"3. That (a) $2 of the above $17 annual fee be paid to the above-mentioned recorder for recording purposes, and that (b) $15 of the said fee be accumulated into a special road fund; said fund to be expended as expeditiously as practicable on such roads, trails, air fields, or other mining facilities as may be agreed upon jointly by the Territorial commissioner of mines and the Territorial highway engineer.

"4. That in the event that the owner of a valid unpatented mineral location should elect to perform his annual assessment work as now prescribed by Federal and Territorial law, he shall record on or before July 1 of each calendar year with the recorder of the recording district or precinct wherein the

said mineral location is located a statement setting forth as nearly as may be the nature and extent of the assessment work performed for the said mineral location, the fee for such recording to be set at not over $2.

"5. That in case the aforesaid owner of an unpatented mineral location fails either to pay on or before July 1 of each calendar year the aforesaid $17 annual fee, or to record on or before July 1 of each calendar year such a statement of annual assessment work as heretofore set forth, the said mineral location shall revert to the public domain and be subject to relocation as now prescribed by Federal and Territorial laws, rules, and regulations; provided further, that within 90 days after July 1 of any calendar year any owner of an unpatented mining claim who has defaulted on the payment of the above fee or has failed to record his statement of annual assessment work shall be permitted to reinstate his claims upon payment of the annual fee plus a penalty of $10 per claim, such penalty to be added to the special road fund.

"In explanation of the above suggestions, it is strongly felt by this chamber of commerce that access roads and trails, and small utility airfields are needed by the mining industry to help reduce the high costs which are rapidly crushing the life of the said industry. To make use of a useless and unprofitable expenditure of human effort and money, such as the performance of annual assessment work, and turn such effort and money to a useful and helpful endeavor would be a boost to all of Alaska's normal economy. The suggested annual fee is set at a low figure so as to make the fee preferable to the performance of annual assessment work, leaving such performance to those persons who were actively mining or to those too poor to afford the annual fee."

Mr. Speaker, I do not know if the proposal of the Fairbanks chamber is the best that could be devised, but I have a strong feeling that it represents a definite improvement over the outmoded and increasingly useless performance of annual assessment work. Whatever the justification may have been for assessment work in the early days of mining in this country the fact is that it has little to recommend itself in logic or in good sense in 1949. There is rather urgent need for a revision of the present law and I hope the Congress will undertake such revision at an early date.

Hon. Clare Boothe Luce

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am delighted to have this opportunity to have recorded in the CONGRESSIONAL RECORD this most gracious and deserved tribute to the record of my distinguished predecessor, the Honorable Clare Boothe Luce, which appeared in the April 13, 1949, issue of the Bridgeport (Conn.) Post:

THE FORESIGHT OF MRS. LUCE

Connecticut has never been represented in Congress by any person with a better grasp of foreign affairs than Clare Boothe Luce, twice Congresswoman from the Fourth Congressional District. A reading of some of Mrs. Luce's earlier speeches, made in her first term in Congress, shows the amazing foresight and statesmanship which she exhibited—qualities which brought her but little appreciation at the time, least of all in Congress itself.

That was a period of divided counsels, of confused thinking in terms of isolation, in a time of war and anxiety. Mrs. Luce's calm wisdom fell on deaf ears. Besides, she was both a woman and a freshman in Congress, which entitled any self-anointed statesmen with more experience in ward politics and no experience whatever in foreign affairs, to look down upon her.

In a sense, Mrs. Luce was the real originator of the Atlantic Pact which has just been signed and is now waiting ratification by Congress, 6 years after she suggested it.

It was on June 25, 1943, that Mrs. Luce, in discussing our foreign policy, urged Congress not to look upon the shores of this country as our boundary line, but in an age of gigantic air and sea power, to regard the other shores of the Atlantic Ocean as our true frontier.

She urged a military alliance with Britain and her dominions which at that time was the only kind of Atlantic pact possible. The world was at war and other combinations were not then feasible. But with the United States, Canada, and Britain guarding the Atlantic, a first step toward security and final peace seemed possible.

Mrs. Luce knew that her suggestion as to a proper foreign policy would be violently resented in some quarters and distorted for political purposes in others, but she never flinched from an unpleasant responsibility. She said what she thought and meant what she said, in contrast to Governor Dewey's treatment of the same theme at the Mackinac conference in Michigan a long time afterward. Repeating Mrs. Luce's thought almost verbatim and adopting it as his own, Governor Dewey was apparently frightened by the roar of disapproval which came from the isolationists. He hastily dropped the whole matter.

Her early advocacy of an Atlantic pact was not the only instance of Mrs. Luce's ability to think years ahead of her colleagues and to point to the right course long before it had become apparent to others or gained any wide degree of public understanding and popularity.

In these troublous times we need both her mind and her courage in Congress. If the Republican Party could succeed in drafting Mrs. Luce for the United States Senate in 1950, bringing her out of her voluntary retirement, the party would be honoring itself and giving Connecticut a new reason for taking pride in the fact that its delegation in Congress included one of the most gifted and far-sighted women ever to grace American public life.

Veteran Says That Taft-Hartley Law Must Remain To Guarantee Freedom He Fought for in South Pacific

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I insert a letter from a veteran in my State who asks for consideration. I urge all Members of the House to read this letter and think on it before they vote for repeal of the Taft-Hartley law.

The letter follows:

MOSCOW, IDAHO, *February 14, 1949.*
Congressman JOHN SANBORN,
House Office Building,
Washington, D. C.

DEAR MR. SANBORN: In regard to the Taft-Hartley law, I hereby wish to state my preference for it to remain as is.

It seems that in the pre-Taft-Hartley days there was no place for the very small-business man; the man who was starting out on shoestring and who did not have the volume of business or the capital to hire his work done but did all his own work.

I am a veteran, 23 years old, and am having a tough time getting started in the concrete-contracting business in a small way. I contract basement floors, sidewalks, etc. There is just enough of this type of work to keep one man and a couple of laborers busy during the summer months. There is no work in the winter to speak of, so a man of my position must make enough in the summer to carry him through the winter.

I buy all my concrete from transit-mix companies (concrete mixers mounted on trucks) since they can sell me concrete much cheaper than I can mix it myself. The union stepped in and black listed the transit-mix companies for selling concrete to me, a non-union contractor. Union contractors have signed a contract that they will not buy from a black-listed company and in order to keep in business the transit-mix companies refused to sell me concrete. This left me two alternatives: first, to put up $2,000, which I did not have, for a mixer of my own and if I did this, I could not compete in price nor service with any of my competitors; second, to sign a buildings and trade agreement with the union. The only thing I could do was the latter and I signed a 1-year contract. According to this agreement, I cannot even so much as pick up a shovel and hand it to a laborer, much less finish my own concrete, which I am very capable of doing. Imagine my position when many jobs require only one man.

I presented this situation to the union. They suggested maybe I should take a 4-year concrete finisher's apprenticeship in their union, pay them $200 and then they would acknowledge me as a finisher; but then I still could not contract and do my own finishing, too.

This is supposed to be a free country but I can see nothing free or democratic about it when we allow the unions in the country to dictate such as I have just described. This certainly is not the freedom which we were told we were fighting for in the South Pacific.

My union contract will expire in 2 months. If the Taft-Hartley law is not repealed and the Wagner Act is not reenacted, I will not be forced to renew my contract. I beg of you, sir, to speak to your colleagues about this matter and to consider not only my plight but thousands of others just like mine located all over the United States when you vote on this matter.

Yours very truly,

R. H. HALEY.

Iowa Soil

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. DOLLIVER. Mr. Speaker, one-fourth of the grade A land in the United

States is in Iowa. Those of us who represent Iowa in the Congress are always glad to acquaint our colleagues and the country with the fertility and productivity of Iowa soil. Not only is it a great resource of our own State, but it is a magnificent resource for the entire country.

Foremost among the interests of Iowa representatives in the Congress is agriculture. That interest is understandable when it is realized of the extent and magnitude of the richness of Iowa soil. The size of this splendid resource is well summed up in the following statement compiled by the marketing division of the Iowa Development Commission:

One-fourth of the most fertile, arable grade A land in the Nation lies in Iowa which makes Iowa the heartland of the richest agricultural region in the world, according to a statistical review recently compiled by the statistical and market division of the Iowa Development Commission.

Iowa's total area of grade 1 land—commonly called grade A—amounts to 25,983,110 acres of the Nation's total premium acreage. The national grade A land total is 101,037,573 acres. Iowa's total land acreage, including all five grade-type soils, is 35,633,920.

The fertile land of the Middle West, which is contained largely in the States bordering on Iowa, accounts for 70 percent of all the grade A land in the Nation. This fact bears testimony to the supremacy of the Middle West in agricultural productivity. In this rich Midwest region, Iowa contains nearly twice as much grade A land as Illinois, its nearest challenger.

The inventory of Iowa's fabulous soil also repeated the remarkable fact that 97 percent of all Iowa soil is under successful cultivation. No similar piece of land in the world has that percentage of land under productive cultivation.

Another remarkable fact reported is that 70 percent of Iowa's cultivated land is grade A. Iowa's remaining acreage is graded as follows: grade 2, good soil, 6,906,158 acres; grade 3, fair soil, 1,392,680 acres; grade 4, poor soil, 1,007,416 acres; grade 5, soil essentially incapable of tillage, 344,556 acres.

No spot in the world of equal total land area has as large a percentage of grade A soil, the survey indicated.

The following break-down shows the concentration of the Nation's grade A land among the States bordering Iowa, the leader: Iowa, 25,983,110; Illinois, 14,777,030; Minnesota, 12,022,243; Missouri, 8,674,763; Nebraska, 8,120,907; South Dakota, 3,052,320; and Wisconsin, 2,820,276.—(Development Bulletin, February 1949.)

Ice Harbor Dam

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith the following editorial from the Seattle Post Intelligencer, large metropolitan daily of Seattle, Wash., opposing the construction of the Ice Harbor Dam in the State of Washington:

When a prudent individual finds that his wants outstrip his income he revises his spending plans.

He decides what expenditures are immediately essential and eliminates those items which he can do without for the present.

The Federal Government should follow the same common sense policy.

That, in effect, is the most cogent argument advanced by the Columbia River Salmon and Tuna Packers Association and the International Fishermen and Allied Workers of America in opposing the immediate construction of the Ice Harbor Dam on the Lower Snake River, near Pasco.

They don't take the position that the plans for the dam should be abandoned immediately.

But they do contend with considerable logic:

"At a time when the Congress is faced with the problem of stretching appropriations to cover the most essential needs, it appears unwise * * * to start construction of new projects when the pressing need of the Northwest is for the earliest completion of power projects now under construction."

They explain specifically that they feel the completion of McNary Dam and the Hungry Horse Dam and the installation of additional generators in the Grand Coulee Dam should be given priority over all other projects, concluding:

"We emphasize doing first things first."

The argument, which was contained in a brief submitted to the House Subcommittee on War Department Appropriations for civil functions, has force, as the primary purpose of the Ice Harbor Dam is to extend slackwater navigation from Pasco to Lewiston, Idaho.

Surely no one will take the position that it is more important to provide this additional river navigation than it is to increase the hydroelectric-power output of the Pacific Northwest.

The benefits from river navigation are especially questionable in view of some figures submitted in the brief in connection with petroleum shipments now made by water from Portland to Pasco. In spite of these water shipments, it is pointed out, gasoline costs 2.8 cents a gallon more in Spokane than in Portland—which is precisely the rail rate on the shipment of gasoline from Portland to Spokane.

Thus, as the protestants observe, "if there is any savings in the movement of gasoline by the river, it is not reflected in the price to the public."

If the same pattern is followed when navigation is extended to Lewiston, the $12,000,000 expenditure on the Ice Harbor Dam—and many millions more on three additional dams which would be required higher up on the Snake River—might enrich some shippers without any benefit to the consumer.

Of course, the packers and the fishermen's union have a purely selfish interest in the matter.

They are fighting the construction of the dam at this time because they believe it would jeopardize the industry on which they depend for their livelihood.

The public has an interest in this too—because the Columbia River salmon resource supports thousands of people in Washington and Oregon and brings millions of dollars into both States every year, in addition to providing one of our primary attractions to tourists.

The Federal Fish and Wildlife Service is authority for the statement that "the lower Snake dams, collectively, present the greatest threat to the maintenance of the Columbia River salmon population of any project heretofore constructed or authorized in the basin."

The construction of fishways is planned in connection with the dam, but this alone is not sufficient. Consideration must also be given to the habitat of the salmon and its need for proper spawning grounds to propagate and reproduce. It is also necessary that means be devised to preserve the salmon fingerlings on their migration down to the sea.

Fishery biologists are learning more about the salmon every year and are endeavoring to improvise methods to adjust it to the developments taking place in the Columbia Basin. But this takes time. Four years are required to complete an experiment in salmon propagation, as that is the life cycle of the fish.

In view of this it is hard to find any flaw in the reasoning of the packers and the union when they say:

"Until the other dam facilities now under construction are completed, it appears logical that we defer needless construction of dams which our fishery biologists maintain will destroy the salmon.

"Such delay will give us valuable time to make further studies of the salmon.

"The permanency of the salmon resource and its future can best be preserved by the most careful scheduling of construction of dams."

Admission of Soviet Agents to the United States

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs:

CARROLLTON MANOR,
Frederick, Md., March 19, 1949.

Hon. JOHN DAVIS LODGE,
House Office Building, Washington.

DEAR CONGRESSMAN LODGE: This is to record, in writing, my most cordial congratulations both to you and to your esteemed colleague, Representative DONALD JACKSON, for your splendid protest against the admission of 23 known Soviet agents to the United States. Your position is right and noble.

Why not raise the following questions, publicly:

1. Would the State Department approve visa applications for Nazi agents, or known Hitlerites?

2. Would the State Department be willing to permit the entrance of known Italian Fascists?

3. Would the State Department attempt to justify the entrance of Nazi-Fascists because of our Government's "unswerving devotion to freedom of information and free speech on any issue, however controversial it may be"? The words in quotation marks, as you probably know, are taken verbatim from the State Department's attempted apology for the issuance of visas to 23 Red Nazis.

As one who has supported the good-neighbor policy throughout the world, I seek an adherence to fair, consistent policies in the State Department.

A few hours after I had congratulated you, publicly, upon the floor of the House of Representatives, where I had opened the proceedings on St. Patrick's Day with prayer, I had the good fortune to meet my dear friend, Judge Michael Francis Doyle, chairman of the electoral colleges of the United States. Judge Doyle, who is a loyal Democrat, advised me that he was indignant with the "Left-wing clique in the State Department," which, in defiance of treaty rights of the United States with the Soviet Union, was reluctant to offer any cooperation to him in his effort to have the Soviet Government re-

instate the visa for the return of a good pastor, Father Antonio Laberge, to the Church of St. Louis in Moscow, the Soviet Union. When he heard from me the nature of the magnificent stand you had taken with regard to the 23 Soviet agents, he pointed out that, if our State Department had shown some disposition to help Father Laberge, the Secretary of State could have insisted that 23 visas would not be conceded by our Government of the United States unless and until the Foreign Office of the Soviet Union had kept its word to readmit Father Laberge, who is not a spy, much less a totalitarian enemy, but rather an angel of mercy in the wilderness of the Soviet Union, which is bound by treaty to allow citizens of the United States to enjoy the rights of conscience as well as the free exercise of religion throughout the U. S. S. R.

This is the same type of thinking which has "leaned us over backward" out in eastern and central Europe; this is the same type of thinking which sold to the President of the United States the self-defeating formula of a "peace and unity" coalition government in China. How much longer will the representatives of the people allow this element to "lean over backward," perhaps out of freedom and democracy into totalitarian slavery?

The Honorable Michael Francis Doyle is at the Mayflower Hotel. Almost single-handed, he has worked, sacrificed, and contributed, generously, to maintain a symbol of religion in Moscow, nearby the Kremlin. He deserves our help and our cooperation. I wish you and he could consult together with a view to liberty and justice. Needless to say, I am at your disposition in this worthy cause. And you are free to use this communication, as you judge best.

Assuring you and Congressman JACKSON of my sentiments and admiration and approval, I remain,

Your friend and well-wisher,

JOSEPH F. THORNING,
Associate Editor of The Americas and World Affairs.

Conservation of Our Natural Resources

EXTENSION OF REMARKS
OF
HON. GEORGE H. WILSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. WILSON of Oklahoma. Mr. Speaker, the occasion for these remarks is my introduction of a bill in the House of Representatives as a companion bill to S. 1576 recently introduced in the Senate by Senator KERR of Oklahoma and others. This Nation has long tolerated and permitted the reckless exploitation of her natural resources. Our wilderness frontiers are now gone and their lack has only led to an intensification of soil-mining and depleting practices. Two great wars have led to record-breaking plantings of soil-depleting crops. The haste with which our water resources are dumped into the seas has increased the prevalence and the seriousness of our floods far beyond what our pioneer forefathers knew. Many of our streams and rivers have literally become "too thick to drink, too thin to plow" with the precious topsoil of our farms. Wanton winds have at times made a no man's land of portions of our Great Plains. Only by the most careful soil treatment and protection were the wastes of our Dust Bowl reclaimed at least for the time.

The territory within the drainage basin of the Arkansas-White and Red Rivers has been no exception to the wasteful policy of our prodigal people. This area can claim a goodly share of what was the great Dust Bowl. Despite the devastation we have witnessed and the heavy toll taken in the wealth of our land and water resources, this drainage basin remains one of the richest regions in the world. Thirty-seven different minerals are available here in commercial quantities. The agricultural potential of this region is tremendous even for this country. Add to this the magic ingredient of oil, and you have located within the inner circle of the United States an area possessing phenomenal possibilities for the future. Whether this area becomes waste or wonderland is a part of our responsibility. We must begin planning now how best to utilize every gallon of water that falls in this area and how we can best save, preserve, and enrich the precious topsoil of this region.

The bill which I have introduced is but a step in the direction we must go. The objective of this bill is a comprehensive basin-wide survey of the Arkansas-White and Red River Basins, which cover 227,140 square miles in 8 States. This bill provides for a 13-man commission, representing Federal agencies and the 8 States affected, which commission would complete its studies and surveys and submit its report within 2½ years. The investigations of this commission would include the study of flood control, irrigation, hydroelectric power, soil conservation, navigation, fish and wildlife resources, pollution abatement, domestic and municipal water supplies, salinity and silt control, recreational development, and improvement of transportation. Heretofore surveys of our river basins have all too often been confined to narrow portions thereof and have reflected the particular interests of the agency making the study. The survey and report sought by this bill would provide an over-all plan of development for this entire region and would coordinate the facilities and technical knowledge of the Corps of Engineers, the Bureau of Reclamation, Soil Conservation Service, Federal Power Commission, Fish and Wildlife Service, and other agencies, including agencies of the interested States.

This bill contains no authority for any actual construction or development, but in my opinion it would provide Congress with the facts and a pattern on which to intelligently base future legislation aimed at conserving our resources and providing for their maximum utilization and development. Such a program will be not only a great boon to the people of this region but will provide the United States with diversified development, a veritable reservoir of the products of agriculture, industry, and manufacture for times of war and national emergency, and the fruit for more abundant living in time of peace.

Higher Education in the Nation's Future

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech made by me before a luncheon meeting of the American College Public Relations Association on April 27, 1949, during their thirty-second national convention which is being held in Washington, D. C., this year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It seems peculiarly fitting that I should bring to this group a message on the subject, Higher Education in the Nation's Future. So much depends on you, who act as liaison between your institutions and the lay public; so much depends on us, as Federal legislators who are in a position to render great service to higher education, once we are convinced of the importance of doing so. Together, we must work to ascertain the facts, to chart our course, to convince the people of the Nation that quick action is needed, before it be too late.

I hardly think that anyone here today will contradict me when I say that we are living in a critical and decisive time in human history. The advances in science and technology have provided us with a tremendous potential for good or evil. Developments in transportation and communication in recent decades have served to bring all the peoples of the world so close that this is truly "one world." Yet, at the same time, we have developed weapons so devastating and so fearful that another major conflict promises to bring total annihilation to civilization as we know it today. A policy of isolationism is unthinkable in an atomic era. Rather, it is imperative that we concern ourselves with the means of bringing good instead of evil out of this technological and political chaos in which we find ourselves at this point. It is urgent that we act quickly to prevent catastrophe on a scale hitherto unimagined.

Scientists tell us that there is no defense against the atomic bomb, once atomic warfare has begun. That there is "no place to hide" is literally true. Yet, atomic power, if properly applied, offers great potentialities for human betterment. The utilization of this tremendous power depends on the attitudes and purposes of the people who possess it.

In short, the issue before us today is a moral and spiritual one. The only preventive to be effectively applied if we are to avoid a major world conflict will be a concerted effort on the part of the peoples of the world for world cooperation and world peace. We are making hopeful strides in that direction even now, with our North Atlantic Pact and our organizations working for a union of the democracies of the world. But the time is short, and there is much yet to be done in the matter of bringing our people to a better understanding of the urgency of the problems involved, to a broader vision of human development, to a burning desire to take constructive and effective steps to assure a lasting peace.

At this point, may I return for a moment to our topic, "Higher Education in the Nation's Future," to suggest that, without higher

education, it is possible that our Nation may have no future.

Too often in the past colleges and universities have been indifferent to their social responsibilities. Too often the academic life has been regarded as a cloistered, "ivory tower" sort of existence. Emphasis has too frequently been placed on the ability to compose verses in Greek or Latin, to identify obscure authors, to recall dates of occurrences that would have been just as well forgotten long since, to concoct strange messes in test tubes, and so on. Please do not mistake me; I realize the importance of study and research in science and the humanities; what I deplore is the assimilation of facts without a resultant understanding of their significance, or the constant application of analysis without the even more important synthesis that should inevitably follow. The ability to generalize is the most important one thing to be derived from higher education; with it, a person of intelligence is fitted to assume a position of leadership in both professional and public life. Without it, he becomes a mere cog in the wheel of everyday life, an expert in his chosen field, perhaps, but a dud everywhere else.

As a reaction to this unrealistic ecademic attitude to which I referred, there came ultimately an emphasis on vocational education. I agree that vocational education is of great importance in an economically complicated world such as ours; however, I believe that it is a great mistake to overemphasize it. To narrow a person's education to one chosen field or vocation is to make him provincial, shallow, and unable to cope with general problems on any scale, local or national.

It is, therefore, encouraging to note that institutions of higher learning today are placing renewed emphasis on general education, or, as it used to be called, liberal education. Thinking university people have come to realize that much depends on the ability of college students and graduates to bring to the solution of contemporary problems a wealth of information and a method of attack which will result in constructive action, progress, and the development of a type of leadership seldom achieved by those with only a secondary-school education or less. They have viewed the chaotic world conditions and realized that broad forms of adult education are the only means of accelerating social progress to the point that world catastrophe may be prevented. It may truly be said that the future of our Nation depends, as does the future of all civilization, upon the direction to be taken by education in the immediate future.

We are all beginning to realize how dear to us is our freedom, and how dependent that freedom is upon a democratic way of life. We realize how dependent true democracy is upon education and how impossible true education is in a police state. In these difficult days the world looks to America for leadership and for salvation. It behooves America, then, to be the home of original ideas; we can no longer afford to depend upon the Old World, as we did in the past. We must develop our own ideas and theories upon which depend our spiritual and intellectual health and our progress in science and technology. These, it is obvious, must be developed in the American colleges and universities. We must take the best brains and the finest young people that the Nation can produce and develop them to their utmost potentialities. We must teach them democracy as it has never been taught before, in a spirit of conative optimism—that is, in a spirit of conscious, all-out effort to do something about the perpetuation of democracy, rather than sit passively by and lose all by apathy. We must teach them a high code of ethical values, the "general" principles to apply to these world-shaking problems. For, as the basic ideals and ideas of American higher education go, so goes America. And, as America goes, so go the hopes of civilized mankind.

This is the prime need of the Nation today in regard to higher education: the development in limitless numbers of our young people of the mature judgment, the ability to generalize as applied to the solution of current problems and to the exigencies of leadership, and the high sense of moral values that should accompany the democratic way of life, based as it is on the premise of individual freedom and justice for all.

If America is to continue to lead the world from chaos to peace, we must consider more specifically ways in which higher education may contribute to that leadership.

Consider, for example, the Federal Government. Today, as never before in the history of our Nation, there is an urgent need for highly trained personnel, both in the various departments, bureaus, and agencies, and on the professional staffs of the congressional committees. Before World War I a Member of Congress could equip himself fairly well, through personal study, to understand the facts of a given issue. Today's problems, however, are far too complex and too numerous to permit a Congressman to rely only on self-help. He must obtain from many sources the pertinent facts, data, and statistics, brief them, and digest them, if he is properly to inform himself. No one person could be adequately and completely informed in all of the fields generally covered by legislation.

Full realization of this need brought about the passage of the Legislative Reorganization Act of 1946, section 203 of which authorized the Legislative Reference Service to appoint senior specialists in various fields to be available for special work with the appropriate committees of Congress, and also for work with individual Members of Congress. This fulfilled a need, so often expressed by various Members of Congress, for men of learning to do research work in the various legislative fields—men who could take an honest, impartial, nonpolitical view of the facts involved. Considering how quickly Congress has sometimes had to act in recent years on issues of grave international importance, it is significant that the acquisition of this expert assistance has in many instances, through making possible the rapid securing of information, served to speed up the processes of legislation, as well as relieved legislators from their former dependence on outside pressure groups for assistance.

Among qualities to be sought in the selection of these experts, it is to be noted that considerable emphasis is placed on broad general knowledge, rather than narrow specialization; analytic ability; and a scientific spirit—all of which stem from higher education of the finest type.

Many of our best-educated young people can plan today to enter the service of their Government through carreer positions available in the numerous departments, bureaus, and agencies. If we are to strengthen the effectiveness of our Government in the troublous years ahead, it is vital that we continue to attract more and more of these highly trained, but not overly specialized, young people into our Federal service.

Nor can we emphasize too greatly the important role being played by the products of higher education today in the various fields of private enterprise: business, industry, commerce, agriculture. It is important to the future of the Nation that the executives and experts in these various fields have not only a knowledge of their respective specialties, but also the broad general outlook and the high ideals and code of ethics to be derived from the best kind of higher education. There is no place for narrowness, selfishness, and greed in a world unified for peace and the well-being of all. We need people in high places who are capable of taking a long-range view of things, who are visionary, who have a strong moral sense.

Our technological progress, our survival, even in this complicated world of today depends to a large degree upon the findings and the painstaking toil of those brilliant but self-effacing individuals who spend their time in long hours of research and experimentation in the scientific and the various technical laboratories maintained throughout the Nation by some of our progressive private concerns, by governmental agencies, by research foundations, and by the colleges and universities themselves. To train young people to fill these difficult assignments is one of the chief obligations of higher education today. Yet, even in these highly specialized endeavors, sight must not be lost of the duty of science to assume a moral obligation in seeing that its efforts are applied for the enrichment and betterment of humanity, rather than for its detriment. Here again, it would be a grave mistake to be too narrow, a mistake far-reaching in its effects on all of us rather than on the individuals directly involved. In the future there can be no successful political or social policy unless it takes account of the potentialities of scientific endeavor and unless it is based on an understanding of the scientific method. To ignore the current relation between science and humanity would be to invite disaster.

In the midst of all these problems confronting higher education as its all-important role in the Nation's future becomes vividly apparent, is a problem existing within the ranks of higher education itself. I refer, of course, to the current shortage of teachers, both those adequate to instruct in institutions of higher learning and those needed to carry on at the elementary- and secondary-school levels. At the time when the demand for new faculty members is greatest, the number available is at a minimum. It is estimated that, if present trends continue, it would take 40 years to meet the needs on the college level of teaching alone that ought to be met within the next 4 or 5 years. The challenge to higher education at this point is to induce more intelligent, dynamic, attractive young people to take up teaching as a profession. The future of democracy depends on education; the future of education depends on its teachers.

Another point too often overlooked, I think, is the role that higher education can and must play in the education of the general populace. If we are to have an enlightened public, familiar with current large-scale problems and conscious of the part America must play in the immediate future in building a world-peace organization, there is no time to lose. Adult education is no longer an excrescence in relation to the total educational field—it has become a necessity. I believe it was Emerson who advanced so eloquently the idea that a man should continue his education throughout his lifetime; his goal was the continuous improvement of the mind of the individual, and this goal we still recognize. However, our new goal is that of the development of a group of consciousness in regard to democratic principles, of a group purpose to perpetuate democracy, of a group sense of belonging to a still larger group comprising all the democratic peoples of the world—a realistic application of the fundamental Christian principle of the brotherhood of man.

As a legislator, I have had occasion to find only too painfully apparent at times the necessity for the education of the adult public—or, rather, some of its members—in even a superficial understanding of the current issues and trends. It is rather discouraging

sometimes, after one has tried sincerely to act for the best interests of all concerned, to receive correspondence in which one is called a Socialist, a Fascist, or a Communist by someone who obviously has not the faintest understanding of the meaning of any of those terms, nor their social and political implications, nor of the specific issues under discussion. How to educate these people for peace in a democratic world? Do they understand the anatomy of peace or of democracy?

At this point I might raise a very pertinent question: Now that we are the recognized leaders of the world, exponents of the democratic way of life, does it not seem imperative that we should exemplify democracy here at home? How can we do this, except through the affording of equal opportunity for everyone in actuality as well as in theory? And how can this be accomplished except through education, on the adult as well as on the student level? This is, indeed, one of the greatest challenges facing higher education today. Democracy must be lived as well as orated about; it must be taught as something to be practiced in everyday life, not reserved for special occasions.

Now that we have considered some of the ways in which higher education can and must serve the Nation in the future, if we as a Nation are to survive and progress, it is appropriate that we consider briefly the conditions under which higher education is operating today.

It is well known, of course, that at the conclusion of World War II the various colleges and universities of the Nation were literally swamped with veterans attending under the GI bill of rights. This terrific and unprecedented student load has been cared for admirably by the institutions involved, despite the shortage of teachers and lack of adequate plant facilities to meet the situation.

Gradually this veteran enrollment has been tapering off. For example, though veterans formed about half of the Nation's college-student body in 1947, they account for only 42 percent in the school year 1948–49. Yet, despite this decrease, total enrollment is on the increase. The rate of student drop-out is slowing down; and at the same time there is at present in our society a general tendency for an increasing percent of our young people to want to go to college.

Total enrollment in all colleges and universities this year is about 2,410,000; last year it was about 2,338,000. This represents an increase for this year of approximately 3 percent. It also represents an increase of 78 percent above the highest attendance in any prewar year.

That our institutions have been able to care for the enormous expansion in enrollments is a great credit to their diligence and ingenuity. Now they are looking forward anxiously to the years ahead, wondering whether the new enrollment levels are merely a temporary condition, or whether they should plan permanently to care for the expanded numbers of students they have been forced to accommodate during the past 2 years.

Taking into consideration various factors that may influence the situation, such as (1) the number of veterans who will want to continue their education, (2) the already mentioned tendency for increasing numbers of our young people to want to go to college, (3) the birth rate and the number of college-age young people in our population, (4) possible introduction of new forms of scholarship or subsidy for students, (5) economic conditions, (6) possible requirement of military service, and (7) the extent to which institutional facilities are developed to meet the demands, one may make a good estimate by saying that total enrollments in the future are not likely to decrease significantly below the present levels. There may be a leveling-off period in enrollment figures very shortly, but this will very likely be followed in the latter part of the 1950's by further increases.

A significant question may be asked at this point: Will this expanded college enrollment lay a foundation for grave social unrest, widespread personal disappointment, a sense of frustration, if it proves that we succeed in educating more young people beyond the secondary school than can be absorbed in occupations requiring college-level training? Unless this education is directed toward sound social ends, it can prove to be a destructive rather than a constructive influence in our society. According to the recent excellent report by the President's Commission on Higher Education, no one need have fears that there is a possibility of overeducating American youth. The important thing is to see that there is adequate attention to a sound general education and that the occupational or professional education is accompanied by adequate guidance and counseling.

I would say that this greatly expanded enrollment is tremendously encouraging to us who are concerned about the future of democracy. Consider the widened sphere of influence among our total population that becomes possible when we, having conscientiously taught democracy to these young people, send them out among the general populace to practice and preach these all-important principles. Consider the enlightened and public-spirited electorate we should ultimately have if we do our work well.

As we burn with all these sanguine hopes and ideals, let us not forget the very practical consideration of just how we are going to finance higher education in the days ahead. At the present time, higher education in this country obtains its financial support from four principal sources: (1) Student fees, (2) philanthropic gifts, (3) endownment earnings, and (4) appropriations from public funds. The public generally fails to understand the fact that colleges and universities rarely collect through student fees enough money to provide the full cost of instruction, but have had in the past to depend on other sources of income. As for philanthropy, it has steadily declined in the share of total support provided higher education. There are those who believe that, if present economic trends continue, there may be ultimately an increase in such gifts; however, it is doubtful if ever again philanthropy may bear the major portion of the financial burden of higher education, as it once did. As for endowment earnings, their effectiveness and adequacy have decreased proportionately as inflation has increased. The present low rate of return on invested funds, and the probability of low rates for a long time in the future, make it a questionable policy at this time to devote much effort to the building up of large endowments for the support of our institutions of higher learning.

Since the end of the war, the legislatures in most States have been fairly generous in making appropriations for higher education. However, the increased appropriations have scarcely been adequate to care for the expanding enrollment and the higher prices of almost every commodity and service that a college has to purchase.

Whether the Federal Government may be expected to come to the rescue with funds for higher education is the vital question at this time. Certainly it is obvious that the success with which institutions of higher education are able to serve an increasing enrollment will depend to a large extent on the provision of adequate supporting funds. This is where the Federal Government could and should play an increasingly important part.

Those who assert that the basic structure of government provides for a complete separation of the Federal Government and education fail to read into the powers of the Federal Government their full significance for education. We have seen how the Federal Government, through its responsibility to assure the national defense, can draw on both students and faculty of the institutions of higher learning, assign specific programs of training to the institutions, and divert research to the extension of the instruments of war. We have also seen that the Federal Government, through its priority in the field of taxation, has access to funds which might otherwise be available to education through State and local tax and through voluntary contributions. The agency that has priority on the funds is by the exercise of this right accepting also an increasing responsibility for the maintenance of services to the general public, including educational services. Through its responsibility for maintaining the public welfare, the Federal Government again has a power which might well extend to include the field of education. Another example of the powers of the Federal Government with respect to education may be found in the various decisions of the Supreme Court which have affected educational policies in a very direct manner.

The conclusion is clear, then, that the opposition to the further extension of the Federal Government into the field of education, if based on constitutional grounds, has no basis in the fundamental framework of government.

Indeed, the Federal Government has a history of ever increasing aid to education with respect to specific activities. This has been inevitable—a part of the dominant national trend. The report of the President's Commission on Higher Education shows that in fiscal 1947 11 different agencies expended $1,732,000 in aid to post-high-school education. In large part, this aid has been provided through emergency programs scattered through various Federal agencies, with no established governmental policy. It is essential that a sound and stable pattern of continuing Federal support of higher education be developed before the present temporary programs expire. This necessitates the immediate development of a long-range legislative program for higher education, with united support on a Nation-wide basis. Certainly I would enthusiastically support such a program, even as I supported, as a member of the House of Representatives, the various measures introduced in the past in behalf of Federal aid to education.

I would like to quote at this point from a recent address of Dr. John R. Steelman, assistant to President Truman: "It becomes increasingly clear that, as our national economy grows more complex, and as the United States assumes a greater position of leadership and responsibility in international affairs, higher education must be made available to every young American who is able to profit from it.

"In the next few years, I believe we must plan, in the light of the report of the President's Commission on Higher Education, the best means by which the Federal Government can give scholarship aid to worthy young people who desire to continue their education.

"We Americans believe in a 'free market of ideas.' We are convinced that in the struggle between democracy and totalitarianism, only people who have been trained to make sound individual judgments, can effectively resist a dogma or 'party line' imposed from above. If America is to retain its freedom in a world of conflicting ideologies, we must take steps to assure every

American youth the opportunity to receive the highest level of education by which he can profit. A soundly conceived Federal scholarship program is a necessary step in achieving this goal."

In conclusion, then, let us remember the ever increasing importance of higher education in the life of the Nation, its vital importance in the Nation's future. Conversely, let us also remember the important part the Nation will have to play, through the medium of aid from the Federal Government, in assuring higher education of its rightful place in the Nation's future.

Our future depends on it; democracy depends on it; world peace depends on it. We will teach our young people the truth—"And they shall know the truth, and the truth shall make them free."

Address by Hon. James P. Kem, of Missouri, Before Midwest Council of Young Republicans

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me before the Midwest Council of Young Republicans at St. Louis, Mo., on April 23, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is indeed a pleasure for me to be with you today. I always appreciate an opportunity to get away from the hectic, hurry-hurry, supercharged atmosphere of present-day Washington and return for a few days to the Middle West. I am particularly glad of an opportunity to meet with you—outstanding young leaders of our party—and to exchange ideas with you on some of the issues of the day.

I wish I could report to you that all is quiet on the domestic and foreign fronts in 1949. I wish I could tell you that my generation has been completely successful in its efforts to promote peace abroad and security at home. Of course, I cannot. A glance at the newspapers, a second at the radio, bring home to us the existence of problems—grave and pressing problems—that confront us on every side. Certainly these are difficult days for all of us. They are days that try men's souls.

There is one bright ray of hope, however. It is to be found in the demonstrated strength and character of the young leaders in our party. Not long ago I paid a visit to Springfield, Mo., for an annual gathering in honor of the immortal founder of our party. I had the pleasure of having dinner with a group of young Republican leaders—some of them I am glad to see are present here today. I can tell you that as a result of that visit I returned to Washington more optimistic about our country's future than for a long time—certainly since last November 2.

I am equally delighted with the aggressiveness and determination shown by you here today. Your ambition, your inspiration, and, yes, your grit are an assurance of the survival of our country, and of our party.

Disraeli once said, "The youth of a nation are the trustees of posterity." Bringing this thought up to date, I would say that America belongs to you. You and the other young people of our country, will be in the driver's seat in the years ahead—and sooner than a lot of people may expect. The inimitable Mr. Dooley once said that his only objection to a certain well-known statesman of that day was: "He wants to make the temporary organization permanent." The impression has been carefully cultivated by the opposition that the Democrat Party is the party of youth. A quick look at the leaders in the administration and in congressional circles should dispel that myth. Isn't it about time that some changes were made in the present temporary organization? Many of you no doubt will not choose to enter public life. But no matter your calling, whether doctor, lawyer, farmer, or businessman—businesswoman or housewife—your opportunities and your responsibilities as citizens will be always with you. A healthy democracy is dependent on the active participation of all of its citizens in the processes of government. There is no such thing as a proxy for your duties as citizens.

America is yours—yours to do with as you choose. I need not remind you of the inestimable value of that which you are about to inherit. Our country today, despite the perils, economic and otherwise which confront us, is the envy of the rest of the world. She did not reach her position of preeminence through accident. Far from it. Her success story is the American system of constitutional government, a free economy, and a free society.

It has often been said that there is no greater truth than that man fails to appreciate what he already possesses. It is always the grass on the other side of the stream that is the greenest. Something is often not appreciated at true worth until it is lost.

And so it is with liberties and human rights—the liberties and human rights that Americans now enjoy. To gain them, men, yes—and women, too—went through the fires of hell. Once won, and seemingly secure, these priceless privileges are left to the care of everyone in general and no one in particular. This is all right so long as no enemy menaces. Today, a determined drive is under way to destroy the social, political, and economic freedoms which have made our country great. Radicals parading under the banner of liberalism (of which they know nothing and care less) now would supplant Americanism with statism. They would substitute for our free economy, a socialized, planned economy. This danger on the home front is more menacing than any rumble of distant drums.

They would weaken and impair the liberties which we have enjoyed under our Bill of Rights and replace them with bureaucratic regulations and dictatorial interpretations, flowing out with monotonous regularity from Washington. They would mold an all-powerful Central Government to regulate our daily lives from the first chime of the alarm clock in the morning to the last weary sigh at night.

Knowing your background and your heritage, I cannot believe you want a bureaucrat in Washington guiding your thinking and telling you about your work—how, and when, and where you shall live, and have your being.

I do not believe you will be misled by the fantastic promises of those who advocate a socialized, planned economy. Planned economy, my eye. It is planned monotony that these long-haired men and short-sighted women would give us.

You may know of the man who was in great trouble and dreamed that he died. When he woke up in another world, an unearthly being told him: "You are now in an existence where you can have everything you want without effort." The man asked for food and more food, for fine clothes, for automobiles, for a yacht, and a palace, and received whatever he wanted merely for the asking. After a few days this type of existence began to pall and the man told his guide: "What I want now is to have a little effort connected with my activities." The being said, "That is one thing we cannot arrange." The man, in desperation, cried: "I would rather be in hell than to go on existing like this." The eerie one said: "Well, where did you think you were?"

We in America have too long neglected to make known the true meaning of our way of life. We have the greatest product on earth to sell and we have fallen down on the job. I hope you young people will profit by the mistakes of the past. You must dig out the facts and get the people to know and understand the unparalleled advantages of our free economy and our free society. Let us sell America.

Just what has our system meant to America? In the first place, the United States, one of the youngest of all nations, has the highest standard of living in the world. We have only 6 percent of the world's population and 7 percent of its area, but Americans today possess 60 percent of all telephones, 80 percent of all automobiles, 51 percent of all radios, and 90 percent of all the bathtubs in the world.

If the proof of the plum is in the pudding, certainly no one can challenge the superiority of the American system of free enterprise.

By way of contrast, let us look at the experience of countries which have fallen prey to the panacea of state control and regimentation. Where could we find better proof that it would be folly for us to abandon our American system? Russia has been experimenting with socialism for 30 years, and today Russia is the poorhouse of Europe.

Take Great Britain, for another example, where far-reaching experiments in socialism are now being carried out. The Government has been acquiring and operating basic industries. This is spoken of as the "nationalization" or "socialization" of industry. Every nationalized industry in England is losing money. In the parliamentary debates on November 16, 1948, Winston Churchill said: "We can now already see that nationalization and state ownership have been a great and costly failure in all the industries to which they have been applied, and this will become more obvious to the public with every day that passes."

Here are some figures to prove that Mr. Churchill knew of what he spoke. During the first year after socialization the British coal industry lost $94,000,000. Civil aviation lost $100,000,000 in the first 14 months of operation.

These nationalized industries have survived thus far only because the American taxpayers have been footing the bill by putting up Marshall-plan money earned under the American system of free enterprise and private initiative.

SHOULD WE FINANCE NATIONAL SOCIALISM IN EUROPE?

Congress recently authorized the continuation of the European recovery program, the so-called Marshall plan, for a further 15 months. The amount of money to be spent will be fixed later when the appropriation bill is passed. I expect to offer an amendment to the appropriation bill when it reaches Congress providing that the administrator of the Marshall plan shall not authorize assistance under the act which may be used by the government receiving it to acquire or operate any basic industry.

I do not intend to discuss the merits of the Marshall plan as a whole, many of the objectives of which are good. What I have to say will be confined to a single phase of it. I should like to discuss with you briefly this evening whether any Congress should permit any part of your money to be used to finance or implement experiments in socialism in the countries of western Europe.

MARSHALL PLAN MONEY HAS ACCELERATED THE NATIONALIZATION OF INDUSTRY IN EUROPE

Several of the countries of Europe are far down the road toward a completely socialized state. England has already socialized 10 of her important industries. France has socialized 23 of them. This process of socialization in both countries has been accelerated to a great extent by the use of Marshall-plan money. Under the Marshall plan each of the participating countries of Europe submits a plan of what it proposes to do by way of internal reconstruction and relief. The United States makes up the deficit in these national plans. What each nation does internally is supported by the money of the American taxpayers. I shall discuss particularly the case of Great Britain; not because of any dislike of the British, but because Great Britain is a typical case and by far the largest beneficiary under the Marshall plan. The American taxpayers have already contributed under various plans, most of them now unhonored and unsung, over $44,000,000,000 to Great Britain.

The Marshall-plan funds go from America in the form of raw materials for Britain's socialized industries and in many other ways. If the United States had not financed the British socialist program, it could not have been carried out. It was American money (your money) that saved Britain from the inevitable unemployment and lower standards of living which would have come under the socialist program. As a matter of fact, the Marshall-plan money has become a great slush fund to keep the British Socialist Party in power.

Socialism and communism are fruit of the same tree, which has its roots in the theories of Karl Marx. They have the same objective, which is the nationalization of all industry. The Communist is willing to resort to any means, including force and violence to attain this end. The Socialist prefers that the nationalization of industry be obtained by peaceful or democratic methods.

Communism is the form of Marxism which has developed in Russia. The adherents of communism are in control of the U. S. S. R.—the Union of Soviet Socialist Republics. Socialism is a form of Marxism that has been developed in England and in some of the other countries of western Europe. The British Socialist Party is in control of the Government of Great Britain.

And so we are met with this strange paradox. The United States is spending billions of dollars to stop Marxist communism, but at the same time is spending billions of dollars to subsidize Marxist socialism.

As Winston Churchill has said, the Socialist parties in every European country are "the handmaids and heralds of communism, and prepare the way at every stage and every step for its future advance."

MAY WE EXPECT MARSHALL-PLAN MONEY TO RETARD THE NATIONALIZATION OF INDUSTRY IN EUROPE?

It has been argued by apologists for the Marshall plan that the Marshall plan is the way to check the advance of socialism in Great Britain. They prefer to think that the Marshall plan will make the British so happy and contented that they will change their present course. This reminds one of the time Will Rogers was asked by a young writer if the field of humor was crowded. "Only when Congress is in session," he said.

Let us look at the record. Keep in mind that the Marshall-plan law was signed by the President on April 3, 1948. Did the British Government turn back from its socialist program in view of the golden prospect of Marshall-plan money flowing from America? Quite the contrary. A month after the Marshall plan was adopted, on May 17, Clement Attlee, Prime Minister of Great Britain and head of the British Socialist Party, assured the party at its annual conference: "We intend to carry on the work to which we have set our hand and with your help we shall win through." On November 2, 1948, Hugh Dalton, former Chancelor of the Exchequer, put it this way: "We shall obstinately persist in carrying out the promises which we made to the electors." But it may be said that was last November—maybe the program of the party has been changed since then. Let us see.

After all, actions speak louder than words. The British socialists are now taking steps in Parliament to nationalize the iron and steel industry. The bill for this purpose has passed the second reading. A few days ago Prof. Harold Laski, the brain truster of the British Labor Party, was in Washington. He said that there are three industries his party plans to nationalize next, but nothing except force would cause him to reveal what they are.

And to bring the record right down to date, on April 12, on Tuesday of last week, a 5-year program for the Socialist Party in Great Britain was announced. In addition to the industries already nationalized, it is proposed that the Government take over the cement industry, all suitable mineral deposits, cold-storage facilities not already publicly owned, sugar manufacturing and refining, and appropriate sections of the chemical industry, and two great insurance companies, the Prudential Insurance Co. and the Pearl Insurance Co., both of which have vast investments in other business enterprises.

Does this look like the Socialist Party is turning back from its program? Who knows better what that program is than the leaders of the Socialist Party themselves? And remember this: If the United States does not finance the program for further nationalization, it cannot be carried out.

It is also sometimes said that we should not place any strings on the Marshall-plan money because the United States should not interfere in the government or in the economy of a foreign country. But bless my soul, the whole Marshall plan is an interference in the economies of other countries on a gigantic scale. We said to Spain at the outset, "We don't like your government. You can't have any Marshall-plan money unless you change it." We interfered in the Italian election in 1948. The American Ambassador made campaign speeches and the Attorney General of the United States addressed the Italian people over the radio on the eve of the election. I do not mean to criticize this, but I do say that it is entirely too late for us to hold up our hands and say with sanctimonious piety, "Of course, we do not wish to interfere in either the government or the economy of a foreign country."

COMPETITION WITH NATIONALIZED INDUSTRY IS UNFAIR TO THE AMERICAN WORKINGMAN

I am concerned about this use of your money because we are creating competition abroad that will rise to plague us. Fortunately we are able to know in considerable detail the plans of the British Socialist Government for the invasion and capture of American markets. Sir Stafford Cripps, British Chancellor of the Exchequer, told the House of Commons on January 27 this year that, "First and most important of all, we must export more goods to the United States. * * *" On April 11, 1949, Mr. Hugh Wilson, president of the British Board of Trade, stated that by 1950 exports to the United States and Canada must be increased by an additional 30 percent. The American businessman and the American workingman have always prided themselves upon their ability to meet fair competition anywhere and at any time. All we have asked is an even break. But we Americans have always insisted that competition be fair. We have put antitrust laws and antimonopoly laws on our statute books to insure that the competition among ourselves is fair. Now we are helping to create in Europe great national monopolies and setting them up in business to compete with American industry and American labor on unequal terms. Nationalized industries have an advantage over private industries in competition with them, and here is the reason: Nationalized industries enjoy freedom from taxation, the advantages of monopoly, and government financial support. Such competition threatens to imperil the welfare of the American workingman.

Let us take the overseas air lines as an example. The American Airlines crossing the Atlantic are having great difficulty in making both ends meet. They find themselves unable to buy the finest planes and the latest equipment for a very good reason—they are losing money. On the other hand, the British Overseas Airways, owned by the British Government, have recently contracted for 10 Boeing Strato-cruisers, at a cost of a million and a half dollars apiece, to be paid for out of Marshall plan money—of course, I mean your money. And so American taxpayers are giving equipment to foreign overseas government air lines and expecting American private enterprise to compete with them. No wonder the American private enterprise in competition is discouraged, and unattractive to thrifty investors.

When the Senate Committee on Foreign Relations was considering this matter Senator GEORGE said to Mr. Hoffman, the Administrator of the Marshall plan: "You may be putting a whole lot of industry in this country out of business." Later the great Georgia Senator said, "I have warned you." Mr. Hoffman's comment was, "Sir, I cannot tell you how little concerned I am about European competition." With due respect to Mr. Hoffman, let me make this clear: I believe the time has come for us to be concerned about American industry and American working people. I believe we of the American Congress should say to our fellow citizens who earn their bread: "Our friends, we can tell you how much concerned we are about unfair European competition in the years to come."

I cannot avoid the conclusion that when we think this thing through—at long last—we shall decide not to permit your money, earned under a system of free enterprise and personal initiative, to be frittered away in experiments in socialism on the continent of Europe or in the British Isles.

Collectivism and the Modern Lawyer

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. LODGE. Mr. President, last night, in the city of Boston, an impressive banquet was held on the occasion of the

twentieth anniversary of the Boston College Law School, and the senior Senator from Wyoming [Mr. O'MAHONEY] made a thoughtful speech which will be remembered by all who were in attendance. I ask unanimous consent that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COLLECTIVISM AND THE MODERN LAWYER

Collectivism is a manifestation of modern industrial development. Unless, quickly appraised and standardized in the American tradition of individual liberty, it threatens to undermine the foundations of free society and subject mankind to a world-wide tyranny more complete and cruel than any that ever existed. It is to the contemplation of this prospect that I invite the attention of the modern lawyer.

We are confronted by the greatest challenge freemen ever encountered. Civilization can endure neither a third world war nor another depression here. Neither men nor nations have recovered from the Second World War. Meanwhile, business leaders and Government leaders stand around helplessly wondering if we stand on the brink of economic collapse, but hesitating with pitiful indecision to use the power of Government to prevent it. There has been no comparable crisis since, in the decade before the Civil War, political leaders in Washington, lacking both vision and courage, wasted their energies in futile debate over half-measures, unwilling to take the strong action that would save the Union. When the issue could no longer be dodged, it had to be settled by the bloodiest war ever fought—until that time.

The modern American lawyer can prevent another such crisis, but only if he is willing to face facts as they are and measure them by the standards of human liberty to which our people have always been devoted.

THE DANGER ABRAHAM LINCOLN SAW

Let us consider the opening sentences of the immortal address of Abraham Lincoln at Gettysburg in 1863:

"Fourscore and seven years ago," said the Civil War President, "our fathers brought forth on this continent a new Nation, conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great Civil War testing whether that Nation or any nation so conceived and so dedicated can long endure."

The danger Lincoln saw was twofold: First, that the Republic by being split asunder would be unable to defend itself, and second, that if it could be split upon the slavery issue, the great ideals of freedom and equality which had inspired the Declaration of Independence and the Constitution would have received a mortal blow. The danger now is that class conflict may rend the Republic and that freedom may then become the victim of arbitrary collectivism.

The threat to popular sovereignty is greater now than it was four score and six years ago when Lincoln spoke. Economic life then was still essentially local and individual. Now it is essentially national and corporate, so that the masses of the people can no longer control the decisions which shape their economic life. Those decisions are made for them, rather than by them. Their economic destiny is controlled by the managers of organized groups instead of by themselves as individuals. Local authority has been disappearing and central authority expanding while over a large part of the world the ideology of the authoritarian state has supplanted the ideology of free government.

Lincoln was confident that if the Union could be preserved, liberty would be safe. The Union was preserved. It was never stronger than it is now, but liberty is in greater danger than ever because a cult has developed that democracy has been outmoded, that the forces of nature, released by science, are beyond the grasp of the masses and therefore that the people, instead of governing themselves, must be governed—in other words, that they must be told what to do.

THE PROLETARIAT HAS DEVELOPED

This is the conflict which every modern lawyer must clearly appraise if he desires to devote his talents to the preservation of what we call the American way of life. The danger to our institutions is more ominous because it has so to speak, caught us unawares. We seem not to have perceived that the dictatorship of the proletariat could not exist unless there were a proletariat, that is to say, a significant segment of the population unable to support itself by its own efforts. Even though a man may be politically free, he is only half free if, at the same time, he is dependent upon some other man or group of men for his economic existence. This is the situation which has developed in our time, right here at home as well as abroad.

Every lawyer knows how deeply rooted in our system is the purpose to protect the economic freedom of the worker. There is no State in the Federal Union which does not exempt from execution for debt the tools by which a man has been accustomed to carry on his trade. The principle was set forth by Coke, one of the great masters of the common law in the quaint language of his time, as follows:

"Thou shalt not take the nether nor the upper millstone to pledge, for he taketh a man's life to pledge; whereby it appeareth that a man's trade is accounted his life, because it maintaineth his life; and thereby the monopolist that taketh away a man's trade taketh away his life."

Few indeed are the men who now own the tools of their trade. Mass production and the assembly line have made the workers dependent not upon the tools they carry in their kits, but upon giant machines which can be owned only by organized capital, and organized capital nowadays is chiefly only collective economic enterprise, that is to say it is furnished by thousands through the sale of corporate stock. Thus it is that 40 percent of all industrial workers in the United States are employed by only one-tenth of 1 percent of all the employers, and 52 percent are employed by only eight-tenths of 1 percent of all the 3,400,000 industrial business enterprises in the country. Thus it becomes plain why we here in the United States who set so much store by rugged individualism find that the collective ownership of the tools of trade and industry has made collective bargaining inevitable. This is why I say economic collectivism has taken us unawares.

ECONOMIC COLLECTIVISM IS HERE

The modern lawyer owes an obligation to himself and to his community correctly to appraise these forces, for economic collectivism leads directly to the authoritarian state. How easy it is to condemn big government without realizing that big government is only the result of the economic conditions under which we live. Regulation of business has always been a recognized function of government, both at common law and in colonial times. When business was predominantly local, government regulation was local. When business became national, regulation became national. When that happens, the people are no longer able to observe precisely what is going on either in management or in government, no matter whether they are the nominal owners of business or its customers.

How these conditions produce authoritarianism may readily be illustrated by a few examples. We have learned not to shudder at the thought of collective bargaining in the field of labor, and I presume nobody in Boston displays much alarm at the thought of the Boston Port Authority, although it is not an example of the town meeting plan. Like the Port of New York Authority, it exercises broad powers of regulation and control that only a few years ago would have been regarded as foreign to our system. The executive secretary of the Northwest Marine Terminal Association defended the authority idea plan a few years ago upon the ground, as he put it, that "the marine terminal industry should be regulated for its own benefit and to protect those in the industry against their own and their competitors' ill-advised actions."

Before we denounce the expansion of big government, therefore, we must first open our minds to the fact that it is not self-generating but is only the inevitable outgrowth of conditions which themselves are the product of the remarkable advances of science and invention within the last 50 years. The Interstate Commerce Commission, the Federal Trade Commission, the Federal Power Commission, the Securities and Exchange Commission, the Civil Aeronautics Board, the Communications Commission, the Reconstruction Finance Corporation, and the National Labor Relations Board are only a few of the agencies of big government at Washington which have been produced solely by the fact that the collectivist economy in which we live left to Congress no alternative but to create them. Debates in the congressional halls do not involve the issue of the existence of such commissions and agencies, but only whether or not they shall be given sufficient authority and money to operate effectively in the public interest. The controversies which fill the headlines seldom have anything to do with the essential issue of whether or not we shall have big government but only over the degree to which it shall be supported. Only last week the Senate debated the Federal public housing bill for days, but when the final vote was cast only 13 Members of that body voted against it. The attack on the measure was by indirection.

These regulatory boards and commissions, the operations of which are the cause of so much current criticism of government, were created only because the business and industry of our time have outgrown the local and State boundaries within which our fathers and grandfathers lived out their lives contentedly. The railroads, the telephone and telegraph lines, the waves of ether through which radio communication passes, the stratosphere through which the airplane flies, all these have utterly changed the world in which we live, and because these instruments of trade and commerce and communication can be built, operated, and maintained only by the collective activity of millions of workers and hundreds of thousands of investors, the public interest can be safeguarded only through the exercise of regulatory authority by the Government at Washington.

THE BATTLE BEHIND THE SCENE

No political party seeks to destroy these boards and commissions. The battle now is waged behind the scenes to make them defenders of special interests rather than custodians of the public interest. It was a great Massachusetts lawyer, afterward Attorney General in the Cabinet of Grover Cleveland, who very lucidly described the technique now so often followed by the collectivist economic interests which resist regulations. President Perkins, of the Chicago, Burlington & Quincy Railroad, who was disturbed lest the Interstate Commerce Commission should cause trouble for the rail-

roads, wrote to Richard Olney asking his advice as to how to bring about the elimination of the Interstate Commerce Commission. Thus replied Mr. Olney:

"My impression would be that, looking at the matter from a railroad point of view exclusively, repeal of the Interstate Commerce Act would not be a wise thing to undertake * * * The attempt would not be likely to succeed; if it did not succeed, and were made on the ground of the inefficiency and uselessness of the Commission, the result would very probably be giving it the power it now lacks. The Commission, as its functions have now been limited by the courts, is, or can be made, of great use to the railroads, at the same time that that supervision is almost entirely nominal. Further, the older such a commission gets to be, the more inclined it will be found to take the business and railroad view of things. It thus becomes a sort of barrier between the railroad corporations and the people, and a sort of protection against hasty and crude legislation hostile to railroad interests. * * * The part of wisdom is not to destroy the Commission but to utilize it."

It is one of the serious defects of government by boards or commissions, particularly when such a board or commission has discretionary powers, that the law itself may be changed merely by changing the personnel of the commission. A complacent member can easily fall into the habit of taking "the business view of things," as Mr. Olney expressed it. "The business view of things" does not necessarily mean the economic or the efficient view of things, but rather only the view which is taken by the managers of the great economic enterprises which have outgrown regulation in the public interest by local government authority, and which, if they are to be regulated at all, must be regulated by the authority of the central government.

JUSTICE BRANDEIS AND THE GIANT CORPORATION

This fact illustrates why it is so important for the modern lawyer to recognize the difference between individual business enterprise as known to our grandfathers and collective business enterprise as known to us. If we are to escape political collectivism, the first essential step is to make sure that economic collectivism shall not gain control of the public authority. The contrast between these two forms of enterprise has nowhere been made more clear than by another great Massachusetts lawyer, Mr. Justice Brandeis, who, in his dissenting opinion in *Liggett* v. *Lee* (288 U. S. 517, 566) described the concentration of economic power as the "negation of industrial democracy."

"The typical business corporation of the last century," wrote Justice Brandeis, "owned by a small group of individuals, managed by their owners and limited in size by their personal wealth is being supplanted by huge concerns in which the lives of tens or hundreds of thousands of employees and the property of tens or hundreds of thousands of investors are subjected, through the corporate mechanism, to the control of a few men. Ownership has been separated from control; and this separation has removed many of the checks which formerly operated to curb the misuse of wealth and power. And as ownership of the shares is becoming increasingly dispersed, the power which formerly accompanied ownership is becoming increasingly concentrated in the hands of a few. The changes thereby wrought in the lives of the workers, of the owners and of the general public are so fundamental and far-reaching as to lead * * * scholars to compare the evolving 'corporate system' with the feudal system; and to lead other men of insight and experience to assert that this 'master institution of civilized life' is committing it to the rule of plutocracy."

Justice Brandeis was describing the collectivist corporation which, in our time, has become the most significant aspect of our whole economic structure. With hundreds of thousands of employees and hundreds of thousands of stockholders who exercise little or no control over either the policies or properties of the corporation, these organizations are dominating a steadily increasing segment of the industrial and commercial activities of the whole Nation. They affect the lives not of the people of one city or one State, but of the people of the entire United States. Their managers may and do determine by their private decisions how much of a given commodity 144,000,000 people may have and the price they may pay for it. Frequently these organizations are members of international cartels which divide among their associates the trade and commerce of the whole world. There are instances too numerous to mention in which these organizations have regulated production, divided territory, fixed prices, and eliminated competition without the slightest authority of government. Some of them are so great that they sit down as partners in business enterprises of world-wide scope with the imperial governments of foreign nations.

In very truth, they have become economic governments. They turn on and off the supply of goods on which all commerce depends. They make compacts in interstate and foreign commerce of which no public authority has any knowledge. Their international cartel agreements have frequently been more far-reaching in effect than formal Government trade agreements over which the Senate sometimes spends weeks of debate in committee and on the floor.

The Constitution gave to Congress the plenary power "to regulate commerce with foreign nations, and among the several States." It is precisely this commerce which is now in an excessively great degree regulated by huge corporate enterprises created by the States. The same Constitution which gave Congress the commerce power provided that no State should, without the consent of Congress "enter into any agreement or compact with another State or with a foreign power." Yet corporations created by the States exercise a power in the field of interstate and foreign commerce which is denied to their creators. All this is because as lawyers we have not distinguished between the rights of the natural person, created by God, and the rights of the artificial corporate person created by the States.

MANAGEMENT IN BUSINESS AND GOVERNMENT

When such corporations were owned and managed by the same persons, it was easy to disregard the difference. Now, however, when ownership and management have been so significantly separated in the giant interstate and international corporations, failure to recognize the difference results in the acquisition by managers of economic powers greater than were ever before exercised by a few men at the top.

This is the condition which has made economic collectivism the distinctive mark of this era. This is the condition which has produced the basic problem the modern lawyer must solve if he intends to contribute to the preservation of individual economic freedom and popular sovereignty in an era which needs and must have the services of the modern giant corporations.

When the political system is controlled by the people in the traditional American way but the economic system is controlled by management at the top, the forces are set in motion which give rise to management in government also. When economic management shall have led to political management, the people will have lost self-government in both fields.

What then are we going to do about it? Our objective should not be to atomize big business any more than it should be to weaken the people's government in Washington. Rather it should be to make them both more responsive to the will of the people. If we would preserve democracy in government, we have no choice but to preserve industrial democracy. If we would escape regimentation by government—and we certainly should—we must first escape regimentation by business management. If private capitalism would save itself, then it must first help to save democracy.

The one thing needful is the rule of order that will preserve the ideal of popular sovereignty in business organization and political organization also. The opportunity of the lawyer and the challenge now presented to him is to help write this rule of order for the economic organizations through which modern business must operate.

It was the failure to produce such a rule of economic democracy that produced the disaster that befell Europe. Economic collectivism led directly to political collectivism. Self-government began to disappear. Totalitarianism took its place. Freedom died wherever totalitarianism took over, and the individual, politically, economically, and even spiritually became the pawn of the state.

AN ECONOMIC CONVENTION NEEDED

To prevent such a disaster here, to preserve our heritage of liberty, we need no punitive program. We need only a preventive program. We need an economic convention now as much as the people of the newly liberated colonies needed the constitutional convention. Such a convention, made up of representatives of business and labor and agriculture, representatives of the consumers and the professions, representatives of the geographical areas and experts who know the nature of our natural resources, would be competent to do the job that is needed. And the lawyers of America who remember that 60 percent of the constitutional convention in 1787 was made up of members of their profession will be eager to make their talents available for the solution of the great modern dilemma of human freedom.

Pray God that we may not delay too long. It is my firm conviction that the policy of the Kremlin is not based on any plan to make war upon the United States. It is based upon a conviction that because of cupidity, the leaders of capitalism cannot avoid a depression. The Communists are waiting for economic collapse in the United States. Such a collapse here would mean that the whole world would fall into the lap of communism.

This, then, is the challenge of our time to the modern lawyer. He has the training. He has the knowledge. Surely he must have the inspiration in this crisis of world civilization to provide the leadership so sadly needed by mankind everywhere, leadership that will preserve political liberty by restoring economic freedom. Without it, peace and prosperity in our time could be the most tragic illusion of all human history.

Labor and Management Dependent on Each Other

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, my attention has been called to the

exchange of letters on this highly controversial matter of labor and management. It is obvious that neither group is independent and hence there must be a common meeting ground of interdependence of each with the other. As part of my remarks I am inserting a letter and reply which appeared in the New York Sun:

TWO SIDES—ALWAYS

The complete interdependence of business and labor on each other, and the need for management and labor to review each other's ideas is sharply brought into consideration by the two letters reprinted below.

Are workers more important? Or do machines take precedence? This interesting explanation of both points of view illustrates why both important segments of the free-enterprise system must be equally considered:

"To the EDITOR OF THE SUN:

"SIR: First, permit me to compliment you for publishing this. Second, permit me to say that seldom have I observed such rank ignorance of basic economics as that displayed by Phelps Adams in his piece The Free Enterprise System.

"It is not enough that he refuses to recognize the importance of cost of living, etc., as rubbing out worker benefits, but he confuses the meaning of terms like communism, socialism, and capitalism itself. The following may help clear away some of his misunderstanding:

"What did you tell that man just now?
"I told him to hurry.
"What right have you to tell him to hurry?
"I pay him to hurry.
"How much do you pay him?
"Ten dollars a day.
"Where do you get the money to pay him?
"I sell products.
"Who makes the products?
"He does.
"How many products does he make in a day?
"Sixteen dollars' worth.
"Then, instead of your paying him, he pays you $6 a day to stand around and tell him to hurry.
"Well, but I own the machines.
"How did you get the machines?
"Sold products and bought them.
"Who made the products?
"Shut up. He might hear you.

"JOEL S. MORGAN.

"NEW YORK."

And here is Mr. Adams' reply:

"MY DEAR MR. MORGAN: What with the high price of paper, it seems worse than profitless to enter into a controversy with you on the issue of which of us is rankly ignorant of what. I do want, however, to make one or two necessary revisions in the highly amusing, cunningly clever and completely cockeyed little colloquy that you presented. I do not even profess to hope that the corrections will succeed in clearing away your own misunderstanding:

"Who is that man sitting over there?
"He's working for me.
"What is he doing?
"He's running that machine in front of him.
"How much do you pay him?
"Twelve dollars a day.
"Where do you get the money?
"I sell products.
"Who makes the products?
"He and the machine he is running.
"How many products do they make a day?
"Fourteen dollars' worth.
"How much of the work does the man do?
"About 5 percent of it—70 cents' worth.
"How much does the machine do?
"Some 85 percent—or about $12 worth.
"How did you get the machine—by selling products?
"Heavens, no. I had to buy the machine before there were any products and before there was even a job for the man.
"Then where did you get the money?
"A lot of people who saved it invested $6,500 in that machine and charged me for using it.
"How much do you pay them for using the machine?
"About 4 percent—70 cents a day.
"Hey, let me get this straight. You pay the man $12 a day for doing 70 cents' worth of work and you pay the owners of the machine 70 cents a day for doing $12 worth of work?
"That's right.
"Good gosh, man, they belong in the booby hatch.
"Shut up. That's what worries me.
"The only essential difference between my story and yours is that mine happens to square with the facts.
"Hoping that you may some day do the same.

"Sincerely,

"PHELPS H. ADAMS."

The Refund of Excess-Profits Tax and Social Security

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. BURDICK. Mr. Speaker, the following statement by Francis Stacey is very illuminating. It seems that the ability to pay taxes has been abandoned in the huge refund of excess-profits tax and there is a definite tendency to shift the burder of taxation to employment taxes. Since those paying excess-profits taxes during the war were well able to pay them from their business enterprises the volume of which was increased by the activity of the war, there is no good reason that those taxes should be refunded.

Here follows Mr. Stacey's report:

When the Revenue Act of 1945, signed by the President November 8, 1945, repealed the excess-profits tax, effective 1946, it wiped out at one stroke the most ample and the most just tax available for the financial foundation of the social-security program.

Our Federal income tax is based on the principle: Ability to pay. Who has greater ability to pay than the corporation which receives dividends from excess profits? Profits over and above normal earnings of preceding years? Profits derived from taxing the consumers, workers, and producers, farmers, and homemakers, by boosting their excess prices on cost of living?

Today the social-security program, in its four-phase operation, is chiefly dependent for financial support upon employment taxes, $2,038,500,000 in 1947, $2,395,700,000 in the fiscal year 1948.

Public Law 379, approved August 6, 1947, provides for a tax of 1 percent for 1948 and 1949, 1½ percent for 1950 and 1951, and 2 percent after 1951. These employment taxes yielded in 1948 the sum of $2,395,700,000 and are estimated to yield in 1949 $2,610,000,000. From this total the Federal old-age and survivors-insurance trust fund is estimated to receive in 1949 the sum of only $1,754,000,000. (See Secretary of Treasury Report, 1948, p. 59.)

By comparison, note the billions of potential revenue, during the fiscal years 1945-48, we have surrendered to excess profiteers by outright repeal of excess-profits taxes:

YEARLY REVENUE FROM EXCESS-PROFITS TAXES (1945–48)

In the last year of World War II, fiscal year 1945, excess-profits taxes (Revenue Acts of 1940, 1941, 1942) exceeded $11,000,000,000, or, more than five times the cost of the social-security program.

Since that year, excess profits collected by the excess profiteers (as all know) have mounted year by year to the peak in 1948. But the revenue collected year by year by the Government under the repealing act of 1945, has declined to the vanishing point (not yet reported by the Treasury):

	Excess-profits-tax collections	Yearly decrease
Fiscal year June 30—		
1945	$11,003,519,623	
1946	7,822,488,154	−$3,181,031,469
1947	3,566,177,958	−4,256,310,196
1948	305,251,476	−3,260,926,482

Though excess profits grew steadily with increased cost of living from 1945 to 1948, annual revenue from excess-profits taxes was cut down by over $10,000,000,000, or, by more than the total 4-year cost of the social-security program. The burden of social security has fallen upon employment taxes—wages withheld at the source.

In the gradual process of excess-profits-tax repeal—from 1945 to 1948, inclusive—the average annual reduction of revenue is around $3,500,000,000, or, 50 percent more than the cost of the social-security program. What have been the effects upon the national economy? Here is a rough sketch:

EFFECTS OF EXEMPTING EXCESS PROFITS FROM TAXES AND THROWING SOCIAL-SECURITY COSTS ON EMPLOYMENT

1. It has given the social-security program an inadequate support.

2. It has stimulated excess profiteers to raise prices to the inflation danger point.

3. It has raised the cost of living to the highest point in American history—75 percent above prewar.

4. It has shifted the tax burden of social-security support from the backs of those best able to pay—the corporations which harvest excess profits—to the backs of those least able to pay—the low-income workers whose wages are withheld.

5. It has promoted strikes—that have been on the increase since excess-profits-tax repeal.

6. It gives the oldster a less dependable source of living than the Negro received in slavery days.

7. It gives the entire social-security program less than one-half the billions sent to help the needy of Europe 4 years after World War II is over.

8. It destroys security and leaves uncertainty.

This last point is illustrated by the report of the United States Labor Department, that unemployment has increased by 3,500,000 from December 15, 1948, to February 15, 1949, which means that employment taxes, upon which the social-security program depends for existence, is on the decline and is emphatically uncertain.

Grants to the States for social security are less than the grants to Europe under the Marshall plan, and not more than one-half the estimated $10,000,000,000 estimated for the annual support of the North Atlantic Pact.

WHY SHOULD NOT EXCESS PROFITS PAY?

There are profits on the ERP billions shipped to feed and clothe and raise the standard of European living—and the excess profiteers are those who skim the cream off the ERP exports.

There will be huge profits on the $10,000,000,000 yearly which we shall soon have to be sending to 11 foreign countries under the North Atlantic Pact.

Why should not the excess profiteers engaged in the ERP trade and in supporting the 11 foreign countries under the North Atlantic Pact pay their due share in the support of social security in the 48 States of America?

To reverse the case, what would you think of a plan to finance ERP by employment taxes? Who would applaud a plan to finance the North Atlantic Pact from receipts from withheld wages?

If excess profits contributed over $11,000,000,000 in 1945, as excess profits did, to wind up World War II, why should excess profiteers expect and claim tax exemption in the postwar period of World War II, when new profits are in sight?

Approximately one-fourth of the excess profits taxes paid in 1945 will meet the cost of the social-security program. The Secretary of the Treasury estimates that employment taxes for support of the social-security program will reach $2,600,000,000 in 1949. But, if unemployment grows at the rate of 3,500,000 in 60 days, as it did from December 15 to February 15, employment taxes will make a like percentage decline, and actual employment taxes in 1949 may not reach $2,500,000,000.

The time has arrived, therefore, when all good excess profiteers should come to the aid of social security for the needy and the unemployed. If for lack of social security, the army of the unemployed grows at the rate of 3,500,000 in 60 days, the time may come when the employed will not be able to pay $2,500,000,000 a year for social security, and, when excess profits will cease.

This Congress is faced with a demand for $5,500,000,000 for the support of ERP under the Marshall plan. During the past few days the North Atlantic Pact has brought before us the vision of coming appropriations which may double ERP expenditures. Who will be the beneficiaries among American taxpayers? Naturally, in the definition of the terms, the beneficiaries will be the excess profiteers.

In time of war, the beneficiaries of war paid the costs of war in the form of the excess profits taxes. They paid on the principle of ability to pay. The principle of ability to pay is the basis of American taxation, not only in wartime, but in postwar time—which is now.

Taxes for war and taxes for social security stand on the same American principle of taxation—ability to pay. If the employer and the wage-earner have the ability to pay, then chief of all and above all, the excess profiteer has the ability to pay—now in the face of a potential world war III, as formerly in World War II.

Security of the 12 nations under the Atlantic Pact hangs upon security of America. Security is the foundation of peace. Security is the foundation of profits. There can be no security if those best able to pay—the excess profiteers—are unwilling to pay their due share—on a parity with the wage-earners whose wages are withheld.

Federal Health Insurance

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include two excellent and enlightened editorials relating to the need for a Federal health program. These two editorials appeared in the January 20 and March 31, 1949, editions of the Grand Rapids Herald-Review at Grand Rapids, Minn., and I am sure that they reflect the viewpoint of a vast majority of the people of Minnesota on the health insurance issue:

A GREAT NEED FOR AMERICA

A Federal health program is just about as sure as anything governmental or political can be. Shortsighted public policy on the part of some people and by the doctors of the Nation can bring about a plan of so-called socialized medicine. But such a development is not necessary to achieve the real purposes of that which so many seek.

There are two general types of illness. One consists of common afflictions. They demand some attention by those afflicted and by doctors. The cost of such medical attention is not great and every family can meet that cost just as the public now pays for clothes, food, and fun.

The other kind of illness is tragic in its effect. This is serious illness, the kind that demands much time by the doctor, travel to distant points, extensive nursing care, long hospitalization, expensive treatments or surgery. Such sickness not only causes physical and mental suffering but it is followed by great economic distress.

It is not necessary to tell of the financial misfortunes of serious illness. When members of a family become sick, relief of illness becomes the paramount concern. Family savings of a lifetime will be sacrificed to help a child. Money set aside for education and opportunity will be used. Homes and property will be mortgaged. Often sickness attends the one who provides for the family. Very often it attacks the mother of children so that she cannot carry on her work. Many times the entire earnings of a family go, month after month and year after year, into futile efforts to contend with sickness for which those who suffer or spend are in no way responsible. The cost of serious illness drags prosperous families into uncertainty and distress and makes poverty all the more hopeless.

Certainly physicians understand this as well as anyone. Many good doctors devote a large part of their time and strength to those who cannot pay for their professional services. Yet the American Medical Association takes actions which are short-sighted, discreditable to a great profession and entirely inconsistent with the humanitarianism and sympathy for which doctors, as individuals, are noted.

The American Medical Association says that it is raising $3,500,000 to fight socialized medicine. Such announcements and undertakings are foolish and indiscreet. It puts the doctors on one side of a question, the public on the other side. It gives argument and inspiration to those who will oppose the association. It closes the door to compromise and constructive consideration of a sound method of dealing with a problem involving the welfare and security of millions of people.

The solution most needed is not socialized medicine as this is often described, as it now appears in England, or as is advocated by many in the United States. The first step is economic protection of every family against the devastating costs of serious illness. To bring that about, it is not necessary to control the medical profession. The need is for the public to underwrite the cost of illness, of which medical fees are but a part, that takes more than a certain reasonable amount in a year or which takes more than a safe percentage of the income of a family.

Such a plan will not control the doctor or the choice of a physician. In truth, such a plan will be of great economic help to so many doctors who now give so much of their time and effort to those who cannot pay for professional services.

Such a plan need not be charity by government. The cost should be underwritten by every person who works, through a reasonable deduction from his earnings. Employers may well pay a part, for relief of the great financial distress of illness will be helpful to every employer and to every business institution in America.

Some of the objectives of a health plan are now being met, in part, by insurance proposals. These undertakings have shown the way but have also demonstrated weaknesses. No private plan will ever go far enough to really do this task. No plan that is voluntary or optional will ever give protection to all of those who most need it. There is a place for a great, universally applied and publicly financed health program in America and it can be attained, under sympathetic and sound leadership, without destruction of the medical profession and with immeasurable good to every family and every person in this great land.

A GREAT OPPORTUNITY

This newspaper believes that doctors, individually and professionally, are among the best people on earth.

Collectively they seem to be on the wrong track. That is due to an obviously incompetent management of the American Medical Association and its professional publicists and policy makers regarding their approach to the public health program.

There is no need to destroy the practice of medicine.

There is a problem of medical care and expense. This problem is not, primarily, that of paying doctors to take care of trivial and unimportant illnesses.

The need is to protect the public and every citizen against the great hazards of long continued, severe, and costly sickness.

There are comparatively few families who can meet the cost of long sickness, surgery, hospital and nursing care, disability, and loss of time without economic collapse.

When this kind of a threat appears the public should step in and pay the cost of severe illness from the funds which the public has paid for such a purpose. Every person, from his first working days, should contribute to such a plan of protection. Every person, irrespective of his means, should participate in the benefits of the plan.

Such a plan means no disturbance of the present practice of physicians. It means no change in medical practice except that the doctor will be sure of pay for the service he renders.

Private insurance plans are projected. They are useful but inadequate. We have a great life insurance business in America. Nearly everyone has life insurance except those who need it the most. Any health insurance plan must protect every person in America.

The American Medical Association has an opportunity to render great service to its members and to the public. It should take up the torch and run with it.

West's Blunders Aid Kremlin on Spain

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include

an article by William Philip Simms, Scripps-Howard foreign editor, which appeared in the New York World-Telegram of April 25, 1949. No one questions the penetrating insight and clear understanding which Mr. Simms possesses of our relations with other countries because they are based upon long experience, wide travel, and thorough study. His editorial follows:

WEST'S BLUNDERS AID KREMLIN ON SPAIN

(By William Philip Simms)

WASHINGTON, April 25.—There is reason to believe the United States and other Atlantic Pact powers soon will resume freedom of action with regard to Spain, certainly this year.

This would put an end to a paradoxical and one of the most hypocritical situations in present-day international relations.

Russia regards Spain as one of the three strategically most important countries in western Europe. The other two are France and Italy. Should any one of them go Communist, the other two wouldn't have a chance.

That is why Russia tried so desperately to take over Spain back in the 1930's. The Spanish Civil War did not result from Gen. Francisco Franco's intervention against the republic which ran things after the downfall of King Alfonso. That republic already had been liquidated. What General Franco did was to intervene against the Red regime which Moscow had caused to be set up in Madrid.

General Franco did accept aid from Hitler and Mussolini. And their aid undoubtedly helped him defeat the Reds. But history reveals he gave them nothing in return, despite Axis pressure during World War II.

At San Francisco Russia led the fight to keep Spain out of the United Nations. The Soviets started off with a blunder that set UN circles chuckling. They said any nation which had collaborated with Hitler should be barred from UN membership.

And that would have barred Russia herself. She was Hitler's most notorious, powerful collaborator up to June 1941. It was Stalin and Molotov who made the deal with Hitler and Ribbentrop to wipe Poland from the map and split her territory between them, 50–50.

Quickly, however, Russia saw her error at San Francisco and changed the formula. As amended, it read that any nation helped to power by Hitler would be barred from the UN.

Even this formula, strictly applied, would have barred Russia. For while Hitlerite Germany did not help to set up the Soviet regime, Kaiser Wilhelm II's Germany most certainly did. It was that Germany which transported Lenin in a sealed train across Germany to Russia for the purpose of planting him in power there.

At Lake Success, Russia and her satellites are still doing their utmost to make trouble for Spain. They seek Spain's economic collapse in the belief that political chaos would follow, thus giving communism another chance.

Refusal of the western powers to maintain normal diplomatic relations with Madrid operates as a serious handicap to Spanish recovery.

Incredible as it may seem, therefore, the United States and other western nations are playing into the hands of Moscow.

Feverishly, clear around the globe, Russia and her fifth columns are seeking to overthrow freedom-loving countries. And Spain is a vital part of the west's defense.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. BARING. Mr. Speaker, we have all heard it frequently stated in recent months that if it were not for the leaders in organized labor that the rank and file labor man would readily accept the Taft-Hartley Act. This thing of telling men who do their own thinking that they do not know what is best for them, and that only Mr. TAFT and Mr. Hartley and their friends know all there is to be known in regard to labor relations constitutes one of the grossest affronts to human intelligence we have witnessed in modern times.

All of us learned at an early age that black is not white and from that time forward our God-given intellect is what we have to guide us, and collectively we do a much better job of thinking. The industrial barons and their cronies demand that their brand of righteousness be legislated for those they say do not know what is good for them. And as a further disruptive factor in this entire smear of antilabor technique, the men of labor are being advised to ignore what their own leaders say on the ground that these leaders are misleading them and giving them unsound advice.

Taft-Hartley advocates argue that if labor appreciated the finer things in life and used the tarnished golden rule of Mr. TAFT and Mr. Hartley we could all be happy.

But let us examine this claim that labor does not know what is good for itself.

I cannot believe that any man, be he employee or employer, can convince himself that the Wagner Act was ever anything except good for him. No one can convince me that placing all parties at the bargaining table on the same level is not good for the workingman and his family and all the members of today's complex society. Yet that is what the Wagner Act did, and it is the Wagner Act that we now seek to reinstate instead of continuing to carry on the lawbooks the Taft-Hartley Act.

What the perpetrators of the Taft-Hartley Act really mean is that if the laboring man would close his eyes and stop up his ears and follow those who are not his leaders, that there would be less understanding of what the Taft-Hartley atrocity does to him. His leaders have told him that this new law that was to bring about great labor-management reforms resulted in more strikes, involving as many as 10,000 more in 1948 than in 1947.

Is a law that encourages or precipitates such strikes beneficial to a man who knows what is good for him when he has been told there will be fewer strikes?

Does a man who has been assured by the National Association of Manufacturers that a labor contract is more apt to be lived up to not know what is good for him when he can see for himself that this is not true? Does not the labor man already know that damage suits filed in Federal courts, already overloaded with docketed cases, are designed to sap the finances of his union and to destroy his own effectiveness individually and collectively? And that the direct result of this situation is that peaceful collective bargaining thus will be destroyed? Further, that settlement of disputes can and will be delayed indefinitely?

I am convinced that responsible labor and responsible management procedures in establishing constructive relations now are being disrupted by the Taft-Hartley Act, on which I am prepared to go all the way to repeal. I know of no law that has injured the dignity of man quite as much as this law.

The right to strike is inherent from the Constitution. Yet the Taft-Hartley Act would supply the beginning of the end of the right to strike, if only you will read the declaration of policy introducing the law as explaining its true purpose.

Today, under this law, employees run the outright risk of losing the protective rights under NLRB if they indulge in almost any kind of strike, not alone those strikes outlawed by the act. You and I know that when the courts get through interpreting and inserting their own mental marginal notes in the Taft-Hartley Act that the laboring man, if he does not already know what is good for him is going to learn suddenly some day what is not good for him. This is but a part of the contribution the Taft-Hartley Act is not making to industrial peace.

What about this cooling-off period of 60 days the Taft-Hartley Act provides, and which, according to the NAM, protects him from being kicked out of work through a sudden cessation of employment? Has not the rank-and-file laboring man learned by now that the longer the period between the time a decision is made to strike and the time the strike actually becomes operative is working to his distinct disadvantage?

Does not the workingman know that the sooner the strike starts, the sooner it is settled and that the employer is entrenched behind his surpluses, both of finances and materials, and that he can farm out work during the cooling-off period and have the product back in his plant and delivered before the strike can begin? Is that good for the workingman? And did not the labor leader tell him about that and did not the leader tell him the truth?

And what about that anti-Communist affidavit? Is this any protection for labor? Labor has done a splendid job of protecting itself in this regard. Every day for many months, every time we picked up newspapers, unions were conducting house cleanings in every direction. During the war some Commies got footholds and the Communists were then our allies, or so we were assured. The anti-Communist affidavit has been much more of an insult to laboring men than it

will ever be as a safeguard. Labor knows how to deal with subversives and does it, and no legislative enactment will change it.

What is all this talk about knowing what is good for us? I trust, Mr. Speaker, that you have kept abreast of the news on what the Taft-Hartley Act has done to one of the finest craft unions in the world, the International Typographical Union. The law has been well used by the general counsel of the NLRB to keep this union in the courts continually at a cost of more than $11,000,000 to date. And the cosponsor of the Taft-Hartley Act who says he believes in equalizing the fight actually puts pressure on the general counsel to go out and do bigger things against this union. Who will daresay the members of this union have not already learned what is not good for them?

Mr. Speaker, I see that my time has expired on this debate, but I am prepared to continue this discussion as to whether the union man knows what is good for him or not. Do not sell the workingman short. He does an amazing amount of thinking for himself and his leaders help point the way to sounder thinking.

Remember November

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks, I include the full text of the American Federation of Labor declaration calling for repeal of the Taft-Hartley law which was adopted unanimously last November by the sixty-seventh convention of the AFL and reprinted in the AFL weekly news service Tuesday, November 23, 1948:

CINCINNATI.—The American people have spoken. The mandate of a free people, in a free election, has been recorded. The verdict of the ballot box is clear, concise, and convincing.

The major issue of the 1948 presidential campaign was the repeal of the Taft-Hartley Act. It was submitted to the electorate in one of the greatest series of debates in American political history. What is most significant is that these history-making debates were carried on, not only in the campaign tours of the presidential aspirants, but in every State and city of our land by thousands of speakers. Many of these were candidates for public office, and countless others, including trade-union representatives, sought no office but realized what was at stake, and were determined to keep this issue close to the grass roots of our Republic.

The Taft-Hartley Act amended the Clayton amendments to the antitrust law, in a manner which eliminated the labor rights which had been established.

The Taft-Hartley Act amended the Norris-LaGuardia Anti-injunction Act by making it mandatory that the Board, control of the NLRB, in certain cases, go to the Federal court to secure injunctions against labor. It also provided that in other types of cases, the Board could use discretionary authority in applying for injunctions.

Before the enactment of the Norris-LaGuardia Act, employers seeking injunctions in connection with labor disputes, employed their own attorneys. Under the Taft-Hartley Act the Federal Government, the taxpayers, met the cost.

The Taft-Hartley Act contains many provisions making collective bargaining more difficult. It made it impossible for trade-unions to secure union-shop provisions in a collective-bargaining agreement, until an election of the employees had been held.

The Taft-Hartley Act places exclusive authority in the chief counsel of the NLRB, in the determination of all that should be done in a large majority of labor cases.

The Taft-Hartley Act was so drawn that many chains were forged which would not be used, except by a national administration determined to shackle labor hand and foot, or when an industrial collapse threw hundreds of thousands out of employment.

There was in the act definite unfriendliness to organized labor. It was injurious to public welfare. It was injurious to employers who believed in maintaining contractual relations with their employees through collective bargaining.

It did not give prime consideration to public welfare. It did not safeguard labor's rights. The act was a definite piece of class legislation, and for that reason it was intolerable to fair-thinking men, whether in industry or labor. Its operation was rigidly driving a wedge between fair-minded and thoughtful employers and their organized employees.

This issue on the repeal of the Taft-Hartley Act having been taken to the people for their decision, and having been decided in the affirmative, places the question squarely upon the elected representatives of the Congress of the United States. Will they now carry out the will of the majority of the people as expressed at the polls?

While 9 Senators and 57 Representatives—Republicans and Democrats alike—who voted for the act were defeated for reelection, not a single Member of Congress who voted to sustain the Presidential veto of the act failed to be reelected.

The action of the voters made it clear that they were convinced that the act was conceived in a narrow spirit of retaliation, and passed in a mood of defiance. It must not remain on the statute books to provide disturbance for open-handed and well-considered effort of reasonable men within the labor movement to provide for cooperation with management and establish a more orderly basis for industrial relations in our country.

In the British House of Commons, often described as the Mother of Parliaments, when a government or an administration is defeated in a majority vote of confidence, it resigns and a new government is formed.

American politics provide for no such prompt retirement of a government defeated at the polls, but the spirit of true parliamentary government should prevail in our land.

Members of Congress who voted for the act, and voted to override the Presidential veto, would do well to consider the temper of the times, and the clear mandate of the people in November 1948. In true American spirit these Congressmen and Senators should now accept the will of the majority by repealing the obnoxious Taft-Hartley Act, and reestablishing the Wagner Act with such further congressional actions as is necessary to completely restore the labor guarantee of the Clayton amendments to the Antitrust Act, and all of the provisions of the original Norris-LaGuardia Anti-injunction Act.

There must, however, be no hiatus between the repeal of the Taft-Hartley Act and the reenactment of the Wagner Act. The public welfare, as well as that of management and labor, is paramount. The economic health, safety, and welfare of the Nation must not again be placed in jeopardy by the irresponsible action of anyone.

Your committee believes that this is not the time for recrimination, political or otherwise. The critical conditions in the world require that we be united as a people, and increase our strength as a Nation. We need to close our ranks, to build for a better future upon the basis of cooperation. Between management and labor there must be mutual respect and acceptance of both of their responsibilities to the public.

While we are unyielding in our fixed determination to secure the repeal of the Taft-Hartley Act, and the full restoration of the Wagner Labor Relations Act, and the other act hereinbefore referred to, as American citizens we are as deeply conscious of our responsibility to the general public as we are to our membership. After the Wagner Labor Relations Act is restored we will be ready to consider any amendments that may be desirable to improve this act and to strengthen collective-bargaining procedures.

We realize that any activity on the part of management, or on the part of labor, which fails to secure a generous measure of public approval and support, will be used as a reason for the enactment of repressive Federal and State legislation. In taking this position we are conscious of the fact that for every right we enjoy, there exists a corresponding responsibility, and it is with this consciousness that we prepare ourselves for the repeal of the most obnoxious and unsound labor measure which has ever been enacted by Congress.

Minority Rights

EXTENSION OF REMARKS
OF
HON. TOM PICKETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. PICKETT. Mr. Speaker, my home town is not large in population nor is its newspaper large in circulation, as we ordinarily speak of such things. However, both the people and the newspaper possess ample capacity for straight thinking and expression on issues confronting the Nation. The attached editorial comment gives much food for thought, is well worthy of the time required to read it, and a few minutes' reflection on its import. It appeared in the Palestine (Tex.) Herald and Press on Wednesday afternoon, April 6:

MINORITY RIGHTS

Why is it that so many Americans fail to see the dangers of taking away the rights of minorities? Why is it that a desire for an immediate benefit often obscures the menaces now being thrown at democracy itself?

Take the case of President Truman's socialized-medicine program. He is insistent that Congress pass it, and his lieutenant, Oscar M. Ewing, Chief of the Federal Security Agency, is waging a high-pressure campaign to sell people throughout the country on the idea.

The argument advanced by Ewing is that there are only 180,000 doctors in the country, to serve all of the country's 150,000,000 or so people. Everybody needs medical attention,

says Ewing. So the Government should underwrite all medical care for all people.

That sounds good to a lot of people. Medical attention free (but don't forget that you'd pay for it in taxes) has the same appeal as winning on a sweepstakes ticket. But the doctors don't want to be socialized. They don't want to be regulated through a Government bureau. And they argue truthfully that socialization of any group opens the door toward socialization of all groups.

The fact of that argument is pretty well substantiated by President Truman's call for Government-owned steel plants, first step in nationalization of that industry.

The prospect of such steps doesn't scare a lot of people. So what, they ask. What does it matter if we take away the rights of 180,000 doctors or a few steel makers to better the lot of millions.

Well, here's what it means.

The same attitude of taking from the few to help the many can be applied to every trade.

There are only a comparatively few automobile workers; so they could be socialized to benefit the many. Then you would then buy a Government-designed and regulated automobile.

There are only a few—compared to the national population—railroad workers. So it would be logical to socialize them, too. Then you could buy your railroad ticket from a bored and discourteous civil-service worker.

There are only a few newspapers and radio stations. Why not socialize them for the benefit of the many? Then you would get your news filtered through Government bureaus that undoubtedly would eventually eliminate all the news except what the bureaucrats might want you to read.

The dairymen are a minority. Everybody needs milk. So it would follow that dairies should be socialized for the service of the majority, and your child's milk supply could be regulated, or denied, by a bureau.

The thing goes on and on. There is no limit to socialism, once the trend gets under way; for all of us, when you come down to it, are members of minorities in one way or another.

The above looks silly printed on paper, doesn't it? It is silly, but socialism itself is silly. So is totalitarianism. So is communism. But put this in your hat: All those systems of government are kin to each other. All of them call for direction of the people by the Government, and not direction of the Government by the people.

When people direct the Government they are free. When the Government directs the people there is no freedom.

The greatest test of American democracy lies in the hard-headed determination of the people to resist Government encroachment on the rights and the freedoms of the people—all people, all minorities, and all groups.

The test is before us in the plan for socialized medicine. Let us hope that Congress, acting on the sentiments of the majority of the American people, kicks that plan into the gutter where it belongs.

Progress of European Recovery

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Progress of European Recovery, delivered by Secretary Snyder, before the Federal Reserve Bank Conference of Ninth District Bankers, at the Hotel Nicollet, Minneapolis, Minn., April 23, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROGRESS OF EUROPEAN RECOVERY

The progress of economic recovery in Europe is a matter of vital importance to you officers and representatives of the Federal Reserve banks and to the business community as a whole. In dealing with this question today I do not propose to discuss the techniques of procurement and the banking operations with which you are familiar. I propose instead to look at the subject from the broad viewpoint of what has so far been accomplished and what we can expect in the course of the next 2 years.

The American aim is to assist in bringing about that degree of economic and financial stability in Europe which will make possible a return to normal international financial relations in which chief reliance for capital investment will be placed on the private market.

Thus far progress toward economic recovery in Europe has been encouraging. When the program started in 1948 production in Europe was still behind prewar levels. The financial situation was, to say the least, disquieting. Many of the European countries were suffering from grave inflation, and there appeared to be little immediate prospect of arresting it. Fiscal problems were serious and makeshift solutions only added to the existing disorder.

Of equally grave import, the political situation was far from favorable. Communists sought to interrupt production in order to spread distress and chaos in Europe.

Today the threat of Communist sabotage to the recovery program is being met with the force of democratic power and determination.

Our combined efforts toward economic recovery and political peace have been intensified. Threats still exist, as you well know, but this last year gives us a basis for greater confidence in the future of western Europe.

A notable increase in western European production occurred during 1948, with total output of factories and mines 14 percent above the 1947 level and nearly equal to that of 1938. Favorable weather conditions helped to raise crop production considerably above 1947, although it was still below prewar levels. Output per worker increased as a result of larger supplies of fuel and raw materials, job-training programs, and more food for workers, but it had not yet returned to prewar levels in many industries.

Marked improvement also occurred in western Europe's balance of trade with the outside world. Whereas in 1947, less than 40 percent of the participating countries' imports were paid for from the proceeds of exports, this ratio will probably exceed 50 percent during the fiscal year 1948–49.

In the field of internal finance, the situation has also improved measurably. There has been a healthy movement toward sounder fiscal policy. In many countries resolute efforts are being made toward balanced budgets. Of course, in some countries, much greater efforts must still be made. To finance governments by noninflationary means has necessitated increasing the tax burden and, as far as possible, required the deferment of expenditures for objectives which could be postponed. And we all know how extremely difficult it is to cut expenditures where there are insistent demands upon government to repair the damages caused by war. In large part this work of immediate reconstruction has been completed. The tasks ahead remain formidable, and there are some questionable spots in the present economic picture, but on the whole, the European countries have faced the situation with courage.

With few exceptions, the rapid rise of prices has stopped. In the case of Italy and France, restrictions were imposed on the extension of credit by the commercial banks. Cutting down the volume of currency and rationing of bank credit were two methods of attacking inflation. The object was to reduce excessive demand for commodities by the use of financial restrictions while at the same time increasing those commodities in short supply. A relative stabilization of prices is making possible greater stability in all areas of the economy. With the European price spiral largely arrested and a measure of budgetary stability in prospect, the internal financial situation can form the basis of a sound international economy.

The European recovery program was not intended as a relief program, though we had to provide the foodstuffs and raw materials needed to tide the population over the postwar shortages resulting from the exhaustion of stocks, crop failures, and the decline in international trade. The program is based on the belief that with assistance from this country, Europe will be able to stand on its own feet by 1952, provided that the European countries individually and collectively take the appropriate steps to cope with the problem of their Western Hemisphere deficit. Some of these steps are financial, some of them may involve a considerable reorientation of production and trade.

The period following the Second World War has greatly aggravated the dollar-deficit problem of the Western Hemisphere countries which existed as a very real problem in the interwar period. European countries have traditionally bought more from the United States and other Western Hemisphere countries than they sold here. They made up the difference by their income from investments, by earning dollars for shipping services, and by earning dollars through triangular trade with areas that had a dollar surplus on current account. American tourists in Europe also provided an important net source of dollars.

The war has changed this situation. Income from investments has been greatly reduced since the European countries have liquidated a considerable part of their long-term dollar assets. A large part of their shipping was destroyed. They have not been able to obtain as much from triangular trade as they did formerly. To this extent they may have to reorient their trade so as to sell more goods directly to Western Hemisphere countries. The United States provides the largest potential single market for many types of goods which Europe can produce.

Of course, a nation's pattern of production and export cannot be changed over night. Plants may have to be constructed or modified as to product, location, and other factors. Workers may need to be trained and perhaps relocated. The necessary mechanics of trade, banking, and finance incident to an expansion of exports must be devised to accompany increased sales effort. It is clear that Europe will have to increase further its exports if it is to maintain desirable levels of production and standards of living without dependence upon special aid from the outside.

A stable world in which the free-enterprise system can operate successfully requires balance in international payments. This does not mean that exports must equal imports exactly because, as I have just mentioned, there are many other factors entering into the balance of payments, such as shipping services, tourist expenditures, and most important, capital movements. The importance of these other factors varies from country to country. An increase in American

tourists going abroad will help the situation, particularly for countries like the United Kingdom, Italy, and France. Improvement in the shipping situation will be important for Norway, the United Kingdom, and other nations with large merchant fleets.

For most countries, the basic problem is the matter of exports. It cannot be overemphasized. America has in the past imported thousands of specialized European products—manufactures of steel, textiles, machinery, and equipment of various sorts. We have imported French perfumes and French wines; Italian silks and olive oil; and luxuries and specialties of many types. To some extent the European countries will be able to balance their accounts with the United States by increasing their exports to us of the type of goods which we have generally imported. They must also find markets in this country for many additional products.

Few of the European countries can supply the basic raw materials which we need, but they do have an opportunity to provide us with many types of specialized finished goods, which they can produce more cheaply than we can because of their relatively lower rates of wages. So too, we, on the other hand, can produce more cheaply many commodities which require a great deal of capital, raw materials or the special types of managerial and technical skill which we have.

A second way in which the European countries can balance their payments is by an increase in American capital investment abroad. At the present time, however, American capital is reluctant to go abroad—not only to Europe but to most other countries. The reasons behind this reluctance are evident.

To the extent, however, that the European recovery program is successful, the special risks involved in European investment will be reduced.

While a return to normal reliance on private capital investments abroad is essential, we must stress the importance of balanced international trade. This means, as I have said earlier, that we in this country must try to take more imports from the European countries. In part this is our problem.

Our program of reducing trade barriers and trying to assure equitable treatment of foreign trade through the International Trade Organization and our agreements on tariffs and trade are part of our contribution to the solution of the problem. On their part, the Europeans must make greater effort to produce goods and offer to sell them in Western Hemisphere markets at competitive prices. In some cases this may require an adjustment of their exchange rates.

In the course of the last year, I have appeared several times before congressional committees to discuss this problem. I would like to restate what I have told the Senate and House committees on different occasions. An adjustment of exchange rates in each instance is a matter requiring a difficult decision. For example, it may bring about repercussions on the internal economy of the country making the change. It is also very difficult to determine what is the proper exchange rate—that is, to calculate what the effects of a given exchange adjustment might be. But the fact remains that if the European countries are to balance their payments with the United States and other Western Hemisphere countries, some of them may have to adjust their exchange rates before 1952.

The exchange rates prevailing today were, for the most part, adopted during and after the war, and were accepted by the International Monetary Fund in 1946. Since these rates were adopted there hav been important changes in the world situation and in the economic life of almost all of the countries in the European recovery program. The progress in production and shifts in price levels which have occurred over the last 3 years would indicate that the European payments position should be studied and that this study should include careful consideration of the relationship between existing exchange rates and the progress which must still be made in arriving at international balance.

As we look back over the last year, we can see that progress has been made. Excepting Germany, practically all of the European countries participating in the program have exceeded their 1938 production levels. The prospect of widespread starvation no longer exists. In most countries there is a high level of employment. Consumption standards are still below prewar, but we may expect that by 1952, with favorable conditions, the desired levels will be reached. The problem still is one of inability, under existing conditions, for the European countries to earn enough dollars to pay for their imports from this country and the rest of the Western Hemisphere.

This is the problem on which we must concentrate for the next 2 years. We are hopeful that the proper solutions can be found. It will take effort on their part as well as on ours. When this problem approaches a solution, there will be greater assurance of political and economic stability abroad which is, of course, our objective.

It is our expectation that barring some great international catastrophe, reasonable stability will be attained in Europe by 1952. From then on, we can deal with international economic problems in terms of the more normal patterns of price, trade, and private investment by which our own country has reached its present economic levels.

As you know, the ECA program was long and earnestly considered, both in congressional committee and by the Congress as a whole. You will recall that although debate on the bill was protracted, there was at no time any major disagreement with respect to the merits of the program. Numerous amendments were offered, some of which were accepted, but for the most part those amendments were concerned with details of the program and methods of administering it. The bipartisan nature of the support which the program received is ample testimony of this country's united determination to make every effort toward world economic stability.

Housing Legislation

EXTENSION OF REMARKS

OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the executive council of the American Federation of Labor:

AMERICAN FEDERATION OF LABOR, EXECUTIVE COUNCIL, STATEMENT ON HOUSING LEGISLATION, JANUARY 31, 1949

HOUSING NEEDS

We are alarmed by the acute housing shortage which still confronts the Nation almost 4 years after the war. It is estimated that there is a current deficiency of 10,000,000 homes, and that 5,000,000 additional homes must be built within the next 10 years if the housing needs of the American people are to be adequately met. We should now be building at least 1,500,000 homes annually, but last year private builders constructed only 925,000 dwellings, most of them at prices which workers could not afford.

Indeed, the generally accepted figure of 15,000,000 homes needed during the next 10 years, since it is based on the Housing Census of 1940, may even be an underestimation of the Nation's housing requirements. In view of the large redistribution of population during the war and postwar years, it is quite possible that in terms of the area-by-area need the 15,000,000 figure is too low.

The lack of accurate, up-to-date data indicated by this uncertainty emphasizes the need for a housing census in 1950. We therefore strongly urge Congress to enact as speedily as possible legislation authorizing the Bureau of the Census to take a comprehensive housing census along with the decennial population census in 1950.

NEW HOUSING LEGISLATION

Ever since the war the American Federation of Labor has been in the forefront of the fight for the Taft-Ellender-Wagner housing bill. However, because this bill never did represent more than a compromise, and because of the long delay in its enactment and the consequent worsening of the housing crisis, it can no longer be considered adequate to meet the existing housing shortage.

We are proud that the American Federation of Labor at its recent convention went on record as the first major organization calling for the erection of a minimum of 1,000,000 units of public low-rent housing, the program which was subsequently incorporated in the President's state of the Union message.

The President's housing program has now been given concrete expression in S. 138. This bill covers such subjects as public housing, slum clearance and urban redevelopment, farm housing, and housing research not included in the very inadequate Housing Act of 1948 of the Eightieth Congress.

We approve particularly the public housing provision of this bill, which calls for the construction of 1,000,000 low-rent units during the next 7 years at the rate of 150,000 a year. In addition, the President has the authority to increase this number by 100,000 in any one year if he determines that this is in the public interest. By using this power of acceleration to the maximum, this country can reach what we consider to be the desirable goal of 1,000,000 units in 4 years.

Although we feel that the bill in many respects is an improvement over the Taft-Ellender-Wagner bill, we cannot accept it as the solution to our housing problem because it contains no provisions for middle-income families or for agricultural workers and their families.

About 37 percent of American families are in the so-called middle-income group whose annual income is between $2,000 and $4,000. The housing needs of this group, which is ineligible for public housing, have been utterly neglected by private builders, and can only be met by large-scale construction of cooperative and rental housing within the means of these families.

In order to foster large-scale construction of decent homes for middle-income families, savings must be sought in carrying charges, profits, and other costs rather than by reduction of space and lowering of construction standards. Therefore, the American Federation of Labor recommends authorization for direct Federal loans for large-scale rental and cooperative housing. The loans should be made for an amortization period covering the useful life of the dwelling at the going Federal interest rate; they should be made available to public agencies, cooperatives, nonprofit and limited dividend corporations, and private builders who can

conform to the rent schedules which should be established under this program. Of the six housing bills now under consideration in Congress, only the bill introduced by Congressman JAVITS contains this feature. Unfortunately, the size of the program authorized by this bill is entirely inadequate.

We estimate that this type of program would make possible decent housing for middle-income families for which monthly payments would be in the neighborhood of $50 to $60. Because of the reduced financing and other costs, such dwellings would be, on the average, the equivalent of an $8,500 dwelling unit.

We cannot accept as a substitute for this legislation the so-called economy-house drive which has recently been launched by the real-estate interests and by the Housing and Home Finance Agency of the Federal Government. The elaborate plans for this drive which have been made public cannot conceal the fact that the economy house represents simply an attempt to force middle-income families to accept standards below the level of decent housing. Cost reductions are achieved mainly by such drastic cutting down of living space that the houses are completely inadequate for ordinary family living. If these economy houses should be built in any appreciable numbers, they may well become the slums of tomorrow.

Construction of substandard economy houses is no substitute for a genuine middle-income housing program, but neither is tinkering with the existing program of mortgage insurance under the Federal Housing Administration. Simply increasing the limits on the cost of houses insured under the FHA program and permitting lending institutions to sell a larger percentage of mortgages to the Federal National Mortgage Association will not solve the fundamental problem of reducing financing charges and profits so that the rents of monthly payments of middle-income families wil be at a level they can afford. What is needed is a separate constituent division set up within the Housing and Home Finance Agency specifically charged with the responsibility of making direct loans and providing technical assistance for cooperative and other types of nonprofit and limited-dividend housing for middle-income families.

As now written, proposed housing legislation also neglects the needs of agricultural workers. The provisions of S. 138 relating to farm housing would aid only farm operators, but would do nothing for the long-neglected agricultural workers. We urge legislation providing for the construction of housing of permanent and mobile types for stationary and migrant agricultural workers. The responsibility for the housing program for farm labor must be placed in the Department of Labor.

The Record of the Republican Party

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Lest We Forget, Let's Look at the Record," written by former Senator Raymond E. Willis, of Indiana, and published in the Steuben Republican, of Angola, Ind.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEST WE FORGET, LET'S LOOK AT THE RECORD
(By Raymond E. Willis)

In these days when the tide of the Republican Party is at low ebb and elective influence in our country is in the hands of a generation which "knew not Joseph" one has a right, if not the duty, to look at the record and judge whether the scandalous, vituperative and vicious charges hurled at the party during the past 18 years can be sustained.

The Republican Party has been variously charged with being a conservative party, a stand-pat reactionary party, the protagonists of princes of privilege, and has been labeled with names that could be fittingly applied to a Benedict Arnold in public life or to a Jesse James in private piracy. Honest Democrats will excuse themselves by saying that everything is fair in war and politics, and "anyways it worked."

In this present day of social and political confusion, the word "conservative" as applied to a party is a quality that sounds desirable. The word "reactionary," like isolationism, is not so good, but its opposite, "liberal," is fast losing favor. Probably "progressive" better represents ahe qualification people are thinking about today.

In spite of the evil charges laid against it, the Republican Party down through the years has a clear record of being a conservative and progressive party. On the other hand, the catchy philosophy of New Dealism has led the country off to the left into the morass of state socialism. Now, greased with Fair Dealism, sober-minded people are fearful for the survival of the American way.

The Republican Party was returned to power in 1921, when the people were tired of Wilson's "New Freedom" and internationalism. It is unfortunate that President Harding's reputation for liberalism is applied more frequently to his personal life than to his public career. Let us look at the record of accomplishment:

Treaty of peace was made with Germany.

Washington naval disarmament conference reduced the heavy burden of battleships and escorts.

Five-power compact established 5–5–3 ration of warships for Great Britain, United States, and Japan and fixed naval-base rights in the Pacific.

Recognition of Russia was denied because of its murderous and barbaric government.

The Federal budget system was established through which the war debt was reduced from 25½ billion to 15 billion in 10 years.

Established War Finance Board to aid in export of farm products.

Advocated a Department of Public Welfare with Cabinet member (now revived as a Truman discovery).

Passed a tariff law to protect American products, giving to Tariff Commission the right to adjust rates within a 50-percent limit to protect the differences in cost of living here and abroad. (This idea was later expanded by New Deal into Hull trade treaties and is now used for political purposes to support governments practicing socialistic schemes.)

Other progressive policies originated and prosecuted during the Republican era of Harding-Coolidge-Hoover, include:

Kellogg-Briand Pact negotiated and signed by all major powers, outlawing war and agreeing to settle disputes through peaceful negotiations. (As effective an international agreement for peace as can be devised if adhered to.)

Held three successful Pan-American conferences greatly strengthening our economic and political relations with our South American neighbors.

Refunded war debts to a level which nations could pay and progress.

Gave to Secretary of Agriculture power to supervise packing houses, livestock yards and boards of trade.

Established Farm Board which spent $500,000,000 in buying up surplus farm products.

Increased loan limits of Federal land banks.

Authorized financial aid to the establishment of farm cooperatives.

Established Farm Marketing Act.

Established Federal Power Commission to regulate Government-owned power resources.

Originated and began constructions of Hoover Dam and Tennessee Valley dams.

Established Reconstruction Finance Corporation to save banks and business.

Established home-loan banks.

Established Emergency Relief Act to loan money to States for public-works projects.

Fostered beginning of rural electrification by loans from Government agencies to projects in Minnesota and other Western States.

Initiated laws for Federal insurance of bank deposits.

All of these progressive measures were instituted with conservative consideration for the future welfare of the country, in striking contrast to the reckless policies and expenditures of the New Deal socialism which has brought this Nation to the verge of bankruptcy. It pays to look at the record.

Navajo and Hopi Indians

EXTENSION OF REMARKS
OF
HON. HAROLD A. PATTEN
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. PATTEN. Mr. Speaker, under leave to extend my remarks, I wish to have inserted in the Appendix of the RECORD an editorial published in the New York Times under date of April 21, 1949, pertaining to the Navajo and Hopi Indians.

Hearings on the long-range Navajo-Hopi bill have brought to light the great needs existing among these people and the importance of immediate action to correct the situation.

The editorial follows:

NAVAJO AND HOPI

It is encouraging that the program of aid so badly needed by the Navajo and Hopi Indians is regarded by the Department of the Interior as a continuing task. These dwellers in the great Southwest have had small attention from the Great White Father in Washington. The Navajo Reservation of some 9,500,000 acres is huge in extent but meager in resources. Chiefly a desert, at a general elevation of about 6,000 feet, it affords magnificent spectacles to the traveler, but only the hardest-won subsistence to its dwellers. Both the Navajo and the Hopi, although they battled stubbornly against the encroachment of the white man in the middle of the last century, have long been his peaceful neighbors.

Experts in the region and friends of its inhabitants in the Interior Department have now informed Congress that the $90,000,000 rehabilitation program is planned on a 10-year schedule and is many-sided in its aim. It will include more and better schools, the development of the natural resources

in the reservation, extension of irrigated farming, and encouragement of small-business enterprises for the Indians. One of the Navajos, chairman of the tribal council, describes their principal lacks as those of water, roads, schools, and communication facilities. He declared before a House committee that the Indians ask only for a chance to help themselves. Surely this chance should come in full measure to the dwellers on the mesas and in the lonely hogans where the arts of weaving, basketry, and silvercraft still retain high standards. After the destructive blizzards of last winter, the need for immediate help is urgent. We have a compelling obligation to aid these fellow Americans.

Address by William H. Hastie to Americans for Democratic Action

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by William H. Hastie delivered at the banquet of the National Convention of Americans for Democratic Action, in Chicago, Ill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The objectives of ADA, even as the name, are in the oldest and best tradition of American Government and politics.

The architects of our National Constitution had such faith in two basic beliefs that they erected an entire structure of representative government upon them. They believed that the great body of the American people would participate actively in the selection of their representatives, chosen to make the laws and to administer them. Men who had just fought and suffered in a long difficult war to win the right of self-government had an understandable faith that all of the people would treasure and exercise their rights as electors under the new Constitution. They also believed that the consensus of the community on issues and men would in most cases be wise.

This magnificent faith in democratic action gave us our political institutions. But we are told, on very good authority, that faith without works availeth not. Certainly the vindication of the faith of the founders in their American plan of government requires work without ending. Good government under the best institutions is neither accidental nor automatic.

In our large country the interest of millions of people in representative government must be aroused and stimulated. Millions must be brought to understand the choices to be made and they must be given a free and fair chance to cast an effective ballot. If any are discouraged by the vastness and complexity of these tasks, let them remember November last. I suppose there are none, 5 months after November, who, at the other extreme, are unduly sanguine about the job of making our political institutions work effectively, and it is perhaps as well that after the dejection of last summer and the jubilation of the fall, events of the winter have brought us back to sober consideration of the functioning of our political institutions.

Much of the attention of this convention has been focused upon the Congress, and rightly so. No other institution of our National Government so constantly reflects, for better or worse, the working of the plan of the Republic. And Congress in action keeps pounding home one inexorable fact of national politics: The Government of the entire Nation can never work well so long as the process of choosing representatives is the antithesis of effective democratic action in any major area of the country.

The true resultant of progressive and reactionary forces and opinion in this country cannot be reflected in the Congress so long as millions of Americans, most of them underprivileged, have neither the opportunity to cast a meaningful ballot nor the information and understanding essential to the making of political choices calculated to promote their own interest. These grave defects in the working of electoral processes are not confined to any part of the Nation, but they are observable in so very many areas of the South, that special and continuing attention should be given to the strengthening of democratic action there. I urge that you make this undertaking, the advancement of democratic action in the South, a major part of the program of ADA.

Undoubtedly this organization will take various steps immediately or in the near future in support of a national program of liberal legislation during the Eighty-first Congress. Some success should attend such efforts. But, in my judgment, until the political climate of the South is changed, until the liberal and progressive forces of that area are greatly strengthened, until the liberal and progressive membership of the Congress elected from Southern States is greatly enlarged the legislative progress of liberal programs will continue to be blocked or at least seriously impeded. If this prediction is correct, the liberal forces of Amer'ca have no intelligent choice but to concentrate upon the strengthening of liberalism in the South.

Only recently I had occasion, speaking in the South, to point out that the predominance of the underprivileged in that area and the disproportionately large advantages to be derived by the South from a national program of liberal social legislation should logically place that section in the forefront of every drive for so beneficial a program. I predicted that with opportunity and understanding the South would come to assume the leadership in American liberalism. Incidentally, one local newspaper reported my speech under the caption "Hastie calls South leader in liberalism." But, if that statement is anticipatory today I believe it can, with sustained effort, be made a current truth during this generation.

I do not minimize the difficulties. Millions with no experience in the exercise of the franchise must be given the opportunity to vote and a zealous interest in advancement through political effort. Racial antagonisms artificially nurtured for a long time must be overcome. New organization must be developed to contest the field with entrenched oligarchy.

Experience has shown that this is a difficult road. Those who have sought to travel it before have turned back. The first attempt followed immediately after the Civil War. It seems almost a contradiction of terms these days to observe that the men then exercising national power were called racial Republicans. At any rate there they were, some motivated by abolitionist zeal and genuine belief in political democracy, others concerned primarily with the preservation of their own power. But, whatever individual motives may have been, all were agreed that each of the Southern States, recently in rebellion, should not return to the prewar feudal oligarchy, but should substitute a more democratic order with both the Negro and the poorer whites fully enfranchised. And so they made the accomplishment of this political revolution a condition precedent to the readmission of the Confederate States to the Union.

What followed has rarely been the subject of competent objective appraisal. Yet I believe it will ultimately be recognized and agreed that the formerly disinherited of the South, poor whites and poor blacks alike, were slowly but surely laying the foundation for an enlightened and democratic community in the years immediately following the Civil War. It ill behooves our generation, which has tolerated and still tolerates our more corrupt and oppressive local political machines, to disparage the reconstruction on the basis of multiple hearsay originating with those whose purpose has been to condemn rather than to describe.

Two or three items must suffice to illustrate my point here. Universal, free public schools were the most insistent demand and stand as the greatest monument to the enfranchised plain people of that time. In South Carolina in 1870, for example, 15,000 Negroes and 11,000 white children were reported as attending the newly opened unsegregated public schools. In State after State there was agreement on the social obligation of the State to educate all of its people. And that was a more advanced conception for those times than any plank of the 1948 Democratic platform is for these times.

In 1872, Reform Party of Louisiana was headed by General Beauregard and other thoughtful citizens who, though veterans of the Confederate Army, turned their backs on the bitter-enders of the Confederacy and at the same time sought to attract the more moderate Republicans to their standard. Here is an excerpt from their platform, and remember it was issued by Louisianians who could be called neither carpetbaggers nor scalawags.

"That we shall advocate by speech, pen, and deed, the equal and impartial exercise by every citizen of Louisiana of every civil and political right guaranteed by the Constitution and laws of the United States, and by the laws of honor, brotherhood, and fair dealing.

"We shall further recommend that hereafter no distinction shall exist among citizens of Louisiana in any of our public schools, or State institutions of education, or in any other public institution supported by the State, city, or parish.

"We shall also recommend that the proprietors of all foundries, factories, and other industrial establishments, in employing mechanics or workmen, make no distinction between the two races." (Yes, there were many southerners who believed in fair employment practices in 1872.)

At the same time in Florida a reconstruction legislature was fighting valiantly against the encroachments of monopoly. The words of a member leading that fight—he happened to be a Negro—have a contemporary ring:

"The great curse of Florida has been dishonest corporations, rings, and cliques, with an eye single to their central interest. * * * The recent exposé of the Tammany ring in New York has satisfied all right-thinking men that the power exercised by strong bodies, composed of many corporations, is the most dangerous to the public good and safety."

Such was the direction in which the South was moving haltingly, but I believe surely, in the early 1870's. There were bitter men and venal men and stupid men then, even as now, on both sides of controversies. The

postwar economic problems of the area were terrific. Mistakes were made, inexcusable things were done, yet through it all can be seen a people in the midst of revolutionary change moving toward a decent and progressive solution of their problems.

We know the story of how this era died a violent death at the hands of those counter-revolutionists who took up arms but hooded their faces, while the North, having accomplished what it wanted, complacently looked the other way. But it is the life and not the death of the epoch which shows us what we in our supposedly greater wisdom should be able to achieve today.

The agrarian revolt of the eighties and nineties was in all logic the second opportunity to bring to the South a reunion of the still disinherited and to oust the few from selfish domination of the many. It did bring the Negro back into the political picture for a time. But too often the agrarian leaders viewed the Negro as a tool to be used in emergency and discarded rather than a respected partner in an honorable association for remaking the South. Here was a chance to enlist the Negro as an eager volunteer in a people's crusade. Instead, Crusader and Saracen alike sought only to hire him on occasion as a mercenary when their own forces seemed inadequate for the election day battle. The Tom Watsons and Ben Tillmans, great leaders of that epoch, debased then destroyed the crusade they led when they came to make common cause with the reactionary forces they originally set out to defeat, reuniting on the sorry premise that agreement on keeping the Negro down was more important than disagreement along lines of genuine political cleavage. So populism which might have built a new South 50 years ago only left the old order more firmly entrenched and the Negro more securely shackled.

Today and tomorrow we are having another chance, the best chance of all, a chance for the plain people of the South, regardless of race, to make this section a center of progressive and liberal political thought and action.

The prospect is more favorable than ever before for democratic action in the South. The ground swell is apparent and its latent power is incalculable. If leadership has the wisdom to direct people already overcoming their inertia, if the disinherited, all of them, are made to know that they are part of a crusade for a better life, if the spectre of racism is laid by leaders who have the courage to talk straight as well as the intelligence to think straight, the face of the South will be lifted, its stomach will be less empty and what is also important to a genuinely religious people, there will be some soul redemption, too.

There is a nucleus of organized labor which can be expanded vastly with the friendly assistance which such an organization as ADA can afford. There are untapped resources of democratic action in the church and fraternal organizations which are such powerful forces in the southern community. The legal outlawry of the white primary is unshackling the Negro voter, and none of the new schemes hurriedly devised to maintain racial disfranchisement has managed to survive judicial scrutiny. Here are millions of new voters requiring encouragement, organization, and guidance. There is already an emerging southern leadership of men who believe in the South and in democracy too, who are neither dismayed by the great power of entrenched reaction, nor confused by the bogie of race. But such leadership needs all of the help that liberal fellow Americans can provide.

We can anticipate the fulminations against outside interference so often experienced when other Americans try to help their southern neighbors in progressive endeavor. Incidentally, I have never heard similar complaint against any form of outside assistance to apostles of the status quo in the South, and this observation covers the most recent general elections. Fundamentally, of course, whatever affects the functioning of our National Government is every American's business. The body politic is a whole, and we must promote its good health. It is our responsibility to attack atrophy or infection in any portion of that body.

This is the time for calculated boldness. Throughout the Nation the forces opposed to effective and informed political action by all of the people are on the defensive as never before. The lines of reaction are being held with increasing difficulty. Military tacticians tell us that in such a situation a general offensive is called for and can succeed. In such an offensive the strongest and most enduring assault is directed at the point where a break-through will be decisive. It is the translation of this military precept into a plan of political action which I urge upon you tonight.

May I close as I began with a reference to the faith and vision of the men who created our American plan of government. Among the greatest of them were southerners. It was Madison who gave us this ringing declaration of our national political creed:

"Who are to be the electors? Not the rich, more than the poor; not the learned, more than the ignorant; not the haughty heirs of distinguished names, more than the humble sons of obscurity and unpropitious fortune. The electors are to be the great body of the people of the United States."

To make ours such a Nation men have planned and worked, and lived and died, leaving to those who should follow them the task of further advancing the basic conception of the Republic. This is our day. I think we shall be equal to its demands.

Address by Governor Bowles, of Connecticut, to Americans for Democratic Action

EXTENSION OF REMARKS

OF

HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the text of an address by the distinguished Governor of the State of Connecticut to the national convention of the Americans for Democratic Action, meeting at the Hotel Sherman in Chicago.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends in Americans for Democratic Action, I can remember vividly my first introduction to ADA. It was early in November 1946. The election was only a few days old and American liberalism had taken its worst beating in a generation.

Jim Loeb was there in my home in Essex to offer his proposal for a new organization that would pull liberals together for practical political action—the kind of liberals whose dislike for totalitarianism in any form—Communist or Fascist—was tough, clear, and uncompromising.

ADA was founded some 60 days later in Washington. At the time, we hoped modestly that it could slow down the swing toward reaction, and perhaps lay the groundwork for future political victories when the people again were ready to move forward.

Events of the last 2 years have proved that our horizons were too limited. We expected much too little. That is because we failed to understand the terrific forces which Franklin Roosevelt had set in motion in the days of the New Deal and in the midst of the Second World War.

In the unhappy days of the 1946 congressional campaign and the Eightieth Congress, our people were trying to find themselves after 4 years of war and the atomic bomb, in a world of misery and confusion. In 1947 and 1948, the American people tasted reaction. They didn't like reaction, and on November 2, 1948, they spit it out.

We are now moving into an age of new party politics.

The most significant aspect of Harry Truman's election was that it was unpredicted. It was surprising. It was unexpected.

In the past, the American people had always voted pretty much as their fathers did. They had left the professional politicians to take care of the details. They had responded only sporadically to outstanding leadership, that is, until 1948. In November 1948, the people moved in and took over.

The Republican Party was blind to what was happening. The men who nominated Dewey at Philadelphia had the right candidate for the wrong age.

The Democratic Party was, for the most part, also unaware of the new forces which were gathering. Except for its bold, forthright stand in defense of civil liberties at Philadelphia, many Democratic leaders were inclined to let nature take its course. In so doing, they set the stage for one of the most remarkable political upheavals in the history of the country.

Because there seemed no real point in anything else, the old-timers agreed to go along with the amateurs who were inexperienced enough to believe that an all-out fight was worth while. Almost by default the people chose their own candidates for Congress, for mayor, for Governor, for Senator.

The Democratic candidate for President also violated all the rules of traditional politics. We went back to the people and asked them what they wanted. While Thomas E. Dewey was telling, Harry S. Truman was asking. And the American people gave their answer in unmistakable terms.

We Americans are a friendly, neighborly people, ours is the Nation of the big dream, the American dream of opportunity, freedom in its broadest sense, a comfortable home and a respectable living.

We Americans are an active people. We admire competence, and we are suspicious by nature of those who do not strive too hard for a living.

We Americans are a sensitive people. We cannot live comfortably among friends and neighbors who are economically distressed or spiritually beaten.

Above all, we Americans like to make things work. Our conception of democracy insists that it be effective. We know that democracy cannot be effective unless it is universal. We know it cannot be universal without being fair.

In times past, we have fought elections on the gold standard, high tariffs, a return to normalcy and it's time for a change. But the words that moved the hearts of our people were concepts like the New Freedom and the New Deal. Those ideas moved us because they hit close to home.

Since VJ-day the American people had grown afraid that their Government was losing touch with these basic American aspirations.

What was fair or decent or democratic about letting inflation wipe out their savings? Why had the politicians killed the veteran's dream of a home of his own?

Last fall, the people of America—in the fresh clear air of their home constituencies—caught a second wind. The liberals took their heads out of the cloud and dangled their feet in the tall grass of this Nation. They got out of their easy chairs and went out to work. They discovered that elections are won not at the banquet tables, but on the sound trucks.

The liberals of America became reacquainted with their neighbors and their friends. Like Harry Truman, they began to ask instead of to lecture. And, as a result, the new party politics got a shot in the arm from the factories, shops and farms all over America.

Our efforts so far to translate the big dream into legislative reality indicates that the "Miracle of '48" is not yet fully understood. It has not been accepted as real. As in all times of great social change, there are always those who prefer not to face up to the truth—even though it stands out bold and clear.

The truth is that the American people will not stand any more being pushed around by politicians. And any political party that persists in ignoring their demands is bound to remain on the side lines.

In Congress, an unholy alliance of Dixiecrats and Republicans has thus far blocked the enactment of the Truman platform. But this is no reason for alarm—yet.

The election proved that the Dixiecrat movement was a movement of politicians and not a movement of the people of the South. Except in two or three States, the Dixiecrat ticket had very little popular support.

I do not mean to say that the people of the South who voted for Truman had the same ideas on all subjects as the Democrats in the North. There were natural sectional differences in outlook. But the majority of the southern people have been basically sympathetic to the major planks in Truman's Fair Deal program exactly as they were sympathetic to President Roosevelt's New Deal program.

The essential liberalism of the southern people is reflecting itself more and more in political events. Sooner or later, this basic liberalism will penetrate into the minds of southern Representatives and Senators in Congress.

I, for one, was not surprised when Governor Scott of North Carolina appointed Dr. FRANK GRAHAM, one of America's greatest liberals, to fill the vacancy in the United States Senate. Nor am I surprised when I read that an antilynching bill with stiff penalties recently passed the Texas Legislature. These are simply the day-to-day signs of the fundamental liberalism of the southern people, finding expression in political life. Eventually, the South may become the stronghold of this American liberal movement.

In the first half of our century, we Americans have survived the ordeal of two horrible wars and a catastrophic depression. We have survived all right, but have we learned?

We have established the right of democracy to exist. Now we must earn the right of democracy to grow and develop. Democracy carries the potential of ultimate freedom—freedom to work and to worship, to speak and to prosper at peace. In the second half of our century, democracy must realize that potential as never before. It is too late for half-conceived measures or half-hearted results.

The last 3 months should prove to us that the day is past when liberals could hibernate between elections. We have taken on a full-time job. We must give that job full-time attention. Americans for democratic action, if it is to live up to its name, must be broader and larger than a clique of good-hearted intellectuals anxious to save the world. ADA must absorb itself into the practical, working political structure of our country. We must go to work with our political friends, give them our time and our efforts, and make the Democratic Party a living instrument of the American people.

Let me speak for a few moments, if I may, about what we in the Democratic Party have learned in Connecticut.

In our State legislature, one house—the senate—was returned last fall with a solid Democratic majority. The other branch—our State house of representatives—is still heavily dominated by Republicans. I will not go into the details of this curious situation other than to say that the Democratic senate was elected more or less on the basis of the popular vote; whereas our Republican house of representatives is heavily weighted in the traditional rotten borough way on the side of our 141 small towns.

Thus, we have in Connecticut a very graphic example of last fall's electoral upheaval. On the one hand are those Democrats who were swept into office on the same tide that elected Harry S. Truman. On the other hand, there is a considerable body of Republican politicians who have managed to insulate themselves from contact with all the people.

Our opposition in Connecticut is not so very different from the coalition of Dixiecrats and Conservative Republicans which has been bucking the President's program in Washington.

In Connecticut, however, our legislature is working, day by day, in the midst of the people to whom it is responsible. It is not possible, as it so often is in Washington, to ignore public opinion as a far away phenomenon.

The result has been that even the most cautious Republicans have hesitated to strike a position comparable to that of the group responsible for the stalemate in Washington.

To the extent that an issue can be sharply defined, the Republican majority in our House of Representatives has had no choice but to go along with the broad principles of a program which is vigorously supported by the overwhelming majority of plain people.

It is vastly encouraging to us in Connecticut to find that no legislator, for example, dared to cast a vote against eliminating racial segregation in the Connecticut National Guard. After years of postponement, this bill was passed unanimously a few weeks ago simply because the people understood at last and cared.

Similarly, a bill to strengthen our State laws on housing evictions was passed with bipartisan support. No family can be evicted now in Connecticut without 1 year's warning, and in most cases evictions are impossible. But when Connecticut people reacted strongly and sharply to the delay, the opposition collapsed.

A proposal to study and streamline our State governmental organization was passed in Connecticut only last week. Originally, a minority attempted to block and pigeonhole this much-needed step toward reform. But under the extreme pressure of popular opinion from all quarters, the opposition likewise vanished into the air.

A model welfare program, including unlimited assistance for needy old people, is likely to pass within a week or two—again because Connecticut people are insisting on action.

There are signs that an aroused and alert Connecticut public will bring similar pressure to bear on low-rental public housing, minimum-wage legislation and a broadening of our unemployment and workmen's compensation programs.

If the people all over America who gave their time and their talents to achieving victory on November 2 will continue that drive and that determination, there can be only one result. If the millions who registered their convictions at the polls will follow up that gesture, the result is inevitable—the kind of legislative progress which we've been dreaming of for generations.

Elections are won in the shops, the stores, on Main Street, and on grass-root farms. Public programs must find their support and their sustenance among the same local voices.

Political activity, let me repeat, is not something to be carried on once every 4 years or once every 2 years. It is something to be carried on all the time. Politics is not merely a matter of winning elections. It is a matter of seeing to it that the elections stay won.

Liberals must abandon the ivory tower, and pitch into the practical realities of politics. The natural tendency of liberals is to think and to talk in abstract, theoretical terms, in terms of sociology and economics. Theory is a valuable background. But nothing gets done in the political world unless it is translated in terms of hard-headed political activity.

The ADA has, of course, come a long way in this direction. Few of its friends or its enemies ever expected ADA to develop into a real political force during the short period of its existence. What I am asking for is even harder work along the same line; in other words, more ADA activities during the so-called off-political season. For the effective political worker there can be no off season. We have got to work—work—work—to drive home the central ideas we stand for—an America of freedom and opportunity for the common man.

Right now we have many jobs to do. One of the most vital is to hammer home the fact that there is nothing inevitable about another economic depression. Depressions are man made—or rather they are the product of human superstitions. During the New Deal, we learned that depressions can be stopped by governmental action. Now we have to learn—and we have to apply the lesson in our political life—that depressions can be prevented by governmental action.

Our NAM friends insist that we must go through another severe economic depression—that it's against economic law for our prosperity to continue indefinitely. This places them in curious agreement with the Marxian Communists. In fact, Stalin has staked his whole policy on the inevitability of a depression in America. If a depression comes in America, he will be able to say to the peoples of Europe—more or less what Hitler told the Germans in the winter of 1932–33. "The American way is the way of starvation and unemployment—only through totalitarian dictatorship can the people be assured of bread and work."

Stalin has bet on the inevitability of a depression in America. Hence, the avoidance of a depression becomes more than a matter of protecting our own welfare and our own freedom. It becomes a matter of protecting the welfare and future of democratic civilization the world over.

After the destruction of OPA, prices moved higher and higher. Food costs went up more than 50 percent, and the housing industry, forgetting the lessons which should have been learned before the war, moved ahead to price itself out of the market. Some adjustment from these high prices has always been inevitable, and that adjustment is here. Let us hope it is no more than just that—an adjustment.

Nevertheless, I, for one, am concerned. In Connecticut today, 83,000 men and women are out of work—that's the biggest unemployment that we have seen in 11 years. This same situation holds true in many other parts of the country.

Most of the experts tell us not to be alarmed, that employment will soon be stepping upward again. I sincerely hope they are right. But let's make up our minds on one thing.

We can no longer put up with idle men, idle machines, and idle money. People all over America—people all over the world—are in desperate need of the goods which we are so capable of producing. If the experts should prove to be wrong—if this adjustment should grow into a recession—we shall need to take action, promptly, vigorously, and intelligently.

If we continue to maintain full employment and freedom of opportunity in America, we shall save ourselves, and we shall stand fair to save the whole world from the grip of totalitarian tyranny. If we fail, then the last and best hope of earth dies with us.

Representative government, enlightened and dynamic, is the basis of all civilization. Representative government involves spade work, leg work and patience. But democracy was never a lazy man's system. Effective democracy must always be the gigantic sum of individual actions. A little bit here; a little bit there; and finally, the colossal impact of millions of hands swing open the door to newer and broader freedoms.

On November 2, 1948, we pushed at the door, and rather to our surprise, it fell open. Let us be determined now and move boldly through that door—toward the new world of peace and prosperity, security and freedom, which Americans have dreamed of since Jefferson. And in the process, let us not be afraid of idealism, the kind of practical, tough-minded idealism that alone can make mankind's dream come true.

Socialized Medicine

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "When Medicine Is Socialized," published in the South Bend (Ind.) Tribune, of April 6, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN MEDICINE IS SOCIALIZED—ENGLISH DOCTOR TELLS TRIALS OF PEOPLE IN HIS COUNTRY

Socialized medicine is attracting much attention but probably not as much as its dangers and its effect on working people and all others warrant. One of the best expositions of how socialized medicine operates is told by Dr. H. A. H. Harris, a consulting surgeon in Chelmsford, England, in a letter to Dr. Wemple Dodds, of Culver Hospital Laboratories, Crawfordsville, Ind. In this letter Dr. Harris says:

"The public had been led by our Socialist tub-thumpers to suppose that, with the coming of the National Health Service, a medical utopia would dawn for them. In point of fact the ordinary working-class patient is less well off than he was before the scheme started. The National Health Service has brought no more doctors, no more nurses, no more hospital beds and, indeed, no more facilities of any kind into service with the result that there are now infinitely more people competing for the same amount of facilities because people who formerly paid for their attention now seek it under the scheme.

"PATIENTS MUST WAIT

"Here is an example. Before the scheme started on July 5, 1948, a general practitioner requiring my opinion upon a working-class patient could get an appointment for him to see me at my out-patient clinic at the hospital that same week. Under this scheme my clinics and those of all my colleagues are overflowing so that a patient has to wait as long as a month for an appointment.

"Similarly with in-patients. Before July 5 all the public ward beds were devoted to patients of the lowest-income groups but now these people have to share the same number of beds with people who could and did afford private accommodation. Inevitably, therefore, they have to wait longer for admission to a hospital. The ordinary family doctor has queues outside his office. Most of the people in the queue are either wanting some sort of form signed or else they are coming with some very trivial ailment with which they would formerly have dealt quite effectively with themselves.

"A proportion of the people in the queue will, however, have some genuine and perhaps serious complaint but the doctor will find it difficult or impossible to give the necessary time to this patient and there is, of course, a grave danger that in the rush he may miss things."

PLAN IS GROSSLY ABUSED

Of the abuse of socialized medicine, Dr. Harris says:

"The scheme is, of course, being grossly abused by the smarter members of the public. The pawnbrokers' shops are said to be full of spectacles which patients have obtained from the state and then proceeded to 'pop at uncles.' Dentistry has developed into an absolute racket. It has been said that we have become a nation of weeping and wailing and national teeth.

"The Minister of Health gave a solemn undertaking that 'any member of the public may use all or part of the scheme' and then proceeded forthwith to deny the right of a patient who prefers to pay for his medical advice as hitherto to get his medicines under the scheme. On the other hand, the Minister has ordained that any foreigner visiting these shores is entitled to all the benefits of the scheme without paying any contribution. There was a case reported in the British Medical Journal a week or two ago of a foreigner who returned to his country with two pairs of spectacles and a complete set of dentures at the expense of the British taxpayer."

EFFECT ON CONSULTANTS

Dr. Harris tells of the effect on the consultants. He says:

"I have yet to meet a consultant who expresses any satisfaction with the scheme. We have become a body of exasperated, frustrated, embittered men. Before July 5 we all used to enjoy our jobs. Now we just regard our work merely as a means of keeping the wolf from the door, and, for some, even that is not possible. Countless forms have to be completed. Our actions are liable to be questioned by local demagogs from the trade-union ranks. A consultant is liable to be drafted to a new neighborhood and he may be denied the right to practice a particular specialty in which he has already displayed his prowess.

"There is no doubt whatever that the Minister is doing all in his power to abolish private practice by making it as difficult as possible for the patient to afford it and by denying the consultants the opportunity of practicing it. His aim is to squeeze us all into the whole-time service, to make us whole-time salaried civil servants. The tragedy is that he may succeed in this with large numbers of the consultants so many of them yield to his pressure either through economic necessity or lack of moral courage.

"SOME GIVE UP PROFESSION

"There are, of course, a few shining examples who have put their principles before everything. I know of men of noble character who have sacrificed careers of brilliant promise and have given up doctoring and become small farmers and such like. One man I know of found more satisfaction in running a fried-fish shop. Many of the younger men are emigrating, and they, perhaps, are our best types, so that our country is in danger of becoming intellectually impoverished. Some of us are not taking all this lying down.

"All sorts of ridiculous regulations have been issued by the Minister," says Dr. Harris. "One of them concerns the scale of fees that a surgeon may charge for operations on private patients in the private ward of a hospital. An attempt has been made to classify all operations into three categories—major, intermediate, and minor. A schedule of these categories has been drawn up."

FANTASTICALLY ABSURD SCHEDULE

"This schedule is so fantastically absurd that one is tempted to think it might have been drawn up by a hospital porter. For instance, the aspiration of a cerebral cyst is called a minor operation and is put in the same category as the removal of a sebaceous cyst. Acute appendicitis is a major operation while adenoma of the thyroid is an intermediate one. The more stout-hearted of us just ignore the whole thing but we shall, I expect, be called to account by the bureaucrats."

Of the effect of the system upon the general practitioner Dr. Harris says:

"Much of what I have already said about the consultant applies equally to the general practitioner and, vice versa, what I say about the general practitioner applies also to the consultant. The general practitioner has lost his joy and his interest in his work and is becoming not much more than a sorting clerk. Many of them are already facing economic ruin, particularly the general practitioner in the rural areas where incomes are in many cases less than half what they were before July 5."

NO REWARD FOR SKILL

"As is inevitable under any socialist scheme there is no reward for skill, energy, and enterprise. Payment is on a flat rate and the dullard and the laggard get the same scale of remuneration as the prodigy. The general practitioners are already worked to death. They have not so far had any epidemic to deal with. The Lord only knows what will happen if and when, for instance, a severe influenza epidemic comes along.

"My general practitioner friends are now, without exception, unhappy men. Pride in their job is waning and, most significant sign of all, I know of none who are bringing up their sons to follow in father's footsteps as happened so very often in the past.

"Now the state has become his master and he can no longer plow his own furrow. The result of this will be, I am sure, that there will be an entirely different type of man going in for medicine. Our future doctors will be small-minded little men with civil-service mentalities and their main concerns will be keeping on the right side of the administrative superiors, the correct filling of forms, watching the clock, and passing the buck."

TO BRINK OF RUIN

"We have now had nearly 4 years of socialism and it has brought our country to the

brink of ruin from every point of view—spiritually, morally, and economically" says Dr. Harris. "The average, not-very-intelligent-but-fundamentally-decent workingman has been debauched and emasculated by this Government of ours. Formerly he was willing to have only what he paid for and to pay for what he had. Now he looks to the all-powerful state to provide him with all his needs. He does not think he ought to have to work for them. The possession of low cunning has become more important and more profitable than character. A slick but unscrupulous intelligence will take a man to the top more easily and more certainly than will honest toil and dogged perseverance.

"Our ordinary man in the street seems incapable of appreciating the obvious truth that socialism leads inevitably to communism, which is its logical conclusion. And he seems incapable of realizing that the nationalization and the class hatred which our socialists spend their time preaching and practicing are the two main props of communism."

ADVICE IS "DON'T"

"Any statements that you may have heard that there has been a change of attitude toward the National Health Service by the medical profession of this country are, quite certainly, deliberate falsehoods and, as you suggest, have probably been issued by the propaganda departments of your left-wing organization," says Dr. Harris. "If your Government should seek to inflict upon you a national health service that even remotely resembles ours then I would repeat to you the famous advice of Mr. Punch to those about to be married—'Don't.'"

It is believed that many who read about and understand the operation of socialized medicine in England will not want it adopted in the United States. President Truman has his ideas about socialized medicine but whether he will be able to impose them upon his country depends upon what Members of Congress do about the subject. It is pointed out that the foregoing article so clearly explains socialized medicine's operation in England that everyone who reads it must see clearly that it is not a scheme for the people of the United States.

IT IS NOT FREE

If anyone does not clearly understand how the plan works in England he or she might read the article again with profit. Socialized medicine is not free as so many persons think. Someone has to be paid for services rendered. The pay comes from taxes. The people who think they would benefit are taxpayers. Therefore, they must pay their share toward the support of socialized medicine.

John L. Lewis

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Lewis Isn't All Crocodile," published in the New York Sunday News of March 20, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEWIS ISN'T ALL CROCODILE

When John L. Lewis pulled the 2-week coal strike scheduled to end next Sunday, he orated that he wanted to give his followers time off to mourn the 1,015 coal miners killed last year, and the more than 50,000 injured.

Some of the mine operators promptly retorted that John was weeping crocodile tears, and that what he was really up to was a sharp reduction of the 70,000,000 tons of coal above ground when the walk-out started. A cut in that stock pile would give him a better bargaining position when his United Mine Workers' contract with the operators expires June 30.

We have no doubt that some such thought was in John L.'s massive head, and that grief for the coal mines' dead and injured in 1948 was not the sole reason for the first big strike of 1949.

However, those tears were not all of the crocodile variety. It is a fact that 1,015 men were bumped off in the coal mines last year in various accidents. Further, almost 4,000 were permanently crippled, and the above-mentioned 50,000 were injured more or less seriously.

Coal-mine accidents in the last 30 years in this country have killed almost 55,000 men, crippled about 125,000, and dealt out a total of more than 2,000,000 nonpermanent injuries.

The men who dig the anthracite and bituminous fuels are rated by insurance companies as being engaged in one of the most dangerous of occupations. They are in the same class, insurancewise, with copper and lead miners, building wreckers, sand hogs, electric-power linemen, and oil field shooters and rank just a little below airplane stunt and test pilots.

Safety conditions in the coal fields are improving slowly but, according to various qualified observers, they could improve a great deal faster.

What's the chief reason for this yearly death toll, anyway?

Apparently, there are several chief reasons, all of them bound up with politics, the quirks of human nature, and the inevitable hazards of digging deep holes and tunnels in the earth.

As to politics: There is the long-raging conflict between the United States Bureau of Mines and the mine bureaus or departments of the States where coal is dug.

The Washington agency (at whose temporary director, Dr. James Boyd, Lewis took a crack in this latest strike) has authority to inspect mines for safety appliances, and issue loud warnings in cases where it finds danger of accidents. But it can't enforce all this good advice it is empowered to hand out.

THE HAZARDS OF MINING

Enforcement of mine safety precautions is in the hands of the State bureaus. It is often complained that many of these are lazy, inefficient, timid, or politically beholden to various mine operators.

The United States Bureau of Mines currently hopes to induce Congress to enact a law giving enforcement powers to Federal safety inspectors.

As to the quirks of human nature: It seems that many a coal miner grows careless or fatalistic, or both, as time goes on, and takes to neglecting the simplest precautions against touching off an explosion of coal gas or getting conked by a falling rock or timber. Many of the 1,000-plus annual deaths in the coal fields must be charged up to miner negligence, and there is no sense that we can see in being sentimental or unrealistic about that.

There are still a few operators of the old, hardboiled school who want only to get the coal out, and care nothing for the lives and limbs of their employees. But these are reported decreasing in number as the knowledge gets around that the best way to induce workers to produce efficiently is to keep them reasonably satisfied with their working conditions.

Altogether, it seems to us that what is needed, if coal-mine deaths are to be cut down, is an all-out safety crusade by all parties concerned.

Why shouldn't Lewis' union redouble any efforts it may now be making to teach the boys to keep their helmets on below ground, to obey no-smoking rules, and take all other indicated measures to keep themselves alive? Why not safety education campaigns by the operators in all the mines? And why not some strenuous attention to this matter at the President's Conference on Industrial Safety, opening next Wednesday in Washington?

These coal-mine deaths are a tragic business all around. But the best way not to decrease them is to sit around, wring the hands, and moan that they are inevitable. A lot of them could be prevented.

You Have a Stake in Spain's Security

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "You Have a Stake in Spain's Security," written by my friend, a great scholar, Dr. Joseph F. Thorning, honorary fellow of the Historical and Geographic Institute of Brazil and an honorary professor of the Catholic University of Chile.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOU HAVE A STAKE IN SPAIN'S SECURITY—SOVIETIZED DELEGATES TO UN DELIVER ANTI-FRANCO TIRADES TO HIDE THEIR OWN TREASON—UNITED STATES GOVERNMENT URGED TO EXCHANGE AMBASSADORS WITH MADRID, ENGAGE IN ECONOMIC TRADE AND INCLUDE SPAIN IN FREE WORLD DEFENSE PROGRAM

(By Rev. Joseph F. Thorning, Ph. D., S. T. D., Associate Editor of The Americas and World Affairs)

Every good citizen of the United States, whether Protestant, Jewish, or Catholic, has a stake in the security of the Iberian Peninsula. The lifeline of America, in the broad, true sense of the whole Western Hemisphere, runs through the Mediterranean, with Spain a natural bastion behind the Pyrenees. This is not merely the judgment of the man on the street; this is the expert view of those officials in Washington charged with the national defense.

This fact has tremendous importance to every man, woman, and child in America, because, once more, the world is being treated to the obscene spectacle of a Sovietized Polish delegation at the United Nations rising to distract attention from Soviet brutalities in Hungary, Czechoslovakia, Poland, Albania, Rumania, Bulgaria, and China. Obedient to their masters in the Kremlin,

the cringing, alleged representatives of a noble-hearted Christian people will do their best to indict and interdict the 28,000,000 decent people of Spain.

Although the latter may not agree on politics, they stand united against foreign dictation. Best of all, they have finally decided that it is better to hang together than to hang separately. Consequently, until the dawn of a brighter sun on the international horizon, they are working together in order to prevent another civil war and to re-create some measure of prosperity for everybody. Nobody wants chaos.

While the so-called Polish delegates shout against Spain with a view to hiding their own treason to the Polish people, what are the Americans of Polish descent in the United States doing in order to prove that they remember with gratitude the fact that thousands of Polish soldiers in the resistance movement against Hitler were enabled by the Spanish Government to escape from the Nazis and fight against fascism in Italy?

Has it been forgotten that the Iberian Peninsula was the escape hatch from Nazi-dominated Europe not only for thousands of Christians and Jews who made their way to America, but also for patriotic members of the Polish nation who wanted to continue their struggle against totalitarianism by attacking the soft underbelly of the Axis? Inasmuch as the Spaniards made this possible, one would think that every group of Polish origin in America would be loud in protest against the Soviet puppet show against Spain at Lake Success.

WHILE OTHERS LEAD

To the credit of the descendants of the Iberians in America it must be recorded that they have sprung to the aid of the mother country. Throughout Central and South America, the Hispanic Americans are instructing their delegates in the General Assembly to take the initiative in favor of Spain. Democratic Costa Rica, cultured Colombia and Peru, loyal Brazil, and social-minded Argentina are glad to assume the leadership that should be found in our own United States Department of State. An overwhelming majority of the good-neighbor Republics are ranged, intelligently and bravely, on the side of the Spanish people. Although the governments of some of the American Republics may have had their political differences in the past 12 months, as happened in the case of Costa Rica and Nicaragua, they have discovered a new sense of unity and friendship in their espousal of the cause of the mother country.

Every South American, at heart, is chivalrous. Whatever the misfortunes, or even the mistakes of a lady in the household, the Latin knows how to ride to the rescue and, if she be a mother, to throw around her the mantle of charity. Perhaps this is another way of saying that our good neighbors remember that they all are, or should be, good Catholics. At any rate, they are proud and happy to be protagonists, or champions of Spain, in this duel-to-the-death with the Soviet Union.

Moreover, the Latins respect law. They know, what President Franklin D. Roosevelt decided 10 years ago, that the present Spanish administration is the only rightful government in that country, from the standpoint of accepted principles of international law. The South Americans realize that ethics, not expediency, should be our guide.

WHY APPEASEMENT?

No more persuasive statement about the legal aspects of the case has been prepared than that of Dr. George Finch, editor in chief of the American Journal of International Law. Dr. Finch, himself a one-time State Department official, writes as follows:

"I am in full agreement that the exclusion of Spain and some other countries from the UN at the whim of the Soviet Union is but a part of the unfortunate appeasement program which we now hope is a matter of history. There is no basis for considering the 1946 resolution (subsequently canceled by failure and rejection of an identical resolution in the 1947 General Assembly), recommending the withdrawal of chiefs of diplomatic mission from Spain, as presenting any legal question. In my judgment, the resolution was a purely political one and may be disregarded at any time for political reasons."

This authoritative opinion coincides exactly with that expressed by Dr. Edwin Borchard, the eminent non-Catholic professor of international law, Yale University. According to Professor Borchard, the 1946 resolution, which was repudiated 1 year later, is now "invalid," obsolete, and without the slightest binding power.

How are good citizens, then, to explain the negative attitude of our State Department? The answer is easy. Just as Dr. Finch pointed out, the decision to yield to the Kremlin on Spain was reached at a time when a pro-Soviet clique ruled our State Department. Now, although Soviet sympathizers have been weeded out of our Government, their deeds and their decisions have survived them.

LAST-DITCH BATTLE

There is another angle, interesting to all Christians and Jews who practice their faith. Although Mr. Robert Schuman, a devout Catholic, speaking for the French Government, assured his French charge d'affaires in Madrid that the French Republic favored the inclusion of Spain in the Atlantic-Mediterranean pact, his decision is undermined by M. Leon Jouhaux, Marxist head of a splinter labor group. Similarly, in the United Kingdom, fanatical Marxists, such as Prof. Harold Laski and others, are fighting a last-ditch battle against Christian Spain. As the capital letters of a reversal of world policy toward the Spanish people write themselves on the broad corridors of history, the Marxist International, perhaps just as deadly and as illiberal as the Cominform, is trying to keep the religious factor excluded from organized international life.

Does any Catholic layman, or religious leader, imagine that it is a mere accident that the three most devout peoples in the world, the Irish, the Spanish, and the Portuguese, are blackballed in the United Nations, with hardly a word of protest from any official quarter? It was bad enough to omit all mention of God from the Charter of the United Nations. It was wicked enough to surrender to the Soviets on the question of providing some Divine invocation, sorely needed, for the deliberations of the Security Council and the General Assembly. It was the climax of folly, reversing the good example of our own founding fathers, to pretend that religious leaders could be ignored, while nations that made and make a public profession of faith should be outlawed. Nothing that is irreligious can succeed; nothing that is un-American, in the sense that it overlooks the fountainhead of liberty, should be tolerated, unless subject to amendment and improvement. All who believe in God can unite on that program. And those who believe in God, as opposed to those who pin their faith in dialectical materialism, whether Stalinists or Nazi-minded followers of Karl Marx, will champion the cause of Spain.

The best tip-off on the Spanish discussion in the United States Congress came with the kick-off play of the Soviet Union against Spain. It was made by Representative VITO MARCANTONIO, on more than one occasion a mouthpiece of the Kremlin, on March 22, 1949. Rising in the House of Representatives, Mr. MARCANTONIO extended his remarks in the RECORD for two pages.

It was the familiar propaganda line of the Soviet Union. He did not mention the $600,000,000 gold reserve of the Spanish Republic, deftly spirited from Madrid to Moscow: a permanent blow at the standard of living of the Spanish people. He did not refer to the promises made by President Roosevelt, as war-time Ambassador Carlton J. H. Hayes has reminded us, in writing, in November 1942. Mr. MARCANTONIO did refer to a letter of the President, written less than a month before his untimely death, which reflected the sad, invalid condition of the man who wrote it, unless indeed it was prepared for the President by some of the same pro-Soviet clique to which reference has been made.

After the diatribe by Representative MARCANTONIO, congressional opinion crystallized rapidly. Most of the freshmen Members of the House of Representatives took one look at the speech and openly expressed their minds: "Now we know how to vote on Spain."

MAKE YOURSELF HEARD

Last spring, the House voted overwhelmingly, in favor of including Spain in the European recovery program. If a similar vote were to be taken today, the margin in favor of Spain would be equally favorable.

What, then, is holding up action? To some extent, it is a matter of timing. As soon as the ERP funds and the Atlantic Pact, in its present form, have been ratified in the United States Senate, the people can be sure that, if they make themselves heard, the Government of the United States will see the wisdom, in its own interests and for the sake of its own safety, to adopt the following three points:

1. An exchange of Ambassadors with Madrid;

2. Economic collaboration with a country, whose railroads and industrial plants behind the Pyrenees are the strongest defense line on the Continent of Europe;

3. The inclusion of Spain, already linked with the Atlantic community by nature and by a treaty with its neighbor, Portugal, in the free world defense program.

Write or wire your Senators and Representatives today. Remind them that it was not Spain, but the Soviet Union, that spelled the doom of Jan Masaryk and Edouard Benes. It was not Madrid, but Moscow, that staged the so-called trial of his eminence, Joseph Cardinal Mindszenty. It was not Spain, but the Soviet Union, that installed the Soviet gauleiter, Jakob Berman, in Warsaw.

It is not Spain, but the Soviet Government, that maintains the iron curtain. It is not the present Spanish Government, but the regime of Generalissimo Josef Stalin, at the head of the Red Army, that aims to enslave and sovietize the world, without mercy, without justice, without God. It is time that Soviet exploitation of the Iberian Peninsula, under the mask of Christian Poland, cease forever.

It is heartening to every American, from pole to pole, to see that our good neighbors have not abandoned the people of Spain. It is, or should be, electrifying to our leaders and to our people to note that, with respect to Spain in Congress, we have a bipartisan, forward-looking foreign policy; both the majority leader, the Honorable JOHN W. MCCORMACK, and the minority leader, the Honorable JOSEPH W. MARTIN, are in the advance guard of the fight for Christian Spain. Their position is open, public, recorded; they represent the people. And the people have a right to see their Department of State on the side of fairness, national security, world freedom, and Almighty God.

Annual Convention, Society of Newspaper Editors, Endorses Voice of America Program Established by Smith-Mundt Act

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. MUNDT. Mr. President, I take genuine pleasure in calling to the attention of the Congress and the country the fact that the annual convention of the American Society of Newspaper Editors during its deliberations here in Washington last week passed resolutions endorsing and commending the so-called Voice of America publicity program established by the passage of the Smith-Mundt Act.

Readers will observe that the three recommendations at the conclusion of the report made by J. Russell Wiggins of the Washington Post and his committee were approved by the full convention. It is especially significant, in my opinion, that this great assembly of newspaper editors included in its resolutions the recommendation that the Associated Press and the United Press follow the example of the International News Service in making their facilities available on appropriate terms to the Voice of America news services.

It is my hope and expectation, Mr. President, that the appropriations for this important peace-preserving program will be substantially increased by the present Congress. In my opinion, $50,000,000 per year in these trying times would be little enough to spend in trying to get the rest of the world to understand and appreciate the policies and practices of the United States.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

REPORT BY J. RUSSELL WIGGINS, WASHINGTON POST, ON STATE DEPARTMENT DISSEMINATION OF NEWS

Mr. President and members of the society, this is the third time that a special committee of this society has submitted a report on the foreign-information program of the State Department.

In 1947 a committee headed by Mr. Howard urged that the then existing international situation justified a foreign-information program, noted the dangers inherent in Government dissemination of news and urged the formation of a special committe to make an annual study.

Last year, your committee, headed by Hamilton Owens, made a thorough study of the foreign-information services of the State Department. It held sessions in New York before which the various division chiefs of the foreign-information service appeared. It submitted a report declaring that the committee was "wholly convinced of the national necessity for carrying on and even intensifying the program provided for in the Smith-Mundt bill." It proposed resolutions endorsing the program and urging the press associations to "put their respective reports at the service of the Office of Information and Educational Exchange."

Your committee this year has had the services of two members of the 1948 committee: Mr. Lloyd Felmly, of the Newark News, and Mr. Harold Wheeler, of the Boston Traveler.

The committee has again examined and studied the principal foreign-information services of the State Department; the Voice of America programs of the International Broadcasting Division; the Wireless Bulletin prepared by the International Press and Publications Division; the Air Bulletin which is sent to our diplomatic and consular establishments abroad; the Russian-language magazine Amerika.

In arriving at its estimate of these services, your committee has had sources of information and appraisal not available to previous committees. It has been able to draw upon the report of the United States Advisory Commission on Information on which members of the American Society of Newspaper Editors, including the president of the society, Mr. Erwin Canham, are serving. The advisory committee's report, the text of which we trust the members have examined, provides all the information needed to found a judgment of the work of the State Department's foreign-information agencies and to obtain the facts about their programs. This report, based on the first-hand observations of the staff of the committee, has made it superfluous for your committee to submit the detailed report that you might otherwise have required it to prepare. The facts have been clearly stated, the results of the program expertly appraised.

Your committee would join with the advisory committee in concluding that the program is even more important than it was when first conceived; that it is effective as far as it is able to go; that it is inadequate to the requirements of foreign policy in today's world crisis.

Your committee has chosen to repeat as its own recommendation the concluding recommendation of the advisory committee which states:

"In our judgment, the budgetary recommendations which have been sent to the Congress for this program for 1950 are a bare minimum for continuing the beginning which has been made. While it is important to spend well rather than merely to spend a lot, the vital need for broadening this program as speedily and effectively as possible, calls for a much larger expenditure. Indeed, a realistic approach requires that we provide a budget better balanced between the three-pronged program of military, economic, and information policy. A budget which contemplates $15,000,000,000 for military, $5,000,000,000 for economic and only $36,000,000 for information and educational services, does not provide an effective tool for cleaning out the Augean stables of international confusion and misunderstanding."

The committee which reported to you last year feels that events have vindicated its judgment both as to the importance of the program and as to the competence and responsibility of those who have carried it out under George Allen, Assistant Secretary of State for Public Affairs.

Your committee is persuaded that the trend of world affairs, in the last year, has multiplied the force of the arguments for a program of foreign information, submitted a year ago.

The great struggle for the minds of men was a conspicuous part of the cold war a year ago. It is now more clearly than ever the crucial battle of our time.

From the Marshall plan we have progressed to the Atlantic Pact. This is a historic departure in American foreign policy that makes it more than ever essential that people everywhere understand the peaceful aims of the Government of the United States.

The Atlantic Pact binds the nations of the Western World together. It is, however, subject to all the infirmities of all the treaties entered into since the birth of diplomacy. The union that it contemplates will grow into a great reality of world politics only if the peoples associated in this enterprise are united in purpose. And they can be united in purpose only by universal understanding of their common aims.

This Atlantic community cannot become the great force for peace into which we hope that it will grow solely by virtue of its economic assets and its military resources. It will shape its own destiny and fix the course of world history only if it summons up the intellectual and spiritual powers that are the foremost virtues of the western culture it has been devised to defend. These allies are not at the disposal of economists and generals. They can be brought into the struggle by the propaganda of truth and by that alone. We must enter into the contest for men's minds with spirit, vigor, and enthusiasm.

Most American newspaper editors certainly would prefer a world in which the American Government might remain in utter divorce from the subjective presentation of information abroad. Most of them certainly would choose above all other possible worlds one in which private agencies had the sole and exclusive responsibility for disseminating news. Such a world, it is apparent, is not to be had in our time. The Government of the United States, whether it wishes to do so or not, is compelled to engage in a program of foreign information. The best that we can do as newspapermen is to make to that program every contribution within our reach that will make it honest, responsible and effective.

One of the things that is needed to make that program effective is adequate wire services of all the press associations. The members of this society are fully acquainted with the past debates on this subject. They will recall the discussion that took place last year. Most of them certainly share the traditional misgivings that in the past have prompted the Associated Press and the United Press to withhold their services from the State Department. The independence and impartiality of the wire services is as important as ever. No one desires to impair it. However, the situation, since last we met, has changed in two respects. We have less reason to fear that their independence and impartiality would be affected by State Department use, now that we have had a further chance to see the responsible way in which the State Department agencies have used the news given them.

We have more reason to run whatever risk there is, now that the decisive phases of the cold war are at hand. As long as western civilization is worth a struggle, its wars, either cold or hot, will bring forth honest conscientious objectors, who dislike the measures essential to survival. The hard facts of life, however, coerce most of us into the realist's choice between the lesser and the greater risk. We come out of our soul searching convinced that it is wiser to give up something of our way of life for a short time than it is to risk giving up all of it for all time.

These considerations and reflections have caused our committee to recommend that the American Society of Newspaper Editors—

(1) Endorse the program of foreign information as it is now conducted and express the hope that it may be enlarged and expanded until it is operating upon a scale commensurate with the Nation's military and economic effort;

(2) Urge the Associated Press and the United Press to furnish to the foreign information agencies of the State Department

the news services that they require to conduct an effective program of foreign information;

(3) Terminate this special committee so long as the society is represented on the Congressional Advisory Committee created by statute to make a continuing examination of the foreign information programs.

J. R. WIGGINS.
LLOYD M. FELMLY.
HAROLD WHEELER.

Number of Government Employees

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a statement prepared by the Family Economics Bureau of Minneapolis, Minn., regarding the number of Government employees—Federal, State, and local.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MINNEAPOLIS.—There is now one Government employee for every six and a half families in the United States; each family's prorata share of the cost of Federal, State, and local government salaries averages approximately $33 a month, or $400 a year, according to calculations by the family economics bureau of Northwestern National Life Insurance Co.

Back in 1929 there were approximately 3,100,000 Government employees, or one for every 10 families in the United States, the figures show. Today there are slightly over 6,100,000 civilian employees of our Federal, State, and local governments. Public workers' salaries totaled a little under $5,000,000,000 in 1929, exceeded $15,000,000,000 in 1948, and may hit $16,000,000,000 for the year 1949, according to the bureau.

A force of 6,100,000 employees approximately equals the number of paid workers of all kinds in the three States of Massachusetts, Indiana, and Texas combined, the report says.

Since 1929 the population of the United States has increased 21 percent, the number of State and local government employees has increased 60 percent—from approximately 2,500,000 to 4,000,000, and the number of Federal civilian employees has increased 250 percent—from just under 600,000 to approximately 2,100,000.

After a sharp shrinkage from its war emergency peak of approximately 3,400,000, the number of Federal civilian employees is again increasing at the rate of about 100,000 per year. This roughly approximates the number of wage and salary earners of all kinds in a city the size of Hartford, Conn., or Oklahoma City, Okla., the statisticians point out.

The number of State and local government employees is currently increasing at the rate of about 200,000 per year, or by about the number of wage and salary earners of all kinds in a city the size of Dallas, Tex., or Kansas City, Mo.

Of the approximately 4,000,000 State and local government employees, approximately 1,600,000 are in the field of education. Since 1929 the number of other State and local government employees has increased half again as rapidly as teachers and educational workers, the figures show.

Brannan Plan Needs Army

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Brannan Plan Needs Army," written by Julian Bradbury, and published in the Omaha (Nebr.) World-Herald of April 17, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRANNAN PLAN NEEDS ARMY—AIKEN ALSO FEARS END TO FARM CO-OPS

(By Julian Bradbury)

Senator AIKEN, Republican, of Vermont, says the administration's new farm program will take a "veritable army to enforce."

In addition, he told the World-Herald in an interview, the new proposal would:

1. Mean the immediate extinction of all farm cooperatives, since income guaranties would remove the reason for banding together to obtain better prices;

2. Put "virtually complete control of every farm in the country" in the hands of the Agriculture Department;

3. Spawn a "grand rush for the farm when hard times come," and thus, eventually, make so many people into farmers with income guaranties that "farming would become unremunerative" to anyone;

4. Set up a "tremendous political force" at the beck and call of the administration.

Mr. AIKEN is the author of the so-called Aiken law supporting farm products on a sliding scale between 60 and 90 percent of parity which is to go into effect next January.

HAVE TO OBEY RULES

The administration proposes to let farm products seek their own price level in the market and pay farmers the cash difference between their actual income and the income necessary to keep their income equal to what purchasing power was over the past 10 years. Tied in with the plan are mandatory acreage controls and marketing allotments and soil conservation. A farmer would have to abide by departmental regulations to get his cash payments.

Mr. AIKEN believes that the Brannan plan will mean that the whole system of county Production and Marketing Administration committees would have to be greatly enlarged—to a "veritable army"—to make sure farmers abide by the rules.

MUST INCLUDE ALL

"No country has ever undertaken such a 100-percent (income) guarantee," he explained. "It would be absolutely necessary that the Government control all farming.

"But they couldn't stop with farming. They would have to extend controls to other groups of the population."

He pointed out that only in 1947 and 1948 did the farmers of the United States enjoy the 100-percent income which the Agriculture Department proposes guaranteeing to them for all time.

Since the administration program insists that the farmer spend part of his income payments for soil-conservation practices, Senator AIKEN feels that because of fixed charges that would put a minimum on tenant farming—it wouldn't be as costly as paying all the expenses on the place and Government-ordered outlays, too.

WOULD HURT CATTLE FEEDER

The Vermont Senator is noted on Capitol Hill for his fair-mindedness. He puts the welfare of the farmer before partisan politics.

One of the aims of the broad administration program, for example, is to cut down on huge corporate farms. Mr. AIKEN believes that is a worth-while aim, but he fears that the ceiling which the administration is setting on one-farm income—about $25,000—will hamstring the cattle feeder and others.

Suppose a cattleman buys beeves he intends to sell for $25,000. And feeds them hay and grass from the ranch worth $15,000. He gets income adjustments for the hay and up to $10,000 for the cattle, and winds up trying to get his money out of the finished cattle the best way he can.

Secretary Brannan's Farm Program

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Salvaging the Brannan Farm Program," written by John D. Black, Henry Lee professor of economics at Harvard University, and published in the Christian Science Monitor of Boston, Mass., in the issue of April 16, 1949. In the article, Professor Black discusses the farm program which has been proposed by the Secretary of Agriculture, Hon. Charles F. Brannan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SALVAGING THE BRANNAN FARM PROGRAM

(By John D. Black, Henry Lee professor of economics at Harvard University)

The farm program presented by Secretary Brannan to Congress last week surely is as unrealistic as some of its more reasonable critics are saying. But this does not mean that it should be cast bodily to the dogs. It has many fine features, such as using an income rather than a price standard, a recent rather than a distant base, and a moving rather than a fixed base, and we should do our best to incorporate these in whatever farm plan is developed.

The feature of the Brannan program that alone almost dooms it to failure is its proposal to get the farmers as high a price for a big crop as for a small one. If the program is adopted as outlined, the 1949 cotton growers will receive $84 per acre if the yield averages 300 pounds per acre, in contrast with $56 with an average 200-pound yield. All the crop history of this country bears testimony to the fact that a crop of high value per acre is followed by larger plantings the next year.

In the ordinary cotton market, an average 300-pound yield brings so low a price per pound as to sell for less money per acre than an average 200-pound yield; and this result has tended in the past to keep crop acreages from expanding following large crops and carry-overs. Secretary Brannan proposes to have the Government step in and prevent this natural adjustment. The sure outcome would be to force fixed acreage controls on cotton and most other crops after every year or two of good crop weather.

The correction for this is to adopt a variable price arrangement, under which big yields

sell at the most for only enough more per acre to cover the extra costs of harvesting the big yields. This would be a modified and improved form of the flexible provision in title II of the present Hope-Aiken Act. The schedule of price adjustments really should be fitted to each crop.

The companion change needed to save the Brannan program is to put the floor under prices of the different commodities at not more than 90 percent of the parity-income standard instead of the 100 percent proposed. This would mean 25-cent instead of 28-cent cotton in 1949; $1.30 in place of $1.46 corn; $1.42 in place of $1.59 potatoes; and $17 in place of $19 hogs. This price would be much less likely to expand production quickly and force marketing quotas, and would reduce very greatly the amount of the tax bill to be collected from the public at large.

If 90 percent of parity instead of 100 would be very helpful, 85 percent would be still more helpful. In fact, 85 percent of the 1939–48 parity-income standard is probably about all that our agriculture can stand in the next 5 years without more extensive control of acreages and marketing quotas, and heavier production or compensatory payments and burdens on the Treasury, than our people will endure.

The Brannan proposals could be strengthened further by providing for an expansion of a sound school-feeding program, to take the place in some measure of the compensatory payments. Such a program calls for planning in advance to produce more of the particular foods needed in school feeding, especially of dairy and poultry products and fruits and vegetables.

Secretary Brannan is apparently able to conceive of a school-feeding program only as a means of disposal of surpluses. He also fails to understand how $2 spent for food used in school feeding and stamp programs can half go for administration and for foods that the consumers would have bought anyway and still add $3 to farm incomes, for the simple reason that the average price of all farm products combined goes up 3 percent for every 1-percent increase in total demand.

The cost of Mr. Brannan's proposed program could also be reduced to advantage if he would require the production payments to be taken largely in the form of soil-conservation aids and the like if they were to be paid in full. The reduction for taking them in cash could be as much as a third or even a half. The special appropriation for soil-conservation payments could be greatly reduced in this way.

Thus revised, the Brannan program could be an improvement on the program of title II in the present Hope-Aiken Act, but not necessarily an improvement on a revised Hope-Aiken Act.

Senate Filibusters

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Filibusters Show the United States of America Is Still a Union of States," published in the Saturday Evening Post of April 23, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FILIBUSTERS SHOW THE UNITED STATES OF AMERICA IS STILL A UNION OF STATES

The usual view of Senate filibusters is that they are bad because they thwart the will of the majority and prevent action on important legislation. The assumption usually is that "democracy" means that the will of the majority should invariably prevail, and that unlimited debate in the Senate is a mockery of the purposes of the founding fathers, because it keeps the majority in hobbles. Because the latest filibuster was brought on by the administration's effort to push through the civil-rights bill, the basic issues behind unlimited debate in the Senate were generally overlooked.

Those who thumbed their way through the CONGRESSIONAL RECORD during the Senate's talkathon had the opportunity to learn considerable about American constitutional theory as it applies to majorities and the too frequently forgotten fact that a check on the will of majorities was one of the primary purposes of the American Constitution as originally written. Senator ELLENDER, of Louisiana, deserves the gratitude of all of us for his extensive quotation from James Madison's Journal of the Constitutional Convention, which ought to be studied by every American, and yet is hard to come by. The fear in 1787 was that a majority of the States would deny to a few States the autonomous rights which they did not wish to surrender to the Federal Union. This anxiety, along with concern for the protection of "inalienable" individual rights from the tyranny of the majority, was not quieted without concessions.

Madison believed that the functions of the Senate should include the power "to protect the people against transient impressions into which they themselves might be led." In addition to a popularly chosen legislative body, "liable to err from fickleness and passion," the Senate should comprise a "portion of enlightened citizens whose limited number and firmness might seasonably interpose against impetuous councils." Finally he believed that such a body would hold the fort when "the major interest might under sudden impulse be tempted to commit injustice on the minority." In other words, if the House, under pressure of popular clamor against an unpopular minority, undertook to put through a constitutional amendment repealing the Bill of Rights, a minority of Senators could still defeat hysteria by debating until the cows came home.

Although far from popular, this year's filibuster was not so badly received as some others in the past, no doubt because the importance of most of pending legislation was obscure. However, there was a widespread feeling that this was no way to run a railroad, and that is true. But is cloture in Senate debates the only answer? The contrast in quality between the debates in the leisurely Senate and those in the machine-controlled House should prescribe caution. A better answer would be some restraint on the part of the Executive and the majority in Congress in their selection of measures to be passed.

As Walter Lippmann effectively put it, "There are certain kinds of laws which, though enacted, cannot be enforced by any means that the majority is able or willing to employ." Rightly or wrongly, southern statesmen in Congress believe that Mr. Truman's civil-rights program comes under that heading. The President made the mistake of trying to translate a set of injudicious campaign slogans into law. There is certainly a good case for the view which Mr. Lippmann appears to hold that death by filibuster for some measures is cheap by comparison with what might happen if the majority always had its way. The important lesson of the filibuster is that, in a Federal Union like the United States, there is still a point beyond which a majority cannot go in asserting itself. The point is not a constant and it may change, even on the so-called civil-rights issue, but James Madison's view that "where a majority are united by a common sentiment, and have an opportunity, the rights of the minor party become insecure" is still a lively concern. Debate in the Senate is one of the few remaining recourses open to a minority which finds what it regards as its rights in danger.

Our Chinese Void

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial which apeared in the Manchester Evening Leader on Monday, April 25, 1949, entitled "Our Chinese Void." I recommend the reading of this editorial by all Senators.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR CHINESE VOID

Renewal of active warfare in China reveals in all its shame the absence of an American foreign policy for Asia. We who have boasted that we would help the free peoples of the world to resist the encroachments of communism, must confess that we have neither plan nor intention of maintaining our pledge in the East.

With acceptance of the concept of one world, we cannot be indifferent to the surrender of millions of human beings to Communist control. Apart from the moral issue of maintaining our promise to support the cause of liberty everywhere, there is the direct challenge to our security resulting from the strengthening of Russia's position.

Our attitude would be bad enough if we had a mistaken policy; it is infinitely worse when we have no policy. As a nation we cannot operate in a vacuum in our relations with a major portion of the world.

The official indifference of our State Department can scarcely be endearing us to our friends. They must construe our lack of policy to either abdication of world leadership or inability to formulate any plan. Neither reason can be reassuring.

In a realistic world we must cope with conditions as we find them. We cannot proclaim a brave determination which we enforce only when conditions are favorable and which we abandon when circumstances are less kindly than we had hoped.

A stand which is predicated upon a never-never land of utopian harmony is worse than valueless. It is unconscionable betrayal of the trust of friends.

The fact of Communist domination of northern China is an existing fact. That does not mean we must surrender the balance of Asia. The longer we delay, the more probable becomes the Red conquest of the great remaining areas of independent China.

If all of China goes, the fall of Burma, Siam, the Malayan States, and even India becomes much more of a dread possibility. Since so much of China is gone already, our need is to salvage as much as possible of the balance of southern and western Asia.

The formulation and fulfillment of a firm policy for Asia is a major necessity of emergency nature. With it, we become again the standard-bearer for all the peoples whose love of freedom makes them wedded to our leadership. Without it, we are a fallen giant whose plight will bring regret but not pity from the rest of the world.

Basing-Point System Assesses Flood-Control Program—Cement and Steel in Huge Quantities Used in Flood Control—Basing-Point and Monopoly Lawyers' Arguments Ridiculous—Small Business Fights Movement to Weaken Antitrust Laws

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. PATMAN. Mr. Speaker, cement is a very important commodity in the construction of our great flood-control projects. We are all familiar with the flood walls built of reinforced concrete stretching along the banks of the rivers upon which are situated many of our large cities and numerous towns and villages. We have expended large sums of money on flood-control projects, not only for the protection of our people and their property in our cities and towns, but for the protection of our farmers and vast areas of valuable farm land. These projects are not confined to any one part of the country, but are included in nearly every State where the necessity for flood control is evident. Every such project, whether it be in the great Mississippi Valley areas and the tributaries of the Mississippi, or in other areas, requires enormous quantities of cement and steel.

BASING-POINT SYSTEM ASSESSES FLOOD CONTROL

The basing-point system, prior to the Supreme Court decision, was utilized in the pricing of cement used in flood-control projects as it has been in every construction project, regardless of kind or character. The millions upon millions of barrels of cement and the millions of pounds of steel, which of necessity must be utilized in the control of the devastating floodwaters of our rivers, have been assessed large sums of money to pay for phantom freight under the basing-point system. There is no one who can deny this statement, although the Cement and Steel Trusts would like to deny it; in fact, they would have much preferred that the subject of the basing-point system had never been mentioned. However, the Federal Trade Commission, under its congressional mandate, did bring up the subject of the basing-point system, and the subject was thoroughly exhausted with little or nothing left to say about it after the Supreme Court spoke on April 26, 1948.

MORATORIUM VERSUS BASING POINT

It has been said again and again that the moratorium was an innocent legislative device to clarify the minds of those who, for reasons of their own, did not understand the Supreme Court decision. Is this not a ridiculous premise upon which to base an argument for the need of legislation? The same basing point and monopoly lawyers who argued so vehemently and so learnedly in opposition to the findings of the Federal Trade Commission in the Cement case now are confounded, confused, bewildered, and perplexed in trying to find out what the Supreme Court said on the day the basing-point system was sentenced. But is this question of clarification really one which requires an answer? Is it not a question of seeking a prop by which to return to the basing-point system, thereby setting in motion a long series of actions which will require years to settle? I do not believe Congress should assume the burden of legislation which will weaken the laws we have been trying so long to uphold.

FURTHER PROOF OF BASING POINT BIDDING TECHNIQUE

As further proof of the operation of the basing-point system and its effect on the flood-control program, I include a number of tables of bids on cement received by the Army engineers, for the period April 9, 1947, to March 22, 1948, for various flood-control projects:

TABLE 1.—*Abstract of bids 2,000 barrels American portland cement received by Corps of Engineers, War Department, Vicksburg, Miss., advertised Mar. 26, 1947, and bids opened Apr. 9, 1947, serial No. 22–052–47–209, for flood control, Mississippi River and tributaries; destination, Vicksburg, Miss.*

Bid No.	Bidder [1]	Price per barrel f. o. b. destination		Discount per barrel (15 days)
		Item 1	Item 1 (a)	
1	Hermitage Portland Cement Co	$2.83	$2.85	$0.10
2	Universal Atlas Cement Co	2.83	2.85	.10
3	Alpha Portland Cement Co	2.98	3.00	.10
4	Lehigh Portland Cement Co	2.83	2.85	.10
5	Lone Star Cement Corp	2.83	2.85	.10
6	Marquette Cement Manufacturing Co	2.83	[2]	.10

[1] Awarded by lot to bidder No. 4 as between bidders 2 and 4, because these were lowest bids considering guaranty against increase for 15 days.
[2] No bid.

TABLE 2.—*Abstract of bids for 150,000 barrels American portland cement received by Corps of Engineers, War Department, Vicksburg, Miss., advertised Apr. 8, 1947, and bids opened Apr. 21, 1947, serial No. 22–052–47–225, for flood control, Mississippi River and tributaries; destination, Vicksburg, Miss.*

Bid No.	Bidder [1]	Price per barrel f. o. b. destination		Discount per barrel (15 days)
		Item 1	Item 1 (a)	
1	Universal Atlas Cement Co	$2.66	$2.68	$0.10
2	Pennsylvania-Dixie Cement Corp	2.66	2.68	.10
3	Lehigh Portland Cement Co	2.66	2.68	.10
4	Marquette Cement Manufacturing Co	2.65	2.68	.10
5	Alpha Portland Cement Co	2.65	2.68	.10
6	Lone Star Cement Corp	2.66	2.68	.10

[1] Awarded to bidder No. 4, whose bid was the lowest received that complied with essential requirements of the specifications, for delivery f. o. b. contractor's shipping point.

TABLE 3.—*Abstract of bids for 4 lots of American portland cement received by Corps of Engineers, War Department, Huntington, W. Va. Bids opened May 12, 1947; issued May 1, 1947, serial No. W–46–022–eng–47–136, for Bluestone Dam, Bluestone Reservoir project, New River, W. Va.*

LOT A, 267,000 BARRELS

Bid No.	Bidder [1]	Price per barrel f. o. b. destination		Discount per barrel (15 days)
		Item 1	Item 1 (a)	
1	Universal Atlas Cement Co	$2.58	$2.60	$0.10
2	Lehigh Portland Cement Co	[2]	[2]	.10
3	Medusa Portland Cement Co	[2]	[2]	.10
4	North American Cement Corp	[2]	[2]	.10

LOT B, 162,000 BARRELS

1	Universal Atlas Cement Co	$2.58	$2.60	$0.10
2	Lehigh Portland Cement Co	2.58	2.60	.10
3	Medusa Portland Cement Co	2.58	2.60	.10
4	North American Cement Corp	[3] 2.73	[3] 2.75	.10

LOT C, 75,000 BARRELS

1	Universal Atlas Cement Co	$2.58	$2.60	$0.10
2	Lehigh Portland Cement Co	[2]	[2]	.10
3	Medusa Portland Cement Co	2.58	2.60	.10
4	North American Cement Corp	[2]	[2]	.10

LOT D, 30,000 BARRELS

1	Universal Atlas Cement Co	$2.58	$2.60	$0.10
2	Lehigh Portland Cement Co	[2]	[2]	.10
3	Medusa Portland Cement Co	2.58	2.60	.10
4	North American Cement Co	[2]	[2]	.10

[1] All bids received on this invitation were rejected. Purchases were readvertised and rebid as shown below.
[2] No bid.
[3] Bidding on only 87,000 barrels.

The bids on 4 lots of American portland cement were reissued on May 23, 1947, and opened on June 3, 1947

LOT A, 267,000 BARRELS

Bid No.	Bidder [1]	Price per barrel f. o. b. destination		Discount per barrel (15 days)
		Item 1	Item 1 (a)	
1	Huron Portland Cement Co.	(2)	(2)	$0.10
2	Universal Atlas Cement Co.	$2.58	$2.60	.10
3	Lehigh Portland Cement Co.	(2)	(2)	.10
4	Bessemer Limestone & Cement Co.	(2)	(2)	.10
5	North American Cement Corp.	(2)	(2)	.10
6	Medusa Portland Cement Co.	(2)	(2)	.10

LOT B, 162,000 BARRELS [1]

1	Huron Portland Cement Co.	(2)	(2)	$0.10

6	Medusa Portland Cement Co.	2.58	2.60	.10

[1] Lot B awarded to Medusa Portland Cement Co. and Lehigh Portland Cement Co. 162,000 barrels.
Lot C awarded to Huron Portland Cement Co., 75,000 barrels.
Lot D awarded to Huron Portland Cement Co., 30,000 barrels.
[2] No bid.
[3] Bidding on only 87,000 barrels.

TABLE 4.—*Abstract of bids 3,000 barrels American portland cement, air entrained, received by Corps of Engineers, War Department, Vicksburg, Miss., advertised Sept. 24, 1947, and bids opened Oct. 6, 1947, serial No. W–22–052–48–103, for flood control on the Mississippi River and tributaries*

Bid No.	Bidder	Price per barrel f. o. b. destination		Discount per barrel (15 days)
		Item 1	Item 1 (a)	
1	Universal Atlas Cement Co.	$2.98	$3.00	$0.10
2	Lone Star Cement Corp.	2.98	3.00	.10
3	Lehigh Portland Cement Co.	2.98	3.00	.10

[1] Awarded by lot to bidder No. 1 as between bidders 1 and 3, because these were lowest bids considering guaranty against price increase for 15 days.

TABLE 5.—*Abstract of bids 1,000 barrels American portland cement, received by Corps of Engineers, Vicksburg, Miss., advertised Oct. 13, 1947, and bids opened Oct. 24, 1947, serial No. W–22–052–eng–48–130, for flood control, Mississippi River and tributaries*

Bid No.	Bidder [1]	Price per barrel f. o. b. destination	Discount per barrel (15 days)
1	Lehigh Portland Cement Co.	$3.03	$0.10
2	Universal Atlas Cement Co.	3.03	.10
3	Lone Star Cement Corp.	3.03	.10
4	Alpha Portland Cement Co.	3.03	.10

[1] Awarded by lot to bidder No. 1 as between bidders Nos. 1, 2, and 3, one of the four lowest bidders as to price. Bidder No. 4 disqualified by stating right to limit deliveries to 1 car per month and to allow 15 days to ship each car.

TABLE 6.—*Abstract of bids, 144,000 barrels of American portland cement, received by Corps of Engineers, Baltimore, Md., advertised Dec. 23, 1947, and opened Jan. 12, 1948, serial No. W–18–020–eng–48–23, for flood control, general*

Bid No.	Bidder [1]	Price per barrel f. o. b. destination		Discount per barrel (15 days)
		Per barrel	Paper sacks	
1	Alpha Portland Cement Co. (partial quantity bid)	$2.91	$3.19	$0.10
2	Universal Atlas Cement Co.	2.91	3.19	.10
3	Lehigh Portland Cement Co. (partial quantity bid)	2.91	3.19	.10
4	North American Cement Corp.	2.91	3.19	.10
5	Glens Falls Portland Cement (partial quantity bid)	2.91	3.19	.10

[1] Awarded one-half of requirements to each of the following companies: Universal Atlas Cement Co. and North American Cement Co., because of special considerations favorable to the Government in proposed contracts.

TABLE 7.—*Abstract of bids, 2,500 barrels of portland cement, received by Corps of Engineers, Vicksburg, Miss., advertised Feb. 26, 1948, and opened Mar. 10, 1948, for flood control work*

Bid No.	Bidder	Price per barrel f. o. b. destination		Discount per barrel (15 days)
		Item 1	Item 1 (a)	
1	Lehigh Portland Cement Co.	$3.23	------	$0.10
2	National Cement Co.	3.23	$3.21	.10
3	Lone Star Cement Co.	3.23	------	--------

[1] Awarded by lot between bidders Nos. 1, 2, and 3, to bidder No. 3, one of the three equal lowest bidders as to price.

It will be noted that on item 1, the Government bills of lading bids, one or two differences are noted in the amount of 1 cent. These differences are in all probability errors in computing freight rates.

On item 1a bids, which are the usual destination basing-point bids, using the tables of the basing-point system, no differences in bids appear, except in the case of one or two bidding companies who bid high for reasons of their own.

TABLE 8.—*Abstract of bids 6,000 barrels of portland cement, received by Corps of Engineers, Vicksburg district, Vicksburg, Miss., advertised Mar. 3, 1948, and opened Mar. 15, 1948, serial No. Eng–22–052–48–338, for flood-control work*

Bid No.	Bidder [1]	Price per barrel f. o. b. destination	Discount per barrel (15 days)
1	Lone Star Cement Corp. (partial bid on 3,000)	$3.09	$0.10

3	Lehigh Portland Cement Co.	3.09	.10
4	Marquette Cement Manufacturing Co.	3.09	.10

[1] No award made. All bids rejected on Mar. 23, 1948.

TABLE 9.—*Abstract of bids 10,000 barrels of portland cement received by Corps of Engineers, Seattle, Wash., advertised Mar. 8, 1948, and opened Mar. 22, 1948, serial No. W–45–108–Eng–48–213*

Bid No.	Bidder [1]	Price per barrel f. o. b. destination	Discount per barrel
1	Superior Portland Cement, Inc.	$3.35	[2] $0.10
2	The Olympic Portland Cement Co., Ltd.	3.35	[3] .10
3	Permanente Cement Co.	3.55	[4] .10

[1] Awarded to bidder No. 1 who was lowest bidder considering discount offered.
[2] 20 days.
[3] 15 days.
[4] 10 days.

NOTE.—Item 1 desginates bid on Government bill of lading. Item 1 (a) designates bid at destination price.

SMALL BUSINESS FIGHTS MORATORIUM BILL

As I have previously shown, legitimate small-business organizations and small-business men, as individuals, are voicing opposition to the moratorium bills. Letter after letter indicates an increased fear that the Robinson-Patman Act and other price-discrimination and antitrust laws will be materially weakened by the passage of a moratorium bill. Farm organizations have come out strongly against the basing-point system and have the same viewpoint that is held by all who have reason to fear the ever-growing monopolies in food, in farm machinery, in basic products such as steel and cement, and in many other commodities.

I sincerely hope the tables above will serve to focus the attention of every Member of this House, who is interested in our flood-control program, on the noncompetitive bidding of the basing-point system. The flood-control program is of vast importance, not only from the standpoint of property, which is of the least importance when compared to the lives and health of our people, but to our entire economy. If we are to save our land, flood control is one of the most valuable methods of conservation. Let

us not jeopardize this program or any other program by weakening our anti-trust laws and encouraging monopolistic and unfair trade practices. The passage of any moratorium bill undoubtedly will have just that effect.

Empty Seats in Congress

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Arthur Krock entitled "Those 'Empty Seats' in the House and Senate," from the New York Times of April 22, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—THOSE EMPTY SEATS IN THE HOUSE AND SENATE

(By Arthur Krock)

WASHINGTON, April 21.—Some days ago in this space an account was given of legislation considered and completed by the House and the Senate in the course of April 13, to support the statement that the Eighty-first Congress is a hard-working, not a "do-nothing," body. Several readers who visited the Capitol that day wrote in to ask why so many seats in the two branches were empty when the important business was being transacted.

Howard M. Liechty, of Monsey, N. Y., voiced the perplexity of the others. "To uninformed visitors it seems a mockery when an orator addresses the empty seats of an unheeding group of legislators," he wrote. "Are they vacant because the Members are in committee work? Is Congress so organized that Members cannot listen to and participate in debate on questions weighty enough to warrant their being debated at all?"

To reply requires a survey of the reasons for absenteeism, which are several and rarely the product of neglect of duty in any form. For example, under the rules the Appropriations Committees (45 Members of the House and 21 of the Senate) can and do meet at any time during the sessions, frequently as subcommittees, and that is what some of the absentees were doing on April 13. Second, no matter how distinguished a Senator or Representative may be, he is an errand boy for his State or district, and afternoons offer about the only time he can transact local business with the executive departments and agencies and receive his constituents in the lobbies. Third, the mail from home is heavy and must be answered and session hours as well as nights when his branch of Congress is not meeting must be used for this purpose. Committee meetings take up most of the mornings.

By necessity Members largely rely on the committees they don't belong to for the spade work by which legislation is made ready for introduction and debate. They are furnished with all the transcripts, and many have read these and satisfied themselves on disputed points before debate begins. On April 13, the day this correspondent used as proof that Congress is hard-working that was particularly the case.

SOME CASE HISTORIES

The Senate that day, for instance, was considering the appropriation for a TVA steam plant at New Johnsonville, and there were very few Members on the floor. Why? Because the issue is not important or Senators were too lazy to take an interest in it? The answer is that advocates of the plant had the votes, which everyone knew, and the opponents could only make a token fight for the record, which they did. But this kept the issue alive, and it will reappear.

This was also true of the District of Columbia rent-control bill, the early stages of debate on the administration's housing bill the authorization of funds for the second year of the Economic Cooperation Administration and the deficiency bill of $600,000,000 that merely carried out Congress' previous pledge to the Veterans' Administration. The sentiment of the House was overwhelming in support of its committee report on the $15,900,000,000 defense bill, and the major disputes had been threshed out before.

Also, when the House sits as a committee of the whole, the presence of only 100 Members is required for a quorum, and divisions on important matters often are tentatively settled by 50 votes to 30. But these decisions can be, and often are, challenged and reversed on a roll call of the entire House. Then the empty seats are few.

WHERE ABSENTEES ARE

Frequently the matter under debate, though of great public interest and political significance, has been argued in principle for years, and the most earnest Members of Congress, certain they will hear nothing new and already determined on their position, will take the opportunity to catch up on the pile of other work that confronts them. For, like all enterprises in which men engage, membership in Congress forces some selection of the matters to which they will give their chief attention at a particular moment. A close and daily observer at the Capitol, whom this correspondent asked for comment, gave these illustrations:

"Representative A of Mississippi, absent from his seat when the Capitol guides are herding visitors into the galleries, will be at the Committee on Agriculture, looking over the latest critical situation in cotton, unless something tremendous is up in the House. Senator X of Ohio, whose advice on fiscal matters is considered vital by colleagues who are busy elsewhere, will be in his seat when a money bill is under consideration, but he will be answering his mail another time. Both activities are within his duty."

Also: Members of the Foreign Relations Committee today had to miss the housing bill debate to listen to Secretary Acheson, popping in only when there was a roll call on amendments.

The broad facts are that most debates in the Senate are as well attended as they deserve; that under the rules of the House there cannot be much worth-while discussion; that legislation does not suffer from absenteeism; and that an empty seat rarely means an indifferent Member. What the occasional gallery visitor sees in his brief inspections is seldom the engine room of Congress. And often when he reads in the newspapers of a historic act on the day of his visit he wonders when that happened, for it was not visible to him among the empty chairs. Yet it may have been done under his eyes by the few occupants and debaters who were present.

This is the system. It has great faults, but inattention to business is rarely one of them.

Injustice to Musicians of 20 Percent Amusement Tax

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Leo Cluesmann, secretary, American Federation of Musicians, and published in the April 1949, issue of International Musician, commenting upon the injustice to musicians of the 20-percent amusement tax.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The 20 percent amusement tax is imposed upon all establishments where live musicians are employed and dancing or singing is permitted. This applies to restaurants, hotels, dance halls, theatres and similar establishments. It is the aim of the American Federation of Musicians to bring about a modification of this tax, in view of its detrimental effect upon the employment opportunities not only of members of this organization, but of all sorts of performers and entertainers in the amusement industry; it also affects adversely other employees, such as waiters, cooks, porters, etc.

It has been the experience of this organization that since shortly after the war there has been a falling off in employment in establishments such as night clubs, dance halls, etc. It seems that for a while after the war the people still had a certain excess amount of money to spend for amusement and for that reason there was no objection generally to the 20 percent tax. However, now that the public seems to count its pennies, the payment of the 20 percent in addition to their bills has caused an undue burden, and many establishments have been compelled to close because of lack of patronage, or have installed mechanical music such as Muzak or some other form of wired music, also juke boxes. This results in unfair competition with live musicians, for ironically mechanical music is exempt from tax by the Government, and according to the copyright law no license fee may be exacted by the American Society of Composers, Authors and Publishers (ASCAP), whereas all these various exactions apply where live music is performed. In other words, an employer is compelled to pay a premium for the privilege of having live talent. The proprietor of an establishment where a juke box operates has the added advantage of receiving considerable revenue from its use.

This clearly indicates that live musicians and entertainers are penalized and their employment opportunities jeopardized in favor of mechanical entertainment.

As is well known, when times become bad the members of the amusement industry are the first to feel the effect, and as conditions improve they are the last to benefit thereby.

In many other fields of endeavor the Government makes it its business to assist industries. The farmer is subsidized for the purpose of assuring him of a fair price for his products; and in other cases, such as shipbuilding, our merchant marine service, and the air lines, certain governmental agencies have the function of maintaining

an economic balance. All these industries are now receiving, or have received, substantial help from the Federal Treasury.

But the musician is the forgotten man and his welfare seems to be of little concern, notwithstanding his contribution to morale during the recent war, and the part which music of all kinds plays in our national life.

The musician does not ask for subsidies, only to have the adverse tariff against live music removed in the interests of equity.

Proposals to remove or sharply reduce all such excise taxes as the 20 percent amusement levy are already before Congress; and before these proposals come up for debate, members and officers of locals should call to the attention of their Senators and Congressmen the disastrous effect of this tax on their livelihood.

Wanted—A New Approach to Farm Problems

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, April 25 (legislative day of Monday, April 11), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address entitled "Wanted—A New Approach to Farm Problems," delivered by Murray D. Lincoln, president, the Cooperative League of the United States of America, at the national convention of Americans for Democratic Action, held at the Sherman Hotel in Chicago on April 9, 1949.

An estimate from the Government Printing Office indicates that the manuscript of Mr. Lincoln's address will exceed by one-third of a page the two pages allowed under the rule without a statement of cost, and that the cost will be $175.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WANTED—A NEW APPROACH TO FARM PROBLEMS

The sign on the barnyard gate might very well read: "Wanted, to buy a new approach to farm problems." Or maybe, as an old sailor might say, we just need to get on a new tack.

Anyway, however you say it, I believe we have been approaching our general farm problems in the wrong way, in many respects. We have been trying to solve these problems in much the same way as has industry and labor. Because they have been supporting a program of scarcity—trying to make prosperity by creating artificial scarcities and thereby making prices high—agricultural leaders and Government tried to make the same technique work with agriculture, which simply cannot be adjusted to the kind of a program that industry and labor can make operative—or one, at least, they thought they could.

What has business done that is restrictive and destructive of free markets? Instead of investing in expansion prior to the war businessman invested in consolidation. That might mean any number of devices to bring their market under control. Buying up competitors, as Rockefeller did, was one device. Another was buying up their sources of supply, as Ford and General Motors did. Controlling your retail outlets, as General Electric, Westinghouse, Firestone, and others did. Running a patent factory, as most every progressive corporation does in its research laboratory. Price agreements of all kinds are generally restrictive. Tariffs and corporation controls are certainly restrictive. Small retailers get their legislatures to pass anti-chain-store legislation and price-fixing laws, masquerading under the name of fair-trade laws. Dairy interests get an oleomargarine tax passed.

The unions adopt a rule that restricts paint-brush width to 6 inches—and other feather-bed rules.

Farmers have demanded Government support to prices of wheat, cotton, and corn. They have their AAA's, FSA, soil conservation, cooperative banks, production credit, also oleomargarine-tax laws.

But where has it all taken us? The net result has been to simply continue that historic sequence of booms, busts, and wars, repeated every generation—now in 20-year cycles. And now people all over the world are in revolt. This is a revolutionary period, even if people don't recognize it. It probably is as significant, if not so violent, as the revolutionary period in which we overthrew political kings and emperors, and slowly and tediously put political power in the hands of common people through the democratic or representative process. What we are doing now is to overthrow economic autocracy, economic imperialism, economic exploitation of the masses by monopolistic classes, to work out the process and detail of economic democracy.

Abe Lincoln once said, "There has never been but one central economic problem. That is how to keep a few from saying to the many, 'You work and we eat.'"

Now I don't mean to say that everything we have done is wrong, far from it. But by no analysis that I can make, no test that I can apply, can I convince myself that we are making the progress we could if we would right-about-face in many respects.

But it has been worth trying many of these things if for no other reason than to have tried them and thereby convince ourselves that they will not work satisfactorily.

A few years ago a meteor by the name of Sapiro zoomed across the horizon with a sure-fire solution to the farm problem. We were going to sign farmers up on watertight contracts, through marketing cooperatives, to control farm products and make consumers pay the price we wanted. Industry did it by their controls. Labor did it by strikes, so we said. But it didn't work.

Then we sought the McNary-Haugen bill under the Coolidge administration.

Next, the Hoover Farm Board, which through Government buying and selling was to control prices. And again we turned to industry—the farm-machinery business, which certainly did control prices through regulated production—to get an industrialist who could show us how to do it, Mr. Legge, who left a $100,000-a-year job to do it for agriculture. We accumulated surpluses that only the war saved us from. The oncoming depression finished that. We said it failed because we didn't control production, which led to the Agricultural Adjustment Act. This resulted in the setting up of a bureaucracy, about which so many are now complaining—with implications of increasing statism that seems in considerable variance with our long tradition of individualism and independence.

So here we have both legislative and economic action attempts to return to farmers the prices that we thought to be deserved.

Far be it from me to say that this effort was abortive. Some good has been derived from the experience. At least we know some things that won't work.

If nothing else has happened as a result of these legislative attempts to solve the farm problem, at least there has come a strengthening in the determination of farmers to continue to expand their self-help action through the still further development of cooperative marketing, cooperative purchasing, cooperative electric utilities, cooperative finance and insurance, and consumer cooperatives.

And I hope that nothing I say here is taken to mean that I depreciate the efforts of Congress or the different administrations to find a solution to this troublesome farm problem. And neither do I wish to convey the impression that farmers through their general farm organizations should lessen their efforts to have farmers adequately represented in legislative halls to oppose detrimental legislation and work for legislation that we believe will reflect benefit to our group or the common good.

But I do believe that we should not be blind to the fact that agriculture is a minority group so far as votes are concerned. Farmers constitute only 18 percent of our whole population. If we believe in representative government, we must recognize that other groups have the power to take away legislative benefits as well as to grant them. And right now we are witnessing one of those periodic swings of public sentiment. During the depression most anything was granted to agriculture because even city people are generally sympathetic to the problem of our farmers. During the period of high prices in the inflationary period following the war, agriculture received much discredit. We were reminded of the program of scarcity which we had practiced in the past when people didn't have all the things to eat which they needed.

I think our national farm organizations have put too much emphasis on legislative controls and not enough on economic controls. Perhaps it is better to say that we want more economic action even if we have no less legislative action.

I do not believe we can ever legislate ourselves into prosperity any more than you can make people moral or Christian by passing laws. If this is the method we choose we will eventually end up with complete state control. Rather we should use our political power to oppose monopolies in control of raw materials, in distribution, in finance, and to guarantee the greatest degree of true competition and freedom of enterprise.

The farm problem comes about largely through the corporate or monopoly control of prices of what the farmer sells and buys. No business can long remain solvent that sells at wholesale and buys at retail, and has no say about either price. And how are you going to correct that situation by legislation unless you put Government into business head over heels?

Now in another way I think we have been wrong. We approach our problem from the standpoint of price—or markets—export demand and other similar phases rather than the simple one of the primary use for agricultural products—namely, food for human consumption.

Take the dairymen. They seem to be chronically in hot water. Yet in spite of all protestations they keep on producing milk. The situation reminds me of a story told by an old German farmer in northwestern Ohio to one of our fieldmen. He

said, "Louie, I keep books like the boys at the university tell me to and each year, according to the books, I lose money. But every 5 years I buy a new farm—I can't understand it, unless it is the manure they don't reckon on."

I don't mean to belittle the problem of the dairymen, but I sincerely believe if they will begin to think in terms of how to get more milk at a lower retail price into the mouths of hungry people, we will be on the way to finding the method of getting more money into the pockets of dairymen.

Dairymen have tried most every restrictive approach we know about, such as using the health departments to shut out competing milk, refusing to let retail stores reflect possible savings to consumers as against door-to-door delivery, a tax on oleomargarine, a wasteful system of collection and distribution of milk, to say nothing of letting milk distributors through good and bad years get away with a return on their investment that is way out of line for any normal return on average business. These are definite examples of trying to increase prices by restrictive methods.

And I am sure that farmers are not going to improve their chances of success if farm leaders keep up their long-time criticism of labor. We may not like what some labor-union leaders say or do, but they have just as much right to organize to protect their producer interests as farmers have. And the public does not like what some farm leaders advocate, according to some articles that appear in the metropolitan press.

A very successful Boston retail merchant once said that no business ever really succeeds that fights its customers. Railroads have long since learned this and are aggressively moving away from the old public-be-damned philosophy that characterized the day of the Vanderbilts, the Goulds, and the like. Working people are farmers' best customers. The first thing people with average incomes do when they get more wages is to spend more money for food.

Witness the fact that during and since the war when the average city workingman's wage was being raised, the consumption of meat increased 17 percent over prewar. This situation was true for practically every other agricultural commodity.

It would appear that increased wages to labor ought to be one of the best sources of increased income to farmers, just as better income to farmers will be reflected in more purchasing power on the part of farmers for supplies made by labor.

This is true, and would be even more so if our distributive systems didn't take so much from both the farmer and city wage earner. In fact, until we overcome the monopolies and waste in distribution and production, such as manufacturing and control of raw materials, neither the farmer nor the wage earner will receive the return that he ought to get and can get.

And that brings me to my principal suggestion. There is not much use in arguing whether what has gone before is right or wrong. As we face the future we must use the past as a guide and to ascertain what is to be our future course of action.

Are we going back to the old laissez-faire economy? Are we again going to take up the mad race to exploit people as well as nations for the profit of a chosen few? Are we again going back to that rugged individualism where every nation and every person looks out only for himself and let the devil take the hindmost?

Well, if we do, the devil will get most of us by dividing us still further into camps of haves and have-nots, and finally we will face the third world war.

Unless we can give people hope of something except recurring wars, we may face the same kind of situation that has recurred before in the history of mankind—so-called civilization simply fades out for a period.

In attempting to outline our course and determine where and how we go from here, we ought to weigh carefully the following:

1. It is now physically possible to assure everyone reasonable freedom from want, as related to an adequate diet, clothing, and shelter. In other words, because of mechanization and scientific development in both industry and agriculture, we know we can produce the goods to assure this freedom from want.

2. World leadership has come to the United States of America—whether we want it or are ready for it. Our country has been less disturbed physically by the past war. Our productive capacity has been tremendously expanded. We have had a minimum of imperialism. We have demonstrated a good-neighbor policy. Scientifically and mechanically we have much to offer other nations. We are a young nation. We represent people from all nations, we have been assimilated in a reasonably successful manner. Therefore we have sympathies for other nations by blood ties. We were the first to develop mass production in industry and mechanization in agriculture. Essentially we have followed a live and let live policy.

3. As a result of this opportunity for world leadership what we do in this Nation is of crucial importance. Whether we produce for abundance instead of for scarcity, whether we can find the way to maintain an adequate degree of full employment of human and material resources. Whether we can harmonize the class strife already too apparent between labor, agriculture, and industry. Whether we will continue our broad policy of helping other nations help themselves.

Our success or failure in resolving these age-old questions will have world-wide repercussions.

In order to accomplish these desired ends, as I said in the beginning, I believe the first essential is that we firmly resolve to adopt a policy that will put into effect an economy of abundance in place of the economy of scarcity that has been practiced so long in this Nation and the world.

We must eliminate this paradox of hunger and want amidst potential and actual plenty.

We must get more goods to more people at less cost.

We must help ourselves by helping (not exploiting) one another.

If we count ourselves a Christian Nation we should make a greater practical demonstration of our Christianity in our economic and social relationships, both within and without the Nation.

If you accept the premise, you may then properly ask: How can it be done? I have no cut-and-dried plan that can reverse our age-old practices. But I do think it is clear what some of the steps are, and we must expect to improve, improvise, and implement as we go along.

First, we must set our hearts and minds on doing it.

Second, we must take every means to lower costs of production, manufacture, and distribution of both agricultural and industrial products and related services.

Of what avail is this mad cycle of industry asking more profits, labor, higher wages, and farmers higher prices? Each increase passes a greater burden on to all other people in society for the temporary benefit of a few. But to continue this vicious cycle leads only to inflation, deflation, repudiation, and damnation in the form of wars and economic and social collapse.

Third, the fullest effect of the lowering of costs must be passed back to the user or consumer. It will be of no avail if the increased savings of such effective reduction of costs are returned to invested capital held by a few people.

There is an erroneous impression abroad that lower prices mean unemployment and lower farm returns. Just the opposite can be true. As a farmer lowers the cost of producing and getting the food to the wage earner, he can work for less money which in turn lowers industrial costs, which in turn lowers farming costs, and so on. This approach will benefit everyone, not just a few. Granted, this cannot happen overnight. Also, some groups will be temporarily out of balance, but aren't they now?

Now all this can be accomplished within the framework of democracy and representative government. Certain industries have partially demonstrated this already, notably the auto industry. As they lowered costs, their markets have increased, since more people were able to buy automobiles.

To implement this new approach I feel that two factors will be important.

First, is the cooperative movement. And when I mention this I mean all phases of this people's movement. There is cooperative marketing, cooperative processing, cooperative finance, cooperative buying, cooperative utilities, cooperative services of all kinds in which people can benefit by reduction of waste, guaranty of quality and proper use, proper adjustment of service to needs, and of course, very vital to the whole scheme, the return of savings to the use of member and patron of the cooperative unit.

I call the cooperative movement a catalytic agent. A catalytic agent is a chemical that, put in with other chemicals, brings about a chemical change while the agent itself remains as is, or stable.

The entrance of cooperatives into various fields, if successful, makes other businesses do certain things they had not been doing before. This, to me, is the evolutionary way of getting things changed or accomplished.

My hope is that in the not-too-distant future city dwellers—on a vast scale throughout the land—will take up consumer cooperation. And there is evidence they are beginning to do so. If they do that, farmer cooperative groups can then contract direct with these urban groups to supply certain food products and in this way we can go around the present monopolies that control distribution and manufacturing, in many cases. And I am sure that farmers will need the volume of business in cooperative channels, to say nothing of the legislative support of urban people, to bring into being an economy of abundance. The old system of exploitation will not give up easily.

Second is the place of Government in the scheme of things. The Ohio Farm Bureau was one of the first farm organizations in the early thirties to object to the restrictive features of the AAA program, also the regimentation. We said if you ask the Government to do something for you, you inevitably put the Government in a position to do something to you.

And to plow up cotton and kill little pigs, pay farmers to restrict production, is social and economic suicide, so long as anyone, anywhere in the world, is hungry or ill-clothed and ill-housed.

It is fortunate for the country and the world that the soil conservation and improvement phases of our national agricultural program outdid the restriction. Improved fertilization and hybrid seed corn also played their part, so that we have had ample food to met the unprecedented demands of

our civilians, armed forces, and lend-lease during the war and tremendously increased demand for food since the war.

And farmers, of course, have done a grand job of producing in spite of shortages of labor, materials, and other deterrents.

People today are grumbling about Government regulations. To me this is a natural sequence to our demands that Government help industry, labor, and agriculture. I do not feel nearly as critical of Government as some seem to, simply because I believe it to be our own fault, as a people. People have in their own hands the tools to fashion their own destinies. If people will do more things themselves, there will be less for Government to do.

We worry about taxes. The same answer holds true here, outside of war costs, of course. If people will do more things themselves in a voluntary cooperative, free enterprise way, the Government will have to do less and, therefore, spend less tax money,

It has been my observation that Government by itself initiates little, if anything. Government is pushed in by the demands of the different segments of society.

If these economic groups would get together around a table and do a better job of solving their own problems by individual and group action, as well as to put their heads together to work out the details of an economy of abundance and each one's part in it—then they would not leave much for Government to do except to run the Army and Navy and Post Office Department. And no one would object to the Government doing that—at least I think so.

By news releases, advertisements, and the radio, certain business interests today are trying to resell Americans a belief in themselves. They indulge in endless prattle about the free-enterprise system and its advantages.

I don't believe you need to sell the American people on personal freedom, private ownership and enterprise, and the representative form of government. The average American believes in all this—but he needs a practical demonstration that he can participate in and share in its benefits to the fullest extent—and not just talk about it.

Now, personally, notwithstanding my personal prejudices and desires, I see little on the horizon to convince me that we can bring about an economy of abundance without a lot of government initiation and control. And it need not be permanent or detrimental if people in this country will assume the responsibility that is theirs as citizens of a Republic such as ours.

And my hope is that as people gain in wisdom and effective group action, they can, through their own voluntary groups, take over after government has initiated the program, and ease government out. It is true that government seldom gives up a function but that doesn't mean it cannot be done if we are willing to accept the full responsibilities of individually participating in a democratic representative government.

To be realistic I must also record that if farmers, or laborers, or industry by themselves adopt a program of abundance without other segments doing it at the same time, it will of course fail. This is a job we must do together.

Specifically, then, what is the job to be done?

1. Since we know what constitutes an adequate diet—let us first figure out what is our potential power of consumption. This basic research would not be difficult.

2. Secondly, it would then become a governmental function to plan production based upon the necessities of an adequate diet for all of our people.

3. Once we can determine what it is in the best interests of the health of our Nation to consume and when we have made certain that we produce only to satisfy that consumption, then we must see that there is a free flow of these food commodities at a reasonable cost to the ultimate consumer. These recommendations can become realities by the voices of the people being heard through government and through their cooperatives.

Farmers should insist through their national farm organizations, that government more actively oppose and dissolve monopolistic practices wherever they exist.

Also that government action, so long as it is necessary, should be directed toward increasing consumption rather than restricting production—as for example, rather than paying farmers to restrict production, it should be made possible to increase the consumption of farm products such as through the food-stamp plans.

Also to eliminate monopolies in the manufacturing and distribution of such commodities as lumber, electricity, raw materials, farm machinery and the like so that farmers can buy these commodities and other necessary items cheaper.

These and other steps if taken would lead to true free markets, real free enterprise and competition.

Restrictions are the real cause of unemployment and consequent low farm prices. When existing producers have so many hooks in the market, the market is less tempting to new producers. When old capital is well protected against loss, new capital would rather join the old than to try to lick it. The odds favor idle or timid capital. And when money is idle, so are men. And our whole business structure collapses.

It is well known that production, and the wages and profits it creates, must all be spent promptly on consumption or invested promptly in new enterprise, in order to sustain the original production.

Which way do the American people—including businessmen, farmers, laborers, want to go? Do you want an economy of scarcity or an economy of abundance? The decision is in your hands—what you decide will shape America's well-being in the years to come. We can't avoid that decision.

Do We Want Socialized Medicine?

EXTENSION OF REMARKS
OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Dr. Walter F. Tunks:

DO WE WANT SOCIALIZED MEDICINE?

Today I want to discuss a matter which ought to be of concern to every American—the threatened loss of some of our precious freedoms. It may be that someone will try to read political bias into what I am about to say, or accuse me of being the advocate of the status quo. Well nothing important can ever be said without the risk that someone will twist it to his own prejudice and partisanship. That is what brought Jesus to the cross.

The scribes and pharisees would have been perfectly satisfied if Jesus had stayed within the patterns of conventional religion. But when Jesus insisted that religion be taken out of its dusty pigeonholes and applied to the problems of everyday living—business and government and all human relationships—the traditionists objected and conspired to put Jesus to death. In our churches today there are still people who insist that the minister, like the shoemaker, should stick to his last. Let him preach the old-time religion, by which they often mean "pie in the sky, by and by" as if religion were meant only to secure us a safe passport into Heaven, but not at all concerned with what happens to us here on earth. That was not the mind of Jesus. He was indeed concerned with men's souls. But he knew there is no use preaching to empty stomachs. He knew that soul sickness can be caused by physical disease and mental illness, and he reached out tender hands to heal. Anything that pertains to the welfare of man, he maintained, is the rightful field of religion.

He advocated no special form of government—but he did launch out at graft and corruption, and drove out of the temple the rascals who were turning religion into a private racket. Jesus never advocated any political or economic theory—he did talk about the timeless principles of justice, mercy, and righteousness. He lifted religion altogether out of the realm of legalism, and said that no man has done enough until he goes that hard second mile far beyond the compulsion of law. Jesus set up no league of nations—but he cut straight through racial hatreds, and sectarian prejudices, and nationalistic pride—by talking about the kind of neighborliness and good will that picked up a wounded man on a dark road and cared for him. And the hero of that story was a despised Samaritan, as if Jesus would have us understand that we can never deal fairly with any man except as we see him as our brother, and in spite of his color or his creed, recognize in him something that is precious to God. If someone suggests then this morning that I am talking outside the field of religion, I can only refer you to the New Testament, and Jesus' insistence that anything that pertains to the physical, mental, and moral welfare of man is the rightful concern of us all.

I believe it is high time for church people to be aroused to what is happening in our country. For unless Americans rise now to defend their liberties, as our forefathers did at Lexington and Bunker Hill, we shall awake some day to find our freedom gone, and ourselves living under state socialism, under a completely planned economy of government directives, told in minutest detail what we can do and what we cannot do.

Let's be perfectly clear on one point. The Christian church is not wedded to any economic system. Through the centuries it has lived under many different forms of government. The church has only one standard by which it judges economic systems and governments—how well do they minister to the needs of the common man, giving him health and happiness and the freedom to worship God according to the dictates of conscience. Some of us recognize that our so-called American way of life, by which I mean our constitutional form of government and our competitive system of free enterprise, are not without serious defects. But we believe that with all our faults and imperfections, the American way of life has given more freedom, a higher standard of living, and promoted the welfare of more people, than has been achieved under any other form of government. We believe that the fundamental principles on which this Republic was founded are sound and worth preserving. But complacency will do more to destroy the

America we love, than all the outside enemies that can be ranged against us. Today a cold war is being directed against the church by a philosophy which is openly and avowedly atheistic, and has frankly stated its purpose of destroying all religion that is not subservient to the state. The amazing thing about this situation is that so many Americans are either unaware or unconcerned about what is taking place. That is our real danger—not so much the threat of communism, serious as that is—but the lethargy of our own people, the spirit of defeatism that prevails, the general feeling that the world is drifting towards collectivism, and that there is nothing we as individuals can do about it.

We hear a lot of talk today about the Bill of Rights and the freedom it guarantees every American citizen. Isn't it time for us to draw up a bill of duties and responsibilities and seriously consider the obligations of good citizenship? We Americans love the word "liberty." We stamp it on our coins. We sing it in our national anthems. We think of it as a part of the very air we breath. In all the earth where will you find any people enjoying so much freedom. Yet how grossly the word "liberty" can be abused. Out in the harbor of New York stands that great symbol of what America stands for—freedom of opportunity for all who come to our shores. It is not by chance that the goddess Liberty holds in her hand a lighted torch. For unenlightened liberty is not a blessing but a curse. It may lead to the worst kind of slavery. "O Liberty," cried Madame Roland, on her way to the scaffold, "what crimes have been committed in thy name." In the French Revolution, the cry went up, "Liberty, equality, fraternity," but soon under the reign of terror the carts were rolling through the streets carrying their helpless victims to the guillotine. Under Czarist rule the peasants of Russia suffered cruel wrong, until the inevitable day of reckoning came. But see what happened as the pendulum swung from one extreme to the other. In the name of liberty a new government was set up dedicated to the cause of the common man. But in reality it has proved only the substitution of one form of slavery for another. We get only glimpses of what goes on behind the iron curtain, but the masses of people still live under tyrannous dictatorship, police surveillance, and Siberian prisons are not different now from what they were under the Czars. Millions of enslaved people can hardly call their souls their own.

You are thinking perhaps that it can't happen here. I hope you are right. Look at some of the things that are happening here. Do the American people want socialized medicine? There is tremendous pressure in that direction. Medical men are well aware that there are grave defects in our present system. All too belatedly the American Medical Association has set up a program designed to correct present abuses, to provide more doctors, and better and cheaper medical care for the masses of people. Many a person within sound of my voice has discovered from his own experience how critical the shortage of doctors is. Recently I was hospitalized in Miami, Fla., with a virus infection that laid me low for many days. Seriously ill and with a high fever, I was in the hospital for over 24 hours without visitation from either a doctor or interne. I am not blaming the doctor—I am not criticizing the hospital. Our hospitals are overcrowded and our doctors are overworked. What I am saying is that the cry for socialized medicine has come from the multiplication of situations like that where people need medical attention and can't get it without dangerous delay.

What we need to consider most seriously is whether the cure that is being proposed in the form of socialized medicine, isn't worse than the wrongs it proposes to right. Other countries have tried socialized medicine. How did it work in Germany, and in France and in New Zealand? We had better find out before we jump at socialized medicine as a cure-all. For 8 months England has been trying socialized medicine—too short a period for anyone to evaluate its ultimate results, but long enough to reveal its obvious defects—the increased burden it places upon both the doctors and hospitals, the superficial examinations, and inadequate diagnosis that are the inevitable result of hurry and pressure and mass treatment of patients. The longest queues in England today are no longer in front of food stores—but in front of doctor's offices. It is all very alluring to promise free spectacles and free dentures to anyone that needs them. But who pays the bills? What government gives away, the average citizen pays for by increased taxation. There is no other way to pull rabbits out of a hat. Somebody has to supply the rabbits of government spending. Do we want medicine in this country to get all tied up with politics, Government red tape, and bungling inefficiency? Well, that is what is being proposed in the plan which the Federal Security Agency is backing—calling for compulsory health insurance. It is based on two theories, both untrue to facts. First, it assumes that our national health is in deplorable shape. Second, that adequate medical care for all can be provided only under a compulsory system. The truth is that with all the defects of our present system of an independent medical profession, we have the best health record of any nation in the world. In our generation 20 years of life have been added to the average expectancy of individuals at birth. Disastrous epidemics have been virtually eliminated. We have stronger, better-fed children than any nation on earth. A child born today into the family of the average American wage earner, without state medicine, has the highest life expectancy in the world.

Lenin said that "socialized medicine is the keystone in the arch of the socialist state." There are at least 10 Communist fronts working in this country in behalf of social insurance. Do you think they are trying to improve conditions in the United States? What they do realize is that compulsory health insurance will bankrupt the United States as it has exhausted the finances of every nation that has ever tried the experiment.

It amazes me to hear people suggest that this question of socialized medicine is no concern of religion. It troubles me when I hear the defeatist attitude of those who say "the world trend is slipping toward collectivism, there is nothing we as individuals can do about it." There is something we can and ought to do about it. We can study the facts. What we need now more than anything else, is a detached and impartial consideration of facts. As one of our Akron leaders well stated it, "We Americans could well do with more exploring and less deploring." But in heaven's name, if we are going to explore, let's experiment forward and upward, not backward. There is nothing new in socialized medicine. Wherever it has been tried it burdened the government with enormous debt, and tied up medical services to the individual with political and governmental red tape, and lowered standards. There is nothing new in state socialism. How any thinking American knowing the past history of collectivism can seriously suggest that we will improve our country by throwing away the principles and the practices that have made this Nation great, and espousing the utopias of socialism, is difficult for me to understand. There is a vast difference between the freedom that comes from self-administered discipline and voluntary restraint, and the freedom that is secured by government restriction. The president of the American Bar Association has well stated the difference. "An elephant in the zoo has the four freedoms we have heard so much about. He has freedom from want, he is fed regularly; he has freedom from fear, his enemies the lions and the tigers are in separate cages; he has freedom of speech, he can trumpet whenever he wants to; he has freedom of belief, he can think anything he likes. The elephant has the four freedoms, yet the most important freedom of all, freedom of movement, freedom to do what he wants, liberty he doesn't have." Freedom, that is a name only, with no substance of reality, is secured for millions of people in the Old World by subservience to the state as the only recognized God. If it happens over here, it will be not because the vast majority of informed and fully aware citizens have passed reasoned and sober judgment on the merits of socialism, and decided that is what America needs. If we lose our freedom, it will be because too many of us took a defeatist attitude, and let this matter go by default.

You have every right to disagree with what I have said this morning. There are two sides to this matter. But no good citizen has a right to say this is no concern of his. All of us ought to study the facts and then act intelligently. A great American once said at a discouraging moment "We have only begun to fight." A great Christian once said, "Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage." "Know the truth" said Jesus "and the truth shall make you free." Enlightened public opinion is needed now if we would preserve the America we love, and move forward to an ever greater future.

Citation to David Dubinsky

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 26, 1949

Mr. JAVITS. Mr. Speaker, there are appended hereto the remarks made by Mr. David Dubinsky, president of the International Ladies Garment Workers Union at a luncheon held in the Hotel Commodore in New York City, on Saturday, April 23, 1949, on the occasion of the presentation to him of a citation in recognition of his twenty years of activity as executive officer of the ILGWU:

I should like to begin by saying that I feel deeply honored and touched by this citation. I feel that it is a high distinction to get this form of recognition from an organization such as the League for Industrial Democracy.

And I trust you will agree with me when I say that most of this honor belongs to the great union which I represent. I am sincerely convinced that in honoring me you are honoring chiefly our International Union, and I am very happy about it.

You have been very gracious to associate this annual luncheon of your fine organization with a personal event in my life, the 20 years of my service as a national officer of the International Ladies' Garment Workers' Union. In all sincerity, it is an event that has all but escaped my own memory.

My appearance here this afternoon at a dinner sponsored by the League for Industrial Democracy, is a symbol of the unity

that has long existed between our union and the liberal intellectual. The LID is an organization of liberal-minded intellectuals. And in some trade union circles, ranging from the IWW to the most conservative, it was the habit to be suspicious and even hostile to the liberal intelligentsia. But, as in other matters, so, too, there has been a change here.

During the last decade, we moved into a period of mutual respect and assistance between the trade unionist and the liberal intellectual.

The unions need the men and women of education. We need their skills, as writers, economists, educators, researchers, engineers, lawyers. I also see the liberal intellectual as a sort of a vital unifying force through which labor can convey its aspirations to other sections of the population: teachers, preachers, artists, authors, philosophers.

Trade-unions need the organizations of the liberals, through which nonworking class individuals are drawn into the direct work of an over-all progressive movement. On the other hand the intellectual needs the unions. The trade-unions are the mass base of liberalism. They provide the manpower, the daily contact with the workers, with actual life, and last, but not least, the realistic touch.

The middle-class liberal and organized labor, then, are mutually dependent. At this gathering this afternoon of the League for Industrial Democracy, under whose roof intellectuals and trade-unionists have long come together, I should like to stress one immediate job. I refer to the education and training of the youth in the theory and practice of industrial democracy. There is no better way of educating—yes—the educators themselves.

Left to itself, youth is neither right nor left, reactionary nor progressive. Hitler knew it. Stalin knows it. We must know it, too—and the program of the LID is to do something about it.

In the high schools and colleges of America there is a generation that tomorrow will formulate the policies of our Nation. That young generation is the America—and, if you please, the world—of tomorrow. We are interested in the future of this generation, in keeping them from falling under reactionary and totalitarian control. We want the youth to learn from our experience. Through organizations like the LID, liberals and labor can unite their efforts to educate the students in the theory and the practice of a dynamic democracy.

Just as the relationship between liberals and labor has changed, so, too, have other changes taken place in American progressivism. This audience need not be told about the tradition of the ILGWU. Our union was never a union that lived by bread alone, neither in our pioneering days of yesterday nor in our prosperous days of today. We always sought to improve the world as we found it. We felt ourselves a link in a great chain of progressive social forces. The letter of invitation from Dr. Dewey adequately described our purpose.

Today, many of these purposes are accepted quite widely. Today, organized labor champions social legislation; minimum-wage laws, unemployment and old-age and health insurance laws, even public power and civil-rights legislation. Today, organized labor is in politics—and, believe me, in politics to stay. Today, American labor is no longer isolationist, but is providing leadership in forming a world federation of free trade-unions. Today, the trade-unions are, as they should be, much more than mere agencies for collective bargaining.

Yes, we have lived through a great and profound change. But we have done more than just live through it. We have had a hand in making it. We didn't just watch history; we made history.

Making history does not always consist of choosing the path of least resistance. Sometimes we must take the course of greatest difficulty.

Let me cite an example. During the recent world war the Soviet Union was forced by Hitler to become our ally. We cooperated with Russia in all good faith to defeat the Nazis.

This led to a period of great confusion among American liberals. They were unable to distinguish between tactics and principle. Whatever was convenient became a conviction. The mistake was both extensive and expensive. It was a strange period to observe: In the very midst of a war against dictatorship, the liberal was surrendering the intellectual and moral distinction between democracy and dictatorship.

It was then very fashionable to confuse Josef Stalin with George Washington. An ambassador wrote a movie script to prove that there was really little difference between Vyshinsky and Oliver Wendell Holmes. The fellow traveler became a bed fellow. For anyone to point out that Russia was still a dictatorship was not only a crime against humanity; it was also bad taste.

How well I remember. I was then at the very center of an attempt to protest the lynching of Henryk Ehrlich and Victor Alter, leaders of the Jewish and Socialist Bund of Poland. Stalin gave this bloody proof, right in the middle of the war, that he had not forgotten and would not forget his private war against true democracy.

Only recently I thought back on all the difficulty we had to hold such a meeting. It was brought to mind by the world-wide protest against the trial and sentencing of Cardinal Mindszenty. Ehrlich and Alter were killed in secrecy—without a hearing, a trial, or even public execution. Yet for Ehrlich and Alter there could only be organized a little meeting because the liberals, yes, the American liberals, and even trade unionists, would not have it otherwise.

One CIO leader was told by another that if he dared to come to speak he would have his nose pushed in. A liberal New York newspaper promised to run an editorial against Russian terror but somehow never got around to it. A magazine editor, who dared to protest the Red lynching in a liberal magazine, lost his job. A trade-union editor who participated fared no better. A United States Senator, of unquestioned liberal persuasion, failed to make an awaited personal appearance. Finally, an outstanding Socialist leader told some friends that maybe it really was a mistake to find fault with the Soviet Union.

Together with a few others, we felt we had no one to consult except our own consciences. We then decided that even if all the world rejected us, even if we stood alone, entirely alone, we would not surrender. We would protest; we would cry out against this crime; we would continue to fight alongside Russia against the Nazi foe, but that we would not sell our souls in the bargain.

I see, in this company this afternoon, the faces of some who had the courage to stand up and be counted. I think that time has paid them the tribute of clear vision and farsightedness.

During the war, there was much talk of the differences between communism and fascism. Undoubtedly, there are differences. But what is really basic is what both communism and fascism have in common.

They are both totalitarian systems driven on by the hunger to conquer the world. Communism came first, it was the father of fascism and nazism. Both Mussolini and Hitler copied much from Stalin, adding barbaric "improvements" to the lessons of the teacher. After fascism was spanked to death, the Russians proceeded to "improve" upon the "improvements." I refer to the new line on Israel. I refer to the rising tide of manufactured nationalism in which Russians claim to have invented everything from electricity to Eskimo Pie. I refer to the barbarous slave labor camps where millions are simply worked to their deaths. I refer to the mass executions and purges.

When communism and fascism clashed, it was not due to any basic differences in principle. The clash arose from the fact that two totalitarian systems, both bent on world conquest, cannot live side by side. When Hitler and Stalin could not agree on how to divide the Balkans, they fell out and went to war. Had there really been irreconcilable differences in principle, there could never have been a Stalin-Hitler Pact and hence there might very well have been no World War II.

Communism, like fascism, must either expand or explode. The choice of the Kremlin is not to explode but to expand, of course. That is why they organize their fifth columns, engage in espionage, prepare saboteurs, infiltrate trade unions to capture or destroy, penetrate churches, colleges, arts, science, poison the wells of liberalism. That is why they seek to capture the imagination and the minds of the youth. That is why they exploit man's love for peace with a week end at the Waldorf and with Paris in the spring.

Because we, in the trade-union movement, were long ago aware of this totalitarian character of communism, we felt the need for active and positive counter measures.

Long before there was a Marshall plan, labor had its own Marshall plan. We sent funds, material aid, and moral support to the free trade unions of Europe, because we realized that free trade unions mean freedom. We helped the European workers beat back the assault of the Communists within the organizations of the workers themselves. In this great work, the American Federation of Labor wrote a great chapter in the ternal struggle for maintaining human freedom. May I here, too, be permitted the immodesty of expressing my pride in the International Ladies Garment Workers' Union for its initiative in this decisive battle to keep free trade unions really free from the Communist poison.

Subsequently, our Government recognized the need to check the spread of communism not merely by methods such as those implied in the Truman doctrine, but also by more direct economic rehabilitation, as in the Marshall plan itself. Yet, with all this, the key question still remains: how are we to fight communism, how are we to contain its spread, how are we to arrest its corrupting influence upon our youth, upon our racial minorities, upon some of our people who like to proclaim from the housetops that they are true-blue liberals?

Is a war against Russia the answer? I say, "No." Much as we hate it, much as we are convinced that the Soviet way is a yoke of slavery on the Russian people, still their form of government, their way of life is the problem of the Russians themselves.

For myself, I am content to lift a page from the speech made by President Roosevelt in Chicago in 1937, in which he suggested that the free world quarantine the Nazi aggressors. Today, the free world must quarantine the Communist aggressors.

Communism, like facism, is a fatal disease. But it is also, like fascism, a highly contagious disease. It is injected into other states by spies and saboteurs. Its germs are carried by dozens of organizations with sweet-sounding titles. It strikes with the quiet of slander or with the thunder of the Red Army. Because this totalitarian regime, like all others, insists upon infecting all the world with its peculiar sickness, communism is not a Russian problem; it is a world problem.

To maintain our health and freedom, we must put communism in quarantine. And that means more than just placing geographic limits on the expansion of Russia's empire. We must deny the Communists in our midst the cloak of respectability and the stamp of approval. We must take positive steps to defend and to strengthen democracy. We must give democracy economic strength. That is the meaning of the ECA. We must give democracy spiritual strength. That is the meaning of our aid, financial and moral, to the free trade unions of Europe; and that is why we must permit the free growth of democratic socialism where the people of Europe so desire.

We must give democracy material and military strength to defend itself against a Soviet offensive or to discourage such an offensive from ever being undertaken. And that is the meaning of the Atlantic Pact. Finally, we must strengthen world democracy by setting a worthy example. We must get rid of our own black sheep. And that's why we must repeal the Taft-Hartley law. We must end segregation and discrimination. We must provide means to educate all our youth, to care for all our sick, to give work to all who want to labor.

Since this event today involves your gracious tribute to me personally, I may be permitted to say that, as I listened to the reading of the citation which you have just tendered me, it brought to me a very vivid recollection that all these nice and laudable things you have said about me and about our union were not accomplished overnight, not through some magic or some lucky circumstances. It was a long, arduous struggle—and the road ahead may be as hard as the road we have traversed.

But, I repeat, the fight against reaction is not the fight of the labor movement only—it is equally the fight of every group and element that stands for liberalism, progress, and social betterment. Your organization, which for more than four decades has carried the torch of education for democracy in the American schools of learning and among the younger groups of the general population, is our natural ally in this struggle.

It is in this spirit of comradeship, with this sense of community of purpose and interests, that I am happy to receive this citation from you. My own appreciation of it, I am confident, will only be matched by the gratitude of our entire membership—as a token of friendship and good will to be long, long remembered.

Infant Death Rate Shocking

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. KLEIN. Mr. Speaker, Senator WAYNE MORSE, of Oregon, recently disclosed to the other body how organized medicine was "punishing" a doctor who had protested the American Medical Association assessment by prohibiting him from lecturing to practicing physicians on how to save the lives of babies.

This callous disregard for the lives of babies is emphasized by the recent report of the American Academy of Pediatrics on the need for better medical care for babies. A summary of this report is contained in a column by Albert Deutsch, the noted medical writer, in the New York Post of Wednesday, April 13. Under consent, I am inserting this column in the CONGRESSIONAL RECORD.

CHEATED CHILDREN

(By Albert Deutsch)

If the flood of human sympathy poured out in the tragic case of Kathy Fiscus could be channeled into streams of positive action we could rescue, each year, thousands of American children who die less dramatically but needlessly and just as definitely as Kathy did.

A report has just been published on child-health problems in the United States, a report that ought to prick the conscience of every literate American. It contains the findings of a 4-year, Nation-wide, State-by-State, county-by-county survey of child-health services—the first of its kind—conducted by the conservative American Academy of Pediatrics.

This epochal survey revealed that:

Millions of American children are still being cheated of the benefits of modern medical science, notwithstanding recent advances in child health.

The infant death rate is shockingly high in some of our States—comparable to that of many so-called backward countries—in spite of the fact that infant mortality, generally, has decreased steadily in recent years. The national rate in 1946 was 34 deaths among infants under 1 year of age per 100,000 live births. But in New Mexico, for instance, the infant death rate was 78 per 100,000—three times above the average of the best States.

Health and medical care for children usually follow the dollar sign. States with the lowest per capita income generally have the largest families and the least child-health services.

Children in some States receive less than half as much medical care as those in other States.

One-third of the Nation's 3,500 pediatricians (specialists in child disease) are concentrated in only 3 of the 48 States. New York has five times as many pediatricians in relation to children as North Carolina.

The farther you get from big cities or metropolitan areas the less medical attention is available to the average child. Children living in isolated counties get one-third less medical care than those in or near cities. Deficiencies in physicians, hospitals, clinics, etc., are most marked in the Southern States.

Negro children especially suffer from deprivation of medical care. Only one out of every four Negro babies in the Southeast is born in a hospital, whereas in some areas nearly every baby is born in a hospital.

Children in some States have more than three times as much hospital care than those in some other States. Delaware has 11 times more hospital beds reserved for children than Mississippi has.

Children in poor and remote rural areas have far less chance of getting adequate health and medical service than those in large cities and centers of wealth.

About half of the States have no mental health clinic services for children at all.

In three-fourths of the States there are more than 10,000 children for every pediatrician. General practitioners carry the main load in providing medical care to children. Yet, nearly half of all general physicians have had little or no hospital training in pediatrics before entering practice.

Dental services for children are shockingly lacking in many States, especially in the South, and more especially for Negro children in the South. The lower the State per capita income, the less care children get from private dentists. New York has eight times as many dentists in relation to children as has South Carolina.

Public-health nursing service is incomplete or totally lacking in three out of every five American counties.

Many children of school age live in counties which have no organized medical services in public schools.

Most medical schools provide inadequate pediatric education to their students, who will have to spend much of their future careers as doctors in taking care of children.

Behind these and other cold statistics collected by the American Academy of Pediatrics in its unique survey are a host of little children who sicken and die because they lack proper health and medical care, children who are loved and loving—as was the case with Kathy Fiscus—children with precious individual personalities, children who could be saved if we but will it. We need not stand helplessly by while they die, as we had to in the Kathy incident.

The valuable survey conducted by the American Academy of Pediatrics has been published in book form by the Commonwealth Fund ($3.50), which has a long series of distinguished reports on American health and medicine under its imprint. The United States Children's Bureau and the United States Public Health Service cooperated in the survey, which was directed by Dr. John P. Hubbard for a committee headed by Dr. Warren R. Sisson.

The report simply tells us the score; it makes no concrete recommendations. But constructive action is implicit on every page and waits on public understanding.

Donation of Surplus Federal Property for Educational Purposes

EXTENSION OF REMARKS
OF
HON. JOHN McSWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. McSWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

STATE OF OHIO,
DEPARTMENT OF EDUCATION,
Columbus, April 19, 1949.

Hon. JOHN MCSWEENEY,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN MCSWEENEY: The Governor, at the request of the United States Commissioner of Education, delegated to the State superintendent of public instruction the authority to establish within the department of education a State educational agency for surplus property. The agency is a constituent unit of the department, and was organized on January 10, 1946.

Practically every educational institution in all of the 88 counties within the State has obtained surplus property for utilization in its school program. Since the establishment of this agency, it is estimated that $30,000,000 worth of surplus property (Government acquisition cost) has been distributed to Ohio schools, colleges, and universities.

Prior to the passage of Public Law 889, the State department of education, through the agency, was authorized to approve and dispose of Government surplus in accordance with the provisions of Public Law 249, Seventy-first Congress, and Public Law 460, Seventy-fourth Congress.

House bill 3238, now pending in the Eighty-first Congress, will permit the Federal Government, through the several departments and independent agencies, to make dona-

tions to the State department for warehousing and redistribution to Ohio educational institutions. It is suggested that you review the enclosed documents in connection with the proposed legislation. The educators of Ohio and the State department believe the bill merits favorable consideration.

It is believed the proposed legislation to broaden Public Law 889, is sound because:

1. States' rights are preserved.
2. The bill is bipartisan and noncontroversial.
3. Complicated rules, regulations, and procedures of the various agencies of the Government, make it more expensive for the Government to sell certain kinds of property than to donate it to education.
4. Greater benefits will accrue to the United States if the property is donated to education rather than disposed of through commercial channels.
5. The legislation is permissive—not mandatory.
6. A workable plan is in operation, as administered by the United States Commissioner of Education and the several State educational agencies. Procedures are already established and the machinery for disposal has been in operation from 3 to 5 years.
7. Congress should not overlook any possible source of assistance that will aid education.
8. The United States Commissioner of Education recognizes States' rights—this has not always been true with other Federal agencies. The States oppose Federal agencies dealing directly with schools.
9. Property generated during peacetimes by all agencies and departments of the Government will be of sufficient quantity to maintain a flow of worth-while goods and equipment, that will be of inestimable value to schools, colleges, and universities.
10. Government property was acquired with the taxpayer's dollar—equipment, tools, and supplies no longer needed by the Government, that can be reserviced by school shops, should be made available to education.

During World War II the Congress recognized the value of training in the public schools by appropriating several hundred million dollars from the period June 29, 1940, through July 3, 1945, to train war workers. This money was distributed and the program administered through the Commissioner, United States Office of Education. We believe the Congress now recognizes the value of a sound educational program in peacetimes, as well as during periods of national strife.

Very truly yours,

WALTER G. RHOTEN,
Director, Surplus Property.

ANALYSIS OF FEDERAL STATUTES PERTAINING TO DONATION OF SURPLUS PERSONAL PROPERTY

Bills to amend Public Law 889 and to authorize all Federal agencies to donate surplus property for educational purposes:

S. 859, introduced by Senator JOHN L. MCCLELLAN, of Arkansas, February 8, 1949. Referred to Senate Committee on Expenditures in Executive Departments.

H. R. 3238, introduced by Representative CHET HOLIFIELD, of California, March 3, 1949. Referred to House Committee on Armed Services.

PURPOSE

To amend Public Law 889, to authorize the head of any department or independent agency of the Government to donate to tax-supported and private nonprofit, tax-exempted school systems, schools, colleges, and universities in the States, Territories, and possessions without cost, except for cost of packing, transportation, and delivery, such equipment, materials, books, and other supplies as may be obsolete or no longer needed by any such Federal department or agency and which may be considered usable for educational purposes by the United States Commissioner of Education. Public Law 889 now limits the authorization of such donations by the Secretaries of the Army, Navy, and Air Force.

HISTORICAL REVIEW

These bills authorize all Federal agencies and independent departments to make donations to education of obsolete or excess personal property no longer needed by the Federal Government. Precedent for these bills dates back to an act, approved February 14, 1927 (34 U. S. C. 546 (a), 44 Stat. 1096, Public Law 615, 69th Cong., ch. 133, 2d sess.), which permitted the Secretary of the Navy to dispose of obsolete aeronautical equipment to accredited schools, colleges, and universities. The Secretary of War was authorized to donate the same type of aeronautical equipment to schools, colleges, and universities by an act, approved May 26, 1928 (20 U. S. C. sec. 94, 44 Stat. 753, Public Law 524, 70th Cong., ch. 760, 1st sess.). A permissive act, authorizing the Secretary of the Navy to donate to educational institutions machinery, mechanical equipment, and tools obsolete or no longer needed by the Navy, was approved by the President May 23, 1930 (34 U. S. C. sec. 546 (c), 46 Stat. 378, Public Law 249, 71st Cong.).

On February 27, 1936, this statute was amended to include boats and boat equipment (34 U. S. C. sec. 546 (c), 49 Stat. 1144, Public Law 455, 74th Cong.). A similar act authorizing the Secretary of War to make donations of machinery, mechanical equipment and tools for vocational training was enacted February 28, 1936 (10 U. S. C. sec. 1258, 49 Stat. 1147, Public Law 460, 74th Cong.).

These acts were based on the philosophy that educational institutions could use the equipment not needed by the Army and Navy to train students and thus increase the return to the Government through greater public benefits than would be recovered through sale of the property.

This program has resulted in the donation of property of approximately $340,000,000 acquisition value to educational institutions throughout the 48 States, Territories, and possessions of this country.

Public Law 889 was approved on the philosophy that all classes of obsolete and surplus property (with the exception of categories of property exempted by Public Law 600) should be made available for donation by the armed forces for educational purposes without restricting the use of donated personal property to courses of vocational instruction. The enactment of this law has permitted all levels of education to participate in the program.

BASIS OF SELECTION AND DISTRIBUTION

All such property may be donated at the discretion of the head of any Federal department or independent agency and which the United States Commissioner of Education may consider usable for educational purposes; all property which is so donated shall be allocated by the Commissioner on the basis of needs and utilization, for transfer to eligible donees or to the State departments of education or other State agencies so empowered by State law, for distribution to eligible donees.

ADMINISTRATION

By the United States Office of Education, Federal Security Agency.

OPERATION

By the United States Office of Education, Federal Security Agency, and the State educational agencies for surplus property.

COMMENTS

History of the program reveals that all bonafide schools, colleges, and universities that are accredited by the several State departments of education, and offering standard curricula, are eligible to receive surplus property. All institutions must be tax supported or private nonprofit, tax exempted under section 101 (6) of the Internal Revenue Code.

The Secretaries of the Army, Navy, and Air Force still retain the right to make donations of property to those institutions in which they retain special interest, i. e., West Point, Annapolis, etc.

Under the proposed amended act, property would not be donated if needed by other Federal agencies or departments. Certain classes of usable property would probably be channeled through the Bureau of Federal Supply, or its successor for screening by other Federal agencies or departments and the residue not so claimed would be available for donation. This procedure is now in effect with reference to armed forces declarations of surplus property in condition O–2 or better.

This bill is administratively sound, workable, and will produce property of great value to education in relation to administrative costs. The several State educational agencies for surplus property employ over 400 people at a cost of $2,600,000 per year to administer and operate the program on a State level. Schools of all levels throughout the Nation have expressed a keen interest in the continuation of this program.

OPINION

This bill deserves congressional support because:

1. Many of the types of property which become obsolete or are no longer needed by the various departments or independent agencies of the Federal Government are needed and usable by educational institutions for plant operation, plant maintenance, instructional use, administration, plant expansion and modernization.
2. Federal agencies and independent departments which at present do not have the authority to donate property for educational utilization have requested that Public Law 889 be amended in order that donations may be made in the interests of improving educational opportunities for American youth, and furthering parallel research work in educational institutions, thereby securing the maximum public benefit possible through the disposal of obsolete and surplus property.
3. The resources available for meeting the needs of American schools, colleges, and universities are inadequate. No possible source of assistance should be overlooked.
4. Maximum benefits accruing to the Government will be realized only if obsolete and surplus property is donated to schools, colleges, or universities, rather than being disposed of through commercial channels.
5. Contacts made with representatives of the armed forces, Department of Agriculture, Veterans' Administration, Bureau of Federal Supply, Atomic Energy Commission, National Advisory Committee on Aeronautics, and the United States Office of Education, indicate that these departments and agencies favor amending Public Law 889. If this bill is amended, it will supplement the administration's objective of higher educational standards for all of the youth of the Nation.
6. H. R. 3238 should make further legislation with reference to the disposal of Government surplus property unnecessary.
7. Adequate funds to administer the program through the Federal Security Agency, the United States Office of Education, will yield the greatest maximum benefits to the

schools, when compared with any other plan of Federal aid to education.

[Public Law 91, 66th Cong. (H. R. 3143)]

An act to provide for further educational facilities by authorizing the Secretary of War to sell at reduced rates certain machine tools not in use for Government purposes to trade, technical and public schools and universities, other recognized educational institutions, and for other purposes

Be it enacted, etc., That the Secretary of War be, and he is hereby, authorized, under such regulation as he may prescribe, to sell at 15 per centum of their cost to trade, technical, and public schools and universities, and other recognized educational institutions, upon application in writing, such machine tools as are suitable for their use which are now owned by the United States of America and are under the control of the War Department and are not needed for Government purposes. The money realized from the sale may be used by the Secretary of War to defray expenses, except cost of transportation, incident to distribution of the tools, and the balance shall be turned into the Treasury of the United States as miscellaneous receipts: *Provided*, That in the event any such material is offered for sale by said institutions without the consent in writing of the Secretary of War, title thereto shall revert to the United States.

Approved, November 19, 1919.

[Public Law 615, 69th Cong. (H. R. 12212)]

An act authorizing the Secretary of the Navy to dispose of obsolete aeronautical equipment to accredited schools, colleges, and universities

Be it enacted, etc., That the Secretary of the Navy be, and he is hereby, authorized in his discretion to dispose of without charge, except for transportation and delivery, to properly accredited schools, colleges, and universities for use in aeronautical courses, any aircraft, aircraft parts, instruments, or engines which have been declared obsolete by the Navy Department; and provided that such aircraft, aircraft parts, and engines will not be used in actual flight.

Approved February 14, 1927.

[Public Law 524, 70th Cong. (S. 1822)]

An act to authorize the Secretary of War to transfer or loan aeronautical equipment to museums and educational institutions

Be it enacted, etc., That the Secretary of War be, and he is hereby, authorized in his discretion to transfer or loan to museums or properly accredited schools, colleges, and universities, for exhibition or instructional purposes, any aircraft, aircraft parts, instruments, or engines that have become obsolete or impaired to the extent that repair would not be economical: *Provided*, That such aircraft, aircraft parts, or engines will not be used in actual flight: *Provided further*, That no expense shall be caused the United States Government by the transfer or loan or return of said property.

Approved May 26, 1928.

[Public Law 249, 71st Cong. (S. 3185)]

An act to authorize the Secretary of the Navy to dispose of material no longer needed by the Navy

Be it enacted, etc., That the Secretary of the Navy be, and he is hereby, authorized in his discretion to dispose of, without charge, except for transportation and delivery, to properly accredited schools, colleges, and universities, for use in courses of vocational training and instruction, such machinery, mechanical equipment, and tools as may be obsolete or no longer needed by the Navy.

Approved May 23, 1930.

[Public Law 455, 74th Cong. (H. R. 1381)]

An act to amend Public Law No. 249, Seventy-first Congress, entitled "An act to authorize the Secretary of the Navy to dispose of material no longer needed by the Navy"

Be it enacted, etc., That Public Law No. 249, Seventy-first Congress, approved May 23, 1930, entitled "An act to authorize the Secretary of the Navy to dispose of material no longer needed by the Navy", is amended by striking out the word "and" before the word "tools" and inserting after the word "tools" a comma following by "boats and boat equipment."(so in original).

[Public Law 460, 74th Cong. (H. R. 8024)]

An act to authorize the Secretary of War to dispose of material no longer needed by the Army

Be it enacted, etc., That the Secretary of War be, and he is hereby authorized in his discretion to dispose of, without charge, except for costs of transportation handling and packing, to such schools as he may select, for use in courses of vocational training and instruction, such machinery, mechanical equipment, and tools as may be obsolete or no longer needed by the Army.

Approved February 28, 1936.

[H. R. 3238, 81st Cong., 1st. sess.]

A bill to authorize all Federal agencies to donate surplus properties for educational purposes

Be it enacted, etc., That the act entitled "An act to authorize the Secretary of the Army, the Secretary of the Navy, and the Secretary of the Air Force to donate excess and surplus property for educational purposes," approved July 2, 1948 (Public Law 889, 80th Cong.), is amended (a) by striking out the words of the title of Public Law 889 "To authorize the Secretary of the Army, the Secretary of the Navy, and the Secretary of the Air Force to donate excess and surplus property for educational purposes" and inserting in lieu thereof "To authorize Federal agencies to donate surplus property for educational purposes"; (b) by striking out the words "the Secretary of the Army, the Secretary of the Navy, and the Secretary of the Air Force are hereby authorized in their discretion" where they appear in section 1 and inserting in lieu thereof "the head of any department or individual agency of the Government is hereby authorized in his discretion"; (c) by striking out the words "the Army, Navy, or Air Force in which any such Secretary or" where they appear in section 1 and inserting in lieu thereof "any such department or agency and which"; (d) by striking out the words "the Secretary of the Army, Secretary of the Navy, or Secretary of the Air Force" where they appear in section 2 and inserting in lieu thereof "the head of any department or individual agency"; and (e) insert the words "school systems" after the words "tax supported" where they appear in section 2.

[Public Law 889, 80th Cong. (H. R. 5882)]

An act to authorize the Secretary of the Army, the Secretary of the Navy, and the Secretary of the Air Force to donate excess and surplus property for educational purposes

Be it enacted, etc., That the Secretary of the Army, Secretary of the Navy, and Secretary of the Air Force are hereby authorized in their discretion to donate for educational purposes in the States, Territories, and possessions without cost, except for costs of packing, transportation, and delivery, such equipment, materials, books, and other supplies as may be obsolete or no longer needed by the Army, Navy, or Air Force and which any such Secretary or the United States Commissioner of Education, Federal Security Agency, may consider usable for educational purposes.

SEC. 2. All property which the Secretary of the Army, Secretary of the Navy, or Secretary of the Air Force may so donate, except that donated in accordance with section 3 hereof, shall be allocated on the basis of needs and utilization by the United States Commissioner of Education for transfer by the owning agency directly to schools, colleges, or universities, or to State departments of education, for distribution by the State to tax-supported schools, colleges, and universities and other nonprofit schools, colleges, and universities which have been held exempt from taxation under section 101 (6) of the Internal Revenue Code; except in any State where another agency is designated by State law for such purposes such transfer shall be made to said agency for such distribution within the State.

SEC. 3. The Secretary of the Army, the Secretary of the Navy, or the Secretary of the Air Force may donate such of the property specified in section 1 hereof as they consider usable for educational purposes to those educational activities that are of special interest to the armed services, such as maritime academies, or military, naval, air-force, or coast-guard preparatory schools.

Approved July 2, 1948.

[Public Law 889, 80th Cong. (amended as proposed)]

An act to authorize Federal agencies to donate surplus property for educational purposes.

Be it enacted, etc., That the head of any department or individual agency of the Government is hereby authorized in his discretion to donate for educational purposes in the States, Territories, and possessions without cost, except for costs of packing, transportation, and delivery, such equipment, materials, books, and other supplies, under the control of such department or agency as may have been determined pursuant to law not to be required for its needs and the discharge of its responsibilities or for the needs and the discharge of the responsibilities of the Federal Government and which the United States Commissioner of Education, Federal Security Agency, may consider usable for educational purposes.

SEC. 2. All property which the head of any department or individual agency may so donate, except that donated in accordance with section 3 hereof, shall be allocated on the basis of needs and utilization by the United States Commissioner of Education for transfer by the owning agency directly to schools, colleges, or universities or to State Departments of Education, for distribution by the State to tax-supported school systems, schools, colleges, and universities and other non-profit schools, colleges, and universities which have been held exempt from taxation under section 101 (6) of the Internal Revenue Code; except in any State where another agency is designated by the State law for such purposes such transfer shall be made to said agency for such distribution within the State.

SEC. 3. The Secretary of the Army, the Secretary of the Navy, or the Secretary of the Air Force may donate such of the property specified in section 1 hereof as they consider usable for educational purposes to those educational activities that are of special interest to the armed services, such as maritime academies or military, naval, air force, or coast guard preparatory schools.

Seed and Nursery Industry Have Real Shipment Problems Ahead—If

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include a letter to me from Henry Field of the Henry Field Seed & Nursery Co. of Shenandoah, Iowa.

Mr. Field has been in the business for over 50 years and knows whereof he speaks. Henry Field seeds and nursery stock is sent into every State of the Union as well as to many foreign nations.

Mr. Field's letter which follows points out in clear, understandable language just why it would be very harmful to the seed and nursery industry and to the general public to boost rates on third- and fourth-class mail, or to cut the long standing maximum package weight in parcel post from 70 pounds to 50 pounds or less.

I respectfully request that every Member of Congress, and especially the members of the House and Senate Post Office Committees, give full study and consideration to Mr. Field's letter, and that nothing be done which will be detrimental to this very necessary and important industry.

HENRY FIELD SEED & NURSERY CO.,
Shenandoah, Iowa, April 21, 1949.

Hon. BEN JENSEN,
House of Representatives,
Washington, D. C.

MY DEAR MR. JENSEN: I recently imposed upon your time by writing you to plead a stop to the tremendous boost in rates on third and fourth class mail being asked by the Postmaster General.

Since then, I have heard there is a request now being made to you to cut the long standing maximum package weight in parcel post from 70 pounds which it has been successful for years to 50 pounds or even less.

I think here are two good reasons for opposing this restriction with all the strength you can muster if you are interested in protecting millions of farmers and small-town buyers:

1. The express company which is trying to push this business out of the post office into their own hands cannot adequately handle the business they already have. In hundreds and hundreds of towns where there is a post office and excellent parcel post service, there is no express service and customers must drive many miles to a town big enough to have express service to get their packages.

We get hundreds of letters a year from our farm and small-town customers saying "Do not send express. The last time you did, we have to drive 70 miles to such and such a town and when we got the package, all the nursery stock was dried. Sent it parcel post."

If the weight or size limits are restricted further, you force us to use the incomplete and less desirable express service. Express doesn't deliver in many cases. The post office goes on its regular routes. Let's see that everybody gets service—not just the big towns.

2. Time and again, our shipments of perishables by express have been tied up by strikes against the express company while parcel post went on through. This happened recently in the New York-New Jersey area where hundreds of our perishable nursery shipments were lost through strike delay. If you limit the size or weight limits further on parcel post, you force us to use the less desirable and incomplete express service.

The post office needs that parcel post business and handles it with dispatch. Don't let the express company have it. They give no service to so many communities.

Very sincerely,
HENRY FIELD SEED & NURSERY CO.,
HENRY FIELD, *President.*

P. S.—I have sent this same letter to TOM MURRAY and OLIN D. JOHNSTON of Postal Committees.

Nebraska Opinions Concerning the Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. O'SULLIVAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following timely article which appeared in the Southern Nebraska Register of Friday, April 22, 1949.

The article above-mentioned, was written by five representative men of Lincoln, Nebr., and to my way of thinking, they are far superior to any collection of opinions I have heretofore read, and I submit them to fellow Congressmen and other readers of the CONGRESSIONAL RECORD for their earnest reading and consideration.

THE REGISTER FORUM—LABOR LEGISLATION CONSIDERED BY SELECTED GROUP OF READERS

(In this fifth of its readers' forums, the Register asked selected subscribers for expressions of opinion on labor legislation pending in Congress.)

PHILOSOPHY OF PRESENT LAW IS ERRONEOUS

Even a cursory reading of Public Law 101—Eightieth Congress—better known as the Taft-Hartley Act, makes it clear that labor legislation in our day has become very complicated business. Within these space limits one can speak only in the most general terms.

The main idea in the old Wagner Act was an optimistic one, namely, if labor and industry could just be made to gather around the conference table, they would of themselves hammer out satisfactory agreements. But it was revolutionary in that it lifted the worker up to a new plane where he was equal in bargaining power with the employer. The exercise of this equal power was too much for the conservative who had been accustomed to running his own business—what he called "the American way of life"—and the Taft-Hartley Act became the counter revolution.

The central idea of the Taft-Hartley law (speaking in very general terms) seems to be that labor and industry are natural enemies who can never get along without Government intervention at almost every step. Incidentally, it is an interesting anomaly to find that the rugged individualists who say "that government is best which governs least" are the same people who are supporting Taft-Hartley.

That a law should not be written in the interests of one side is obvious. It is perhaps less obvious, but equally important, that the central purpose of any labor law should not aim merely at achieving a balance of power between two irreconcilable opponents. Rather, it should become a vehicle, and a legal framework designed to promote and encourage harmonious relations between two interdependent and equally important groups. The Taft-Hartley law fails to meet that test. It is not entirely bad, yet its overall spirit is punitive and petulant. The Congress that passed it was hopping mad at John L. Lewis, and not without reason. In this temper it set out to obtain redress for all the wrongs to industry, real and imaginary, in a dozen years' administration of the Wagner Act. Personally, I would prefer a less vindictive law, and one more in line with recommendations of the great encyclicals that deal with workers and the social order.

Therefore, I think we should go back to the principles of Wagner with necessary changes to bring it up to date, which would include the good features found in Taft-Hartley.

R. T. MALONE.

JUSTICE IS THE WORD

In my opinion, in the event that Congress decides to change the present labor relations legislation, the whole secret of a more effective program is in the appointing of a pro-management, prolabor tribunal as near as possible acceptable to both, to hear and make recommendations before a labor situation reaches the strike peak. Justice is the word.

When labor first began to assert itself, it was unorganized, had no capital to use to present its cause, and hence anything done for it was an appeasement, with little thought of justice.

This is an age-old problem, forecast by Edwin Markham in his poem, The Man With the Hoe, written after viewing Millet's famous painting of a toiler in the field. Markham questioned how the future would deal with this "dumb terror," bowed down with the weight of the world, silenced by centuries, but destined to tear off his bonds and judge the world that so imprisoned him.

Every man is entitled to a living commensurate with the requirements for feeding, clothing, and educating his children, and this holy desire should not be thwarted. Likewise management is entitled to a fair profit on its investment. A tribunal of justice, free from the capital of either side, working with an emergency board appointed by the President, would in my opinion lessen the number of strikes and provide for the common good.

D. JAMES COSTIN.

TAFT-HARTLEY LAW SHOULD BE REPEALED

In the best interest of most of the people and the advancement of the American economy the Taft-Hartley Act should be repealed. This act is entirely one-sided, designed to protect the interests of management and to destroy unionism. In itself it is a lengthy, complicated document, one very difficult to administer. This act deliberately buries in a mass of red tape the Wagner Act's protection for workers to bargain collectively. Many decisions on important issues have been against labor in favor of management. After 18 months of operation under the act, it has created a greater lack of balance between wages, prices, and profits, and its provisions are beginning to weaken the soundness of the American economy. Among other things it has made the settlement of disputes between labor and management more difficult, created more misunderstanding, and is destroying the constitutional rights of men to organize, form unions, and bargain collectively. It is relevant to call attention to this part of the Encyclical on

Labor by Pope Leo XIII: "Workingmen and employers should make free agreements and, in particular, should freely agree as to wages. They (labor unions) exist of their own right."

Now that the Taft-Hartley law has been tried and tested, the sponsors themselves have admitted that important changes should be made. I quote Senator TAFT: "I myself would propose quite a few amendments."

All indications are that we need to get out from under the Taft-Hartley law and return to the principles of the Wagner Act. Briefly, the Wagner Act, passed by Congress in 1935, was a simple, easily administered law that merely forbade interference with the rights of workers to organize, form unions, and bargain collectively. This act was not one-sided, because the American workers have never interfered with the rights of management to bargain collectively. The Wagner Act had a very beneficial effect on the American economy.

In conclusion, the Taft-Hartley Act is unworkable, unfair, deliberately designed to destroy unionism, and a threat to the economic gains of the workers.

CHARLES F. BURDA.

PUBLIC ENTITLED TO FAIR LEGISLATION

What the public demands, and is entitled to demand, is fair legislation that will check both employer and labor excesses, but which at the same time will not destroy any legitimate rights of either labor or industry.

The legislation that we have now was enacted primarily because of the agitation against a few labor leaders and not because the law in itself is a very good thing. The Taft-Hartley law restricts labor organizations from supporting any political candidate financially, yet it permits other organizations to lobby and to spend millions of dollars for legislation to benefit them.

There is no doubt that labor, the same as capital, must be kept within reasonable confines of law and order, but these conditions should be equalized and handled on the basis that labor is not all wrong.

There are objectionable practices in labor organization and there are objectionable aspects to capitalism. What is it that is wrong? It is of course the human beings who are wrong, those who deny and omit all Christian principles; as long as this condition exists there cannot be complete harmony between capital and labor.

Organized labor has promoted better living conditions and high wages, which have created a prosperity that likely is greater for capital than for labor. Some industrialists seem to forget that labor is entitled to a living wage, to rear a family, and to the comforts of life the same as are the men who hire them.

CHARLES G. WALTER.

LABOR PENALIZED BECAUSE OF ANTICS OF ONE LEADER

To prepare anything on the Taft-Hartley Act would take a volume, so I will deal with a few phases of it.

First. The act was passed primarily because of the agitation against John L. Lewis and not because the law in itself is a very good thing.

Organized labor has promoted better living conditions, sanitary work shops, and higher wages, which have created prosperity greater for capital than for the worker; shorter hours, which have contributed to the span of life of man; and countless other benefits to workers in America and all over the world. Yet, because Lewis and a few leaders may have done things that were contrary to general public opinion, certain Senators and Congressmen were instrumental in passing a law that would deprive labor of many of its gains.

It should be remembered that labor organizations are made up of individuals, just as chambers of commerce and manufacturers' associations are, and none are perfect, but this law assumes that all labor is bad. For example: Labor officials must file a sworn affidavit that they are not Communists, yet the employer does not have to assume any such responsibility. An employer may be a Communist if he wishes; there is no proof that there are proportionately more Communists among the workers than there are among employers. Every month newspapers and magazines reveal names and pictures of prominent persons, who have others in their employ, who are active in some Communist-front organization (see Life a few weeks back).

Another absurdity in this act is the section that forbids labor organizations to contribute to the political campaigns of any candidate; yet it permits the railroad lobby, the liquor lobby, the manufacturers' lobby, the real estate lobby, and hundreds of other groups to spend millions on candidates and legislation.

There is no doubt that labor, the same as capital, must be kept within reasonable limits, but legislation should not be on the basis that only labor has committed any wrongs.

In reading the Taft-Hartley Act, you will note that the tone is to liberate the worker from his big union bosses. Since when did these legislators arrive at a need to exercise their benevolence for the poor workers? Labor did not ask for this bill; capital was 100 percent behind it.

THOMAS J. CONNELLY.

Why Democracy Works

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. POLK. Mr. Speaker, under leave to extend my remarks I include a short essay, Why Democracy Works.

This essay written by Miss Janet Ruth Shelton, a student at Minford High School, Ohio, is so outstanding in its presentation of the principles of democracy that I want the Members of the House to have the privilege of reading it.

WHY DEMOCRACY WORKS

(By Miss Janet R. Shelton, of Minford, Ohio)

Our democracy works because it is a collection of all the good points from historical governments, plus the ideas of the majority of the American people. Democracy means a government of the people collectively, by elected representatives. Yet these are not the only reasons why our democracy works. It works because it lives and grows in the hearts of millions of people, day by day. It works because it is covered by gallons of pure, red, human blood; because it is being pushed forward daily by thousands of gallant heroes who willingly gave their lives so that it would always remain bright and shiny.

Democracy works because its right hand man is freedom. Yes, freedom—freedom to speak; freedom to vote; freedom of choosing our own religion; freedom to own our property and do with it as we like; freedom to sacrifice for our country; and freedom to think.

Our government, a democracy, works because it has the power to enforce the laws which the people themselves, make.

After World War II the war brides coming to the United States were instructed that in playing any game with the Americans always to let them win, because people from the United States resented being beaten in anything. Certainly we like to win. We fight to win, and when a person fights to win he usually does. We fought for democracy—we won it. We're striving for international peace now, and we will win it, too.

Like the ocean seeping through a small hole in a ship, democracy and its policies are slowly spreading into the whole world. Other countries can see how well our Government is working, and they are beginning to lay their foundation for a democracy, too. Democracy's motto is, "That all men are created equal." These words were given to man by God, and with God's help the democracy which is working today will continue to work in the future.

Democracy will remain steadfast because the leaders of today are guiding the leaders of tomorrow. School children of today are given a great heritage free, and a great promise to fulfill a promise to pass this noble heritage on to the future generations. This is a large responsibility, but these are sturdy young shoulders on which it rests.

Yes, this is truly a wonderful country, the smelting pot of the world. A place where everyone has a chance. A chance to become anything his heart desires, as long as he works diligently toward his goal. It doesn't make any difference what color his skin is, what church he attends, or how much money his family has in the bank, he still has a good chance in America.

To the people of America, democracy means the life line of our future. It means the difference between freedom and slavery, the difference between light and darkness. Yes, a darkness illuminated only by the Statue of Liberty and her gleaming torch, leading the world along the steep, rocky path to democracy.

National Press Gave Silent Treatment to GOP Corruption in Illinois

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the Washington Post of Wednesday, April 27, 1949.

For background on the Post's editorial, I invite the attention of the Members of the House to remarks which I inserted in the RECORD of Tuesday, April 26 (p. A2434).

The St. Louis Post-Dispatch, the Chicago Daily News, and the Washington Post are to be congratulated for maintaining honesty of the press. To these add the East St. Louis Journal and the Belleville News-Democrat.

The Washington Post editorial follows:

THE SILENT PRESS

It has been as much of a shock to us as to any of our readers to see the evidence of political venality among a number of small-town newspaper editors and publishers in Illinois. At least 33 have been named who at one time or another during the ousted Green administration in that State were on the State pay roll. Some of them may have performed certain services to earn their pay. In other cases checks paid out of the State's treasury were obviously compensa-

tion for sale of influence. One publisher received $850 as a "public works laborer." His paper is called the March of Progress! Several other editors and publishers received larger amounts as "messenger-clerks." Those carried on the pay roll as "investigators" gathered in five-figure sums over several years.

The unethical conduct of the individuals concerned is obviously the first and foremost issue. Beyond that is a larger and broader concern: the reputation of the American newspaper press as a whole. For the fact that none of the culprits in this instance owned or operated large city newspapers is morally beside the point. And furthermore, the distinction, if any, will be missed by the ordinary citizen. Too many Americans have an almost innate distrust of the press as it is, and are always ready to gobble up any stray "proof" that all newspapers are venal.

As a matter of fact, the ethics of every member of the press are inevitably of concern to every other member. And this makes all the more infuriating the treatment of this story. It was broken in the St. Louis Post-Dispatch and Chicago Daily News on April 14. Until the Washington Post heard about it, no other newspaper, so far as we can find out, at least none outside of the Illinois region, picked it up. Nor did either of the two chief wire services convey the story as far as Washington, if they carried it at all.

At best this looks like crass indifference to a particularly juicy bit of news. At worst it looks like a cover-up of scandal within the family. We cannot approve of either. The newspaper press, by virtue of the first amendment, claims special status as a pillar of free and honest government. By the same token it has special obligations. Among these is the duty not to keep its own dirty linen from public view. Nothing can more surely damage the reputation of the American press for honesty and accuracy than failure to acknowledge promptly and openly its own faults.

Work To Be Done—Invocation by the Reverend Daniel M. Cantwell, Chaplain of the Catholic Labor Alliance, Preceding Convention of Americans for Democratic Action

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. YATES. Mr. Speaker, recently the Americans for Democratic Action, an organization of progressives, dedicated to the achievement of freedom and economic security for all people everywhere, through education and democratic political action, held a national convention in Chicago, Ill.

Before the convention got under way, a prayer was offered by the Reverend Daniel M. Cantwell, chaplain of the Catholic Labor Alliance, which carries a stirring message of action:

The prayer follows:

Eternal Father, we dedicate this convention to Your honor and glory. We know the importance of the work that has brought us here. We acknowledge that we need Your help. With sincerity we invoke it. With conviction we expect it. With love and dedication to You and to our fellowmen we want to accept it.

We are here for the sake of democracy, human rights, and human dignity. That is important to men. It is also important to You.

We are here with a faith in democracy. That means not only a faith in the inherent rightfulness of ballots and assemblies. More, it means a faith in what You have put into men: an image of Yourself, a sharing in Your Spirit. It means a faith in this: that because of this image You the Creator have endowed all men with inalienable rights.

Inalienable rights. And still, among us over 3,000,000 workers are right now unable to find jobs. Keep us mindful of them. There's work to be done.

Over 6,000,000 families want to get out of slums. Keep us mindful of them. There's work to be done.

Over half of American families still live a hand to mouth existence, are able from their pitiable incomes to save little or nothing. Keep us mindful of them. There's work to be done.

For virtually all American wage-earners a guaranteed annual wage is still a far-away dream. Keep us mindful of them. There's work to be done.

Millions of Americans are second-class citizens, cannot vote, are discriminated against in getting jobs, are covenanted out of American neighborhoods. Keep us mindful of them. There's work to be done.

Millions of citizens around the world need food, tools, hope, and protection. Keep us mindful of them. There's work to be done.

In the family of nations strengthen us to keep the door open to every honorable proposal for peace. To be courageous in the defense of freedom. And to be honest in the evaluation of our friends. In the Western World we would like to see more democratic governments in Spain, Portugal, and Jugoslavia. Hasten the day when these changes will be made—for the welfare of the citizens of those countries, and for the honor of the Western World.

We are grateful that we live under the Stars and Stripes. That we are a part of the government of the people, by the people, and for the people. Through Christ Our Lord may this country and this government never perish from the earth.

Keep us a free people. Make us a prayerful people—one Nation, indivisible, with liberty and justice for all. Amen.

The American Way—What Is It?

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay by Juney Fasick, of Springfield, Ohio:

THE AMERICAN WAY—WHAT IS IT?

(By Juney Fasick, Springfield, Ohio)

I ask a German soldier who was a POW, "What is the American Way?" and I hear his answer, "Why, American way is freedom. You do not have to bow to one man because he says, 'I am God.'" I ask a DP who has lost his home and has been allowed to come to America, and he answers in his broken accent, "American way is opportunity. You can have a good job regardless from where you come." I ask a mother in Europe who had no food for her children, and she whispers with gratitude in her voice, "The American way is giving. The Americans have sent food and now my babies will not die this winter." And then I ask an American who enjoys all these freedoms, and he answers, "The American way? Why, I don't know. Never thought about it too much." Finally, I ask myself, "What is the American Way?"

To find the answer I go back many years, and I see a man in a rough, homespun garment breaking the first clod of ground in the New World with his hand-made plow. "What is the American way?" I ask. He looks thoughtful for a moment and then his countenance changes and his weather-beaten features light up. "The American way is for what I have come here. Here I can worship God as I please." "Then," I think to myself, "the American way is freedom of religion." But still I am not satisfied. I go on and I meet a Continental soldier in a tattered uniform. "What is the American way?" I venture. "It is independence. It's the thing for which I died on Bunker Hill." "Independence," I sigh, "independence and freedom of worship." But this is not enough; I must find out why we are willing to live, serve, and, if need be, die, for this way of life. Continuing my walk on the Highway of Time, I meet another soldier of the Union Army. Still searching for the truth, I ask him the question. He gazes far into the past, and his answer echoes throughout the little valley. "The American way is freedom for every man, regardless of race, creed, or color. It's not good for one man to own another. That's why I died at Gettysburg." "Now," I think, "I am accomplishing something. The American way is freedom of religion, it is independence for each individual." Still searching, I walk on, and I meet another soldier wearing the familiar khaki. "Please, what is the American way?" "Well, it's the thing I died for on Corregidor and the thing my buddy died for in Normandy." "But what is so great about the American way that makes you fight wars and die for it?" I wonder. "You see," he goes on, "you're an American, a free American, free to worship as you please, free to speak as you please, free to listen to anything you please, because no one says, 'Don't listen.' You can vote for those who govern your country. You can petition these officials and have your voice in the Government. But once in a while there are people who rise to power who have other ideals. They think that their way of dictatorship is best. That's why we must fight and die. We are willing to do this to protect the American way. Anything precious must be protected." "Now I'm beginning to understand," I mutter.

I walk out of the past and into the present. What can I find here to show me? And then as I walk down the street of Mytown or Anytown, I see a little Negro boy giving his last piece of candy to the little white boy who has just fallen from his tricycle. And now I know—now I understand completely. It's freedom, but, even more than that, it's sacrificing for others. It's more than an ideal; it's a way of life. It's the American way.

Dr. Stephen S. Wise

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. KLEIN. Mr. Speaker, seldom is it given to any man to be completely loved by all who knew him.

I think, however, that can truly be said of the late Dr. Stephen Wise—a man

whose name was in itself a reverent pun; for Rabbi Wise was wise. He had the wisdom of the ages, the wisdom of love for his fellow men, the wisdom of devotion to his ideals and his religious calling.

I am not given to hero worship; but Dr. Stephen Wise was one of my heroes. I am not given to accepting what I see on the surface as the true man; but I accepted Dr. Stephen Wise at face value. He had a terrible simplicity which shamed those of us who are more worldly, more captivated by the baubles of Mammon, than his great spirit could ever be. He sought the rewards of spirit, not of flesh.

His death was not unexpected; yet it was a great blow to the cause of humanity. There is something of an analogy between his going, and the departure of other great leaders who rose above human limitations. We know that they are not immortal; yet their greatness gives an illusion of unending virtue, and when they die, we have a sense of emptiness in our living.

Mr. Speaker, more eloquent tongues than I have eulogized Dr. Wise, and I cannot presume to place my own words above those of others. Therefore, under leave, I am inserting in the RECORD generous portions of the tender and touching eulogy delivered by Dr. David W. Petegorsky, executive director of the American Jewish Congress, at the funeral service of Dr. Stephen S. Wise in Carnegie Hall, New York, on April 22. The text follows:

According to Jewish tradition, one does not eulogize or mourn for the dead during the current month of Nissan. But we gather at this service not to mourn the passing of Stephen Samuel Wise, though our hearts will be heavy with grief for years to come. Nor have we come to eulogize him. One eulogizes those whose achievements can be measured and weighed. We cannot eulogize a man whose achievements are incalculable—incalculable in quantity and in quality; in quantity because he influenced so fundamentally so many fields of human endeavor; in quality because he touched the very souls of numberless persons in every land, touched them as individuals and as human beings.

We gather, instead, to thank God that we, the Jewish people, in the most tragic and the most creative half-century of our history; that millions of persons of all races and faiths who suffered wrong and endured injustice, who dreamed of a better life and a better world—that all of us were blessed for so many years by the leadership and inspiration of this great and noble person.

Today, as each of us recites our acceptance of God's decree, "The Lord hath given, the Lord hath taken; blessed be the name of the Lord," let us, above all, bless the Lord for what He gave. For His gift of Stephen Wise has blessed, and will bless for generations, our country and our people and all the world.

History will inscribe Stephen Wise among the truly great men of our era. It will record that he was a pioneer, a fearless crusader in every worth-while field of social concern—in the cause of justice and freedom for all men and all peoples; for public morality and social welfare; for the deepening of religion and the extension of knowledge; for international peace and understanding. It will tell that he was the beloved and peerless leader of his people who did as much as any man of his time to right a 2,000-year wrong by reestablishing the people of Israel in Israel, its homeland, and who did more than any other man to forge the unity of his fellow Jews in their hours of deepest distress. History will ascribe monumental achievements to his name—the institutions and movements he created and led; the multitudes he moved and inspired; the battles he magnificently waged and won. And, for all of this, he will be remembered as a great Jew, a great American, a great liberal, a great humanitarian—as a giant among men.

But history is an adequate recorder only of impersonal events. It is an extremely inadequate recorder of persons and human beings. The impersonal records of history will enshrine the accomplishments of Stephen Wise. They will not enshrine the man.

Let us, therefore, while our memories of him are still warm and fresh and vibrant, seek to encompass the man. Let us today testify for the generations that thought Stephen Wise was great as a humanitarian, his real greatness was as a human being. Let us affirm for all who will follow that though he was a giant among men, there was no greater man among the giants.

Last year, Dr. Wise paid tribute to Mahatma Gandhi in words far more applicable to Dr. Wise himself than to any other man of our time. He said of Gandhi that he was great because he was "the man who dared to be himself; a man, who, being utterly true to himself, became one of the supreme figures of a millennium."

Superficially, much of the greatness of Stephen Wise may seem to have been in the courage and daring with which he fought on behalf of so many ideals. Actually, his true greatness lay in his daring to be so supremely what he was.

He was a simple man, who dared to remain simple in an age which rewarded cunning and cold calculation and deceit.

He was a man of profound faith and piety; and he dared to retain his faith in a world which mocked and seemed to disprove any faith.

He was a man overflowing with love; and he dared to continue to love during a generation when hate and prejudice and ill-will stalked the earth and crept into the hearts of millions.

And, above all else, he was a Jew, and he dared to be a Jew, a full Jew, a proud Jew, when so many gifted Jews of his time sought escape from their Jewishness as an avenue to success and happiness.

Stephen Wise was a simple man. His mind knew no cunning, no deviousness, no ulterior motives. Whenever he learned of injustice or cruelty or wrong, he knew simply that they had to be challenged and uprooted. And he took the most straight-forward, the most direct path to the fulfillment of that goal. All the world recognized and honored the integrity that came from that basic simplicity. That is why, as in the case of the Hebrew prophet Samuel, whose name Stephen Samuel Wise bore: "And all Israel, even from Dan to Beersheba, knew that Samuel could be fully trusted to be a prophet in the service of the Lord."

Because he was a simple, an uncomplicated person, he gave all of himself, and never less than all of himself, to everything he did. He withheld nothing of himself in whatever he did—whether in so historic an enterprise as building a Jewish state or in alleviating the plight of a poverty-stricken person who turned to him for help. And because his gifts of mind, of soul, of heart, of energy, of articulation were so matchless, by giving all of himself all the time, he inevitably became a leader among men in any cause with which he associated himself.

But Stephen Wise was not only a simple person. He was a man of profound faith and piety. He had a deep and unshakable belief in God, in moral values, in human beings. His convictions were rooted not in social theories or in political dogmas but in an abiding religious and spiritual faith. Out of the depths of that faith came the irresistible force of his beliefs and convictions; the compulsive power which impelled him in every venture he undertook; the indefinable but inescapable moral authority he exercised over all who had contact with him. Adversity could not deter him. The intense physical pain he endured for years, vilification, unpopularity, political reversals—none of these could even momentarily halt him in his relentless quest for justice, for peace, for freedom, for Zion. For his were the faith and spirit of the Hebrew prophets of old whom, more than anyone else, he resembled, and by whom, more than anyone else, he was inspired.

To his simplicity and faith, he added an overflowing love, an abounding love for his people Israel, his country America, his family, his friends, his associates, for ordinary and humble men and women. This quality of love—which his family and his intimates knew so well—is, as much as anything, the key to the understanding of his life. He loved his people and his country, each of his fellow-Jews and his fellow-Americans and his fellow-human beings so deeply that he shared personally and intimately the experiences in which they partook. He shared their sufferings and their anxieties; he felt their needs; he dreamed their dreams. And because his was the sharing, not merely of intellectual or abstract understanding, but of love, his efforts to ease their suffering, to satisfy their needs, to give substance to their dreams, were suffused with the passion of love. He could brook no delay, nor would he calculate any consequences; personal or financial or social or political.

And that love which flowed from him in turn evoked the affection of millions the world over in greater measure, certainly than any other Jew, and probably than any other public figure, of our time. During the war, in the Jewish resistance movements in Europe, the code word for the United States was "Stephania"—for to Jews fighting for freedom, Stephen could mean nothing else but Rabbi Wise and the United States. Jewish soldiers and chaplains have reported that when they landed in remote corners of the globe, when they reestablished contact with Jews who had been isolated for years under enemy rule, the first question with which they were greeted was, "Is Stephen Wise still living?" And the knowledge that he was still with them brought to these Jews relief and reassurance. That sense of security which they felt did not come from the fact that the influence of Dr. Wise was so great. There have been Jews of our day whose influence in the councils of the mighty, in the political chambers of the world, was far greater than his. But the masses of Jews the world over knew that there was no other Jew whose devotion and love for them was fullest assurance that he would make their problems his own, and that he would toil restlessly and ceaselessly for them.

It was out of this abounding love for the people—not the people as an abstraction, but people as human beings—that he drew his deep and abiding faith in democracy. From the people, he drew warmth and inspiration and strength, and he therefore continually sought the people. "I see my brethren" was the theme of his life. Thus he became the articulator of the hopes and desires and needs of millions of people, and thus he fulfilled in such measure God's command to Samuel, "And the Lord said unto Samuel, listen to the voice of the people in all that they say unto thee."

Above everything else, Stephen Wise was supremely a Jew. And being a Jew for Dr. Wise meant not an "accident of birth," a phrase he found so distasteful. It meant being the proud heir to 4,000 years of Jewish tradition, of Jewish learning, of Jewish achievement, of Jewish suffering, of Jewish

nobility, of Jewish dreams. It meant being the heir to the teachings and ideals of Moses and Isaiah and Amos and Hillel and Rabbi Akiba and Maimonides and Herzl. And just as he gave to everything all of himself—all of his abilities and all his faith and all his love—so he gave to everything he touched all of his Jewishness, all 4,000 years of his Jewishness. He sought to give living expression to those teachings; to compensate for all the sufferings; to help fulfill all the dreams. His Jewishness was the oldest and most integral part of himself. In giving himself to whatever he did, he gave—and had to give—all of his Jewishness. Thus he became for the world the supreme and noble symbol of Jews and Jewishness. Out of that Jewishness there came his uplifting and ennobling dignity, his fierce pride. For as the inheritor of the tradition of prophets and princes, of scholars and saints, there was no one, however exalted, before whom he need cringe; no one, however mighty, to whom he need apologize. Thus he taught an entire generation of Jews to walk proudly and with dignity, to act with firmness in the right.

Thus by daring to be so supremely what he was—a simple man, a man of faith, a man of love, a Jew—he became one of the great of this earth. Thus he wrought so much and wrought so enduringly. And thus as he grew greater, so grew the affection in which millions held him.

The Bible tells us of the Patriarch Abraham that "Abraham died in a good old age, old and full of years, and was gathered unto his people." Stephen Wise, who has passed away with a fullness of years, fullness in time and achievement given to so few, had been gathered unto his people, unto the hearts of all people, long before this day. And long after his passing, men and women—the great and the humble, colored and white, Jew and gentile, here, in Israel, in all lands—will continue to gather him unto their hearts; to bless his name and his works; to be inspired by his example.

As we bid his earthly remains farewell, let us thank God for having given us this man, and for having spared him until this day, and let us pray in words written by Dr. Wise himself in a letter shortly before his death: "Into the Hand of God I commend my spirit. May He continue to vouchsafe me His grace and mercy."

Into the Hand of God, we commend this great and good and noble spirit. May He continue to vouchsafe unto him His grade and mercy.

Oil Imports

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. GOSSETT. Mr. Speaker, within the last 6 months, the State of Texas has been forced to reduce her oil production by almost one-third. Since last January, the Railroad Commission of Texas, our proration and conservation agency for Texas, has reduced our oil allowable three times, cutting the amount of oil which Texas producers can market by some 700,000 barrels a day. This has been necessitated because of tremendous oil imports into this country.

I have just received a resolution passed by the North Texas Oil and Gas Association on this subject. A copy of such resolution follows:

The national oil policy prepared by the National Petroleum Council, at the request of the Secretary of the Interior, was approved unanimously. The council is composed of representatives of the domestic petroleum industry and of all oil-importing companies.

The basic policy with reference to imports of petroleum and its products is that they should not be in such quantities as to be harmful to our national economy and security and should be limited to those quantities necessary to supplement domestic production, when produced in accordance with sound conservation practices.

Excessive imports have forced the reduction of domestic production to a level far below the maximum efficient rate. Within the last year we have built up a domestic supply more than adequate to meet our domestic demand: Therefore be it

Resolved, That the North Texas Oil & Gas Association commend the Railroad Commission of Texas for requesting the importing companies to provide figures as to the quantity of petroleum and its products that they each intend to import; and be it further

Resolved, That each and every company or individual importing oil into the United States make public figures as to the quantity of petroleum and its products that they imported each month during the past year and for each and every month in the future; and be it further

Resolved, That the Congress of the United States enact legislation that will require each and every importer to furnish the Bureau of Mines, within 30 days after the close of each month, with information as to the quantity of petroleum and its products that they imported into the United States during that month and requiring the Bureau of Mines to release and make public these figures for each importer, separately, immediately; and be it further

Resolved, That the Congress of the United States enact legislation that will prohibit imports of petroleum and its products into the United States in excess of such quantities as are necessary to supplement domestic production, produced in accordance with sound practices so that domestic oil will not be supplanted by imported petroleum and its products; and be it further

Resolved, That copies of this resolution be forwarded to the Members of the Senate and House of Representatives of the Congress of the United States from the State of Texas, and that we particularly urge the Senators from Texas to secure the adoption of an amendment on the floor of the Senate, to the Reciprocal Trade Agreements Acts that will accomplish these purposes.

The Treatment of Greek Seamen in America

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. BURDICK. Mr. Speaker, the Immigration and Naturalization Service—Baltimore district—is using a trade-union blacklist to terrorize Greek seamen sailing to and from American ports.

Greek seamen who are members of the Federation of Greek Maritime Unions are subjected to severe intimidation, denied shore leave, and given very unsubtle hints concerning the safety of their families in Greece. Captains who protest in behalf of their crews are put through the same wringer by the immigration officials. Over 100 men were detained aboard their vessels in March alone—men who have been sailing in and out of America for 15 to 25 years. Suddenly, mere membership in a trade-union is sufficient to label them subversive and dangerous to the safety of the United States.

The origin of the blacklist being used to determine membership in FGMU is an indication of its purpose.

In 1943, FGMU, representing over 80 percent of the Greek seamen sailing abroad, signed the first contract with Greek shipowners ever won by Greek seamen. In 1947, the Government-organized Panhellenic Nautical Federation, a maritime union founded by Metaxas, prewar dictator of Greece, signed an agreement with the companies annulling all the gains of the 1943 contract. Then, when it refused to recognize or become a party to this new agreement, FGMU was outlawed, its offices raided and closed in Greece, its leaders arrested and sentenced to death. Overwhelming world-wide protest from every democratic country in the world, from the UN, and so forth, succeeded in winning a stay of execution for the union leaders, but unless protest is sustained effectively, they will be executed quietly and unobtrusively so as not to arouse world protest again.

By governmental decree it became illegal to ask for overtime pay, for extra pay for extra work, for better food conditions, and so forth; all part of the 1943 agreement. The seamen would not recognize the new contract and as a result became victims of intense persecution. Over 1,500 were blacklisted in Greece and a list of 600 names was drawn up of men sailing outside of Greece in an attempt to court martial them for offences ranging from claiming their 6 months' bonus to complaining about unhealthy food.

Use of blacklists in the United States is illegal, yet this trade union blacklist of 600 members of FGMU is being used by the agencies of the United States Government to attack a trade-union, discriminate against members of that union, and thus aid the Greek shipowners' attempt to smash the FGMU.

Greek shipowners today enjoy a unique position. With the Greek Government acting as their agent, persecuting active maritime union members, outlawing the seamen's union, FGMU, and making it a crime to ask for higher wages or better conditions, these shipowners have succeeded in driving standards to far below the American ships. Thus, their operating costs are far lower than American shippers. Further, the Greek Government requires few taxes from them; they pay no taxes to this country, where so many of them reside and hold tremendous interest in property and corporations; they purchase American ships, their purchases are underwritten

by the Greek Government with American money; it is common practice for them to switch the flags of their ships and sail under the flags of countries like Panama and Hondura to pay even lower wages and taxes.

The American merchant marine is being wiped from the seas as an important industry by competition from Greek-owned ships.

The terrorization of Greek seamen here aids no one but the Greek shipowners in their desire to reduce the men on their vessels to the position of slaves. The seamen become more and more hesitant to claim even normal trade-union grievances adjustment.

FGMU is the last obstacle in the way of these shipowners. The actions of the American Government supports their attack, and ultimately the American maritime workers and American maritime industry suffers.

Our Foreign Relations

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. HARVEY. Mr. Speaker, in considering the problem that has confronted and will confront Congress on foreign relations, there are two thoughts which should predicate our discussion. The first is that this is not a political issue. You will find proponents and opponents of our present foreign policy, in both parties, for it is a bipartisan program. The second is that our foreign policy should be regarded primarily as one designed to protect our own country and our efforts should be regarded and measured in terms of how they have and will serve this purpose. As I interpret the program presently being considered in the Congress, it may be divided into three parts.

The first is the Atlantic Pact and the United Nations. The second is the Marshall plan or ECA and the third is rearming of Europe.

The fear has come to my attention frequently that the Atlantic pact is designed to supersede the United Nations and is a recognition that this instrument has failed. We can only say that while the United Nations has not functioned entirely as we would like, neither has it failed. We—the United States—have attempted in good faith and are going to continue to do so, to make the United Nations work for peace. Now peace is not something that you achieve at one meeting or several meetings. It is something that requires practice and constant effort. As long as the nations of the world are able and willing to bring their problems to the conference table the possibilities for peace are thereby enhanced. Looking in retrospect at history who can help but agree that most of our wars have been precipitated by a lack of willingness to meet at the conference table. With the contention that the United Nations has not been a spontaneous success, I will agree, but it deserves to be continued so long as there is the slightest possibility of keeping the nations working together. That the Atlantic pact supersedes the United Nations is to me an evident untruth, for the Atlantic pact was drawn to reaffirm among peace-loving nations their unity of purpose, and to present a firm front against any aggressor in the world.

There are many technical features of the pact, but I will not attempt to dwell upon them. The main point I wish to stress is that this pact will give the most important nations at UN a common understanding so that there can be no doubt in the minds of any participants of the desire for peace and yet to show in unmistakable terms their united opposition to any aggressor. In comparing the United Nations with the League of Nations, it is fair to say that the failure of the latter can be attributed to the fact that the participants did not really believe in its necessity or usefulness. Developments up to and including the recent World War have charged the nations, particularly those outside the iron curtain of Russia, with the necessity for unilateral action to preserve peace. In light of these circumstances there is every reason to believe that the combination of the Atlantic pact and the United Nations will present a strong concerted effort to achieve world peace and an equally strong deterrent to those who would provoke a war.

The Marshall plan has now been in operation for almost a year. There was a great deal of doubt in my mind a year ago as to what my stand should be on this issue. I might add, parenthetically, that there was a great deal of doubt in the minds of most of the citizens of our district. It was my good fortune to have a personal envoy to Europe to help analyze the problem. This person was Dick Bancroft, of New Castle, Ind., who was traveling in western Europe, and consented to make a study of the matter and the possibilities of success of the Marshall plan while there. His attitude before going was at best very critical of the idea. His report, when he returned, was a very excellent and thorough one. He did visit most of the western European countries and England and had an excellent opportunity to analyze the problem, keeping free from propaganda of the countries he visited. This report advised me that in spite of the objections that were evident we should still undertake the experiment. To Dick Bancroft I think the entire district is deeply indebted, and I want at this time to pay personal tribute to him for his excellent service. The plan has succeeded even better than was anticipated.

It was my privilege recently to be a participant in a session with Paul Hoffman and a few Congressmen. Those attending were both those for and against the ECA program. This forum, which lasted 3 hours, was a very helpful and constructive one. Some of the common objections raised by those opposing the program were that the countries we are aiding will not love us for our help, or that we have done enough now and should quit, or that western Europe could easily be taken by Russia, so that our efforts will be wasted.

Let us analyze the problem as objectively as possible. It was said a year ago that this effort was a calculated risk and I think the same statement is true today. First of all, Mr. Hoffman said the greatest problem he met, when he first became Administrator, was the suspicion on the part of the participating nations. This suspicion was a natural one, and I think you can readily understand that these nations might feel we had some ulterior motive. It is my impression that he has quite frankly told them that we have no selfish purpose, but that we do realize that world peace and balance of power cannot be maintained unless they are revitalized and their democratic governments maintained.

The recovery of these nations has been better than expected, and in many instances their production is almost up to prewar. This production, however, is not enough and is the reason why we must continue an organized program.

Let me say, at this point, that these nations constitute more or less a unit so far as trade and economics are concerned. It is in essence the same situation that we have in our country where all of the states contribute to a balanced economy. That is the reason why the program must encompass all of these countries and a new scale of production be made possible. These nations have lost in the war many of their manufacturing and production facilities. In addition much of their production equipment has either been worn out or is obsolete. Their production facilities have never been the equivalent of our own. Our manufacturing gives to each production worker approximately 7 horsepower in comparison with Europe's 3 or 4. The reason I am mentioning these figures is so that you can realize the necessity for supplying them with critical materials so that their industries can be equipped, which will in turn raise the productivity and standard of living of these peoples. This is a very important question and should be stressed. Even in the short period during which this program has been in operation we have found the Marshall plan to be the only remedy to stay the infiltration tactics of the Russians. This is rather an interesting observation since it was not the primary reason for inaugurating the plan. To be sure we have also provided much by way of food supplies to western Europe. In this category our supplies will be in diminishing quantities in the future, although western Europe will probably never be completely self-sustaining. Italy represents the weakest link in the chain, but has probably made the greatest progress during the past year. Mr. Hoffman himself stated that he had been amazed at the moral regeneration within that country. The entire sector has been so encouraged and improved that the outlook is much brighter than a year ago.

Taking England for example, we can say that she has made a great effort to become self-sustaining. It should be borne in mind that she is exporting 40 percent of her manufacturing production in order to as nearly as possible

achieve a balance of trade. In this respect she would be able to have a balance by 1952, but it has required great self-denial on the part of her citizens, and this remains the best testimonial to her good faith. It is her leadership, among the participating nations, that is making the plan work. Certainly so long as these countries are willing to work to achieve their sufficiency, our plan should be directed toward helping them accomplish this goal. You will hear criticism of the plan to the effect that it may dislocate some of our own production and export plans, and I think this is a fair criticism. However, we should take the long-range viewpoint rather than the immediate one.

By way of illustration I would like to cite the opposition that came from men employed as cradlers of grain to the reaper. This invention did cause a temporary dislocation, but the value of the ultimate contribution to the standard of living of all of us far outweighed the temporary dislocation. We have made our choice as between trying to live as a self-contained Nation or be a part of world affairs and commerce. The invention of the airplane and its modern development and the atomic bomb have, in my opinion, made the decision for us, and we could not live an insulated or isolated existence if we chose. So with regard to the Marshall plan I will conclude by saying, as I did a year ago, that it is, in my opinion, the most momentous decision we have made in a century. And we have adopted a positive program for peace even though it involved a calculated risk.

The question of rearming Europe, the third section of the problem is one I have not determined as yet, in my own mind. We should first of all recognize that we are dealing with the Russians, hence an oriental mind. It is impossible for us, having an occidental outlook, to guess what their decisions will be. Although most of us in Congress are agreed on the first two phases, that is the Atlantic Pact and the ECA, there is much disagreement on the third sector, or rearming of Europe. Some contend that rearming Europe will place Russia in a position where she can do nothing but go to war. There are others who claim that these countries cannot adequately rearm themselves and effect an economic recovery at the same time. They point out that the entire projected cost of our efforts—that is ECA and rearming western Europe—will not exceed the cost of 3 months of World War II.

This question is one that will undoubtedly come in for much debate in the Congress during the next 3 months, but as yet opinions are not entirely formed. Without presenting my opinion as a military strategist, which of course I am not, it would seem to me that if our rearmament efforts are undertaken they could best be utilized in fortifying strategic places in western Europe. I have in mind particularly spots in Denmark or Turkey that are of great vital military importance, for these countries do not have the resources to adequately install the fortifications.

In conclusion I will simply say that our budget for military defense and for foreign assistance are much larger than we would wish. A budget of $16,000,000,000 for our armed services would be too little if war comes within 5 years and too much if it does not. The reason I make this statement is that great proportions of this amount are dedicated to contractual obligations that will require many months to complete. As an illustration, not a single plane flew in World War II that was not on the drawing board before our entry into the war.

It has been a pleasure to be here and discuss this most important national problem with you, and I hope I may have your continued thoughtful consideration of my efforts.

Billion-Dollar Swindle

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial from the Daily Tribune, of Royal Oak, Mich., by Mr. Floyd Miller, its editor.

I commend the reading of this editorial to the Members of the House for their reflection. That this favored Nation is moving toward state socialism must be apparent to every thinking American. We received the inheritance of freedom from our forebears. Will our posterity be that fortunate or will they receive from us a socialistic state?

The editorial follows:

PERSONALLY SPEAKING

(By Floyd J. Miller)

BILLION DOLLAR SWINDLE

Personally, I don't like to be swindled, no matter what fancy words the guy uses to cover up. How about yourself?

The people of Oakland County have been taken for a ride for hundreds of thousands of dollars, yet many do not realize it. In fact, the people of the whole United States have been squeezed of vast amounts of money—taken out of their weekly earnings—under a high-sounding phrase.

This swindle is called social security.

That phrase would be a laugh, if it were not so tragic. For it really won't be funny to see trusting citizens reach old age and find they have been cheated by fast talkers who used an appealing word. "Social security" indeed.

Since it is barely possible that some of you haven't kept up with the score, I will recall what has happened. The social-security plan has been in operation for 12 years. Each year it has dipped its hands into the pockets of workers and taken out millions. It has extracted an equal amount from the cash registers of employers.

This take has amounted to $13,394,000,000. That's a lot of billions.

And what was this money taken for? Why, to build up a security fund for the aged and unfortunate.

Where has the money been deposited? What kind of a savings account does the Government have, so that you and I can get our money back when we get old and need it? Answer: Most of it has been spent.

You mean there isn't any big fund to pay us? Did somebody steal the money? Answer—There, there, don't accuse anybody of stealing. It's just what is known as the old political hocus. Of the thirteen billions plus which the kind Government has taken in, it has:

1. Paid out $2,379,000,000 to those who reached the pension age, or to their survivors.

2. Spent $309,000,000 in running expenses. (Bureaucracy is not cheap.)

3. Spent the rest, $10,706,000,000, for various Government bills and left some IOU's in the till. That is practically 80 percent of the total taken from the wage earners and their employers, all for their own future good.

But the IOU of the American Nation, sir, is good enough for me, retorts the man in Washington. Sure it is. Only there is a real catch in this one.

The IOU's which have been left in the Social Security cash register instead of ordinary money are special interest-bearing bonds of the United States. These are good just as long as the Government can collect more taxes or seize property.

And that is the only way the Government can pay back this money. It has to get the money from you and me and other taxpayers or workers.

In other words, the money taken from our pay is not in the bank. When payment is due, the cash will have to be raised by taxes levied on you and me and other citizens. What the bank contains is not cash, but a promise that we will pay ourselves the amount due.

Now the thoughtful Government is proposing to include millions of other individuals in the plan. More money would be poured into Washington, to be spent and replaced by pieces of paper saying we owe it to ourselves.

The same hocus-pocus would be worked with every other phase of the so-called "cradle-to-the-grave security." If the various proposals already advanced by the Administration in Washington were adopted, the workers of the country and their employers (allegedly in their behalf) would have to pay in $5,800,000,000 every year.

Pretty soon the biggest business in the world would be Social Security. And about the smallest and least important thing in this country would be the individual worker and citizen, you and I.

The planned economic state would take care of everything. Seems to me a couple of other fellows tried that not so long ago.

Wildlife Conservation

EXTENSION OF REMARKS
OF
HON. A. SIDNEY CAMP
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. CAMP. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ZEBULON, GA., *April 10, 1949.*

Hon. A. SIDNEY CAMP,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN CAMP: In a certain mountainous section of Wyoming there are a number of wild horses, supposed to be descended from horses carried into that section by the Spaniards long ago. These horses are not only harmless but are individually beautiful and collectively quite interesting

as a unique feature of our wildlife assets, as are the buffalo, for instance.

Recently, hunters, far more mercenary than merciful have taken to hunting these horses in a most cruel and heartless manner. They use airplanes and fly low over the herds, scaring the animals into frenzy and keep up the pursuit until the animals are exhausted and fall, or until they are driven into corals from which they are unable to escape. Slitting the nostrils of these helpless victims, they insert wires which they twist to close the air vents and thus make it possible to carry them off for slaughter to make dog food or something out of the carcasses. If unchecked this ruthless butchery will quickly exterminate this entire element of our wildlife possessions. This is not only wickedly inhuman but also wantonly wasteful of an attractive element of our national resources.

You and the other lawmakers of our Nation will confer a great favor upon millions of American citizens whose sensibilities are shocked by those needless atrocities if you will make such acts a punishable crime and will provide refuge and protection for these noble animals, which deserve a better fate than what is now befalling them. Moreover, you will have the satisfaction of having upheld the ideals and principles of enlightened and civilized humanity.

In a few days you will receive a copy of the April issue of Our Dumb Animals, on page 3 of which you will find this situation more fully described.

I assure you that I will be personally grateful and appreciative for whatever you may do in alleviating the suffering of these animals and in preserving them as a worthwhile element of our national wildlife resources.

Yours truly,

MAY BELLE BUSH.

Veterans of Foreign Wars' Golden Jubilee Anniversary

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. BOGGS of Delaware. Mr. Speaker, night before last in Wilmington, Del., I attended a testimonial dinner given by the Department of Delaware, Veterans of Foreign Wars of the United States, in honor of that organization's national commander in chief, Lyall T. Beggs. It was my privilege and pleasure to be present on that occasion not only as a Member of Congress, but also as a member and past post commander of the Veterans of Foreign Wars.

In addition to serving as a testimonial affair in honor of Commander in Chief Beggs, the dinner meeting last night also served to direct attention to the fact that in this year of 1949 the Veterans of Foreign Wars is celebrating its golden jubilee anniversary.

This splendid service-rendering organization, of which I am proud to be a member, had its beginning just 50 years ago when several groups of Spanish-American War veterans banded together in order to be of mutual service to each other, but especially to serve their less fortunate comrades in arms and their widows and orphans. Fourteen years later, in 1913, these groups of men throughout the Nation, who had served overseas during the war with Spain, the Philippine insurrection and the China relief expedition, merged to form the Veterans of Foreign Wars of the United States, which some years later received a congressional charter.

On the occasion of this golden-jubilee anniversary it is well worth reviewing for a moment the purpose of the Veterans of Foreign Wars as set forth in its charter. There we find this clearly defined, inspirational statement:

The purpose of this corporation shall be to preserve and strengthen comradeship among its members; to assist worthy comrades; to perpetuate the memory of our dead and to assist their widows and orphans; to maintain true allegiance to the Government of the United States of America and fidelity to its Constitution and laws; to foster true patriotism; to maintain and extend the institutions of American freedom; to preserve and defend the United States from all her enemies whomsoever.

Mr. Speaker, even a brief review of the record of achievement of the Veterans of Foreign Wars will show how closely and effectively this fine organization has adhered to the principles and purposes set forth in its charter. Its splendid work in the field of rehabilitation is known to all. The usefulness and accomplishments of its national home for orphans and widows of deceased veterans has achieved renown as one of the Nation's finest child-welfare projects. In thousands of communities throughout the Nation the Veterans of Foreign Wars has sponsored and successfully carried out a wide variety of projects beneficial to civic welfare, to schools and churches, and to the Nation's youth.

In view of this splendid record of achievement and of continuing purpose, we can see now, Mr. Speaker, that it was with almost unbelievable foresight that those who organized the Veterans of Foreign Wars chose for its emblem the Cross of Malta. That symbol is an expression of the desire of this organization and its members to serve their fellow men, as did the early crusaders who created the Cross of Malta, because they are pledged to defend the principle of human rights in either war or peace.

Harold E. Stassen on the Half Century Ahead

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extraordinary address given by Harold E. Stassen, former Governor of Minnesota, and now president of the University of Pennsylvania, at the midcentury convocation of the Massachusetts Institute of Technology, Friday evening, April 1, 1949:

THE HALF CENTURY AHEAD

(By Harold E. Stassen)

Dr. Compton, Hon. Winston Churchill, President Killian, distinguished guests, my fellow citizens, although I appear, as you know, as an eleventh hour substitute for the President, I assume it is totally unnecessary for me to tell you, with a smile, that I do not speak for him, and that he is not responsible for anything I say this evening.

I am certain, nevertheless, that I can speak for the President and for the people of our country when I give a salute to the Massachusetts Institute of Technology for its amazing record of constructive, educational, and scientific accomplishment, and say best wishes and Godspeed to this great institution and to its able, modest, new president, Dr. James Killian.

I am confident that, in the same representative manner, I may word a hearty and respectful welcome to these shores to that gifted and inspiring leader of the people of Britain in "their finest hour," that contemporary Shakespeare, Burke, and Nelson cast in one dramatic mold, the Honorable Winston Churchill.

It has been asked that I speak of the future, that I address my remarks toward the second half of this twentieth century which so shortly will begin. Let me respond that I am not given to prediction, not even to shorter-range prediction, especially not after what happened November 2, 1948. Yet I do recognize with you the importance of thinking ahead. I agree that at the midturn of a century, in this atmosphere of science, a searching inquiry into the humanities is important. I agree that the next 50 years is not too long a time to think about when we reflect that, barring catastrophe, most of the undergraduates of this institution and the other millions of our youth now engaged in study will witness during their lifetime this full half century of which we speak.

There are those who will say, why speak of a half century, when within a few years we either solve the worldwide question of relations of men, or see civilization die in the rubble of an atomic war! Others whisper that atomic destruction, with all its horrors, is but as a bow and arrow compared to the potential devastation of germ warfare. Others say—and that is not all. No one is more keenly aware than I am of the vast capacity for catastrophe possessed by future war or more determined, that mankind must find the way to prevent its occurrence. Yet I here declare that to say now that all thinking should begin and end upon this question of the prevention of a third world war is to introduce a note of sterility into our analysis. It is to shackle our minds at the very moment in history when it is most essential that they be unfettered.

I therefore state, in considered phrases, that if, God forbid, an atomic war does come, civilization will survive. If more than one future world war should come, with all the destructive force of every kind that is developed, civilization will yet survive. I say this bluntly, for I believe that the future course of man requires that there be a toughness of free minds, a searching, long-term thought upon future policy, a complete canvass of considered alternatives, and no blind spots or road blocks in our thinking.

Terrible devastation and destruction and suffering can be dealt out, but, in my judgment, man can never fashion the means of destroying all men; man can never wipe out entirely throughout the world that curious combination of progress called civilization.

Our first concern is not to be for places to hide. Our approach should not be one of either hysteria or resignation. Rather

must we be determined that we will rebuild; we will go on, what e'er may come.

Before turning our eyes to the future, we gain perspective if we recall that when this century began fifty years ago, man had never flown. The first, feeble, fascinating flight by Orville Wright occurred in 1903. Man at the turn of the century moved heavily over land and slowly over sea. Thus handicapped, food moved with difficulty; lands were tilled laboriously. In the first decade of this century, many many millions of people died of starvation and of plagues.

I need not speak of today's nonstop, refueled aerial circling of the world, of many flights at speeds above 500 miles an hour, of some faster than sound, of communication by radio covering the globe every day, of the rapid increase in the transmission of visual messages via television, of production—mass production—and its amazing totals, of medical science and its conquest of major epidemics. What then of the future? Should we not contemplate as a minimum, readily available nonstop travel to any point on the world, communication of message and of picture everywhere, and new developed sources of energy removing old limitations of fuel and transport?

Clearly the physical facts today, and in increasing degree, the projection of these facts, means that our thinking must be world-wide. Our thinking must give more consideration than ever before to the fundamental nature of man and the way in which he should live.

This philosophic approach has greater validity than either an economic, social, military, or political approach, for it affects all these, and more too.

I talk of world-wide, fundamental concepts with humility, with hesitation. But I do hope that I may in some degree stimulate and provoke others, through disagreement and agreement, through modification and amendment, through correction and projection, to contribute a larger measure to the unending dynamic process of thinking our way through to the course we should follow.

It is my view that there are in the world three major streams of philosophic thought as to the nature of man and the way in which he should live. Each is many centuries old. None is held purely and completely by any numerically appreciable group of the people on the earth. Each has felt the cross impact of the other. Each has received impetus, direction, modification from geographic and anthropological fact, from experience and circumstance, from scholarship, and from religion.

The correct evaluation of these three major streams, and the appropriate development of policies at home and abroad are of greater importance for the next half century than any other intellectual pursuits.

These are the three:

The concept of the natural rights of man; that he was meant to be free, of his inherent worth and dignity, of his spiritual quality, of his relationship to God, and of his brotherhood to fellow man.

The concept of the subordinate status of man to man, of his possessing rights only as they are given to him by those in command of the society in which he lives, of might making right, of man's value limited to his material being, with no recognition of his spiritual value, and no God.

The concept of man's little worth, indifference to his rights and welfare, of mystical and primary concern for the hereafter, of life as a vale of tears or a period of suffering, of devotion to a rigid religion and callousness to the conditions of living.

These three might be termed the doctrines of the free and equal man, of the subservient and atheistic man, and of the apathetic and lowly man.

Or they might be labeled the concepts of—

Liberty of man.

Order for man.

Indifference to man.

Each has a diverse and ancient background. None is held and implemented consisely and completely by any peoples.

There are some shreds of evidence of the welling up of the first stream of natural rights in the misty glimpses of earliest history of civilization when the workers on the pyramids and on the drainage projects of the Nile Valley demanded that not only Pharoah's court, but the workers too were entitled to the right to wōrship Ri, the Sun God, and receive the benefits therefrom, rather than to be limited to the worship of Osiris, God of the earth and underground.

In any event the flow is clearly evident in ancient Athens, in the writings of Socrates and Plato and Aristotle with their unfolding views of justice and of law. It is given major impetus by Christianity, in some respects by Judaism, and traces its development to the constitutionalism of ancient Rome, to Magna Carta, to Locke, to the founders of our own United States, to the Declaration of Independence, to the Bill of Rights, to Jefferson, and to Lincoln.

This philosophy of the nature of man has had predominant influence upon the governmental, economic, and social systems of the western civilization, of nearly all the nations of Europe, of the British Commonwealth of nations, of the United States of America, and has had a considerable impact in all other portions of the world.

The second stream, that of materialism and force, is noted in part in the Sophists and Epicureans of ancient Greece, and is traced through the seventeenth century French materialists, through Hobbes, through Hegel and Feuerbach of Germany, Karl Marx and Friedrich Engels, Lenin, Hitler, and Stalin. It is of import now in the ruling groups in Russian and her satellites, in Spain, Portugal, and Argentina, and in North China.

The third stream, that of indifference, springs from the earliest eastern religions; and, although in their theology they place high value on the life of man, yet the extreme mysticism and aesthetic emphasis of the beauty of a spiritual hereafter, when coupled with the poverty and want of overcrowded destitution, cause the principal current religions of Asia and the East—Hinduism, Buddaism, Confucianism, and Mohammedanism—to contribute largely to this stream.

This philosophy is of key significance in all of Asia, including China, Burma, India, Malaya, Pakistan, and also in Africa.

I recognize that a question may arise as to relating Hitler and Stalin, nazism and communism, to the same philosophic stream. But I reply that the attitudes in both instances toward the nature of man and his rights are closely identified, that the bitter clashes in doctrinal statement, and the war between them, rose from their proximity to each other as major, mutually suspicious powers, rather than from any fundamental ideological difference, and that the führer principle of Hitler's system and the centralism of Stalin's system, and the whole approach of ruthless domination and cold-blooded liquidation of those with whom they differed, were of the same cloth.

And some may also question the inclusion of Hindu and Moslem, bitter in their clash with each other, in the third category. But their fanatic hostility toward each other is confirmation of the mystic and rigid beliefs and callousness toward mortal life, rather than a negation of it.

I have a deep and abiding faith that the first stream of philosophic thought, that of inherent right of liberty, is correct as to the nature of man. I believe it points the way for policy and for action in the confusion and clash which has risen so soon and so sharp in the wake of World War II. I am confident it can be the basis for winning through toward the true objectives of mankind. It presents laws as true universally for all men, as are the laws of physical science which we know are valid even though many men do not recognize or believe them.

We should understand its own dynamic, living qualities and our constant effort should be to improve the implementation of that philosophy in economic and social and political systems, and endeavor unceasingly and skillfully, and by peaceful means, to increase the adherence to it in the other portions of the world. We should further seek to improve our system with the aid of the constructive value of the bitter criticism of its economic and social shortcomings made by those who hold the opposing materialistic philosophy. Finally we ought to enrich our doctrine by the more highly developed sense of beauty and by a measure of the tranquility of those who hold the concept of mystical indifference.

In applying the broad theory to specific, hard problems in definite terms, there may be many who, though they have traveled with me thus far, will part company with me on specific suggestions. Nevertheless broad generalizations are of little value unless we give them specific application through proposals for definite action.

If my analysis of the major stream of philosophic view motivating the Communist leadership of Russia and her satellites is correct, then it definitely indicates that their appraisal of relative force will be the key influence restraining or encouraging their aggression. Holding as a fundamental idea the denial of any higher concept of justice or morality, they believe that someone will rule by force and from their standpoint it had better be them. This means in turn that no voluntary release of power over others can be anticipated, no yielding of human rights, no granting of freedoms, unless compelled by the pressure of internal or external, impending or applied force.

Relating this inescapable situation to the specific China problem, we must conclude that by our inaction and by our withdrawal of aid, we are foolhardy thus to contribute to the Communist domination of China. We should move, and move promptly, to bolster the southern half of China, to assist by materials and by counsel in maintaining the independence of Canton, and of the four southern provinces of Kwantung, Kwangsi, Fukien, Hunan, and of Formosa and Hong Kong.

Giving due consideration to European needs and to our own total economic situation and capacity, we should regularly invest a portion of our resources in Asia for the resistance to communism. The amount should be a minimum of $1,000,000,000 a year. It should be administered on an Asia-wide approach, preferably in relation to local provinces and individual projects and in underwriting private endeavor, rather than being funneled through any central, major government.

Clearly the Marshall plan in Europe has been the most significant single right thing we have done since the end of the war. It is a high time that we have a parallel MacArthur plan in Asia. Supported in a major way, it should be long term in its vision, adjusted to oriental conditions, continuous in its execution, carrying the same flexibility of detailed application, and the same concept of objectives and requirement of self-help as the Marshall plan.

If we are right in our philosophic view, then it follows that men everywhere have the right to know the facts and information and ideas from other parts of the world. An individual can pull down a curtain for his own privacy, but no ruler has the right to drop a curtain and close off men from communication with their fellow man.

The program represented by the Voice of America, therefore, should be greatly expanded and ingeniously multiplied. Not only messages by radio, but in addition, the widespread dissemination of printed literature giving facts and information and ideas

should be carried forth. I am informed by men who know that such literature can, with comparative ease, be scattered broadcast over closed borders by means of drifting balloons or from high-flying airplanes during favorable winds. There needs to be a continuous, widespread, dramatic program of printed messages from freemen to all mankind.

In fact, one of my friends suggested that dropping a few Sears, Roebuck catalogs should be included in this program of literature from the sky. Of course, we are actually discussing messages and literature of much wider significance than that of consumer-goods production. I am proposing that we vigorously contest for the minds of men everywhere.

If methods such as these of sending material over borders seem contrary to ancient rules of diplomatic respect for borders, let me emphasize that when officials of governments constantly pour out vitriolic attacks on free peoples, the remedy is not that of trying to block their free speech. The remedy is not infringement upon the right of assembly to hear this party line within free countries. Rather, our doctrine indicates that the response should be widespread dissemination of information. The peoples in Russia and the satellite countries should be continuously told of our views and intentions and objectives, of our desires for peace, of the facts of the rest of the world. We should apply for support from the minds of the peoples in these dictatorially governed nations. The internal pressures for freedom and peace that will come from a well-informed people within these countries can be just as important as the deterrent of our own potential counteracting military force that is available in the event of war. These are times without parallel, and we must ingeniously develop a way in which to carry on the contest of ideas. Winning that contest will be the best assurance that there need not be a grim struggle by military force.

Some men have turned to materialism at a number of points in history when faced with widespread abuses which denied in practice the philosophy of liberty and equality which was professed. The present sway of this coercive materialist concept is directly traceable to reaction against the autocracy of the czars, to the monopolies and unfairness to labor in early capitalism, to the neglect of the responsibility of brotherhood by our west after World War I. Above all, its present extent has been due to the cruel measures of force used by those cold calculators who seized power under its doctrine.

Throughout recorded history, men, after listening to the exponents of this philosophy of order dictated over humanity, have repeatedly rejected it in their minds and struggled for more individual liberty. The plain people will reject it again; they will reject it in Russia; they will reject it in eastern Europe if we but give them the chance by pursuing dynamic humanitarian policies, by sending them the facts, by maintaining alert and adequate military strength, and by never surrendering to the jelly-like course of appeasement.

Of marked interest has been the recent conduct of peoples dominated by the third stream of indifference, and their rapid response to any ray of hope of better life on earth. The favorable change in Turkey and in the Philippines are recent confirmations of this.

Thus, I am encouraged to say that the story of man gives renewed and deeper faith in the inherent truth of our philosophy of the native worth of man, that he was meant to be free upon this globe.

It is likewise imperative that we improve the application of our own philosophy to our own social, economic, and political systems. Certainly, the violations of civil rights, the discriminations and repressions of bigotry, which are too numerous in our country, are directly contrary to the philosophy to which we subscribe. There must be a steady insistence upon progress in this respect.

It would be tragic if this session of Congress adjourned without at least passing the antilynch and anti-poll-tax measures. Major progress must be made in this direction with regard to those portions of our population which have suffered discrimination in their opportunities for education, for facilities of better health, and for decent housing.

Our concept of the nature of man is further guidance, though in a very different manner, in our economic and social policy. It means that those policies, taken as a whole, should contribute to the rounded development, creative capacity, worth-while character, and true happiness of man. The objectives of our economic policies, therefore, must not be limited by the materialist principle of meeting to the maximum degree the physical wants of man. It is undoubtedly true that if government were to take over the distribution of the food of the Nation, at least in theory it could deliver an assigned amount of food to every household every day at less expense than now involved. It is equally true, in theory, that if government took over the distribution of clothing, it could deliver to every person every year allocated clothing at less expense than clothing now costs. The same observation could be applied to other necessities of life.

Let me make it clear that from a strictly material approach I believe that the result of such an attempt would in fact be the loss of interest in production, lower supplies and the failure to attain the material Utopia outlined.

But entirely apart from the question of the successful production of material returns, do you not agree that removing from the individual both the privilege and the responsibility of planning for the provision of necessities, of making choices, of budgeting earnings, of weighing relativities, would result in the end in a people of less resourcefulness, less value of personality, less happiness, less strength of character? Thus I feel the economic socialists are departing from the basic philosophic stream in which we would move. Their concentration upon attempted material service to the many, with disregard for the individual rights and opportunities of the few who are especially talented in various fields, negates the basic tenets of our way of life.

The concept of the natural rights of each man must give rise to a constitutional system that protects man against oppression by the tyrannical rule of a single ruler, of a clique of rulers, or of an unbridled majority itself. Is it not clear that each aspect of the system should serve the many and the few? It should yield dividends in standards of living, in education, and enjoyment, to the many, but it should also keep open the avenues of opportunity for the few who stand out in each category. Such a system should safeguard minorities of whatever kind, and more particularly should be so constituted as to keep open the road for the few to develop and use their unusual talents.

If under the impetus of a short-sighted response to numbers in a democracy, or in revolt against the oppression of rulers, economic, social, and political systems are directed only toward fruits for the many, the result will be a deteriorating mess of mediocrity. The great artist, the inventor, the skilled surgeon, the exceptional scientist, the ingenious engineer, the keen financier, the gifted production manager, the designer, the craftsman, the scholar, each should find his path blocked by no insurmountable artificial obstacles, no excessive man-made handicaps, and each should have before him the fullest of incentive.

The unfolding genius of each of these in a desirable system will in turn yield dividends to the many, yes, to all.

The general attitude of the economic total-socialists of "bringing it to the people" can clearly be overdone. As Toynbee reports, all of history shows that civilizations may deteriorate or abort or ossify when they meet enervating, dissipating conditions, or when they encounter adversity too extreme to surmount. There is every indication from the ancient Egyptian civilization of 6,000 years ago down to modern western civilization, that a challenge of significant nature, but not obliterating in its weight, leads to the most significant development and response. Do not the studies of individual human nature indicate a similar rule? The capacities, of course, are varied, but in relationship to potentiality, a challenge of some adversity and stimulus, not stifling in amount, develops definitely stronger personality, a happier individual, than does either crushed subservience or blissful lassitude. To me this means that attempts to establish a breakfast-in-bed economy for the citizens, is a sad mistake both for the people and for the Nation.

Our unending effort should be to ease those overwhelming burdens which are beyond the capacity of individual man to bear, but we must leave the major normal provision for man's own livelihood and future up to him, himself.

In our economic relationships with those who are of the third major conceptual stream, that of indifference and mysticism, we would seek to stimulate, and contribute toward, the improvement of the very low standards of living in these areas, and at the same time to demonstrate, and lead toward, a higher appraisal of human life. Too often has the Western World been willing to profit by that low appraisal of native human life in the exploitation of colonial resources, instead of demonstrating a higher value for life. There is a small grain of truth in the fictional story of the American investor in dependent area resources who plaintively exclaimed, "I am perfectly willing to educate my native workers but I am afraid that the first lesson learned will be to demand a raise in wages." The Dutch in the East Indies and the French in Indochina are at this time particularly subject to censure for exploitation practices. All of us need to think through our basic policy in dependent areas in the Near East, in Africa, and in Asia, and harmonize those policies with our fundamental doctrince of the nature of man. A greater portion of the returns from the resources of these territories should be retained there for direct and constructive purpose, utilizing the superb experience of western civilization, for the advancement of the native peoples, for their education, their health, for the increase of their production of goods, and the general raising of their standards of living. You will note I have listed education as the first of the various contributions which I urge for these dependent peoples. I know that some will say, pointing to the near starvation of many millions in Asia, that food, food sufficient to place them beyond the miserable subsistence level, should have top and almost exclusive priority. But I submit that if only the supply of food is raised, without an advance in education in its broadest cultural sense, without instilling a higher morality, and without an elevated emancipated status for women, the only result of more food will be a larger population, a larger population to exist at the same level of destitution and misery.

If a man is to make a significant ascent the cultural, educational, ethical side must be lifted at the same time that the food and material production totals are increased. This requires the development by Western nations, with the aid of the trusteeship portions of the United Nations Charter, of a world-wide code of conduct for capital abroad. Excessive risks for this capital must be underwritten by society as a whole, so as

to remove the need or excuse for excessive profit and exploitation.

In a very brief space of time there have come major indications of an amazing development flowing out of the independence of Israel, not only affecting the growth of resources and advancing conditions of living not only in the new nation, but in addition causing a constructive stirring in neighboring Arab states.

Someone could well say that there cannot be a bright prospect for world peace and for progress of mankind unless a mechanism of government is developed on a world level to administer the natural rights of man, to adjudicate differences between peoples, to stabilize and police world situations. Of course this assertion is right. And it is constructive to urge this necessity. But as we analyze the three philosophies I have described, it must appear crystal clear that no major portion of the world that follows the materialistic concept of the nature of man can be included, or will permit itself to be included, in a world administrative machinery unless that apparatus be one dominated by a concept of force. Furthermore unless in all major component parts there is the concept of a higher justice, of natural rights of man, with the self-restraint and self-discipline that comes with it, it is difficult to see how a world structure for administration over all men can be successfully maintained. This means that we had better develop the lesser agencies and commissions and courts and arbitration systems in the Atlantic community and in the broader community of those who move in our philosophic stream, and make an effort to expand a similar concept in other parts of the world.

As a part of this growth we should note the vital necessity for a currency, or medium of exchange, which with reasonable speed and stable convertibility can be the helpful agent for the movement of goods and services between peoples. There must be unceasing concentration upon this major task in the Atlantic community and beyond. It may well be found that an impelling need exists for the establishment of a bank of the Atlantic. Such a bank of the Atlantic should issue an appropriate currency, backed in part by gold, available for those many circumstances in which direct exchange of national currencies is no longer feasible.

The United Nations Charter has within itself the means for strengthening and developing its provisions in all essential respects on the world level. Our Government and other governments should appoint commissions to address themselves to the many complicated and difficult problems that will be involved in establishing a minimum of effective government at a world level. Obviously in its present form, with its vetoes and lack of police power, the United Nations is sadly inadequate to meet its own high purposes.

I would nevertheless caution that we must not underestimate its value, even in its present weak form. Without such an organization, limited though it be, so clear an understanding of the devious and distorted and dangerous policies of the Politburo of Russia could not have been acquired so quickly by the overwhelming majorities of the peoples of the world. Without it, economic recovery from the damage of war could not have moved forward as rapidly as it has. Without it, Israel today would not be a free and developing state, substantially at peace. Without it, we already would have lost the lingering hope of peace with freedom and justice on the earth. Each session of the United Nations and of each of its committees and bodies should be looked upon as an opportunity for a serious, thoughtful, informative discussion.

Clearly our education in the years ahead must convey to our youth an understanding of each of these philosophies, of their manifestations, their meanings, their mechanisms. This can best occur through the development of general education conducted with true academic freedom. We should not attempt to indoctrinate our youth with narrow zeal for America as it is, but rather to open the avenues for personal growth, develop the broad understanding of our basic concepts, instill a deep appreciation of the progress our country has made in relationship to those truths, and encourage a determination to use the avenues of peaceful change through democracy for constantly improving our America and the lot of all mankind. On that road lies, for our youth, the noncorroding, intelligent, effective, satisfying love of America, which we all want our young men and young women to possess.

Of course, we have not attained the ideals marked out by this warm humanitarian philosophy. For true ideals, springing from a great philosophy, are like the stars in the heavens. You cannot ever reach them with your hands, but if you understand them and see their location, they will guide you aright. Such ideals are as valuable, as aids to navigation through the social, economic, and political troubles of the day, as are the stars in the heavens for navigation over the sea, through the air, or across the desert.

As Browning wrote so optimistically, so beautifully:

"Ah, but a man's reach should exceed his grasp,
Or what's a heaven for?"

We seek for mankind a better life, a more fruitful life, a happier life. An ever deeper understanding of our dynamic philosophy of life, with an unending determination and unfaltering courage to apply it, can lead, yes, I believe will lead, to a brilliant half century now opening before mankind.

Are We Afraid of Freedom?

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. YATES. Mr. Speaker, the Houses of Assembly in the State of Illinois recently voted to establish a commission to investigate subversive activities at the University of Chicago and Roosevelt College, in Chicago, Ill.

As an alumnus of the University of Chicago, I am proud of the fact that the university has long been one of the world's foremost educational institutions, and I believe this investigation which I consider hastily conceived and ill-advised may well bring ill-deserved censure upon the university.

Perhaps it should be recalled that it was at the University of Chicago on December 2, 1942, that the first controlled chain reaction in atomic research was first developed. Moreover at the present time the University of Chicago is the operating contractor for the Argonne National Laboratory, which is one of the major installations of the atomic energy program and the center of the Atomic Energy Commission's nuclear reaction development program.

The University of Chicago has also achieved Nation-wide prominence through its great books courses, another example of its educational leadership.

The list of achievements of the University of Chicago as well as the eminent scholars it has attracted to its teaching staff have given it an enviable reputation as one of the true centers of this Nation where our basic rights of free speech and opinion and free assembly have attained true maturity.

The following statements by Chancellor Robert M. Hutchins and Laird Bell, chairman of the board of trustees, I believe are pertinent to state the credo of the university:

ARE WE AFRAID OF FREEDOM?

(A statement from the chairman of the board of trustees of the University of Chicago)

A serious question is raised by an investigating committee of the Illinois Legislature. The question is fundamental to democracy. It underlies all scholarship and all thoughtful inquiry. Therefore, it underlies the very purpose of a great university. The question is this: In these troubled times are we afraid of freedom?

ONCE AGAIN

In 1935 the Legislature of the State of Illinois empowered a committee to investigate alleged seditious activities at the University of Chicago. Charges were made. Damaging surmises were printed in the public press. The work of the university was interrupted. At the conclusion of the investigation the committee wrote in its report:

"Has the University of Chicago or any of its professors violated either the letter or the spirit of our laws? The answer to this question must be in the negative * * *. Nothing in the teachings or schedule of the school can be held to be subversive of our institutions or the advocation of the Communist form of government as a substitution for the present form of government of the United States." (Majority report issued by Senators Graham and Barbour, June 26, 1935.)

The committee cleared the university. But a university is dependent in the public's appraisal of its contribution, and harm had already been done. Even the generosity of Mr. Walgreen, who contributed $550,000 to the university after the investigation was closed, did not remove the impression created by the headline charges.

This year on March 1, 1949, a group of students from Illinois universities, including a number of students from the University of Chicago, traveled to Springfield to protest the five bills introduced into the State Legislature by Senator Paul Broyles. This they had the right to do. If they were disorderly, we disapprove of their conduct. Immediately following this student protest, House Joint Resolution No. 21 was passed calling for an investigation of the university and stating: "It appears that these students are being indoctrinated with communistic and other subversive theories contrary to our free systems of representative government." This resolution was passed within a few minutes, without customary hearings or referral to committee.

So, once again apparently the university is to be investigated. Once again statements harmful to the university's reputation have been made. We think that the people who have made these statements do not know the facts. Most of the statements are untrue. But the newspaper reader is likely to assume that "where there's smoke there's fire." Therefore, this statement is being made. The truth does not lie somewhere between the allegations of irresponsible individuals and our statement of it. The facts spell the truth, and the truth is the opposite of the charges.

There is no Communist professor at the University of Chicago. There is no Communist indoctrination at the University of Chicago in any course or program in its curriculum.

We know that there is a Communist Club at the university—one of some 200 student organizations. We know also that its membership comprises one-tenth of 1 percent of the total student body, about one out of every thousand. The board, which controls and directs the affairs of this university, could refuse to recognize that organization. But we believe with Mr. Justice Oliver Wendell Holmes that "with effervescent opinions * * * the quickest way to let them get flat is to let them get exposed to the air."

Communism is a term which is used loosely by different people to mean different things. Not everyone who advocates change is a Communist. In times when there is fear of Communist infiltration many persons are afraid of any criticism of things as they are. There is a tendency at such times to put a red label on anyone with whose opinions one may not agree. Universities have as much duty to defend the free expression of opinion within the bounds of legality as they have to prevent what is illegal. If such defense subjects the university to the harassment of a legislative investigation and to the possibility of inadequate or distorted reports of it, we shall nevertheless defend the university's principles with all the vigor we can command.

The trustees and administration of this university are against communism. They are against it because, among other reasons, it is contrary to our free tradition. Communism suppresses ideas. We oppose communism as we oppose all efforts to undermine our constitutionally guaranteed free speech, free press, and free assembly. We oppose communism because we believe in the tradition of individual freedom which men throughout the centuries have fought to preserve. This tradition has been stated by many men in many ways. A few of these stat ments follows:

John Milton, Areopagitica (1644): "Give me the liberty to know, to utter, and to argue freely according to conscience, above all liberties. * * * And though all the winds of doctrine were let loose to play upon the earth, so truth be in the field, we do injuriously by licensing and prohibiting to misdoubt her strength. Let her and falsehood grapple; who ever knew truth put to the worse, in a free and open encounter?"

Thomas Jefferson, First Inaugural Address (1801): "If there be any among us who wish to dissolve this Union, or change its republican form, let them stand undisturbed, as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it."

John Stuart Mill, On Liberty (1859): "This, then, is the appropriate region of human liberty. It comprises, first, the inward domain of consciousness; demanding liberty of conscience, in the most comprehensive sense; liberty of thought and feeling; absolute freedom of opinion and sentiment on all subjects, practical or speculative, scientific, moral, or theological."

Woodrow Wilson, message to Congress (1919): "The only way to keep men from agitating against grievances is to remove the grievances. An unwillingness even to discuss these matters produces only dissatisfactions and gives comfort to the extreme elements in our country which endeavor to stir up disturbances in order to provoke governments to embark upon a course of retaliation and repression. The seed of revolution is repression."

Oliver Wendell Holmes, *Abrams* v. *United States* (1919): "But when men have realized that time has upset many fighting faiths, they may come to believe even more than they believe the very foundations of their own conduct that the ultimate good desired is better reached by free trade in ideas—that the best test of truth is the power of the thought to get itself accepted in the competition of the market."

Louis D. Brandeis, *Gilbert* v. *Minnesota* (1920): "The right of a citizen of the United States to take part, for his own or the country's benefit, in the making of Federal laws and in the conduct of the Government, necessarily includes the right to speak or write about them; to endeavor to make his own opinion concerning laws existing or contemplated prevail; and to this end, to teach the truth as he sees it. * * * Like the course of the heavenly bodies, harmony in national life is a resultant of the struggle between contending forces. In frank expression of conflicting opinion lies the greatest promise of wisdom in governmental action; and in suppression lies ordinarily the greatest peril."

Charles Evans Hughes, letter to Speaker Sweet of the New York State Legislature, reported in the New York Times, January 10, 1920:

"If public officers or private citizens have any evidence that any individual or group of individuals are plotting revolution and seeking by violent measures to change our Government, let the evidence be laid before the proper authorities and swift action be taken for the protection of the community. Let every resource of inquiry, of pursuit, of prosecution be employed to ferret out and punish the guilty according to our laws. But I count it a most serious mistake to proceed, not against individuals charged with violation of law, but against masses of our citizens combined for political action, by denying them the only resource of peaceful government: that is, action by the ballot box and through duly elected representatives in legislative bodies."

Alfred E. Smith, in his message vetoing the Lusk laws, which sought to license schools and to require teachers' oaths (1919): "Its avowed purpose is to safeguard the institutions and traditions of the country. In effect, it strikes at the very foundation of one of the most cardinal institutions of our Nation—the fundamental right of the people to enjoy full liberty in the domain of idea and speech. To this fundamental right there is and can be under our system of government but one limitation, namely, that the law of the land shall not be transgressed, and there is abundant statute law prohibiting the abuse of free speech. * * * The profound sanity of the American people has been demonstrated in many a crisis, and I, for one, do not believe that governmental dictation of what may and may not be taught is necessary to achieve a continuance of the patriotism of our citizenship and its loyal support of the Government and its institutions."

THE TRADITION CONTINUES

Opinions such as these are often unpopular, especially when they are spoken in times of stress. But they have been stated again and again by men who were not isolated thinkers but men of action. It is fortunate that in the midst of our present apprehensions and alarms America does not lack men of the courage to continue the democratic tradition.

ROBERT A. TAFT, the Battle Against Communism, address to the Executives Club of Milwaukee, May 8, 1948: "There has been a good deal of talk of outlawing the Communist Party. Of course, under our Constitution, we cannot and should not make it illegal for an American citizen to think communism or express his opinions as long as he does not advocate a violent overthrow of the Government. We cannot afford, if we are going to maintain freedom in this country, to violate the Constitution. We would be killing the very liberty which it is the purpose of our whole policy to preserve against totalitarian attack."

Dwight D. Eisenhower, installation address as president of Columbia University, the expression of his administrative policy, October 12, 1948: "There will be no administrative suppression or distortion of any subject that merits a place in this university's curricula. The facts of communism, for instance, shall be taught here—its ideological development, its political methods, its economic effects, its probable course in the future. The truth about communism is, today, an indispensable requirement if the true values of our democratic system are to be properly assessed. Ignorance of communism, fascism, or any other police-state philosophy is far more dangerous than ignorance of the most virulent disease.

"Who among us can doubt the choice of future Americans, as between statism and freedom, if the truth concerning each be constantly held before their eyes? But if we, as adults, attempt to hide from the young the facts in this world struggle, not only will we be making a futile attempt to establish an intellectual iron curtain, but we will arouse the lively suspicion that statism possesses virtues whose persuasive effect we fear."

Wilbur J. Bender, dean of Harvard College, in the March 1949 issue of the Harvard Alumni Bulletin answered those who criticized Harvard for permitting Gerhart Eisler to speak before the John Reed Society: "I know of no faster way of producing Communists than by making martyrs out of the handful of Communists we now have. Forbidding them to speak would be not only treason to the ancient traditions of Harvard and America: It would be proof that we have something to hide, that we have lost faith in our principles and in our way of life. It would be accepting Communist practices in the name of Americanism. * * * I devoutly hope that the time will never come when we are faced with the sorry spectacle of a great university and a great country trembling timorously in fear of the words of a Communist or of a demagogic commentator."

WHAT ABOUT SPIES?

Today, some men devoted to freedom are worried about spies. They would get rid of all the Reds to eliminate the possibility of espionage. We, too, are against spies. But not everyone who is called Red is a spy. And, more important, not all spies announce themselves as Reds. The danger, if any, does not exist with the noisy agitators. The University of Chicago is engaged in secret projects of vital importance to national defense. The university is under surveillance of professional investigators, agents of the FBI and of the military intelligence units. This, we think, is the way to look for spies. The general suppression of Reds is too simple, too amateurish to be effective. J. Edgar Hoover, head of the FBI, is against it.

THE ATOMIC BOMB

The Italian navigator has landed in the New World, and the natives are friendly.

In this cryptic message, so legend has it, the news of Enrico Fermi's successful operation of the atomic pile under the grandstand of Stagg field at the University of Chicago was flashed to Washington on December 2, 1942. It meant that the chain reaction worked, and the first unleashing of atomic energy was under control.

The chain reaction made possible the most terrible weapon in history. It created the greatest economic fact of our time. It opened up endless new vistas for scientific accomplishment.

The work on the atomic bomb took great scientists. It also took great courage. Had it failed, the university might have been charged with the most spectacular boondoggle of all time. Or without the adequate calculations and protections which its scientists provided, the university might have

been responsible for blowing up the northern end of Illinois.

The chain reaction is in a sense only a symbol of the working of freedom in ideas. It is no accident that the world's leading scientists wish to work in the free atmosphere provided by a great university. Freedom is the necessary condition of learning and progress.

Its contribution to the successful production of the atomic bomb was but one facet of the university's wartime activity. Its alumni and its staff served valiantly. It provided numerous trained individuals for positions of grave responsibility. Its facilities were mobilized and its activities ranged from interpretation and training in Chinese dialects and the prediction of weather in the Arctic region to the development of numerous protective measures for armed forces personnel. The University of Chicago has been honored by the Secretary of War for contributing materially to the successful conclusion of World War II.

THE MARKET PLACE OF FREE IDEAS

This university was founded and rose to international prominence under circumstances which are possible only in a free and democratic state. Free interchange of ideas, free research, and the right of its faculty members to engage without restraint in the activities dictated by their judgment and their conscience have been protected and encouraged. Out of this freedom have come the renowned contributions of this university to the humanities and to the physical sciences, the social sciences, and the biological sciences.

"The galaxy of Midwest State universities—Illinois, Michigan, Minnesota, Iowa—could scarcely have come to their current high standards without the compelling influence of the University of Chicago." (Edwin R. Embree, Harper's Magazine, March 1949.)

It was in an atmosphere of freedom that A. A. Michelson, earliest American physicist to win the Nobel Prize, measured the diameter of a star for the first time; James H. Breasted, America's first professor of Egyptology, furthered the understanding and reconstruction of ancient society; Robert A. Millikan won the Nobel Prize for measuring the charge of the electron; Edgar J. Goodspeed achieved the status of the Nation's foremost New Testament scholar; Arno Luckhardt discovered ethylene gas, used as an anesthetic in millions of operations; Frank Billings demonstrated that teeth and tonsils can be focal centers for the spread of infection; Arthur H. Compton won the Nobel Prize for his pioneer work on X-rays; Charles Merriam rose to eminence as a scholar and teacher of American political thought; Arthur J. Dempster isolated uranium 235, the atomic explosive—these men and the host of their distinguished colleagues produced the achievements which have placed this university among the foremost in the world.

"Some day I would like to take a year off, return to Chicago, and write a book about the University of Chicago, which by any reckoning is one of the three or four most outstanding in the world." (John Gunther, Inside USA.)

It is in that freedom that the men of the university work today to find a cure for cancer, to harness atomic energy for peaceful productive use, to widen our knowledge of the social, political, and cultural forces in all human experience, and to train the teachers, the scientists, the scholars, and the enlightened citizens of tomorrow. It is upon that freedom that the future promise of the university is dependent. As Norman Cousins, editor of the Saturday Review of Literature, wrote in an editorial:

"For it is that environment, rather than any dogma, that represents the real Chicago story. It is impossible to spend any time on the campus without sensing the vitality of true academic freedom—not the academic freedom which limits itself (instead of being limited from without) to stump speeches or political activity, but the academic freedom which Holmes used to call the open market place of ideas. The spirit of independence, particularly as it applies to research, * * * gives Chicago both its dominant characteristics and its chief claim on the future."

To be great, a university must adhere to principle. It cannot shift with the winds of passing public opinion. Its work is frequently mystifying and frequently misunderstood. It must rely for its support upon a relatively small number of people who understand the important contributions it makes to the welfare of the community and the improvement of mankind; upon those who understand that academic freedom is important, not because of its benefits to professors but because of its benefits to all of us.

Today our tradition of freedom is under attack. There are those who are afraid of freedom. We do not share these fears. The University of Chicago needs the support of those who believe as we do.

LAIRD BELL,
Chairman, the Board of Trustees,
the University of Chicago.

APRIL 11, 1949.

UNIVERSITIES AND REDS

(By Robert M. Hutchins, chancelor of the University of Chicago)

A university is a community of scholars, it is not a kindergarten; it is not a club; it is not a reform school; it is not a political party; it is not an agency of propaganda. A university is a community of scholars.

Freedom of inquiry, freedom of discussion, and freedom of teaching, without these a university cannot exist. Without these a university becomes a political party or an agency of propaganda. It ceases to be a university. The university exists only to find and to communicate the truth. If it cannot do that, it is no longer a university. * * *

In the past 40 years, universities have taken up the study of economics, politics, sociology, and anthropology. They have been endeavoring to create social sciences, which if they can be created may prove as beneficent to mankind as natural science and the technology which rests upon it. In inquiry into social problems, professors have run into prejudices and fears, exactly as they did in studying natural science and theology. * * *

The political and economic views of university faculties are those of a fair cross-section of the community. The views of those who are studying social problems are worth listening to, for these men are studying these problems in as unbiased and impartial a fashion as any human being can hope to study them.

It must be remembered that the purpose of education is not to fill the minds of students with facts; it is not to reform them, or amuse them, or make them expert technicians in any field. It is to teach them to think, if that is possible, and to think always for themselves. Democratic government rests on the notion that the citizens will think for themselves. It is of the highest importance that there should be some places where they can learn how to do it. * * *

The way to make students Red is to suppress them. This policy has never yet failed to have this effect. The vigorous and intelligent student resents the suggestions that he is not capable of considering anything more important than fraternities and football. * * *

Thomas W. Lamont, partner in J. P. Morgan & Co., has advanced another reason for the interest of students in unconventional doctrines, a reason which is doubtless operating, too. Mr. Lamont says, "I hear complaint that our college professors are teaching too much of socialistic theory. That would not be my observation. These are days," says Mr. Lamont, "when among the teaching forces * * * the freest sort of academic freedom should prevail." He goes on: "But to me it is little wonder that many of our students today are radical. * * * The sort of world they have seen," says Mr. Lamont, "is one of chaos."

If Mr. Lamont is right, instead of attempting to suppress free discussion, we should set ourselves to remedy the cause of radicalism, the chaos of the modern world. I venture to suggest the value of encouraging intelligent, calm, and dispassionate inquiry into methods of bringing order out of chaos. That is the American way.

Look at the universities of Russia and see how they have sunk to be mere mouthpieces of the ruling party.

In America, we have had such confidence in democracy that we have been willing to support institutions of higher learning in which the truth might be pursued and when found might be communicated to our people. We have not been afraid of the truth, or afraid to hope that it might emerge from the clash of opinion. The American people must decide whether they will longer tolerate the search for truth. If they will, the universities will endure and give light and leading to the Nation. If they will not, then as a great political scientist has put it, we can blow out the light and fight it out in the dark; for when the voice of reason is silenced, the rattle of machine guns begins.

Essay Winners

EXTENSION OF REMARKS
OF
HON. EARL T. WAGNER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. WAGNER. Mr. Speaker, the American Legion, Department of Ohio, is doing a magnificent job for the young people of our State who are in the high schools. Every year the Department of Ohio conducts an essay contest and the winners are brought to Washington to observe the workings of our Government. I am proud of the fact that Hamilton County has produced two more winners, one being Betty Altenau, 4321 West Eighth Street, Cincinnati, Ohio, winner in the ninth-grade contest, and Donald J. Goepper, 7244 Beechmont Road, Cincinnati, winner in the twelfth-grade group.

I have read the essays of these two fine young people and concur in the judgment of the leaders of the Ohio Department of the American Legion that these essays on the American way are fine examples of the spirit of our American school children and I believe deserve recognition in the CONGRESSIONAL RECORD. The essays follow:

THE AMERICAN WAY—WHAT IT MEANS TO ME

(By Betty Altenau)

There are probably as many interpretations for the phrase "the American way" as there are for the word democracy. A Communist lays particular stress on the statement that the Soviet Republic alone has a

really democratic form of government. Yet, how many liberty loving Americans would subscribe to that assertion?

Torrents of essays and speeches are produced on Americanism or the American way, which are equally at cross purposes. They prove principally, by their conflicts of views, that most of us are in much doubt today as to what Americanism really is. We say that the American way is opportunity, or democracy, or individualism and a free economy. Those are the three main answers, but unless qualified all three are inadequate and misleading.

If the American way is opportunity, then what about Europe, which gave to the son of a blacksmith the opportunity to become a duce, a paperhanger to become a führer, and the son of a shoemaker to become the dictator of 175,000,000 people from the Baltic to the Pacific. Is that kind of opportunity Americanism? Obviously not. America gives to no citizen the opportunity for any such unrestricted personal assertion of himself. We are in a land of opportunity but of opportunity limited by law.

Nor is the single word "democracy" a complete clue to Americanism. Democracy means simply the rule of the people, which in turn means simply the rule of the majority. Well, we Americans obviously do not believe in unrestrained majority rule. We have a multitude of constitutional provisions to check it. We know that a majority—as in Colonial Massachusetts in its persecutions of the Quakers—can be tyrannical as a monarch. We are a republic and a democracy limited by law. It is a new foundation under individual liberty, and it is vital to the future of every boy and girl like myself.

To me, the American way means that I have the opportunity, the privilege, and the God-given right to choose my own calling in life, and to rise in that calling as far as my ambition, character, and ability will take me. Regardless of my religion, my color, my politics, my social position, I am free to develop whatever capacities I possess. I am not tagged and indexed, as a cog in a huge machine; nor am I simply a symbol of a class, no more and no less. Under the American way I am looked upon as a creature of God, with certain inalienable rights, and I am considered part of the development of a young, earnest, free country.

I am one of many millions our forefathers must have had in mind when they insisted that our country should be free of classes, and that the welfare of those who were less fortunate was a concern of the community. They knew that the sparks of ability, character, and ambition lie in the boys of the log cabin equally with those of the city home. By this opening of all the windows of hope they assured that skill and leadership for the Nation would be refreshed from all the people instead of lodging in a privileged group. It would give to the Nation the whole strength of the race. Every generation would bring new genius and new leadership for its own problems. They knew that the sum of achievements of all the striving, working, free individuals would make the highest total of national progress; a progress which has lifted living scales more than they have advanced throughout all history prior to the advent of the American Republic, a rise that shifted the burdens of production from the backs of men to the machinery they devised.

In humble prayer, I kneel daily and thank my Creator for the privileges of living in America, one of the most fortunate countries He has ever created.

THE AMERICAN WAY—WHAT IS IT?

(By Donald J. Goepper, Cincinnati, Ohio)

The tall buildings, the blue lake, the brownstone house, the cop on the corner, the general store, the rolling carpet of wheat, television at the corner tavern, the volunteer fire department, the draft law; that is the American way. It can never be taken as a definite feasible term, but rather as an ideal, evolved from the minds and lives of great and common men of the past and present. It is the work of such philosophers and leaders as Socrates, Plato, Christ, Lincoln, Washington and Carver.

This ideal exists in America today; even though it is not as apparent, at times, as it necessarily should be, it is always present and basically important. It is aptly illustrated in the average small town, with its few stores, school, and varied churches, its Saturday night at the show and then Sunday morning at church.

The American way is understanding among men, harmony and cooperation between peoples of different races, customs, and opinions. In reality, it is democracy at work and the fundamental concept of democracy is a belief in the inherent worth of the individual, in the dignity and value of human life. Based on the realization that every human being is endowed by God with certain undeniable rights, democracy is the proudest possession of every American. It is brought about by a free society, a society necessarily composed of free citizens. But men are not free solely because they are democratic. Freedom is a function of the mind and the spirit. It flows from strength of character, firmness of conviction, integrity of purpose. It is channeled by knowledge, understanding, and the exercise of discriminating judgment. Free men are men who not only insist on rights and liberties, but who, of their own free will, assume the corresponding responsibilities and obligations.

The American way has been derived from these basic ingredients in democracy; the right of all men to equality of opportunity, the equal right of all citizens to vote and to hold office, the rights of religious liberty, freedom of speech and all forms of expression, freedom of association, freedom from want and fear and ignorance, the obligation of the majority in power, to respect and protect the rights of the minority.

We in America owe a debt to our forefathers that can never be repaid. But in a greater sense those men made their sacrifices for a definite love of country and did not expect compensation. For this we should be thankful; this debt of the American way could never be repaid.

The American Way—What Is It?

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay by Bobby Grear, of South Solon, Ohio:

THE AMERICAN WAY—WHAT IS IT?

(By Bobby Grear, South Solon, Ohio)

Many great writers and statesmen have attempted to express what we mean by American, but there is within that word a feeling, not capable of being weighed, which reaches to the soul of our people.

The American way means more than life on a continent bounded by two oceans; pride of military power; glory in victories; vast expanse of farms; great factories, mines, and magnificent cities, it is freedom of mind and spirit in man. It is moral and spiritual quality in free men which fulfill the meaning of American. It is more than pride, power, and tradition; it is the right to worship God, to be a good neighbor, the right to bring to your children greater comfort, better education, good food and tender care, and to open to them wider opportunity.

The American way is like a powerful magnet which attracts the downtrodden and oppressed people from other countries. It is like a great workshop with leadership in inventions, commerce, and industry which makes life for the common man and woman happier and richer. There is no place on the whole earth, except here in America, where all the sons of man can have this chance in life.

The American way is fulfilling the aims of the Constitution of the United States of America and can best be described by what is meant by the Preamble to the Constitution.

First, in order to form a more perfect union, it is for us today, by understanding and friendship for the people of all the parts of our country, to honor, uphold, and put into practice the ideal of our forefathers. We seek not only our own betterment but the betterment of all, the good not only of our own group, our own section, our own State, but the good of the United States.

The Constitution gives us the rules for establishing justice, which means that each person should be secure in the rights the Constitution has ordained.

We can be sure of domestic tranquillity only when we put aside all kinds of quarrels and bitterness; when we are done with strikes and lock-outs; when our own capital and labor learn that each prospers only when they work in cooperation.

The common defense means protection from internal violence and external aggression. Police guard our homes, but we are free from search. Military forces keep foes away. We want no useless wars of destruction and we must work for peace among nations.

The general welfare is the good life of one and all. Dangerous work must be made safe; fair wages must be earned and paid to all in industry; education must be improved and extended, and each must have full opportunity to develop into his best self.

Our liberty is bounded by the lawful rights of our fellows. The blessings of liberty belong to this and all generations as a sacred trust, which we must hand down unimpaired to the next generation, and they to the next.

The American way is a hope to continue to use our commanding position among nations to champion the cause of world peace; it is the hope of the world.

Spendthrift Guardian

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, most States wisely provide for the appointment of guardians to manage the affairs of spendthrifts.

The laws of the State of Wisconsin define spendthrifts as those "persons who, because of gambling, idleness, or debauchery of any kind are unable to attend to business or thereby endanger their health, life, or property, or that of others, or waste their property so as to endanger their or their families support."

I submit that it is unfortunate that no provision exists for the appointment of a spendthrift guardian for the present administration.

The administration's socialized medicine bill is evidence that this administration is unable to attend to business and is endangering the health, life, and property of the Government and the people of the United States.

I ask the Members of the House to examine this bill. In all of its 163 pages, and 7 titles, there is not one word pertaining to the expected cost of this proposal. In all of its 163 pages and 7 titles, there is not one paragraph providing the revenue to pay for the benefits it describes so glowingly.

The authors admit they have not estimated the cost of this legislation. They contend that it cannot be estimated. We know that it will be enormous. The bill has been drawn in such a way as to bypass the House Ways and Means Committee in order to avoid any reference to its costs or the taxes proposed. Any person, or administration, which would seriously propose such legislation without a careful analysis of where and how we are going to find the money to pay for it is legally and morally incompetent, within the full meaning of any spendthrift statute.

Our country and its people must be protected against the follies of spendthrift administrations. Our economy, our political institutions, our form of government are in jeopardy because of incompetence. We really need a spendthrift guardian right now.

The National Guard

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial of the forty-fifth legislative assembly of the State of Oregon:

House Joint Memorial 6

To the Honorable Senate and House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the House of Representatives and the Senate of the State of Oregon, in legislative session assembled, most respectfully represent and petition as follows:

Whereas the Secretary of Defense brought into being in 1947, the committee on civilian components, commonly known as the Gray board, which committee was directed by the Secretary of Defense to make a comprehensive, objective, and impartial study of the armed forces; and

Whereas said committee on civilian components on June 30, 1948, in its report to the Secretary of Defense, recommended, among other things, that national security required that all services have one Federal Reserve force, which should be accomplished:

(a) By establishing the Reserve forces of the Army under the "Army clause" of the Constitution;

(b) By similarly establishing the Reserve forces of the Air Force under appropriate legal authority;

(c) By incorporating the National Guard and the Organized Reserve Corps into the Army Reserve force under the name of the "National Guard of the United States";

(d) By incorporating the Air National Guard and Air Reserve into the Air Force Reserve under the name of the "United States Air Force Reserve"; and

Whereas on December 15, 1948, the Secretary of Defense recommended to the President of the United States, among other things, the federalization of the Air National Guard and greater Federal control over the personnel, equipment, facilities, and allocation of money to the States; and

Whereas the National Guard performed in a highly creditable manner in World Wars I and II; and

Whereas, the several States have need for the National Guard as a military force to cope with disaster therein, and for the internal security thereof: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the Senate concurring), That the Congress and the President of the United States hereby are memorialized, unless the very security of the Nation otherwise require, to retain intact the National Guard of the United States, ground and air, as it now is organized under the militia clauses of the Constitution of the United States and thus reserve to the States the controls provided by the Constitution in time of peace and ensure that the National Guard will be at the disposal of the respective States in time of peace; and be it further

Resolved, That copies of this joint memorial forthwith be transmitted to the President of the United States, the Speaker of the House of Representatives, the President of the Senate, the chairmen of the Armed Services Committees of the Congress and the Members of the Oregon delegation in the Congress.

Maryland's Program of Vocational Rehabilitation

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Thursday, April 28 (legislative day of Monday, April 11), 1949

Mr. O'CONOR. Mr. President, Maryland was one of the first States in the country to establish a permanent program of vocational rehabilitation. It was my privilege in 1942, as Governor of the State, to make available increased funds for needed expansion of facilities and for additional personnel and, in 1943, to bring the State legislation and appropriations into line with Public Law 113 of the Congress, so that work in this vital field was advanced immeasurably.

The accomplishments of our State in this field are depicted in an address of Mr. Tasker G. Lowndes, able president of the Maryland State Board of Education, delivered on the occasion of the twentieth anniversary dinner of the board. Mr. Lowndes is one of Maryland's outstanding citizens and has made a splendid contribution to the educational system of our State.

I ask unanimous consent that it be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When Gov. Albert C. Ritchie signed the Vocational Rehabilitation Act 20 years ago this month, Maryland became the forty-first State to establish a division for the training and placement of disabled adults. Before this important step was taken in 1929, however, considerable spade work had been done by several interested individuals and agencies over a period of 6 or 7 years. Most active in the movement for a vocational rehabilitation program in Maryland was Mr. Charles W. Sylvester, assistant superintendent for vocational education in the Baltimore city schools. Through his efforts, the 1924 session of the general assembly created the vocational training and rehabilitation investigating committee. He was named chairman; Mrs. Marie Bauernschmidt, secretary of the Public School Association of Baltimore, was made secretary; and five other persons representing labor, management, and the legal profession were appointed. With valuable assistance that was rendered by Mr. John A. Kratz, Director of the Division of Vocational Rehabilitation of the United States Office of Education, this committee was able to make a comprehensive report to the State legislature in 1926. It was not until 3 years later, however, that a bill creating the division of vocational rehabilitation in the State department of education was passed.

Unlike most of the laws of the other 40 States, the one in Maryland established a permanent program and provided that the general assembly should supply sufficient funds from time to time to fully effectuate the purpose of the act. It accepted the provisions of the Smith-Bankhead Act of Congress making Federal funds available to the State on a 50–50 matching basis, and thus began a State-Federal partnership in human welfare that has paid tremendous dividends. But the law had several glaring weaknesses: It was restricted to the physically handicapped; it excluded the home-bound; there was no provision for medical treatment, living maintenance, or placement equipment. Whenever such services were needed to supplement vocational training, they had to be secured from other agencies. Unfortunately, an amendment was attached which limited the amount to be appropriated to $5,000 a year for the first biennium, and specifying that not more than $15,000 might be appropriated for any year thereafter.

On September 1, 1929, the supervisor of vocational rehabilitation assumed his duties with the State department of education. During the remaining 10 months of that fiscal year, 113 disabled persons were inducted into service, and the amount of money spent for all purposes was $3,376 from State funds and $3,035 from Federal funds. In spite of the fact that at least a year is required for the successful rehabilitation of a disabled person, 5 of the 113 clients of 1929 had completed their training and were placed in satisfactory employment on June 30, 1930. It is very gratifying to me to note that four of these first rehabilitants are still satisfactorily employed; the fifth worked successfully until his untimely death 3 years ago. The combined income of these first five over this 20-year period has been greater than the entire amount spent by the State for the promotion of the program during the years 1929–42.

So much for the beginning. Let me sketch briefly the high lights of our program from then until now.

In 1932 the first counselor was employed and assigned full time to Baltimore city. In the same year the State appropriation was increased to $10,000; the number of clients

served was 245, and the number rehabilitated, 41.

The next milestone was reached in 1934 when we were able to add three more counselors with Federal funds appropriated through the Emergency Relief Administration. In 1935, the Baltimore public schools added a counselor to render rehabilitation services to all physically handicapped present and former students between the ages of 16 and 21. At a special session in 1936 the general assembly removed the limitation that had been placed on State appropriations when the act was passed, and at the regular session the following year it increased the annual grant from $10,000 to $15,000.

A great step forward was made in 1942. In that year, the State appropriation was increased to $25,000 annually, a district office was established on the Eastern Shore, two additional counselors were added to the State-wide staff, and the State board of education established vocational rehabilitation as a separate division in the department.

It was in 1943, however, that vocational rehabilitation as we know it today was born. Congress amended the Federal act through the passage of Public Law 113, in which Federal funds were made available for 100 percent of the administrative and supervisory costs of State programs, and for 50 percent of all costs of case services. The provision of the act which limited service to the physically disabled was removed, and authority was given for the payment of living maintenance, medical or surgical treatment, and the procurement of placement equipment. Maryland amended her act that same year to keep pace with this new concept of the rehabilitation of all types of the disabled, and developed a plan of cooperation with the Office of Vocational Rehabilitation which encompassed the various provisions of Public Law 113. The legislature increased the annual appropriation to $25,000, and since that time every dollar granted by the State has been spent on actual case service costs.

In June of 1944, a specially trained worker who is himself without sight was added to the vocational rehabilitation staff for the purpose of training and placing blind workers on industrial jobs. Prior to that time all of the work done for the visually disabled had been handled by our regular counselors. This special program has met with remarkable success; 42 blind persons were rehabilitated into satisfactory jobs during the first year of operation, and a similar number have been placed each year since. Two years later an additional blind counselor was employed and the work was divided between Baltimore city and the 23 counties.

In 1945, additional district offices were established in Baltimore city and Hagerstown, in 1946 a district office was established in Hyattsville, and in that same year the legislature increased our annual appropriation to $50,000.

In 1947, we launched upon a special project for tuberculous clients with the aid of the Maryland Tuberculosis Association. A specially trained counselor was assigned to the State sanatoria for the purpose of developing training programs to meet the need of patients who were in physical condition to begin rehabilitation. Another milestone of that year was the increase in our annual State appropriation to $100,000.

In 1948, we established a district office to handle the central Maryland clients, and a local office in Chestertown to serve the four uppermost counties of the Eastern Shore. With the opening of these two branches, we completed the decentralization program which was begun in 1942, thus extending the benefits of counseling, training, and placement services directly to the home communities of the disabled citizens of our State.

Concerning the present status of vocational rehabilitation in Maryland, I should like to quote from a report of a recent survey completed by the Federal Office of Vocational Rehabilitation: "There are two characteristics of the Maryland agency which are pertinent to these 1948 fiscal operations. The first is that the expansion of the program has been steady and consistent, with emphasis on maintaining established standards in staff training and quality of case services. The second is that over a period of years Maryland has, more than the average State, emphasized careful survey and use of local facilities, and thus has held down its per case * * * expenditures for case services."

What of the future? In submitting to the Bureau of the Budget our request for appropriations during the fiscal year of 1950, we stressed the importance of extending vocational rehabilitation services to two groups which have not yet been reached; namely, the mentally handicapped, and the severely disabled or home-bound. Each of these groups presents special problems that must be handled by specially trained counselors, and the services required for their ultimate adjustment are frequently more costly than the so-called regular program can provide. Experts in the field of the mentally handicapped have stated repeatedly that no program for these persons is complete without proper vocational guidance and training, and satisfactory job adjustment. Our division of vocational rehabilitation is the only agency in Maryland, public or private, that is equipped to do this job, and our main objective for 1950 is to reach out into that field.

The appropriation of funds for erection of buildings and the improvement of physical facilities at tuberculosis sanatoria and mental hospitals is most essential, but that is only the first step. Unless sound and adequate provision is made for the restoration of the patient to reasonably satisfactory vocational adjustment under normal conditions, then our hospitals will remain simply custodial institutions. We want to help make them rehabilitation centers, and we shall seek continuously for the necessary financial aid from the State with which to provide trained counselors and to purchase the required rehabilitation services.

In closing I wish to express the gratitude of the State board of education to all public officials, both Sate and Federal, and to the various private agencies in the fields of health, welfare, and employment for the sincere and wholehearted support which they have given us during the past 20 years. If we continue to work together as a team, then I am sure that the time will soon come when every disabled man and woman in Maryland will have an opportunity to make the greatest contribution of which he is capable.

The Right To Work

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. RHODES. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the following editorial from the April issue of the Typographical Journal pertaining to the right to work:

THE INDIVIDUAL'S RIGHT TO WORK

One of the main arguments against organized labor making contracts for a closed shop is that it interferes with an individual's right to work. This is an obvious fallacy and the question of an individual's right to work is a tricky one involving both a philosophical and a practical answer. The argument is made by employers because the "statement the individual has a right to work" is instantly appealing. The philosophical application of the statement is rather not that the individual has the right to work but that it is the duty of society to so arrange our economy that there is opportunity for an individual to secure work. Eliminating the question of the closed shop or any organization of wage earners at all, we can approach the question with more clarity. An individual has a right to work only if he finds an employer that is willing to hire him. In this instance the employer has all of the power to say whether or not an individual may work. Certainly that indicates no right to work on the part of the individual.

Those who raise the question of the individual's right to work are actually trying to protect the employer's sole right to hire. The employer does not want to share with a union any part of his power to hire and discharge employees. In the case of the closed shop, the employer has partially restricted his right to hire by voluntarily signing an agreement with a union that he will employ none but their members.

Obviously, it cannot be detrimental to the public policy for a union to share with an employer his absolute right to say whether or not anyone will work for him.

Obviously then an individual has a right to work in any event only if he can get a job. Since an employer may hire whom he pleases regardless of training, religion, race, or creed, it is ridiculous to say that an individual has a right to work which exists separate and apart from the employer's right to hire.

The provisions for the so-called union shop as provided in the Taft-Hartley Act is the first legislative attempt at compulsory unionism and provides that an employer may agree that after a period of 30 days' employment, any employee be required to join a labor union in order to work. This provision preserves to the employer his absolute right to employ whomever he will but coerces the employee into joining the union perhaps against his will and perhaps against the will of the members of the union who may not want to associate with him. Thus the employer is, by law, given authority to select those who will become members of the union. It is easy to see what abuses can be developed through such power in the hands of an employer. Under such a plan an employee is still compelled to belong to a union in order to work but under such circumstances as to nullify the principle involved.

The employer's right to hire individually should certainly not be restricted so that he may not hire collectively, as in the closed shop, since it is the declared public policy to encourage collective bargaining.

The right of an employer to buy only the services of members of a union and the right of members of a union to work only for employers engaging in collective bargaining with their union should not be prohibited.

University of Chicago

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following article from the Chicago Sun-Times of April 25, 1949:

UNIVERSITY OF CHICAGO SPREADING ITS STORY

(By Herb Graffis)

It's good to get from the University of Chicago background information giving in rather lengthy detail the achievements and contributions of this world-famed establishment. By judgment of competent experts the University of Chicago is rated second or first among American universities. Harvard gets the decision over Chicago in some rounds.

Notwithstanding the magnificent performance of the University of Chicago and the top class of its faculty it is too often placed in the category of a prophet without due honor in its own country. Outside of its association with the development of the atomic bomb the general public of Chicago is inclined, superficially and erroneously, to consider the University of Chicago as an institution where eccentrics flourish.

Perhaps the university doesn't mind. But, in view of the university's able and effective work in popularizing its type of teaching and extending its influence through its radio round table and its boost of the great book courses and night classes, it should be obvious that the school has been trying its level best to make its top scholastic standing of value to Chicagoans who aspire to develop their brains.

Sometimes it has seemed that among the great books which the university recommends for study, How To Make Friends and Influence People might have been ready at the university for some helpful slants on getting the rest of us to appreciate the University of Chicago as its many and great merits warrant. But merely the listing of the school's contributions to higher education, which means all education, is enough to show that if any citizen of Chicago does not recognize the service of the University of Chicago it is more to the disadvantage of that citizen than it is to the university.

I'm ashamed to say I never knew before I saw the background information that the University of Chicago was the first university to operate a regular summer term, to serve with university extension work, to have the junior college idea, to establish the university press operation, to give faculty status to athletic coaches, to have a full-time faculty for its medical school, and to have a dean of women.

Now that the university is beginning to correct the too popular misconception that it is a combination circus and educational institution, we're all going to be stirred into making better use of this tremendous asset.

Coordinated Development of Pacific Northwest Resources

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. MITCHELL. Mr. Speaker, the Southwest Washington Public Utility Commissioners Association, meeting in Aberdeen, Wash., on March 6, 1949, passed a very important resolution concerning power and resource development in the Pacific Northwest. The imperative need for a new legislative charter to assist in achieving the full and coordinated development of the region's resources is emphasized in the resolution. This need will be met by enactment of the CVA bill (H. R. 4286) which I have introduced in accord with President Truman's special message calling upon the Congress to create a Columbia Valley Administration. I include the resolution as part of my remarks:

Resolution on Pacific Northwest regional development

Whereas the development of power generation and transmission, and the conservation of natural resources in the Pacific Northwest is essential and necessary to the economic health of this region, representing 13 percent of the land area of the United States; and

Whereas such power generation and transmission is vital to the national security program because of the importance to the chemical and light metals industries; and

Whereas a planned, coordinated, and sustained development is not possible under present statutes; now, therefore, be it

Resolved by the Southwest Washington Public Utility Commissioners Association meeting in Aberdeen, Wash., this March 6, 1949, That—

1. The Congress authorize by statute a long-range, integrated construction program which will adequately provide for power generation and transmission, navigation, flood control, and irrigation needs of the Pacific Northwest;

2. The Congress provide by statute a long-term financing program for such construction, the financing to be on a sustained basis so that funds will be available at a rate and volume commensurate with the most efficient development of the program;

3. The Congress authorize by statute the application of modern management methods to Columbia Basin development so that the program can be planned and operated on a coordinated basis;

4. That provision be made for a maximum degree of local autonomy in such programing consistent with national objectives.

The Woman Pays

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following article from the April 17, 1949, issue of the American Weekly entitled "The Woman Pays" by Sally Young, beauty editor:

THE WOMAN PAYS—UNCLE SAM COLLECTS A 20-PERCENT LUXURY TAX ON SUCH ITEMS AS COLD CREAM AND LIPSTICK, WHILE SHAVING CREAM AND RAZOR BLADES GO TAX FREE—IS THAT FAIR?—ASK THE WOMEN OF AMERICA

(By Sally Young)

Is lipstick a luxury?

"No!" says REVA BECK BOSONE, the volatile Congresswoman from Utah. "I'd sooner leave off my girdle than be without my lipstick."

Is a handbag a luxury?

"No!" says Mrs. CECIL HARDEN, the new Republican Representative from Indiana. "My suit has no pockets, while every man has at least nine."

Are talcum powder, baby oil, deodorants, cold creams, electric light bulbs, flatirons, telephone calls and wedding rings luxuries?

It's up to you—women of America—to answer that question.

If you're like the women I get letters from, I know your answer is a great big "No."

What can you do? Sit right down and tell your Congressman how you feel about paying luxury taxes on necessities.

Tell your Congressman it's high time these nuisance taxes, which were enacted as a war measure, be repealed. The war has been over almost 4 years. Congress promised to remove these taxes 6 months after the war. Tell your Congressman to keep that promise.

The time to write that letter is now, because the 20-percent luxury taxes should be up for consideration about the time you read this.

Tell your Congressman you want the luxury taxes which discriminate against women repealed.

The American Weekly has just interviewed the 25 members of the House Ways and Means Committee. This is the committee in which all tax legislation must originate.

Virtually all of these 25 committeemen admitted that the 20-percent luxury tax is unfair.

But will they do something about it?

WILBUR MILLS, Democrat, of Arkansas, told me he sees no hope of relief this year.

JERE COOPER, Democrat, of Tennessee, ranking member of the committee, said the committee was at the time occupying itself with other matters and he could make no statement on what would happen to the excise tax.

Others said, "The President wants more money. We've got to get it from some place."

And so it's the poor working girl and housewife who foots the bill.

The woman who can afford a $1,000 evening gown doesn't pay a tax.

But if the working girl wants a $300 fur coat she's taxed $60.

At first sight a fur coat may seem a luxury. But 80 percent of the fur coats in this country sell for less than $800.

The girl who buys one usually does so because she wants to keep warm. Also because a fur coat is serviceable. It lasts her 3 to 6 years. And she can wear it anywhere, to work in the daytime and for dates at night.

Working girls don't earn as much as men. Then why should their things be taxed so heavily? Why tax cold cream and lipstick 20 percent while shaving cream and razor blades go tax free? It's unjust.

All the committee members aren't deaf to your plea.

Congressman J. M. COMBS, Democrat, of Texas, conceded that a woman's cosmetics were not a luxury. "To stay young is essential," said he.

Congressman THOMAS A. JENKINS, Republican, of Ohio, admitted his wife had also been needling him about the unfair taxes on purses and cosmetics, and so, for the sake of peace in the family, he's in favor of doing something about them.

STEPHEN M. YOUNG, Democrat, of Ohio, stated, "As a member of the Ways and Means Committee I will do my utmost to remove unjust excise taxes and to impose fair taxes. Taxes should be levied according to ability to pay. I am very much opposed to these excise taxes which were imposed as a wartime measure. The war is over."

The unfairness of these taxes was brought home to him recently, he said, when he bought his wife an expensive cloth coat on which there was no tax, and then bought his granddaughter an inexpensive fur coat on which there was the 20-percent tax.

JOHN A. CARROLL, Democrat, of Colorado, also admitted he had recently felt the bite of the luxury tax when his wife had to rush home to attend a funeral in her family.

The tax on her transportation came to $40.

DAN REED, Republican, of New York, is one of the committee members who has introduced a bill to lower these taxes.

Mr. REED proposes to take the excise tax off certain items, such as baby oil and handbags and reduce other luxury taxes from 20 percent to 15 percent. He figures this could be done despite President Truman's budget increase, if Government expenditures were cut a mere 1 percent.

"The main thing," he said, "is to budge these taxes before they become imbedded, like cigarette taxes now are."

Two other commiteemen, Minority Leader JOSEPH MARTIN, Republican, of Massachusetts, and Congressman JOHN D. DINGELL, Democrat, of Michigan, have bills before the committee which would repeal the war-tax rates, putting the prewar taxes back into effect.

This would mean no tax on handbags, and in the case of cosmetics an 11-percent tax on the manufacturer's price.

Mr. MARTIN'S bill would have no tax on jewelry under $25.

* * * * *

In a personal interview, Mr. DINGELL went on to say that he considered the excise taxes unfair and discriminatory against women and wanted something done as soon as possible.

Talking about cosmetics he said, "I consider paint on a woman's face much more essential for morale and good looks than paint on a barn."

On that point many doctors would agree with Mr. DINGELL, for they know about the psychological effects of make-up. When a woman has had an operation, or is past the crisis of a severe illness, one of the first things her nurse offers her is her make-up materials—even if she doesn't think of them first and ask for them herself. As soon as a woman makes herself look better, she feels better—and often that is a big help in making her get better. In some mental institutions, beauty parlors have been established because they have been found to be a definite aid in improving the morale of women patients.

Used in those ways, are cosmetics a luxury? They sound more like a necessary healing treatment.

The British Government, even during its darkest war days, couldn't afford to shut down all manufacture of cosmetics. They learned only too quickly that a woman without her lipstick is a woman without morale.

Not long ago it was reported that in China lipstick thievery and black marketing was going on in the highest strata of society. No hostess dared leave her lipstick unguarded on her dressing table. If she did, she was likely to find a sizable bit of money in its stead. Little comfort that, in a country where money is more easily come by than a new lipstick.

With certain variations the bills presented by Congressmen AIME J. FORAND, Democrat of Rhode Island, and JOHN W. BYRNES, Republican of Wisconsin, both committee members, follow the lines of those mentioned.

Most of these bills are aimed at putting the tax back to prewar levels.

But there are two bills before the House that would repeal all luxury taxes completely. Both were presented by ABRAHAM MULTER, Democrat of New York, who is not a member of the Ways and Means Committee.

He's from Brooklyn and his constituents are working girls who need lipsticks to get and hold their jobs. He wants to repeal all excise taxes on luggage, jewelry, furs, cosmetics, light bulbs, travel and communications.

Mr. MULTER stated that he offered his bills in the interests of fairness to women and better business.

He cites the figures on jewelry, furs, toilet preparations, luggage, handbags, and so forth, as estimated by the Joint Committee on Internal Revenue. According to their figures, 1948 revenues from these items had dropped approximately $50,000,000 in comparison with 1947.

The repeal of the so-called luxury excise taxes, he says, will stimulate business and turn out more and better goods, employ more people who can then afford to buy better products.

The wartime luxury tax was levied to do just the opposite: (1) To restrict sales, (2) to conserve raw materials:

Obviously, both reasons are completely outdated.

Business needs a shot in the arm rather than stifling restrictions, MULTER believes, and that's why he is in favor of repeal.

"It's up to the women," he said. "The women of America are a great political force. If they are making fewer purchases because of the taxes, and sit down to write their Congressman about it, he has to listen."

Your Congressman welcomes your letters.

Personal letters carry weight.

The more letters the more likely something will be done about it.

That's what Congressmen themselves told us.

When you've written your letter to your Congressman, there's one more person you ought to tackle.

That's the powerful chairman of the powerful Ways and Means Committee, Congressman ROBERT L. DOUGHTON, Democrat of North Carolina.

He is the man who leads the way on any tax plan. His influence is so great it might make or break any move to revise taxes.

He says he is in favor of some revision of excise taxes, and agrees that certain women's items now taxed as luxuries aren't luxuries.

But, he also says, "The money for the President's tax bill has to come from somewhere."

At this rate it will come out of the handbag that is already taxed as a luxury. It will come out of the housewife's budget—for what woman can get or keep a husband these days without her lipstick?

It's taxation without representation in the case of babies whose very health and comfort is taxed as a luxury.

But as one Congresswoman said, "If the men of Congress are honestly interested in taxes let's make them fair. How about a $1 tax on each of their pockets."

Most women in Congress felt the same way.

Mrs. MARGARET CHASE SMITH, Republican Senator from Maine, stated she was in favor of revision on a lot of things, including oleomargarine and household appliances.

* * * * *

Mrs. KATHARINE ST. GEORGE, Republican of New York, said, "We must go back to a peacetime economy. The high excise taxes have been extended long enough—too long."

Most every Congressman and Congresswoman we talked to agreed that women had cause for grievance. They admitted the luxury tax is excessive, is unfair to women, and discriminatory against certain industries.

Was the furrier warned when he started his business that his goods would be taxed far beyond his competitor in the cloth-coat business?

Was the cosmetics manufacturer warned? He might have chosen a less competitive field. Or he might not have worked so hard to give us the best cosmetics in the world.

But what does Mr. DOUGHTON promise us?

The most encouragement we received was that after the social security hearings taxes would be taken up.

Will the various bills that are before the committee get a favorable hearing?

Will something actually be done to take the burden off the working women of America?

Si Rosenthal

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, I rise to call to the attention of the House the heroism of two veterans who did not have to fight. One was Si Rosenthal, my friend and the friend of thousands of admirers, the great Red Sox baseball player, who played in the early 1920's, and made a lifetime batting average of .342. The other is his son who was killed in 1943. His son was under age. Si Rosenthal, determined to avenge that killing, entered the service, although he was over age. His minelayer exploded and he is now paralyzed for the rest of his life. He is the only paraplegic who gave a son in this war. These two men make us grateful because we are Americans.

PARALYZED VET MEETS BOAT BRINGING BODY OF HIS HERO SON

BOSTON, April 27.—The boy who was too young and the father who was too old met again today.

It was a wordless meeting. For Si Rosenthal, former Red Sox baseball player, was in a wheel chair. His son, Irwin, was in the flag-draped coffin that rolled down the South Station ramp.

Si is the only paraplegic veteran in the country who lost a son in the same war. He silently reached out to touch the boy's casket. His wife watched grimly, then collapsed. For Si didn't have to fight. Neither did the boy.

Irwin was under age, but he enlisted in the marines. On Christmas day, 1943, he was killed at Cape Gloucester and Si swore to avenge him.

Si was over age and had to fight to get into the Navy. But he did. And during the Normandy invasion his minelayer blew up and Si was paralyzed from the waist down.

That ended the active career of Si Rosenthal, who patroled the Red Sox outfield in the early 1920's and compiled a lifetime batting average of .342. Now Si lives in a specially constructed house and commutes to Cushing General Hospital for treatment.

Doctors are preparing him for another operation next week. But Si couldn't stay in a hospital today. Irwin was coming home, and it was his twenty-third birthday.

The Taft-Hartley Act In Disguise

REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. CROOK. Mr. Speaker, even though a man attempts to graft the American rose on the cactus of the desert and sprays it with the sweet perfume of Arabia, he has not blunted the thorns of the desert plant. He may dress a wolf in sheep's clothing, but his astute

action will not restrain the animal from attacking Little Red Riding Hood. Yes, he may even disguise the devil himself by making him lily white, equipped with the wings of an angel that he may soar toward the celestial skies, but his deceptive creation will yet be the old devil.

The Taft-Hartley Act, considered to be the most atrocious, deceptive, ambiguous, and nauseating act ever placed upon our statute books by the representatives of special interests for no other purpose than to break the backbone of organized labor and eventually liquidate the Department of Labor, has won the disapproval of organized labor and the American people in general.

This disapproval has caused the clever designers of the Taft-Hartley Act much agony and they have been shedding croccodile tears about the matter. Millions of dollars have been spent by the agents of special interests in spreading spurious propaganda, questionnaires and deception to confuse and mislead the general public. As a result of their desperation, they have created another slicker in the woodpile, if you please. The Taft-Hartley Act has been made more drastic in every respect and now carries the adopted name known as the Wood bill, the reasons being very obvious.

The majority of this Congress well knows the platform on which it was elected. It is mandated to put an end to all such deception and exploitation imposed on organized labor. If it carries out the mandate of the people, it will render an overwhelming defeat to the Wood bill and pass the Lesinski bill.

Somewhat paraphrasing the words of the great commoner, William Jennings Bryan, I say we cannot press down on the brow of labor a crown of deprivation; we cannot crucify man on an empty stomach. The laboring man believes in the integrity of the human soul and he wants a little more than the horny hands of toil and the deep inscriptions which time does engrave during his efforts to create the wealth of our lands that is produced through the vehicles of soil and toil.

The laboring man believes in a government of the people, by the people, and for the people. He cherishes the freedom that was incorporated in our American Constitution for him and it is not his desire to see infringements imposed upon this freedom. The injunction procedure without investigation or just cause, as is permissible under the proposed Wood bill, in my estimation, amounts to the same as permitting the officers of the law to search one's home in the absence of a search warrant. To bar organized labor from financially participating in political elections, at the same time allowing special interests, National Manufacturers Association and various other organizations, to spend millions for selfish promotion of their political philosophy, is an unconstitutional practice under our esteemed Constitution of the United States.

Man's greatest enemy is man himself, and before we can set a pattern of peace and harmony for the world, I deem it necessary to change our way of thinking here at home and provide that type of legislation conducive to promoting brotherly love and the welfare of all our people. The Wood bill would mean further exploitation and confusion. The Lesinski bill is designed to promote harmony and respect. May we, this day on which the eyes of the Nation are focused, build for harmony and good will in this Congress.

Unemployment in Connecticut

REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. SADLAK. Mr. Speaker, early in February I called to the attention of this House the growing unemployment situation, particularly in my State of Connecticut. More emphatically did I call the attention of the House to that fact when I proposed an amendment to provide $14,000,000 to be sent back to the States to provide necessary personnel to take care of the growing number of unemployment claims. As in my previous remarks, wherein I stressed the fact that I hoped we were reaching the peak of this unemployment, and I continue in that hope and have great concern that we will reach that point shortly and then have a decline in lay-offs and the unemployment claims. However, I have before me this morning the latest release from Hartford which gives the information that the number of jobless unemployment claims amounted to 75,943 during the week of April 18, to 23, 1949:

The number of jobless claimants for unemployment benefits in Connecticut rose to 75,943 during the week of April 18-23. During the previous week there were 71,786 filing and a year ago claimants numbered 27,014. The number filing is the highest in 11 years and was rising steadily since last October when 21,485 were applying.

The Bridgeport office reported the largest group of jobless claimants with 13,147, followed by Waterbury 9,385, New Haven 8,605, and Hartford 7,976. Slightly more than half (52%) of the claim load was in these four offices. The other 15 offices were each under 4,500.

Initial claims, which represent new unemployment, rose to 8,356 from 7,471 for the previous week, and 3,586 for the corresponding week a year ago.

Lay-offs were reported in the following industries: Electric razors 500, electrical appliances and parts 285, hats 225, clocks 175, buckles 120, brass goods 105, sporting goods 100. Other lay-offs varying from 50 up to 100 were reported in telephone equipment, bearings, garment, zippers, rubber footwear, tobacco, and sewing machines industries. Three woolen mills rehired a total of 175.

In the Ansonia district, a manufacturer of small metal objects laid off 20 temporarily.

The Bridgeport office reported lay-offs totaling 145 by two electrical appliance firms and about 50 by a sewing-machine plant with lack of work the reason.

In the Danielson area, an electrical-goods factory laid off 100. A woolen mill was reported to be rehiring from 100 to 150.

In the Hartford office a lay-off of 20 by a dairy company, 50 by a garment shop, and 35 by a special machinery plant.

In the Meriden area, a bearings plant laid of 55 and a communications-equipment firm 90 due to lack of work.

The Middletown office reported that a cosmetics company rehired 20.

In the New Britain area, a zippers factory laid off 50 and buckles company 120 due to lack of work.

In the Danbury area, four hat companies laid off a total of 225 due to lack of work. A machine-products firm laid off 20.

A New London boat company laid off 25 while reorganizing the distribution of work.

In the Norwich area, a canvas cloth company laid off 60 due to lack of orders, and a woolen mill 25.

A Stamford electric-razor firm laid off 500 due to an overstocked inventory.

In the Thompsonville area, two woolen mills rehired a total of 45. A carpet concern laid off 25 and a tobacco company 50 due to lack of work.

In the Torrington area, a sporting-goods concern laid off 100, a clock company 150, and an electrical-appliance plant 40. About 25 from another clock company filed partial claims.

The Waterbury office reported lay-offs of 105 by a brass-goods company, 50 by a rubber-footwear factory, 25 by a clock company, and 25 by a chemicals concern with lack of work the reason in each instance.

Mr. Speaker, because of the many inquiries from my colleagues asking what lines of endeavor are affected, what industries making the greater number of lay-offs, I have given the release in its entirety to the House. Meanwhile, my amendment which was restored by the other body has, as yet, not been acted upon since it is included in the First Deficiency Appropriation bill which is in conference.

Georgia's Last Confederate

EXTENSION OF REMARKS
OF
HON. A. SIDNEY CAMP
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mr. CAMP. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Atlanta Journal magazine of April 24, 1949:

GEORGIA'S LAST CONFEDERATE

(By Wylly Folk St. John)

Georgia's last Confederate is a spry old soldier of nearly 104, who lives in a little Confederate-gray house in Fitzgerald, Ga.

He is Gen. William Jordan Bush, of Company B, Fourteenth Georgia Infantry. He was a teen-aged private when he fought in the Battle of Atlanta, but he's been an honorary general for years. He is regarded with appropriate awe throughout the State, as the last living Georgian who wore the gray during the War Between the States—the only flesh-and-blood contact with the lost cause that is left to us on this Memorial Day.

The general—who holds in his frail person all the accumulated legend of the gallant rebel-yelling, ragged-uniformed, barefooted army that outfought the Yankees but lost the decision on points—enjoys his distinction to the full. Any battle you mention, he remembers in detail, with a sly twinkle that tips

you off to the fact that while he might not have actually been in that battle, it's up to him as the last Confederate to do the honors for all the boys in gray who were there. He demonstrates with a rusty bayonet how he fixed any number of Yankees, and points out his various battle-scars with glee.

Fitzgerald is a wonderful town for the last Confederate to live in. It was settled, they say, by "some real nice Yankees" shortly after his war. The hotel is called the Lee-Grant, and the original streets were named half for Confederate and half for Federal generals. A month or so ago, the town council voted to name a street also for General Bush.

Called Uncle Josh by half the town and Daddy Bush by the other half, the General is Fitzgerald's most famous and most carefully-taken-care-of citizen. The U. D. C. offers him everything he could possibly want to make him comfortable; the State patrol drives him home in state when he's out late; the ordinary not only brings him his pension check but also the $75 to cash it with; he is always being asked for pictures and autographs; and he gets sheaves of fan-mail. He's senior deacon of his Baptist church, and received his "diploma" as a Mason in 1888. He goes to the Masonic meetings, too. "He stays out until 2 a. m.," says his wife fondly, "and tells me he's been to lodge meeting—and expects me to believe it!"

For a man who'll be 104 next July 10, Uncle Josh is astonishingly vigorous. He can read his Bible without his glasses, he can hear well with no artificial aid, his blood-pressure is perfect and his heart's O. K. He can still dance a jig if you dare him to. He sings Dixie in his quavery brave old voice, also a pseudo-battle-song called Kiss that old gal right square on the mouth. He likes apple pie better than anything else to eat, and the doctor condones it, saying the General will outlive him. Uncle Josh's goal is 120, but he sees no reason to stop there. He has a favorite old rocking chair with a calico cushion in the back, but he doesn't stay in it much. Until a few years ago, he walked downtown every morning to talk over old times with his friends. Now, he has to call a taxi, when his wife's back is turned. Sometimes, when Mrs. Bush, who teaches the sixth grade, misses him, she finds out he has dressed up by himself and "gone out with the girls"—to a U. D. C. meeting. Mrs. Bush has celebrated her twenty-seventh wedding anniversary with the General, whom she married when he was 76 and she was 34. He lived with his first wife 48 years before she died, and had 6 children, 2 of whom are still living. He has 11 grandchildren and more great-grandchildren than he can count. He still handles his own money, giving his wife what she needs for the bills.

As proof of his amazing vitality, he points out that his snow-white hair is turning black again—and if you look closely you can indeed see fresh black hairs in it and in his warrior mustache. He has one fierce blue eye, that glares when he talks about the Yankees and is full of Irish fun when he talks about the girls.

When the Bushes went to see the movie of Gone With the Wind, the General declared that the Battle of Atlanta in the picture was "just like it really happened." When he went to the cyclorama he pointed out in the painting the very tree he was behind, "shootin' like hell" while the battle raged. Mrs. Bush says he almost got violent at the sight of his old enemies, and she had to restrain him from a new charge. "When he saw Sherman on that horse he said, 'Let me at him,' " she reports.

Uncle Josh was a bare 16 when he joined the Gray army. "I told a lie to get into it, and I'd have told another to get out," he says, and then immediately retracts, "No, I wouldn't, either. I fought to the end and I wouldn't have done any other way." He was "near about" the whole time with General Gordon, but part of the time with General Johnston. When asked if the young army did much training before it went into battle, General Bush retorts, "We didn't waste no ammunition practicin'. When we shot, we shot to kill. In them days we didn't have airplanes—it was hand-to-hand fightin'." He brought home a big Confederate flag from the last Gettysburg reunion and he carries it in all the Memorial Day parades.

Until a few years ago there was also one Union veteran left in Fitzgerald, Henry Brunner. On Memorial Day the two old soldiers would go to the cemetery together and put flowers on the graves of their fallen comrades, General Bush decorating the northern graves and General Brunner the southern. When his friendly enemy died, General Bush sent a wreath "from the last of the gray to the last of the blue."

Now General Bush has to place, tremulously, the flowers and laurel wreaths for both of them. There will be tears, no doubt, when emotional southern ladies see his lone indomitable figure car-borne in the parade this year, the last Confederate, wearing his Gettysburg medal and carrying his Confederate flag.

But the small, bent general will not be mournful. He will be gay and gallant, lifting his soft black Confederate-style hat, bowing to the girls as a southern gentleman of spirit does. He will keep up the tradition of Jeb Stuart and Beauregard and the courtly Lee. He will wave his valiant flag as though it were undefeated, while the band plays Dixie this one more time for him, on Memorial Day.

The other men in gray are all gone. Now, at the cemetery, when the bugle softly plays Taps, it is for all the Confederates—except Josh Bush.

There is no other man left alive in Georgia today who fought in '61. It is a lonely eminence.

Here is Georgia's last Confederate.

Taft-Hartley Act

REMARKS
OF

HON. DONALD L. O'TOOLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. O'TOOLE. Mr. Speaker, what many Members of this House fail to recognize in their consideration of the Taft-Hartley Act and in the now proposed Wood bill is that this is a grave moral question.

Some who have spoken here today have termed it a philosophical question. This is not correct, for a philosophy may be godless. All labor legislation concerns the dignity of man and must recognize that man has been created by God in His own image and likeness. Hence, all legislation affecting the rights and dignity of mankind must be based on the tenets of Judo-Christian theology.

Labor, and I use the capital L, is an army of 60,000,000 American men, women, and in some cases children. They are human beings who have been given definite rights and attributes by God, Himself, and when unjust penalties are inflicted upon these people an answer must be made to God. These are the people who are the backbone and foundation of the American Nation. For many years in our history they were not recognized as individuals who had both God-given and constitutional rights. They were bartered as if they were a commodity. They were deprived of just wages. They were mulcted by company stores and were harrassed by company police. Further, they were not permitted the right of collective bargaining and could do nothing to further the cause of their families or class. In many instances they and their children were dedicated to a continuing life of poverty which precluded them from education and security. The result was that the Nation contained a vast horde of people without hope and also without purchasing power.

Certain heroic individuals, recognizing the plight of the laboring people after a long struggle, succeeded in unionizing several million of the American workers. These workers, discovering their newly acquired strength and not forgetting the indignities to which their class had been subjected, determined that their spokesmen in the legislative halls of the Nation should do something to alleviate the plight of more than half of our people. That is how the Wagner Act came into existence. During the debate on that measure in these Halls it was said time and time again that nothing but economic chaos could result from its passage. However, we who have lived through the days when the Wagner Act was the law of the land know that it was one of the media that brought unparalleled prosperity to our people and to the Nation. It was during these days that so many American citizens acquired their own homes, cars, refrigerators, electrical appliances, and many other devices that made our standard of living the envy of the world. Each material gain that the workingman received was a benefit for the banker, the farmer, and for every other group. On the moral side, there came a more adequate flowering of democracy itself.

The rights guaranteed under the Constitution, but which were often partially or fully denied to the citizenry, were now recognized. Class, social, and religious distinctions were slowly but surely wiped out. The opportunities for progress denied by birth were now available so that millions of our working people were able to give to their children a higher standard of education than they themselves had received.

The first successful blow at these new-found freedoms was the Taft-Hartley Act. The Taft-Hartley Act is nothing more than a penal code with all of its penalties directed at labor. Its enactment was and is still considered by the foes of democracy as the opening wedge to the return of the semifeudal state in which labor existed in the latter part of the last century and the early part of the present one.

Today this House is faced with this question: Shall man's inherent dignity be recognized, or shall he be considered nothing more than another commodity on the market? Shall this House hinder the progress of democracy, or shall this House vote to return to a law which will once again make the American workingman and the American Nation the envy of the world?

Potable Water for Domestic, Industrial, and Agricultural Purposes Is Possible From the Ocean

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. McDONOUGH. Mr. Speaker, the history of the development of the West has been the history of the continual struggle of man for water, water to keep alive, water for the production of food, water to produce the power to move the wheels of industry.

Water has shaped the development of the West, boomed areas where it could be found, retarded those where it was absent.

As the ingenuity of Americans developed, irrigation methods have kept pace. Water is piped to the cities of California distances of hundreds of miles. Huge irrigation canals create small rivers for the irrigation of farmland. And from these developments and extension of irrigation, the arid desert has become a garden spot yielding major crops that contribute an important share of the Nation's food supply.

But today the far West is an expanding country. Population growth during and since the recent war has been phenomenal and the needs of the people for water in the great industrialized areas of population are already overtaxing existing water supplies and threatening serious water shortages in the future.

And, as in the past, the supply of water will surely change the history of the West, curb and limit its expansion, if new sources of water cannot be utilized.

If new sources of water can be found, the possibilities of development and expansion in the West are unlimited. Untold acres could be reclaimed from the desert and converted to agriculture, and new communities would spring up from the waste land.

The search for water sources is being diligently pursued, and various suggestions have been offered and plans developed. Among others is a proposed vast redistribution of the waters of the Columbia River and even of the Mississippi River.

These suggestions are not without merit and could apparently be utilized to some extent, if no other sources of water could be developed. But the methods of such redistribution of river water would obviously include the building of great dams and the piping of water over distances of a thousand miles.

Such a system would be subject to break-downs, would require constant maintenance, and would be extremely vulnerable if war should ever threaten this country.

It is, therefore, vitally necessary that new sources of water to be devoloped are reasonably close to the area to be supplied and are either sufficiently dispersed or can be protected for security purposes.

Along the shores of the United States lies the world's greatest source of water, the ocean. And the conversion of sea water to domestic purposes is no idle fantasy, but is an accomplished fact. The only barrier to the utilization of the vast resources of the sea has been the prohibitive cost of its processing.

During World War II, in spite of this large cost, it was necessary for the United States Navy to produce millions of gallons of domestic water by the distillation of sea water, and according to the Army Engineers, all the information on the conversion of sea water into fresh water by distillation and by chemical processes which was developed during World War II shows the feasibility of obtaining fresh water from sea water.

The only obstacle to the large-scale production of water suitable for irrigation and domestic uses is the present high cost. And this is an obstacle which should not be too difficult to surmount once the full forces of scientific and technical knowledge and skill is focused upon it, and adequate experimental and demonstration plants constructed.

I have introduced H. R. 3650 to authorize the construction and operation of the necessary demonstration plants for this purpose, and I believe passage of this legislation would be one of the greatest contributions of the Eighty-first Congress to the Nation's progress. Once a satisfactory and economical method of conversion of sea water is developed, it can be utilized as a supplemental water supply for almost every part of the country and can banish permanently the destruction that walks hand in hand with extended drought.

Not only the West will be freed from water shortages, but cities on the eastern seaboard would utilize the sea to augment their supply which occasionally is inadequate. Recently the city of New York found it necessary to urge water conservation to avert water shortage.

Because of the importance of water to the Nation, I urge the favorable consideration of H. R. 3650. If passage of this measure can result in the solution to our water problems and end the bitter struggles for water we have witnessed in the West, there should be no objection to its passage.

Address of Hon. H. E. Aklilou Abte-Wold

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by H. E. Aklilou Abte-Wold, Vice Minister for Foreign Affairs and Chairman of Ethiopian Delegation to the United Nations:

Mr. Chairman, fellow delegates, I have taken the floor to address you today on what is the most important problem that has faced my country, since that memorable day when His Imperial Majesty, my august sovereign, addressed the nations of the world met at Geneva on the occasion of the Italian aggression against Ethiopia. The lot of a small country is not an easy one. It is not easy for a small people, however resolute and courageous its leaders, to make its voice heard. We are fortunate, however, in counting among the United Nations represented at this table stanch friends. To those faithful allies Ethiopia remains proudly and eternally grateful.

Ethiopia, who at no time in her long history, has sought aggrandizement at the expense of others, desires nothing more than to live peacefully and independently in her corner of the globe. Without seeking aggression against others we have fought and sacrificed long—and we would like to think courageously—for our independence; an independence, whose long span of life and proud struggle descends from the earliest records of antiquity. I recall in this connection a somewhat picturesque passage of Herodotus which refers to my country and to the mission which that famous conqueror, Cambyses, King of the Persians, had sent to Ethiopia. I am sure that my friend and colleague, the Honorable Delegate from Iran, will not take amiss the following reference to this ancient and glorious leader. Upon reaching the court of the King of Ethiopia, bearing their gifts, the mission was received by the sovereign, who made reply to them as follows:

"The King of the Persians sent you not with these gifts, because he much desired to become my sworn friend—nor is the account which ye give of yourselves true, for ye are come to search out my kingdom. Also your King is not a just man—for were he so, he had not coveted a land which is not his own, nor brought slavery on a people who never did him any wrong. Bear him this bow, and say:

" 'The King of the Ethiopians thus advises the King of the Persians—when the Persians can pull a bow of this strength thus easily, then let them come with an army of superior strength against the long-lived Ethiopians—till then, let them thank the gods that they have not put it into the heart of the sons of the Ethiopians to covet countries which do not belong to them.' "[1]

Our proud and ancient empire was born in the land of Arabia to which we bear today profound attachments and with which our language, written and spoken, bears intimate relation. From Arabia our ancestors migrated across the Red Sea and the Gulf of Aden to Ethiopia, passing through and settling in that territory, formerly known as Tigre and today called Eritrea, and also simultaneously through the territory now known as Somaliland. In consequence, our first capital and the cultural and religious center of the empire for over 1,000 years were fixed in the Tigre. Tigre, or Eritrea, was our gateway to the ancient, to the medieval, and to the modern world from the days of Adulis to those of the port of Massawa.

It was only natural, then, that the people of Eritrea should have remained throughout this period identified with us from every point of view: Race, religion, language, culture, habits, and social structure. It was also only natural that this identity should have received recognition throughout the long centuries preceding this day and this moment, when I come before you on behalf of my sovereign and my people. It is, finally, quite understandable that Ethiopia was called to the defense of the people of Eritrea, in particular, against Italian forces, at the Battles of Kaotit, Senafe, Dogali, Amba Alagi, Makalle, and Adua which took place at the

[1] The History of Herodotus, by George Rawlinson, vol. II, published by John Murray, Albemarle Street, London, p. 416, sec. III-21.

end of the last century. I shall not importune you with fastidious recitals of ancient, medieval, and modern documents and authors, who bear testimony to this unity and identity. These facts are available to all who care to glance at that volume Document A/C.1/W.8, distributed by the Secretariat.

The incursion of the Italians, in 1885, therefore constituted the injection of a totally foreign element and a grave diversion of a clear and strong current of national life and tradition. The invasion of Eritrea by the Italians commenced in 1885 and was followed by the three subsequent invasions of Ethiopia of 1894–95; 1895–96, and 1935.

Simultaneously, Italy launches her campaigns of encroachment and aggression against Ethiopia in the territory now known as Italian Somaliland which she likewise constituted as a colony at the end of the last century.

Since those fateful years Italy, not only the Fascist Italy, but also the so-called liberal-democratic Italy, carefully and methodically prepared her eventual mass invasion and occupation of Ethiopia. These attacks, supported by massive armed forces and poison gas, were launched from both former Italian Somaliland and Eritrea in 1935. Between these two jaws Italy sought to crush up Ethiopia in her raging and insatiable hunger for empire.

Let us leave, however, for the moment, the question of the invasion of my country in 1935, to ask ourselves the question what had Italy done during the years following her seizure of these two territories to develop the areas and to promote the welfare of the populations?

I would remind you that the record of maladministration, oppression, stultification and of so-called achievements during this period of 50 years, concerns, quite as much, if not more, the so-called liberal-democratic as the Fascist Italy. Two of the three invasions of Ethiopia were made by this so-called liberal-democratic regime. In Libya, seized, not by the Fascists, but by that so-called liberal-democratic Italy, in Eritrea and in Somaliland, Italian policy, whether under a democratic or under a Fascist regime, remained that which it had consistently been from the start, one of racial hatred, oppression and imperialistic aggrandizement.

It is not my intention, fellow delegates, to deliver a Philippic against Italy in respect of her administration of the former colonies of Eritrea and Somaliland. I have no such intention for the reason, first, that Ethiopia is not motivated by a spirit of hatred or vengeance as regards her traditional enemy, and, second, for the simple reason that I am quite content to let the facts speak for themselves. I do not ask you to believe in or lend any credence to data of Ethiopian sources. In the interest, solely, of achieving a sound and practical solution of the colonial issue, I shall confine myself rigorously to facts from unimpeachable sources, viz, the reports of the commission of inquiry and statements of Italian Government officials. I do not seek to deny that Italy, if only in her own selfish interest and with a view to obtaining colonies of settlement in these desert areas, may have sought to improve conditions. It is, however, apparent that notwithstanding any such efforts, Italy completely failed in her objectives, even though she had 50 years to accomplish them. For reasons that I will adduce somewhat later, I think it will be apparent to all that she could never accomplish them, were she given yet another 50 years for that purpose.

As regards former Italian Somaliland, I would merely remind you that since the Italian Government found itself incapable of assuming the administration of so vast a territory, it passed the responsibility therefor by way of a concession agreement to a company known as the Benadir Co. As the Italian Minister for Foreign Affairs at that time stated:

"The Government did not want to spend much money on that colony, and this way out of the difficulty was found as a means of keeping the colony while putting off the real solution of the problem to the distant future. * * * In entrusting the Benadir to a private company, the Government of the time had only one end in view, that of getting it off its hands at any cost."

Under these circumstances, and in view of the maladministration, as well as of the deplorable climate, the Government itself discouraged immigration to Somaliland. At the end of the period of Italy's control, Italians constituted less than one-thousandth of the population consisting of over 1,000,000 local inhabitants, who, according to the publication entitled "The First To Be Freed," prepared by the British Military Administration, entertain "a positive hatred of their ex-masters." Yet, today, Italy claims the return of that territory.

As regards Eritrea, I would remind you of the fact that the Commission of Inquiry of the four great powers has found that the country had been left in an appallingly backward state, notwithstanding 50 years of Italian occupation. Her road communications, according to the report, consisted of earth roads and trucks, and there were no modern roads for vehicles and commercial traffic.

According to the same report, Italy had placed in long-term industrial investment in Eritrea, the equivalent of only $1,000,000.

In the report of the Commission of Inquiry it is stated that—

"At its present stage of development, Eritrea is not in a condition to support its population, even on the basis of minimum requirements" that "Eritrean industry is in its initial stages of development and could only satisfy some of the elementary requirements of the country, the national wealth and revenue at the present level cannot assure the country an independent existence or provide for its development" and that "Eritrea is a backward agricultural and pastoral country and a grain importer."

Consequently, it is not surprising that in this desert region, where Italy has done little, if anything, for the local population or for the development of the territory, there should have been, on the eve of the invasion of Ethiopia and after 50 years of oppression, not more than 5,000 Italians settled in that territory. Today, we have a sorry but striking proof of this fact. At this moment, the British Military Administration is supporting thousands of unemployed Italians to whom the poor country of Eritrea cannot supply opportunities for gaining a livelihood.

For the entire population of Eritrea, the Italians, during their 50 years of oppression, provided only 800 hospital beds or the equivalent of 1 hospital only for the whole country and but 20 elementary schools; whereas had these facilities been supplied in the same proportion as they have beer furnished to the Italian population of Eritrea, the Eritreans would have benefited by no less than 44,000 hospital beds and 1,200 elementary and secondary schools. It is not to be presumed that an Italy which is far poorer than she was before the war, would improve today upon so lamentable a record.

Notwithstanding the almost infinitesimal minority of Italians, such amenities of existence as had been introduced, were, by reason of the racial prejudice which motivated the pre-Fascist and Fascist administrators of Eritrea, denied to the Eritreans themselves. It was this racial prejudice that excluded Eritreans from public cafes, theatres and cinemas and denied to them electricity, water supply and sanitation facilities.

Under the circumstances, it is by no means astonishing that, as I shall subsequently point out, throughout the entire period of Italian occupation, Eritrea has constituted a markedly deficit economy. There is, consequently, reason to concur with former Secretary of State Byrnes, who has recently declared:

"Italy's record of administering the colonies was one of inefficiency and oppression. * * * Investigation disclosed that every year Italy had been in control of the colonies she had incurred financial loss, notwithstanding the fact that her civilian employees were paid pitifully small salaries."

Fellow delegates, as I have already said, it is not my intention to depart from a dispassionate analysis of facts, for the purpose of indulging in any partisan criticism of the Italian regime. However, in order to dispel any suggestion that my remarks might be flavored with any bitter venom against our former enemy, I would refer you to the following statement of Maurizio Rava, Fascist Minister of State, who, in respect of the general Italian position in Eritrea, declared in 1937 (Eritrea e la Somalia, preface by Marshal Badoglio):

"It seemed that these colonies must be a dead weight, a cause of impoverishment. In a word, they were less than useless * * * it appeared that henceforth they had a poor future, reduced almost to the condition of islands without their advantages, deprived of any commercial outlet by the latent hostility of the Ethiopians and the competition of neighboring colonies * * * in short, it might seem that the two colonies of East Africa, and particularly Eritrea, must be preserved for the sake of principle, of national unity, or so that others might not occupy them to our disadvantage, rather than because of any hope of a fruitful result in the future. Today, the two colonies are becoming what they should always have been, the two main outlets of the Empire. Eritrea not only comprises the two important ports of Massawa and Assab, it is also the big market for Ethiopia and particularly northern Ethiopia. Moreover, Eritrea and Somaliland, particularly, of course, Eritrea, are also the outlets to Arabia for the products of Ethiopia."

Marshal Badoglio himself declared:

"The colony of Eritrea, small and poor, with scanty resources and limited possibilities, has led a wretched, poverty-stricken existence, even in the military sense, since 1896."

Why, then, did Italy attach such importance to these desert areas of Eritrea and Somaliland, which had been only a burden to her and which had not served as colonies of settlement? It should be obvious that Italy came into the colonial grabbing contest late by comparison to the other powers with the result that she was left only the choice of invading desert areas in the region of Ethiopia which remained for her for 50 years an unattainable prize. Fellow delegates, I need not importune you with a long recital of evidence and documents which we have at our disposition concerning Italy's aggressive intentions—those not only of Fascist, but equally those of the pre-Fascist Italy—which motivated her retention of these two desert colonies during a period of 50 years for the object of acquiring the rich hinterland of Ethiopia.

It might perhaps suffice merely to refer again to the statement of former Secretary of State of the United States, Byrnes, who has recently declared:

"The colonies had proved of no value to her [Italy] except as a place for military training and, under the treaty we were considering, she would have no need for great areas for training troops."

Likewise, the representative of France observed at the Paris Peace Conference in 1946:

"Italy did not always treat the local populations as she should have. Above all, she transformed these territories into military

bases for the purpose of attacking neighboring countries."

Having thus briefly considered the Italian record in her former east African colonies, we come to the third and last invasion of Ethiopia to which I have referred, invasion carefully and meticulously set up in both Somaliland and Eritrea which then closed as crushing jaws on a defenseless Ethiopia, deprived of access to the sea and the possibility of freely importing arms and subjected to a rain of poison gas against which there was no defense either in the air or on the ground.

Thus after 50 years of pre-Fascist as well as Fascist preparations on the side of the Italians, Ethiopia commenced her long and fateful struggle against the Axis aggressor, a struggle the length of which has been exceeded only by that of the valient people of China. Ethiopia, the first to be attacked in the European theater, was the first to be liberates, now already 8 years ago. It is only proper, therefore, that, under such circumstances, Ethiopia should be the first to receive justice and redressment of the wrongs to which she has been subjected.

Since that liberation, the problem of the former Italian colonies has been fully discussed and rediscussed, not only between and amongst the Big Four, but also amongst all interested states. Italy, the aggressor, has, in fact, been heard more often and fully by the Council of Foreign Ministers than has Ethiopia, her victim. Those hearings commenced in September 1945 and were continued throughout the ensuring year up to and including the Paris Peace Conference.

At the Paris Peace Conference in 1946, the question was again discussed. In view of the support which Ethiopia gained at that conference for her claims to the return of the former Italian colonies in east Africa, and in view of the firm and unanimous insistence of the four great powers that no formula of settlement be included in the treaty of peace, Ethiopia agreed to the postponement provided for by the terms of article 23 of that treaty. This formula provided the four great powers with yet another year to reach a solution.

That year of delay demanded by the great powers became, in fact, a period of 2 years, during which all of the interested states were again heard and reheard. Memoranda were submitted. Discussion followed upon discussion. Italy was heard and reheard. A commission of investigation was sent to these territories and made its reports. The views of the interested states were heard on these reports. New discussions took place amongst the four great powers, ending with the total disunion of the Council of Foreign Ministers meeting in Paris in September of last year.

What, then, are the facts and conclusions from all of this long history, which this Assembly must bear in mind, in reaching its decision on the question expressly referred to it by the treaty of peace with Italy, a decision which is of such fateful import for the peoples of the Middle East and of the continent of Africa?

In examining this problem, I must remind you that the question concerns not one, but two territories, namely Eritrea and Somaliland, of vital importance to my country, not only from economic and social points of view but also from the strategic and security points of view. The problems concerning these two interrelated territories are, therefore, necessarily interdependent. Let us endeavor to unravel this skein by turning first to the question of Eritrea. What conclusion may we draw from the preceding remarks?

In the first place, we are dealing with a population identical in its racial, religious, and social patterns with the population of Ethiopia. I have already mentioned the common origins, historical, racial, and political of the peoples of Ethiopia and Eritrea since the period of their migrations across the Red Sea from Arabia. The languages, both written and spoken, of the two territories are intimately related. The written characters remain identical in both countries and the languages retain their intimate connection with the Hamitic and Semitic languages across the Red Sea. National customs in both territories are identical. Family life and village and pastoral communities follow an identical pattern in both territories. Leaders and dignitaries are designated in Ethiopia and in Eritrea by titles indigenous and peculiar to Ethiopia, such as Basha, Blatta, Kentiba, Belatengueta, Grazmatch, Kagnazmatch, Fitaourari, Dedjazmatch, Ras, and so forth. In Ethiopia, as in Eritrea, Christians and Moslem peoples and communities live peaceably and without friction side by side in the same proportions and following roughly the same pattern in both territories.

In consequence, Eritreans definitely are not considered by my compatriots as being foreigners. Would you care to accept some evidence of this statement? For example, Eritreans freely enter Ethiopia without passports or other travel documents and, in fact, many thousands periodically avail themselves of this privilege in order to pass many months of each year on the high grassy plateaus of Ethiopia with their cattle. Eritreans, who have sought repatriation from Italian prison camps or who find themselves destitute abroad, turn instinctively to the Ethiopian Government which unfailingly repatriates them at its own expense.

Under the Italian regime, as I have already mentioned, Eritreans were afforded only the most meager and wretched form of elementary instruction in the 20 small and miserable primary schools which existed in Eritrea after 50 years of Italian oppression.

In consequence, those Eritreans who have benefited by any advanced education or any instruction abroad, have enjoyed those privileges only by the largesse of His Majesty and of the Ethiopian Government. Is it surprising then, that no less than 10 percent of the personnel of the Ethiopian Government are pure Eritreans? These Eritreans occupy posts at all levels of employment in the Ethiopian Government including the Army, the police and the civil services and reaching to the ranks of cabinet ministers and chiefs of diplomatic missions abroad, of whom one, known to you all from many years of conferences, is present in this hall at my side.

When we recall that the entire population of Eritrea is but one-fifteenth of that of Ethiopia, we can see that, notwithstanding the cruel separation imposed by Italian aggression, Ethiopia has already accorded—and for many years past—full measures of representation in the Ethiopian Government to Eritreans. We thus have at hand a large and experienced staff, fully and intimately conversant with all problems of administration in the two areas and ready to assure the reintegration of Eritrea into Ethiopia. Under the regime of Italian oppression, as the report of the Commission of Investigation makes it clear, no such possibilities of political training and experience were afforded to Eritreans. Where else, might I ask, does a comparable situation exist? Where else can a comparable basis be found for the union of two territories?

The second conclusion to which I wish to draw your attention is the fact that according to the report throughout Eritrea, 90 percent of the population is resolutely opposed to the return of Italy in any form. In particular, as regards the three plateau provinces, from 75 to 95 percent of the population are in favor of reintegration into Ethiopia.

It is thus natural, the report of the Commission of Investigation makes it abundantly clear, that by far the largest element in Eritrea urgently demands immediate return to Ethiopia. It would, therefore, seem highly unjust, iniquitous even, to maintain this cruel political separation from Ethiopia, which has only resulted in the repression of representative institutions in Eritrea, and in the vicious policy of political obscuranticism.

The third basic conclusion to which I would wish to draw your attention is the inability of Eritrea to exist as a separate or independent economic entity and its dependence upon Ethiopia. I have already referred in the course of my present remarks to the many statements occurring in the report of the Commission of Investigation as regards the economic insufficiency of Eritrea. Eritrea is a desert country with but limited possibilities for agriculture. The report of the Commission of Investigation states that but 2.6 percent of the area of Eritrea is cultivated. Due to the scanty rainfall and to the porous nature of the soil and rocks, it is difficult, if not impossible, to resort to irrigation or to the impounding of water for storage or hydroelectric purposes. Moreover, the mineral potentialities are markedly restricted. The report bears eloquent testimony to all of these points.

What consequences shall we draw from these basic facts? In the first place, it should be obvious that a grim future of struggle would await any administering authority other than Ethiopia. Eritrea, a desert region, has never been a colony of settlement, the entire European population never exceeding 5,000 settlers before the invasion of Ethiopia. Eritrea can never, in the future, become a colony of settlement for any colonial power. It cannot be imagined that an Italy of whose past inept and futile efforts in administration so much evidence exists, now even more greatly impoverished than before the war, could possibly hope to improve upon such a situation.

In the second place, ever since Eritrea was separated from Ethiopia by the Italian occupation, imports have consistently exceeded exports by approximately 200 percent annually. Abundant data exist on this point, not only from Ethiopian and other sources but also from the report of the Commission of Investigation.

Let us look, however, further into this matter of imports. From all of this data, including the data supplied by the report of the Commission of Investigation, you will note that Ethiopia is by far the largest supplier of all imports into Eritrea, accounting alone for approximately 50 percent of all such imports. And so what, fellow delegates, do these imports from Ethiopia consist? These imports consist almost entirely of foodstuffs essential to keep the population of Eritrea alive. I need not burden you with reference to troubles created over a long period of time among the population of Eritrea by maliciously false rumors to the effect that Ethiopia was from time to time going to cut off the supplies of food to Eritrea. The fact remains for anyone possessing any knowledge of the situation there that no one could hope to administer or would accept the responsibility for administering that territory without being assured in advance of continuous food supplies from Ethiopia.

A third consequence of this economic insufficiency of Eritrea has been the fact that ever since that territory was separated from Ethiopia, the administering authorities, including the British Military Administration to whose disinterested efforts I have pleasure in rendering tribute, have been obliged to resort to heavy subsidies in order to meet the expenses of administration and to keep the colony alive. In this connection, I would invite your attention to the statements on this subject contained in the report of the Commission of Investigation, pages 35 and 48. At this moment the British Military Administration is supporting thousands of unemployed Italians to whom the poor country of Eritrea cannot supply opportunities for gaining a livelihood.

The same comments apply, in particular to the port of Eritrea, Massawa, which is bound by rail with Asmara and by road communications only with Ethiopia, and which serves as the only port of access to and from the northern half of Ethiopia. On the other hand, Assab is but a locality at an indentation on the coast, devoid of all harbor installations and permitting access only to dhows drawing not more than 12 feet of water. Apart from the use of poison gas, the most important single factor contributing to the Italian occupation of my country was the fact that, being cut off from access to the sea, Ethiopia was unable to import the arms necessary for her self-defense.

On the contrary, and this is the fourth general conclusion to which I would invite your attention, Italian interests in this territory are strictly limited. It has never been a colony of settlement or of capital investment, as I have already shown and as the report of the Commission of Investigation clearly points out. The only interest, albeit a highly important one for Italy, is her desire for a base from which to cut off Ethiopia from access to the sea and from which to attack and destroy her by all means within her power. Those means would include not only the eventual mass invasion which we Ethiopians thrice, within a lifetime, victim of Italian lust for empire, do not for one moment doubt would come, but also include economic pressures of all forms rendered possible but cutting us off from the port of Massawa. These economic pressures and threat would be used instantly to build up the inevitable aggression against our country.

As fifth conclusion, I would point out the fact that not only Eritrea but Somaliland have served as bases of attacks and aggression against a peace-loving state. I would remind you that the fateful invasion of Ethiopia was prepared in 1934 from Italian Somaliland and precipitated at Wal Wal in the regions bordering on that territory and that the actual full-scale invasion which was commenced in 1935 was launched simultaneously from both Somaliland and Eritrea. Is it, therefore, a matter of surprise that Ethiopia should consider the solutions to be given to these two territories as intimately related? Thus, Somaliland, the problems of which in so many ways resemble those of Eritrea, cannot be left aside in any solution of the question of Eritrea.

It would appear from the foregoing that Italy had forfeited all right to claim the return to her of that colony. It should be evident, therefore, that the imperial Ethiopian Government cannot agree to, or tolerate, the return of Italy in any form whatsoever to Somaliland. This position is maintained even though following 50 years of gross misrule and oppression, Italy has already, morally and legally, forfeited all right to this area.

For all these reasons, Ethiopia feels warranted in claiming the administration of this area, so long subjected to Italian misrule. The intimate bonds which attach the people of Somaliland to Ethiopia were expressed during the war by the large number of desertions to the Ethiopian armies of Somali troops, who, it will be recalled, had been impressed by force into the armies of the invaders. In the memorandum submitted to the Council of Foreign Ministers in September 1945, will be found a list of these deserter-patriots, as well as names of important officials of the Imperial Ethiopian Government of Somali origin. During the campaign of 1940, the British military forces distributed a proclamation of His Imperial Majesty calling upon the peoples of Somaliland to take up arms against the aggressor and promising them return to their homeland of Ethiopia.

I have already had occasion to point out that the territories of Eritrea and Somaliland were liberated now already over 8 years ago. Since that time, the entire colonial question has been completely and exhaustively discussed by the Big Four and by all the interested states. I will not fatigue you at this time with further reference to the long series of conferences, hearings, memoranda, discussions, rediscussions, proposals, counterproposals, suggestions, and maneuvers which have done little if anything to clarify further a situation already amply clear in itself concerning simple territories and peoples which involve no complications other than the conflict of rival political forces.

The reports of the Commission of Investigation of the deputies of the foreign ministers make it clear that until the status of these territories can be determined once and for all, nothing can be done toward improving the lot of the inhabitants and of releasing the British Military Administration from the responsibilities of an utterly thankless task ably accomplished under most trying circumstances. I can only point out that after 8 years, it is time to bring to an end, by an immediate solution, the sufferings of the peoples of Somaliland and particularly of Eritrea.

To this end, my Government has for many months devoted long and thoughtful study and consideration to the details involved in the immediate reintegration of Eritrea into Ethiopia. A memorandum on this subject is reproduced in the volume Document A/C. 1/W. 8, page 72, distributed by the Secretariat to the delegations. It is therefore, with considerable satisfaction that we note in the report of the Commission of Investigation confirmation of the technical analyses already undertaken by our Government. Thus, as regards the port of Massawa, the conclusions of our Government as to port expenditures and revenues are fully confirmed by the report which indicates, among other things, that by maintaining in force the slight harbor tax of 1½ percent, the revenue thereby produced would not only meet the entire expenses of the port including expenditures for further expansion, but would also leave an even larger sum for contributing to the general budget of Eritrea and reducing thereby, to that extent, budgetary deficits. As I have already explained, Ethiopia is in the peculiar and highly fortunate position of having immediately available Eritreans who have, for many years, been trained in the services of the Imperial Ethiopian Government to assure a smooth and immediate transfer of the administration of Eritrea to Ethiopia, under conditions assuring in advance full scope to Eritrean representation and participation in the Government. I would recall to you that even now, under conditions of political separation, Eritrean participation in the Ethiopian Government already exceeds the population ratio.

As regards the Italian population of Eritrea, I would recall to you the fact that today thousands of Italians live out useful and happy lives in Ethiopia. In order to permit the Italians in Ethiopia to assist their relatives in Italy, my Government has opened wide the doors to the remittance of foreign exchange and of the resources of the country, including foodstuffs. I am wondering whether many other countries here present allow the same facilities to Italians.

In Eritrea as in Ethiopia, our Government is prepared to assure to all Italians who have useful employment there, the same guaranties and freedom of employment that are today being assured them by the British military administration. Ethiopia is prepared to afford necessary and effective guaranties for Italians in Eritrea as regards civil, religious, educational, and legal rights as well as the freedom of work. In this connection, I would invite your attention to the fact that already in Ethiopia, and without any request for formal guaranties, Italians enjoy full protection in the courts and freedom to pursue their trades and occupations. As His Imperial Majesty, my august sovereign, declared at the moment of his return to the Empire, Ethiopia seeks not vengeance but justice. If she obtains justice, nothing will stand in the way of a fruitful collaboration with her former enemies.

Gentlemen, if this committee and this assembly do not face up to their clear responsibilities, their failure would amount to nothing more or less than a revival of that discredited policy of appeasement which we had all hoped to have interred at San Francisco. It would be a frank and brutal sacrifice of moral principles for political expediency.

Fellow delegates, it is time, at last, to think in terms of the small nations of the world.

You will perhaps allow me to recall to you the moving words of the Canadian delegate to the Paris Peace Conference in which he declared:

"To this general attitude there is one qualification, however. And that is with regard to Eritrea. We cannot forget that Ethiopia was one of the first nations to suffer the full force of aggression in consequence of the failure of the system of collective action which had been established precisely to prevent such an occurrence, and that, consequently, Ethiopia should be one of the first to receive redress. * * * The Canadian delegation warmly supports the claims the Ethiopian delegation has put forward, irrespective, however, of any vote, we express the hope which, I believe, is shared by the majority of nations represented here, that the four powers will transfer Eritrea to Ethiopia and thus redress an old wrong and unite in one nation the people of a proud and ancient race. * * * We recogize that as there must be one peace for all, so there should be one justice for all, for men of every race, color, and creed in every part of the world."

My fellow delegates, 12 years ago, the Emperor of Ethiopia, my august sovereign, took the long and painful road to Geneva to ask an assembly of the nations of the world for clear and simple justice. Since that time my country has traversed a long and bitter period of travail and sufferings, and, by a fateful and inexorable logic of events, an historic cycle is being here, today, completed when I, in the name of that same sovereign and of my long-suffering people, stand before an assembly of the nations of the world again seeking for justice. Twelve years ago the voice of my country was not heard and our world went down in flames and ruin. Today, thanks to that wonderful resilience of the human spirit and to our inborn faith and hope in justice, we are all here endeavoring to redeem the structure of international solidarity and understanding. Justice and hope you may not refuse to a small country as you have refused them to her in the past. Justice and hope you may not refuse to all small countries whose sole faith lies, today, in you who are here assembled in this hall. The decision is for you to make, let us have the faith and courage to make it.

Weekly News Letter

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. SCRIVNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my weekly news letter for the week of April 27, 1949:

President Truman's political panaceas are popping out all over the place. The farm

program has great political potentials but the political pill-rolling plan, one of the more radical, is now before you. It is not new. It was tried in Germany and other socialistic countries. It is in operation in England under its socialistic government. It is fundamental in Russia.

Let us look at it. Article 120 of the constitution of Soviet Russia says: "Citizens of the U. S. S. R. have the right to maintenance * * * in case of sickness * * *. This right is insured by extensive development of * * * free medical service for the working people." Since the Soviet Government owns, controls, and operates all business, factories, shops, stores, mills, railroads, farms, homes, and hospitals, and controls all wages and prices and gets all the profits, Russians have nowhere else to look. That is not true, however, in America, the greatest capitalistic country on earth and where individuals and their rights are paramount, where you can, if you will, make your own way.

A similar program has been previously proposed here. The American Communist Party platform of 1928 contained the following plank: "Free medical treatment, medicine, and hospital care for all wage earners."

The Socialist Party (U. S. A.) platform of 1936 advocated socialized medicine supported by public taxation.

Then again in 1940 the Communist (U. S. A.) platform called for a Federal health program and in 1944 they asked for a national health program similar to the Wagner-Murray-Dingell bill.

I, for one, think our doctors, nurses, and hospitals have performed a splendid service. The records show that our independent personalized medical practice has given the United States better health, longer life, finer hospital service, and more and better doctors than any other country in the world. The federalized medical service is not free. You and I and everyone else will pay for it in taxes and plenty of them. Why give up that which has proven so good? Of course, there is room for improvement which comes with every passing year. Stop, look, and listen before crossing over to socialism or communism even in part.

Compulsory insurance, compulsory medicine, compulsory controls are not compatible with freedom of opportunity and thought and choice of action and movement that made America.

FEPC

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following letter from Mr. Kern Dodge. No, Mr. Dodge is not a citizen of Mississippi. He is an outstanding man in the engineering profession from Philadelphia, Pa. I commend it to the consideration of all who read the CONGRESSIONAL RECORD. The letter follows:

PHILADELPHIA, PA., *March 22, 1949.*
Hon. WILLIAM M. COLMER,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN: It appears that you are all agreed that communism is a vicious thing and should be fought against, and we appropriate many billions to fight its growth and spread in Europe.

What about giving the Un-American Activies Committee even a mere billion to fight the spread of communism here at home? Why not send back the illegally entered communistic alien; and why not deport those who have embraced this doctrine, which is a wrecker of nations and peoples?

Then why not oppose every bill brought before Congress which is basically communistic and which will aid in the breaking down of our Government?

Remember, we were never set up as a democracy where everyone is preaching equality and which has never worked since the world began; because a democracy slides into socialism and then into despotism.

We were set up as a republic with the idea that people should and can govern themselves with just enough governing bodies to keep law and order.

I have read the report to the President about his civil-rights program, and it is a perfect picture of the setting up of a dictatorship. I ask that you oppose all these communistic suggestions.

Immediate action is necessary. Stamping out communism transcends all other measures before Congress.

Yours very truly,

KERN DODGE.

Lifting of Berlin Blockade Will Save American Taxpayers $500,000 Daily

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. VAN ZANDT. Mr. Speaker, when the House passed the second deficiency appropriation measure last week, there was contained therein an item of $43,000,000 for the Army Air Force who has the responsibility of operating the Berlin airlift.

"Operation Vittles," as the Berlin airlift is known in military circles, has been in operation since June 26, 1948, when the Soviet Union closed all surface corridors leading to Berlin.

Now that the Berlin airlift has been in operation for more than 10 months, it may be well for all of us to review the over-all cost to the American taxpayer.

It is interesting to note that the cost of the first 10 months of operation of the Berlin airlift amounted to $149,664,200. The daily cost of this operation is slightly less than $500,000. This means that the American taxpayer is called upon to produce this sum of money every 24 hours.

Breaking down the total cost of $149,664,200, we find the sum divided as follows:

Operation	$45,825,100
Support	57,370,700
Reserve (moneys)	28,958,700
Wrecked planes	7,522,000
Depreciation of aircraft	9,987,700
Total	149,664,200

From the standpoint of actual operations, there are 319 Air Force and Navy planes assigned to do the job.

For the first 10 months of operation, they completed a total of 120,377 flights, lifting better than 1,250,000 tons of foodstuffs and supplies for Berlin.

On April 16, 1949, the Berlin airlift had its best day when 1,089 flights were completed with a lift of 10,905 tons.

While the record of the Berlin airlift is a remarkable one, the Army Air Force had several unfortunate accidents in which pilot and plane were destroyed. As of April 25, 1949, a total of 28 planes were destroyed with the lives of 22 Air Force personnel.

Mr. Speaker, the Army Air Force is not alone in carrying on the Berlin airlift. The United States Army of Occupation in Germany, as of March 31, 1949, has spent approximately $7,000,000 for not only foodstuffs and supplies, but also for transportation and other necessities in support of the Berlin airlift operation.

Taking into consideration the $43,000,000 we appropriated last week, it will not be long before we will have spent $200,000,000 because of the Russian blockade of Berlin.

Development of Columbia River and Its Tributaries by Existing Agencies

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a report from Lewis A. Pick, major general, Chief of Engineers, outlining the program of development for the Columbia River and its tributaries under existing Government agencies:

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington.

Subject: Columbia River and tributaries, northwestern United States.
To: The Secretary of the Army.

1. I submit for transmission to Congress my report on a comprehensive plan for development of the Columbia River and its tributaries for flood control, navigation, power development, irrigation, and other purposes, including fish and wildlife conservation and recreation. The water-resource-development plans presented in this report are of far-reaching significance nationally as well as regionally. The Columbia is one of the world's great rivers. Its drainage basin, comprising about 7 percent of the area of the United States, contains more than a third of the Nation's potential water power. Despite wide variations in precipitation, a relatively large and steady volume of stream flow is available. Without artificial regulation, however, extensive flood damages occur periodically, water supplies for irrigation are inadequate in many areas, economic utilization of the power potential is precluded, and navigation is hampered.

2. The region is currently developing at an appreciably higher rate than the national average and its economy is dependent to an unusual degree on efficient utilization of its vast water resources. Formulation of up-to-date plans for orderly and timely development of those resources is therefore essential. This report presents the most effective plan for such development. It recognizes the magnitude of the problem and the many interests which must be correlated

for a satisfactory solution. The plan provides the means whereby the agencies best qualified by experience to develop the region can proceed efficiently and in consonance with the views and needs of the people of the region.

3. This report is submitted in response to several authorizations by Congress and primarily in response to a resolution adopted September 24, 1943, by the Committee on Commerce of the United States Senate calling for a review of the original 308 reports on this area which have formed the basis for water-resource development to date. The detailed report of the division engineer is based on extensive and thorough field investigations and engineering studies over a period of several years. It contains data on numerous possible developments for all purposes which will form a basis for further study and selection of projects as needed for many years and it presents recommendations for the immediate authorization of the projects needed in the near future.

4. The needs of the region now and in the future, and possible plans for meeting those needs, were determined in cooperation with the State and local interests affected and with other Federal agencies concerned. More than 30 public hearings were held in various parts of the basin during preparation of the report. Numerous conferences were held with representatives of Federal, State, and local agencies, and with other interested parties. In response to letters from the President on June 1, 1948, and September 16, 1948, following the disastrous floods in the Columbia Basin area, the long-range plans of the Corps of Engineers for development of the basin were reviewed in the light of the 1948 flood and were correlated with the plans of the Bureau of Reclamation and of other affected agencies of the Department of the Interior, the Department of Agriculture, and the Federal Power Commission. Both during and after preparation of the Division Engineer's report, the facilities of the Columbia Basin Inter-Agency Committee and other established procedures for interagency cooperation were fully utilized. Through these cooperative procedures, the Division Engineer has prepared a comprehensive plan of development that is sound from engineering and economic standpoints, and at the same time meets the requirements of, and is coordinated with, the views of all interests.

5. In order to permit all concerned to express their views on the completed report of the Division Engineer, the Board of Engineers for Rivers and Harbors held four hearings in the basin area prior to completing its review of the report. After consideration of the report and the data presented at the hearings the Board concluded that the proposed comprehensive plan is sound framework under which the requirements of all concerned can be met. The Board recommends adoption of the plan.

6. As a means of facilitating and expediting the correlation of plans as contemplated in the President's letters of June 1 and Septemper 16, 1948, copies of the Division Engineer's report were transmitted to the Governors of the Columbia Basin States and to the heads of the Federal agencies involved prior to preparation of the report and recommendations of the Chief of Engineers. Conferences were held among the Secretary of the Army, the Secretary of the Interior, the Commissioner of Reclamation, the Chief of Engineers, and their representatives and matters requiring coordination were discussed by representatives of those agencies with the Departments of Agriculture and Commerce and the Federal Power Commission at meetings of the Federal Inter-Agency River Basin Committee. These procedures were extremely effective in bringing into view the complexity of purposes and problems involved and made it possible to reach agreement on the plan as a whole and on the specific points outlined in paragraphs 7 to 17 below.

7. The plans of the Bureau of Reclamation have been satisfactorily correlated with the comprehensive plan presented herewith in all respects, including the number, scope, and purposes of the projects involved, the agency jurisdiction for construction, plans for coordinated operation of projects for the several purposes involved, and procedures for investigating and recommending authorization for construction of projects in the future.

8. The Bureau and the corps are in agreement that the projects outlined in their respective coordinated reports constitute a sound and satisfactory basis for development of the basin. These agencies agree also on the jurisdiction for construction and operation indicated in the recommendations in my report which contemplate that the Hells Canyon project should be considered by Congress for construction and operation by the Bureau of Reclamation.

9. With respect to irrigation development, the Corps of Engineers is in agreement with the Bureau of Reclamation that financial assistance should be provided from power revenues or by other means to help defray the reimbursable irrigation costs that are beyond the ability of water users to repay on the 13 irrigation projects recommended in the letter of June 3, 1948, from the Secretary of the Interior to the President and on future projects found warranted on the basis of regional or national needs. Such support should be furnished from all power revenue-producing projects in the Federal system in the Pacific Northwest and should be available to all irrigation projects that qualify for support in the Pacific Northwest, which includes the Columbia River Basin and coastal areas of Washington and Oregon. The principles underlying extension of this support should be consistent with those embodied in reclamation law. Administration of the financial support should be the responsibility of the Secretary of the Interior.

10. The Glacier View project, which is one of the most economically favorable projects considered for the plan, and which is approved by the State of Montana and local interests generally, is strongly opposed by many because it would encroach upon Glacier National Park. A possible alternative to Glacier View, the Paradise project, is objected to by the State of Montana and local interests. In view of these divergent views, it is concluded that neither of these projects should be authorized at this time, and that recommendations for a project or projects that will accomplish the purposes of the Glacier View project should be presented after further study which will be carried on while other elements of the main control plan are under construction.

11. The operation of an increasing number of developments for the storage and use of waters of the Columbia River in the best interests of the region will impose increasingly complex problems. The Corps of Engineers and the Bureau of Reclamation, with the participation of appropriate officials of the affected States and other governmental agencies, have already initiated studies to determine the best system operation of the projects in the basin. This work should proceed expeditiously and will be augmented as required by the establishment of a jointly financed staff to develop the details of such plans with the advice, participation, and consultation of all appropriate interests to obtain full integration of all individual project operations to insure the best system operation.

12. In order that the further investigations required from time to time in the future for selection and construction of additional projects under the comprehensive plan may be carried out with the maximum efficiency and without duplication of effort, the Corps of Engineers and the Bureau of Reclamation have adopted cooperative procedures for the investigation, construction, and operation of future projects. It is recognized that the Corps of Engineers should investigate, construct, and operate all navigation improvements and all channel improvements, levees, bank protection, storage works exclusively for flood control, and drainage works related to flood control. It is also recognized that the Bureau should investigate, construct, and operate all Federal irrigation and related drainage and domestic water developments and should dispose of water for irrigation purposes from Corps of Engineers' projects. Within the field of multiple-purpose storage projects and power projects both recognize that the primary responsibility for investigations and construction in the future should be assigned to the agency having predominant interest in the problems of the area involved. The agencies have agreed to a definition of spheres of predominant interest and, insofar as consistent with directives of Congress, will recognize the primary responsibility of each agency in the designated areas and will consult and reach agreement on responsibilities for work in such areas at the outset of investigations and studies for future projects.

13. In addition to the foregoing correlation which was concerned primarily with the plans of the Bureau of Reclamation, this comprehensive plan was coordinated with relation to activities of other agencies in the Department of the Interior and with the Department of Agriculture and the Federal Power Commission. The views and assistance of representatives of the Federal Power Commission and the Bonneville Power Administration were obtained on the power phases of the plan and are presented in the division engineer's report. The Bonneville Power Administration's transmission program and the United States Fish and Wildlife Service's lower river fisheries plan are also presented.

14. The importance of the concurrent development of land and water resources in the basin has been recognized throughout the investigation in numerous discussions with the Department of Agriculture and others primarily concerned with the development of the land resources. The condition, treatment, development, and use of the land resources have a positive influence on the amount of water available for beneficial use, on peak stream flows and on sedimentation. In order to insure the attainment of a balanced program of development of both land and water resources, provision should be made for the acceleration of the land resources program in both the planning and operations phases by the Department of Agriculture and others responsible for these activities.

15. The comprehensive plan presented herewith is a carefully prepared framework within which the projects necessary for a progressive, balanced economy in the Pacific Northwest can be built step by step at the rate required to bring about the needed expansion of the region's capabilities. Adoption of the plan at this time is essential for orderly and efficient development. A substantial part of the work proposed is urgently needed and should be authorized now for early construction.

16. Schedules for construction of the projects in the plan should be worked out to meet the needs, as foreseeable from time to time, for flood control, navigation, additional power, irrigation, and the related programs for soil and forest conservation and other activities of the Department of Agriculture, fish and wildlife preservation, power transmission, and other purposes. This can best be accomplished by the agencies concerned through periodic preparation of programs covering the next several years ahead, utilizing the established procedures for coordination among the agencies and States, including the Columbia Basin Inter-Agency Committee. In general, the lower Columbia

River levees and local flood-protection projects throughout the basin should be given high priority in order to secure the maximum relief from floods in the shortest possible time. Similarly, the Willamette subbasin plan should be carried to substantial completion with high priority. In the main control plan, the Albeni Falls, Libby, and other up-stream storage projects are logical first steps because of their flood-control value, the power available at the site, and the benefit to power installations downstream from the storage regulation afforded. The downstream main-stem projects should be coordinated from a timing standpoint with the lower river fisheries plan, as well as with the needs for power, flood control, and navigation. The various subbasin plans should be undertaken under medium priority as progress is made on the projects for the main control plan. In general, the associated plans for fisheries, irrigation, and soil and forest conservation should proceed with high priority. Power transmission construction should proceed in phase with the completion of power generation facilities.

17. The question of adjustments for local loss of taxes as a result of Federal projects is being studied as a national problem by the Federal Real Estate Board. One means of adjustment is afforded by section 5 of the Flood Control Act approved July 24, 1946, which provides that 75 percent of revenues from leasing of lands acquired by the United States for flood-control purposes shall be turned over to the States for the benefit of public schools and public roads of the counties in which the land is situated. This procedure is applicable to the flood-control projects in the Columbia Basin. Further adjustments for projects in the Columbia Basin plan should be considered as part of the Federal Real Estate Board studies rather than as part of this report.

18. I therefore recommend:

(a) That the comprehensive plan outlined in the report of the division engineer, with modifications as outlined herein and in the report of the Board of Engineers for Rivers and Harbors, be approved as the basis for long-range development of the Columbia River Basin.

(b) That the following be authorized for early construction by the Corps of Engineers:

(1) The main control plan (table A of the accompanying report of the Board) less the Glacier View and Hells Canyon projects and the modifications to Grand Coulee and Hungry Horse Dams.

(2) The Willamette and other subbasin plans (tables B and C of the Board's report).

(3) An engineering laboratory (par. 45 (2) of the Board's report).

all at an estimated cost to the United States of $1,570,000,000 for construction and $11,650,000 annually for maintenance, generally in accordance with the plans outlined in the report of the division engineer and with such modifications as the Chief of Engineers may find advisable.

(c) That, as a condition to the construction of each levee, channel improvement, or channel rectification project for flood control included in recommendation (b) above, responsible local interests give assurances satisfactory to the Secretary of the Army that they will:

(1) Meet the conditions prescribed in the report of the division engineer to satisfy special circumstances at certain localities;

(2) Provide without cost to the United States all lands, easements, and rights-of-way when and as required;

(3) Make all necessary highway, highway bridge, and utility alterations;

(4) Hold and save the United States free from all damages due to the construction works;

(5) Prevent any future encroachment on the project channels;

(6) Maintain and operate the improvements after completion in accordance with regulations prescribed by the Secretary of the Army.

(d) That, as a condition to the construction of open river navigation work and each harbor improvement included in recommendation (b) above, responsible local interests give assurances satisfactory to the Secretary of the Army that they will—

1. Meet the conditions prescribed in the report of the division engineer to satisfy special circumstances at certain localities.

2. Provide, without cost to the United States, all lands, easements, and rights-of-way and spoil-disposal areas necessary for the construction and maintenance of the projects when and as required.

3. Construct, maintain, and operate adequate terminal facilities open to all on equal terms at the recommended harbor projects.

4. Hold and save the United States free from all damages due to construction.

(e) That authority be provided to the Bureau of Reclamation for modification of Grand Coulee and Hungry Horse Dams and for construction of Hell's Canyon Dam, and for their operation for flood control in conjunction with the main control plan projects as contemplated in the report of the division engineer.

(f) That Congress give favorable consideration to the related programs consisting of: The 13 irrigation projects recommended by the Secretary of the Interior in his letter of June 3, 1948, to the President; the necessary expansion of the transmission system of the Department of the Interior; programs for watershed treatment and agricultural and forestry conservation and development by the Department of Agriculture; and the lower Columbia River fisheries plan of the United States Fish and Wildlife Service.

(g) That this report, with illustrations and appendices, be reproduced as a public document to facilitate utilization of the data and plans by all concerned in the long-range development of the Columbia River Basin.

LEWIS A. PICK,
Major General, Chief of Engineers.

Civil Rights Compromise

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. HAYS of Arkansas. Mr. Speaker, following my presentation of a proposed compromise of civil rights issues to the House in February, I have received innumerable endorsements in many of the Nation's leading newspapers and in letters from every part of the United States. Under leave to extend my remarks I include the following excerpts from some of the editorials and letters:

The New York World Telegram: "It is past time to end this destructive battle. It may not be too late to end it by middle-ground compromise such as the one proposed last month by Representative BROOKS HAYS, of Arkansas."

The Pittsburgh Press: "Influential southerners have shown encouraging interest in Mr. HAYS' proposal. The situation calls for willingness to meet on reasonable middle ground."

Elmira (N. Y.) Star Gazette: "There is an old proverb about making haste slowly. That is applicable to the civil-rights battle in Congress. Not all the opposition is based on prejudice. Representative BROOKS HAYS, an Arkansas Democrat, recognizes that civil rights is in the cards. He thinks southerners will accept an amendment to the Constitution outlawing the poll tax. In this he repeats what has seemed to us wisdom all the years this issue has been argued in Congress."

The Forest County (Pa.) Republican: "The best answer to the civil-rights question lies in the proposal advanced by BROOKS HAYS, of Arkansas."

Lester B. Granger, executive director of the National Urban League, outstanding Negro leader: "The omnibus recommendation by the Arkansas Congressman will undoubtedly seem like milk-and-water stuff to the average supporter of the President's civil-rights program. Certainly it is a considerable dilution of the demands implicit in the bills which have been submitted, but the speech is notable nonetheless because it is a clear recognition by a Congressman from the deep South that Congress has a responsibility for action and because of the spirit of reasonable compromise that it exudes."

Nathaniel Leverone, Chicago businessman: "I have just read your speech on civil rights. I could not endorse it more enthusiastically if I had spent all of my life in Arkansas than I do as a citizen of the United States."

Ed McQuiston, president of the Arkansas Conference of Social Work: "We had a splendid reaction to your clear statement at our convention of the moral basis for a compromise of civil-rights issues. The State conference unanimously endorsed your stand in this matter."

Marvin Hurley, assistant general manager, Houston (Tex.) Chamber of Commerce: "Your position is reasonable, sane, timely, logical, impartial, and fair. You have treated a most perplexing problem with studied analysis and have outlined the most acceptable solution I have seen."

W. T. Couch, director of the University of Chicago Press: "I think you are on the right track, and I hope very much that your efforts will receive Southern as well as other support."

John Alden Powers, Philadelphia insurance executive: "Mr. HAYS has attacked the problem in splendid fashion. I hope he keeps up the good work."

J. Powell Oates, president of the Southern Mattress Co.: "I want to congratulate you on your efforts to compromise the civil-rights program. Yours is the most advanced idea that has been presented to the Congress."

Thomas R. Reid, vice president of McCormick & Co.: "Your approach is one of the best I have seen. Congratulations and best wishes to you."

Joe Hardin, president of Arkansas Farm Bureau Federation: "I want to commend you for the manner in which you are attempting to handle this matter. I agree that if we expect to have State's rights we must accept the responsibility of preventing the loss of liberty to our citizenship."

Slum Clearance in Washington, D. C.

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Washington Evening Star, Wednesday, April 27, 1949:

SLUM CLEARANCE OUTLOOK

There is encouraging evidence of a renewed interest by Congress in the long-publicized slum-clearance problem here. The

Senate, several of whose Members recently made a tour of familiar Washington alleys near the Capitol, has approved restoration of site-acquisition powers to the National Capital Housing Authority. This would facilitate the NCHA public-housing program for families of low income, most of whom live in the blighted areas inspected by the Senators. There is growing sentiment on the House side in favor of giving NCHA independent land-buying authority, a right of which it was deprived when the District Redevelopment Land Agency was created.

It will take more than the broadening of NCHA powers to wipe out Washington's slums, however. The NCHA is concerned with the lowest income families. The Redevelopment Land Agency was charged by Congress with preparing and carrying out a long-range slum clearance and redevelopment program on a broad scale. Both agencies can operate without duplication or conflict. But the Land Redevelopment Agency has been completely stymied by failure of Congress to provide sufficient money even to do preliminary planning of an adequate nature. It is a disgraceful fact that officials of the agency have had to dig in their own pockets for office supplies and other administrative expenses.

Despite this unfair handicap the agency has managed to produce a preliminary plan for one project, that at Marshall Heights. Hearings on this plan before the District Commissioners have revealed some opposition that may imperil the whole development program; opposition based on the mistaken belief that the program is designed to create colored ghettos. A decision by the Commissioners on the Marshall Heights project is expected shortly. If approved, the agency still will be powerless to proceed with the program unless Congress supplies the $3,400,000 needed to buy the tract and rebuild it. So ultimate responsibility for the fate of Washington slums and for those who live there rests largely with Congress. If recurrent visits to local alleys will spur action, a regular schedule of tours for Members of both Houses should be arranged; until all in Congress have seen the need for positive, effective remedial measures.

Memorial Address by Dr. John R. Abernathy at Funeral of Former Senator Gore, of Oklahoma

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Thursday, April 28 (legislative day of Monday, April 11), 1949

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the memorial address delivered by Dr. John R. Abernathy at the funeral services for former Senator Thomas Pryor Gore held at Oklahoma City on Friday, March 18, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IN MEMORIAM—HON. THOMAS PRYOR GORE

(By Rev. John R. Abernathy, D. D.)

By a strange coincidence entirely unknown to anyone present, I am privileged in this solemn hour to pay my humble tribute of love and respect to one who more than a half century ago opened up to me new horizons which have constantly since that climactic hour lured me onward and upward, and though I am now approaching three score and ten years of my pilgrimage, the radiance of a long-remembered day lingers with me still.

A little more than 50 years ago I was living in a one-room log cabin with my widowed mother and a brother 3 years older than I. Life had not been easy for me. My father died when I was a lad 5 years old, leaving my mother with four children and little of this world's goods. Now after the passing years we had rented the little farm and launched out on our own. At that time in Texas we knew but one crop—cotton—and that meant that I would have little time for obtaining an education. Already I had developed a thirst for knowledge, but at times was almost crushed by the realization that perhaps my fondest dreams were destined to vanish into thin air.

Then one day something happened. A little circular delivered at our door announced that on a date near at hand Thomas Pryor Gore, the blind orator, would speak under a brush arbor not more than a quarter of a mile from our home.

On the appointed afternoon I was among those present, and that hour marked a turning point in my life. As I beheld the classic features of the speaker and heard with rapture his deep and musical voice, and his words which were as "Apples of gold in pictures of silver," I suddenly realized that this man rested under greater handicaps than were mine, and that in overcoming these handicaps he was steadily winning his way to the accomplishment of a worthy goal.

For more than an hour he held the audience spellbound by his eloquence, his logic, wit, humor, and pathos. He espoused the cause of the underprivileged, and pointed toward a better day for the toiling masses. I remember in particular he said: "On this very ground where we are now assembled there will someday be an adequate school building and the opportunity for the boys and girls of this community to enjoy the privileges of a high school." His words were prophetic, for on that very site a consolidated high school was built and my brother was president of the school board.

I went home to sleep little that night. All night long I was haunted by the presence of the remarkable man I had heard that afternoon. As I lived over and over again that high hour of inspiration, I said to myself: "If that man with his great handicap can go bravely on and with grit and determination refuse to accept anything less than the highest, why may not I, too, surmount any difficulties and make some worth-while contribution to the progress of the world?"

From that moment my decision was made, and I launched out and to the limit of my ability I have sought to be worthy of the high hour which bfought me face to face with my opportunity.

As I think of the achievements of Senator Gore and his winning battle against his great handicap, I recall the words of the poet Henley, which seem to, in some definite way, reveal the heart and soul of the one to whom we pay our tribute of love and honor:

"Out of the night that covers me
Black as the pit from pole to pole,
I thank whatever gods may be
For my unconquerable soul.

"In the fell clutch of circumstance
I have not winced or cried aloud.
Under the bludgeonings of chance
My head is bloody but unbowed.

"Beyond this place of wrath and tears
Looms but the horror of the shade,
And yet the menace of the years
Finds and shall find me unafraid.

"It matters not how strait the gate
How charged with punishments the scroll,
I am the master of my fate;
I am the captain of my soul."

The life of this beloved servant of the people is a constant reminder of the fact that he was greater than anything that could happen to him. He made hardships a stepping-stone to higher things.

Through the years to come, his life will be a beacon light to thousands who face life with seemingly little hope of translating their dreams into reality because of handicaps.

In this hour of memory I would have you remember that Thomas P. Gore was a statesman and not a mere politician. He did not keep his ear to the ground to hear what folks were saying or demanding in order that he might readily conform to the cry of the multitude. He was a watchman on the tower ready to interpret to his constituents the signs of the times, and to speak to them with authority on the great issues of the day. Conversant as he was with history, he knew that to live up to his convictions and to answer the stern call of duty would lead to political martyrdom, but he also took the long look and knew that the right would finally triumph. With a vision of a poet and a prophet and the wisdom of the true statesman he saw what the poet James Russell Lowell saw in the days of the long ago:

"For humanity sweeps onward where today
the martyr stands,
On the morrow crouches Judas with the
silver in his hands;
Far in front the cross stands ready and the
crackling fagots burn,
While the hooting mob of yesterday in
silent awe return
To glean the scattered ashes into history's
golden urn."

In the First World War he opposed the entrance of our country into that struggle, and also insisted if men were to be conscripted, wealth must also be conscripted.

This courageous stand ended in his retirement from the Senate, but he continued to battle for the things for which he was willing to give not only his political life, but also his physical life, for with all his strength he continued the fight. When the passions of that great struggle faded away, he was again elevated to his position in the Senate and continued his brilliant career and when finally retired after distinguished service there was no spirit of complaint or bitterness. The sunset hours of life were peaceful, and he sleeps the sleep of the just and good.

I would be recreant to what I deem a sacred duty if I did not, in closing, pay tribute to his beloved wife who through all the years of their wedded life walked the pilgrim years with him. With rare devotion and with a high sense of consecration to a Holy task, she became the medium through which he came to know the world's great literature, music, art, and history, and political economy. Through her eyes he saw the beauty of the sunrise and the glory of the sunset; the majesty of Mount Scott standing like a lone sentinel at the head of the mountain range. When the Senator and his wife were patients in a local hospital recuperating from injuries sustained in an automobile accident, I visited them often, and standing between their beds I clasped their hands and through me they were again joined in that blessed comradeship which began in life's morning. Hand in hand they marched in beautiful glow of life's evening time, and it was: "A light more beautiful than ever gleamed on land or sea."

To this faithful citizen, Oklahoma says: "Well done thou good and faithful servant."

Truly it may be said of him as Edwin Markham said of Abraham Lincoln:

"The color of the ground was in him, the red
earth,
The smack and tang of elemental things;
The rectitude and patience of the cliffs;
The good-will of the rain that loves all
leaves;

The friendly welcome of the wayside well;
The courage of the bird that dares the sea;
The gladness of the wind that shakes the corn;
The pity of the snow that hides all scars;
The secrecy of streams that make their way
Under the mountain to the rifted rock;
The tolerance and equity of light
That gives as freely to the shrinking flower
As to the great oak flaring to the wind—
To the grave's low hill as to the Matterhorn
That shoulders out the sky.
And his passing is, as when a lordly cedar, green with boughs,
Goes down with a great shout gainst the hills,
And leaves a lonesome place against the sky."

As the sunset kisses the mountains and the valleys and the broad prairies of Oklahoma this evening, there will be a lonesome place against the sky.

Success of the Berlin Airlift

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial entitled "Operation 'Vittles'" which appeared in the Washington Times-Herald this morning, April 28, 1949.

As a member of the Committee on Armed Services I visited Germany last November and for several days studied the operations of the Berlin airlift. I was amazed at the magnitude of the operations and I could see even at that time the favorable effect the airlift was having on the people of Europe.

OPERATION "VITTLES"

The end of the Russian blockade of Berlin is in sight and with it the end of the Berlin airlift.

In order to get a better understanding of the significance of this tremendous operation in which air power was called to rescue 2,500,000 persons suddenly cut off from food, heat, light, clothing, and all other supplies needed to run a big city, we've decided today to review the history of Operation "Vittles."

On June 21 of last year, Stalin's gang of high-pressure boys decided they could force the western powers into agreeing to the Kremlin peace terms for Germany by isolating Berlin. Accordingly they barred all railroad and highway entrances into the city.

But the Russians left a loophole. They had signed a written agreement providing three air corridors from the Allied zones through the Soviet zone into the beleaguered city. They were only 20 miles wide, but that was wide enough.

Gen. Lucius Clay and Gen. Curtis Lemay jumped in, and on June 26 a small fleet of two-engined C-47's made 25 trips carrying 80 tons of supplies into the city. It was not much, but the "Lemay Coal & Feed Co.," as it was dubbed by the boys, was in business.

CLAY AND LEMAY HAD KNOW-HOW

Both Clay and Lemay knew you couldn't supply a whole city of two and a half million people with the planes and men on hand. But Clay knew what the city needed and Lemay knew how to get it there. Lemay, it must be remembered, helped rubbleize that very country in the war, starting with experimental type B-17's and finally burning out Japan with B-29's.

So they sent out calls for bigger planes and more of them, and more men and more supplies, and pretty soon the big four-engined C-54's were jumping off from Alaska, the Caribbean, Hawaii, and Japan to join in the biggest peacetime job the Air Force had ever attempted. The British lent their aid and the United States Navy was called into the picture.

The climax came a week ago Saturday, April 16, when the combined air power made 1,398 flights carrying 12,940.9 tons of supplies into Berlin, the equal of 22 trains of 50 freight cars each. This feat gave the Russians and everyone concerned a very good idea of what air power can do when the men in command put their minds to it.

TWENTY-SEVEN MEN KILLED

The air lift has cost the United States of America $149,664,244. Of this amount, it is estimated that $81,546,400 was spent above the amount which the normal operation of the groups involved would have cost if there had been no air lift. As of noon last Monday, a total of 1,441,105 tons had been hauled. Of this amount, 1,011,399 was hauled by the United States Air Force, 93,653 tons by the United States Navy, and 336,053 tons by the British.

During this 10 months' period 26 Air Force men and one Navy man lost their lives.

The Air Force also lost 18 C-54's, 8 C-47's, and one C-82. The Navy lost 2 R5D's.

GREAT RESULTS

The cost was high, indeed, but here are some of the gains to be considered:

First, the blockade of Berlin was Russia's big thrust in the cold war. Its defeat by air power could mark the turning point toward peace in Europe instead of another war, and we sincerely hope it does.

Second, it demonstrates that when this country commits itself to a job it can do it regardless of obstacles. The supplies were carried despite the Russians' interferences with war games, fighter harassment, and all the other nasty tricks they tried.

Third, it demonstrates that with a sufficient air force in being this country cannot be stopped from reaching its objective in peace or war, no matter what obstacles are present on the surface such as blockades, armies, or navies. We can just fly over them.

And fourth, the lessons learned in handling this large undertaking has telescoped into a few months years of experience which will be of untold value to commercial aviation. And it provided training for our airmen in a short course that would never have been equaled in normal operations.

Disloyal Utterances by Paul Robeson

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, April 28 (legislative day of Monday, April 11), 1949

Mr. O'CONOR. Mr. President, in an address to more than 2,000 firemen of the city of New York, in that great city on Sunday morning, I felt constrained to take note of the disloyal utterances made in Paris last week by Paul Robeson. Despite the extraordinary benefits which he, as an artist, had achieved under American citizenship, Robeson, claiming to speak for an entire group of his fellow citizens, declared that, in the event of war between the United States and the U. S. S. R., he and those for whom he claimed to be spokesman, would not perform their duties of citizenship on behalf of the United States.

I suggested that if Robeson was so strongly enamored of the Soviet Republics, he should take up residence there and I offered personally to undertake to secure necessary visas for him and any who wished to accompany him.

In the Baltimore Evening Sun of yesterday, there were printed three letters dealing with the Robeson statement, which I think deserve to be brought to the attention of the Congress and our people generally.

I ask unanimous consent, therefore, that they be printed in the RECORD as a supplement to my remarks.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

ONE RIGHT, ONE WRONG

To the EDITOR OF THE EVENING SUN:

SIR: Recently two American Negroes made international news. Both want world peace but each employed different means to achieve it. Time will record that one was right and the other wrong.

Dr. Ralph Bunche, United Nations mediator, will soon be rewarded for his brilliant assistance in terminating the Palestinian dispute. On the little Isle of Rhodes he wrote a peace that silenced the guns. He knew that a workable peace must be fashioned out of unity.

The other American Negro, Paul Robeson, is a victim of Communist intrigue. He is driving a wedge between the white and colored Americans. He is using mendacious lies to divide us. He is the first American Negro to betray his country, for his race has an enviable history of supporting America in war or peace.

We will never be misled by Kremlin-inspired statements. American democracy, with all of its inherent weakness, is precious to us. Its concepts will be morally upheld by all regardless of race or creed. No travesty upon truth will confuse us.

JULIA R. GERBER.

BALTIMORE, April 24.

ROBESON'S RADICALISM

To the EDITOR OF THE EVENING SUN:

SIR: Congratulations are in order for Mr. L. J. Shaw as a result of his excellent letter in protest against Mr. Paul Robeson's radicalism. It would not be just if the Negro race, which has struggled against seemingly insurmountable barriers and obstacles in the way of its attaining the right to live freely and peaceably, were thrown back and punished for the raving and ranting of such an irresponsible fanatic as Mr. Robeson.

The credit brought their race by such great Americans as Booker T. Washington, George Washington Carver, Dr. Ralph Bunche and a host of others ought not be tainted or menaced by the despicable antics of Mr. Robeson and his few frenzied followers. Certainly his words must be pleasing to the ears of the Ku Klux Klan and Governor Talmadge. The American Negro is a human being, and he feels as great a love and respect for the United States as we whose skin just happens to be white.

In the past war the blood of both Negro and white flowed freely for our country. Don't allow this new Moscow-directed wedge

to separate us and incite that serpent Prejudice to rear its ugly head any higher. Instead, let us pray to God that we may be solidified by a more tolerant and sympathetic attitude toward each other.

WILLIAM S. COOPER, Jr.

BALTIMORE, April 23.

SUGGESTION

To the EDITOR OF THE EVENING SUN:

SIR: We would like to suggest that since Mr. Paul Robeson was in Sweden and so close to the border, he might have stepped over into Russia—and stayed there.

R. M. MARKET.
L. D. SMITH,

BALTIMORE, April 22.

Address by William C. Doherty, President, National Association of Letter Carriers

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 27 (legislative day of Monday, April 11), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by William C. Doherty, president of the National Association of Letter Carriers, at a postal rally in New York City on April 24, 1949. The address is an exceptionally fine one, and goes into the history of postal pay raises. This morning I received word that the manuscript was of such length that an estimate of cost was required. The estimate of cost is $225. I ask unanimous consent that the address be printed, even though the cost of printing is $225.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One of the most asked and least answered questions among postal workers is: When is the Eighty-first Congress going to enact legislation affecting the welfare of postal personnel?

At the outset, I want to say very frankly that I do not propose to answer that query in full—I wish I could. But unfortunately—or perhaps fortunately, I am not clairvoyant. Over and beyond that, I think it would be presumptuous on my part or on the part of any other representative of an employee group to assert in public or intimate in private that he can read the minds of 96 Senators and 435 Representatives; or that he can solve the intricate equation, involving many, many other factors, inherent in the introduction, processing and final enactment of every piece of legislation.

However, I do have very definite ideas, as well as positive convictions about the legislation now before the Eighty-first Congress touching on the welfare of postal workers.

First of all, I am firmly convinced that postal people are not asking too much.

Secondly, it is my conviction that our requests are reasonable and fair.

Thirdly, and by far most important, postal employees cannot wait forever for relief.

The need for an equitable salary exists now.

The need for an adequate law covering injured employees exists now.

The need for certain adjustments in the Civil Service Retirement law exists now.

The need for a realistic approach to the salary grades for new employees exists now.

The need for justice to the ex-GI exists now.

The need for an equalization in the annual and sick leave law exists now.

The need for a real, honest-to-goodness longevity award exists now.

In short, there is an urgent need for an exploration of the basic law governing the wages, hours of work and other conditions of employment in the Post Office Department. That basic law is Public Law 134, enacted July 6, 1945, more familiarly known as the Reclassification Act.

Before I make any attempt to discuss the legislation before the present Congress in which postal workers are interested, I want the RECORD to show that I, personally, and speaking for the 95,000 letter carriers I have the honor to present, have no desire to have anything but a fine, warm, and friendly opinion of the Eighty-first Congress. Letter carriers feel that the present Members of the Congress are preeminently honest, competent, and patiotic men and women. But to use one of their own favorite expressions, reserving the right to object, letter carriers are beginning to think the Eighty-first Congress is well on the road to acquiring the somewhat dubious title of the slowest-moving Congress, so far as postal employees are concerned.

And just to keep the record straight, there are other departments and agencies in Government that rightfully should be assessed a portion of that dubious distinction, having earned that right by virtue of their delay in reporting on legislation submitted to them for comment. While it is true that within the past several weeks reports have been returned to Congress by various departments and agencies, the fact still remains that it took 3 months in some instances to secure these requested comments. My personal reaction to these long periods of procrastination on the part of Government agencies in matters affecting employees, is that they muffed the ball from a standpoint of labor-management relations. No employee—in Government or private industry—should be expected to have high morale or a keen sense of appreciation for the success of his employer's business when he is made to feel that management is so apparently disinterested in the employee's welfare that it considers 3 months time enough in which to reply to a grievance, or a request for improvement in the conditions of employment.

To digress from the main theme—although it is not totally irrelvant—the thought has often occurred to me that some type of machinery should be made available to the Congress to speed up the information they need to pass on legislation affecting Federal employees, perhaps a fact-finding board, a panel of experts that would dig out the facts. It is difficult to understand why it requires 3 months to turn in a report.

Earlier in my remarks I made the statement that postal people are not asking too much from the Eighty-first Congress by way of beneficial legislation. Let's see if the facts substantiate that statement. At the same time let's inquire into the reasonableness of these requests.

The program endorsed by the Government Employees Council of the American Federation of Labor contains the following seven points:

1. A $650 permanent increase in basic salary for all Government personnel.

2. Complete revision of Public Law 134 and the Classification Act of 1923 affecting nonpostal Federal employees.

3. The elimination of low salary grades for all employees.

4. Credit for all past service in meritorious grades and extension of the longevity principle.

5. Amendment of the United States Employees' Compensation Act.

6. Twenty-six days' annual leave and 15 days' sick leave, cumulative indefinitely.

7. Further liberalization of the tirement act.

In unanimously approving this program, the council did not necessarily list the items in any order of importance; as a matter of fact, the council considered each bill important in its own right. Individual members of the council, and even individual organizations within the group conceivably might have a favorite bill—and certainly I have no quarrel with that procedure. The record of the council will show that when the chips are down there is complete unanimity—each organization contributes its share toward the common good.

Taking point No. 1—the salary increase—let's discuss it for a moment. Back in the Eightieth Congress, postal employees petitioned for a wage adjustment on the premise that postal salaries were not in harmony with the economic conditions as they then existed. No matter how the subject was approached and regardless of the method used to arrive at the amount required to bring salaries in line with prices, the absolute minimum requirement was a 33-percent increase, 33.6 percent to be exact. Public Law 900, which became effective July 1, 1948, provided for a 14.5 percent wage boost for postal employees. No mental gymnastics are required to show that we were still left with a 19-percent deficit in our purchasing power. Since that time there has been a slight decrease in over-all costs of approximately 2.8 percent—and I am using a figure furnished me by the Bureau of Labor Statistics for the period ending February 15, 1949. If we subtract from the 19-percent deficit left over from Public Law 900 this 2.8 percent decline in prices, we still have a glaring deficiency of approximately 16 percent in our purchasable dollar.

Is there anything unreasonable about asking for a wage that will do no more than put us on an economic parity with our neighbors who are employed by private industry? That is all we are asking in our endorsement of S. 558, introduced by Senators OLIN D. JOHNSTON, South Carolina; HERBERT R. O'CONOR, Maryland, RAYMOND E. BALDWIN, Connecticut; and WILLIAM LANGER, North Dakota, and H. R. 2492, introduced by Congressman EUGENE J. MCCARTHY, Minnesota, in the House.

In his annual budget message to the Eighty-first Congress, President Truman asked for "more realistic salaries" for Government career employees. At another point in the same message we read: "The Government and its employees should be assured that the salaries paid for positions at all levels are fair compensation for the work performed."

I say without equivocation that postal employees are not now getting fair compensation for work performed; moreover, the Eighty-first Congress has a moral obligation to correct the situation.

It is evident that there is a decided disinclination on the part of the leadership in the Congress and the administration to take early action on salary legislation. Perhaps this attitude is based on the expectation or anticipation that prices will continue to decline. As I pointed out, the total drop in prices for the 7-month period from July 1948 to February 1949 amounted to a mere 2.8 percent. Are postal workers expected to wait until living costs drop the remaining 16 percent which now separates their wages and prices?

In some quarters we find concern about the budgetary situation. We are told that the Federal Government has moved into a deficit status. If this is correct, it is difficult to reconcile the ultra-conservative atti-

tude toward postal employees with the unrestrained spending in some other directions.

The apropriations for the cold war in Europe will cost approximately $7,700,000,000 in 1949, and approximately $11,601,000,000 in 1950.

The Secretary of Agriculture, Charles Brannan, recently proposed a new farm bill that is estimated will cost a tremendous amount of money, the exact amount of which the Secretary of Agriculture himself cannot say.

Our program for national defense brought forth the stupendous appropriation of $16,000,000,000.

And no doubt there will be other costly projects; postal employees, as loyal Americans, will have no quarrel with these programs. All expenditures absolutely necessary to safeguard free institutions of Government and our democratic way of life should be authorized; there should be a sound farm program to protect our producers of food from the extremes of our industrial economy. However, it is difficult, most difficult indeed, to reconcile the open-handed attitude toward these problems with the tight-fisted policy toward postal workers.

One word about those twin bugaboos, postal deficits and postal rates. If there is such a thing as a postal deficit, and I have always maintained there is no such thing, then every other agency of the Federal Government should have a check and balance system. In that way it can be determined which departments are operating at a profit, if any, and which are producing revenue equal to or in excess of their expenditures. Then let the experts analyze the field of service given the American people; let them find an equal to the matchless service the postal system provides every man, woman, and child in every town and hamlet in the United States. Following that, let them produce another Federal agency whose operating overhead includes outright and hidden subsidies to the railroads, airlines, and steamships. I believe that if all these things are given their proper consideration, any reasonable person will agree with my contention that a so-called postal deficit is a figure of speech to indicate that actual dollar-and-cents income did not match outgo. As for postal rates, it has been the historical policy of the National Association of Letter Carriers that the Postal System is basically and fundamentally a service institution. Since early Colonial days it has been accepted as such by the American taxpayer; every attempt to deviate from that line has ended in disaster. The sole purpose of the postal service is, therefore, to give swift, certain mail service to the American people at reasonable cost. What a reasonable charge amounts to is something for the Congress of the United States alone to decide.

Letter carriers contend that postal rates and postal salaries are two entirely different propositions. Salaries should have nothing to do with a determination of postal fees, and vice versa. But if rates are to be determined by what it costs in personnel hire to move the mails, then I want it made perfectly clear to the American public that the traditional postal policy of service is being abandoned for profit.

Now permit me to move on to another highly controversial piece of legislation in which all postal employees are vitally interested. I have reference to reclassification. There is much merit in our request for S. 644, introduced by Senator HERBERT R. O'CONOR of Maryland, and H. R. 4053, sponsored by Representative JAMES H. MORRISON of Louisiana. Both measures would correct many present inequities in Public Law 134, which as all of you know is the basic law for salary, hours of duty, annual and sick leave, and practically every other aspect of our employment. There is one feature about a reclassification bill which a great many postal people do not seem to understand; namely, that by its very nature, incorporating as it does so many different sections and affecting so many facets of our employment, any consideration of this type of legislation necessarily involves extensive study in committee and lengthy public hearings. There has been plenty of time for consideration of reclassification, but up until now nothing has been done about it by the Eighty-first Congress. My personal opinion is that reclassification has been used in several instances as a smoke screen, a red herring dragged across the path of our salary bill, our longevity bill, our annual and sick leave equalization bill, and so forth.

The enactment of S. 644 or H. R. 4053 would cure a great many ills of the postal service. But as long as it remains pigeonholed in committee, we have no recourse other than to press for the enactment of individual items of legislation included in the reclassification measure. That, of course, we are doing.

There is one subject on which I could spend all of the time allotted to me on this program and even then I would not have said enough in favor of the legislation. I have reference to the elimination of low salary grades. The present ridiculously low entrance wages paid postal employees are a disgrace—I repeat, an unadulterated disgrace.

It is not enough that the entrance salary is low, but the injustice is compounded when we stop to consider that practically all of the new recruits in the service during the past 4 or 5 years are veterans of the military. "What price glory?" they must ask themselves.

There are three important bills that have to do with providing benefits for employees in the lower grades. H. R. 87 and H. R. 927 apply only to military veterans. You are undoubtedly aware that adverse reports on these measures have been filed with the House Committee on Post Office and Civil Service by the Director of the Budget and the Post Office Department. Briefly the objections alleged discrimination and the cost feature was described as prohibitive. H. R. 87 was estimated to cost $61,000,000, whereas H. R. 927 is estimated to cost approximately $18,150,000. The essential difference between the two measures is that H. R. 927 applies only to employees who entered the service on or before January 1, 1948, and H. R. 87 applies to all employees who entered the service within 3 years following the date of passage of the bill. Both bills would give credit for military service toward salary promotions.

There are certain inequities and discrepancies in the increase that will be given to veterans under both of these bills. H. R. 927, for example, provides that employees who have benefited under Public Law 577 shall not be entitled to benefits of H. R. 927. In effect, this would mean that an employee who had 5 years' military service and was reached for appointment after he had served 3 years in the military, under the provisions of Public Law 577, would only receive $200. However, an employee who was not on the rolls at all and came under H. R. 927 would receive $500.

It is for these and other similar reasons that the National Association of Letter Carriers looks with greater favor on the third of the three bills referred to, H. R. 1704, introduced by Congressman LAURIE BATTLE, of Alabama. It would eliminate completely the four lower grades. Both of these other bills, while they would temporarily correct inequities, would eventually bring about the same situation that existed following the passage of Public Law 134, in that there is a closing date on the benefits of the operation of the law, and the employees following that closing date would have the same complaints as the employees have now. The Battle bill would correct the situation for all time, and is by far the more important bill. S. 391, introduced by Senator JOHN SPARKMAN, of Alabama, is a companion bill to the Battle measure.

There are several bills now before the Senate and House which are designed to give employees credit for all past service in determining eligibility for longevity credits provided for in Public Law 134. The principle of longevity awards is based on the theory of rewarding employees for long and meritorious service. That principle is defeated or greatly minimized if no consideration is given past meritorious service. The Lyle bill, H. R. 250, seemingly is the best solution to this problem. It would immediately grant all employees credit for all of their service. I should add that the enactment of this legislation is most desirable for another reason. That is, by increasing the basic wage you thereby increase the average 5-year wage used in computing retirement annuity. I have no doubt in my mind that a great many postal employees would take advantage of retirement if their 5-year average salary could be increased by the amount realized through the enactment of this longevity feature. I am reasonably certain that longevity legislation will be enacted in this session of Congress.

Perhaps one of the really bright spots in our legislative program is the prospects of the measure to liberalize the United States Employees' Compensation Act. The intrinsic merit of this legislation is equaled only by the urgent need for its early enactment.

The present United States Employees' Compensation Act is woefully inadequate in the light of present-day requirements. The act now in effect has remained basically unchanged over a long period of years. Specifically, the benefits are not nearly enough in comparison with today's prices or salary scales. This contention is more easily understood when it is pointed out that the benefits now in effect are computed on the wage standard of 1925—nearly a quarter of a century ago. The present act provides for compensation at the rate of 66⅔ percent of salary. Today, employees injured on the job receive approximately 39 percent of their regular income.

It is not important that I, personally, believe the present law should be brought up to date. But it is vitally important that no future disability case be adjudicated on the basis of a $116.66 maximum monthly payment—with no provision or schedule of awards for the loss of or the loss of the use of a member or function of the body.

Not too long ago one of your own coworkers, Alexander Cook, a New York letter carrier, was killed on duty. You recall the accident, I am sure. You remember how he was returning from delivery of his route; how a woman intent on suicide jumped from the fifteenth floor of an apartment building. She not only killed herself, but she landed on Carrier Cook, crushing him to death. He left a wife and four small children. They receive $116.66 a month from the Government. Likewise, I know all of you are familiar with the tragic bomb accident which permanently disabled Carrier Osborne in Bowling Green, Ky.

The correction for these conditions is incorporated in H. R. 3191, introduced by Congressman JOHN LESINSKI, of Michigan, and S. 1287, introduced by Senator ELBERT D. THOMAS, of Utah.

These bills establish the minimum compensation of $112.50 a month; it also provides compensation at the rate of 66⅔ of the wage loss, plus 8⅓ where the disabled worker has one or more dependents. This is a very fair and modern schedule.

The bill also provides for a scheduled payment of benefits in case of disability, partial in character but permanent in quality, which results in the loss of a member or the loss of the use of a member or functions of the body.

Section 10 of the present act is amended to provide increases in benefits for widows and wholly dependent widowers and children.

Section 11 of the present act is amended to increase the burial benefit to $400—it is now $200.

I think it will be interesting to this audience to know that both the Lesinski bill and the Thomas measure used as a pattern for their schedules the rates provided for in the New York State law. This legislation is eminently fair; it is forward looking; it is socially desirable. I am thoroughly confident that it will be written on the statute books before the current Congress adjourns.

The sixth point of the Government Employees Council is the equalization of annual and sick leave.

If there is anything that raises my blood to a boil, it is to be told that legislation in which letter carriers are interested is objectionable because it is discriminatory in that its benefits are restricted to certain employees. If there is anything more discriminatory in the entire Federal structure than the present annual and sick leave applicable to postal personnel, I would like to know about it.

I want the record to be crystal clear on one thing: letter carriers are not opposed to the 26 days' annual and 15 days' sick leave now enjoyed by most Federal employees; our request for equal consideration is not to be construed as an undermining of the benefits now enjoyed by these other people. Simply stated, we believe equality must prevail in the matter of annual and sick leave as in other fields of employment. We want to be lifted up to the level of other Government employees, we do not want them lowered to our level; postal employees don't do business that way. We want everyone lifted to the same plane.

Representing letter carriers as I do, it is natural that I am more familiar with conditions of employment concerning letter carriers. With no intention of minimizing the stress under which other postal employees work, I know that no job in the postal service is an easy one—a snap, to use the parlance of the day. I am convinced that letter carriers have one of the most arduous jobs in or out of government. Certainly they deserve as much time for relaxation and recuperation from illnesses as that given any employee in the various departments and agencies of the Government.

Permit me to give you a few brief figures to substantiate my statement that letter carriers have an arduous and a hazardous occupation; I think these statistics will convince even the most hardened skeptic that letter carriers richly deserve the fullest equality with other Federal workers in the matter of annual and sick leave.

The Compensation Commission informs me that in computing the frequency of injuries, they use as a basis the rate of disabling injuries per million man-hours. The frequency rate for letter carriers is 17.8. To illustrate the significance of that figure, I want to point out that the frequency in the post office for all employees is 8.8; in the Navy Department it is 6.5; in the Interior Department it is 13.8; in the Federal Works Administration it is 15.6.

The Commission measures the severity of injury on the basis of 1,000 man-hours worked; the severity for letter carriers is .55, compared to .22 for the post office as a whole.

There are several bills in both the Senate and House designed to grant postal employees 26 days' annual and 15 days' sick leave. H. R. 1304, introduced by Congressman GEORGE P. MILLER, of California, has received a favorable report in principle from the Civil Service Commission. The report included, however, a notation inviting the attention of the committee to the fact that the legislation would involve a substantial yearly expense to the Post Office Department.

Recently, I had the privilege to serve as a member of an advisory committee to the staff of the Senate Post Office and Civil Service Committee. Our group made a study of vacation and sick-leave legislation. It was significant that our panel unanimously recommended that postal employees be granted equality in annual and sick leave with other Federal personnel.

This legislation is long overdue; simple justice demands that postal workers be granted 26 days annual and 15 days sick leave, and I might add that justice too long delayed is no justice at all.

In the field of retirement legislation, the representatives of your national organizations have been most diligent in seeking further improvements in our retirement law. I want to say here and now that our retirement law, that is, Public Law 426, enacted last year, is in the main a very fine piece of legislation. True, it needs improvements—there are certain refinements that should be made, but no law is perfect when it is enacted—our retirement law is no exception. But I reiterate, it is a vastly improved law as it now stands; our job is to further perfect it. That we intend to do.

Retirement legislation is a highly complex and intricate mechanism. Perhaps this is not the time or place to enter into an analytical discussion of every phase of retirement. But I do want to give you a brief explanation of some of the more important sections of the present law which the Government Employees Council feels should be amended.

All of you are familiar with that section of Public Law 426 which compelled those already on retirement to choose between the modest increase in annuity provided for in the bill and a widows' annuity. That was and remains a harsh decision to force on anyone. It is cruel to ask a man to make a decision that deprives him of needed income on one hand, and utter disconcern for the welfare of his spouse on the other in the event he predeceases her.

Senate bill 878, introduced by Chairman OLIN D. JOHNSTON, of the Senate Committee on Post Office and Civil Service, provides that employees who were retired prior to the passage of Public Law 426 will receive both the $300 increase or 25 percent and the widows' annuities. A Senate subcommittee has favorably reported this measure to the full committee. It appears likely that the full committee will consider this bill at their meeting scheduled for next Tuesday, April 26. According to all indications now, the full committee will also approve the bill. The prospect of passage of this legislation in the present Congress seems very good. It is estimated this bill will cost $13,000,000 a year.

Congressman HOMER THORNBERRY, of Texas, has introduced H. R. 4295 in the House; it is a companion bill to S. 878. Early hearings have been promised in the House.

Another Senate bill, S. 1440, appears to have very good prospects in the present session. This measure was likewise introduced by Senator JOHNSTON of South Carolina. It provides that when an employee retires it will not be necessary to make an election to provide an annuity for his wife. The election annuity is automatic—no reduction in the annuity of the employee shall be made.

Experience has shown that over 50 percent of the employees retiring since the passage of Public Law 426 have elected to take the full annuity, thereby making no provision for their wives. It is most unfortunate that those electing to take the full annuity were generally in the lower-income groups. The pressure of living costs compelled them to look for the greatest possible amount of money for immediate purposes.

The Retirement Division has estimated that S. 1440 would cost approximately $25,000,000. The fact remains, however, there will be no effective survivorship program until this type of legislation is enacted into law.

H. R. 4036, introduced by Congressman EUGENE J. MCCARTHY of Minnesota, is a companion bill to S. 1440.

A third bill sponsored by Senator JOHNSTON is known as S. 1189. It not only includes the language of S. 1440, previously described, it also provides for the elimination of the reduction factor for those who retire at age 55 with 30 years' service. As far back as I can remember—and that goes back more than a quarter of a century of postal service—there has been a continuing campaign for retirement after 30 years' service. This bill places a 55-year-age stipulation on that service, but it does incorporate the principle of retirement after 30 years of service. It is a very meritorious bill; it deserves the support of all postal employees. I can assure you that it is receiving the complete support of your national leaders. It is only fair to tell you, however, that a very strong undercurrent of opposition exists against any plan of retirement that provides for a full annuity after 30 years' service at age 55 or any other reduced age.

There are, as I said, many other bills touching on retirement. For example, Congressman GEORGE P. MILLER of California, has introduced H. R. 1963 which includes the provisions of S. 878, and it also gives present annuitants the right to have their annuities recomputed under the new formula.

Congressman JAMES H. MORRISON of Louisiana has sponsored a bill, H. R. 1963, which provides that those who elected to leave a widows' annuity and are predeceased by their spouse shall be restored to a full annuity, just as if they had not made an election.

He has also introduced H. R. 2060, which provides for 30-year optional retirement at the option of the employee only.

Congressman EDWARD H. REES, of Kansas, has introduced H. R. 543, which exempts annuities up to $1,440 from income tax. Congressman JAMES C. BOGGS of Delaware has sponsored a similar bill.

Senator LANGER, of North Dakota, has introduced a bill, S. 801, which provides an annuity for widows of all employees deceased prior to February 28, 1948.

Thus, we have our job cut out for us.

There are, of course, many other bills of interest to individual postal organizations because they directly affect their membership. The Government Employees Council gladly supports these measures and cooperates with the individual organizations to the fullest extent. I know that letter carriers have received this support in their fight for a uniform allowance, rural-carrier legislation, and village-delivery legislation * * * each peculiar to letter-carrier employment.

We are going down the line for the GEC program * * * the $650 salary bill * * * the compensation bill * * * and all the other measures I have outlined in this address. We want your help. We must have it. This great State of New York has always been in the vanguard of every campaign for a better postal service and improvement in the working conditions of its employees. I am confident the postal workers of New York will never relinquish the honor spot they have always held in previous drives for beneficial legislation.

This State produced one of the greatest Americans of all time—his name was Franklin Delano Roosevelt. Twenty years ago, when he was Governor of New York, he saw the great need for continually improving our social and labor legislation to keep it from falling behind the times. On one occasion he put his philosophy in these words:

"Labor legislation must be kept in step with changing developments in individual life and forward steps in social welfare."

Postal employees can well meditate on those words. Let's get going together. And if I might paraphrase the immortal words uttered by Farragut during the decisive battle of Moble Bay in 1864, I would leave you with this campaign slogan:

Damn the obstacles! Full speed ahead!

Jefferson, Roosevelt: Two Great Americans

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include an article that appeared in the Farmers Union Herald of April 18, 1949:

JEFFERSON, ROOSEVELT: TWO GREAT AMERICANS

The month of April brings recollections of two great Americans—Thomas Jefferson and Franklin Delano Roosevelt. Jefferson was born on April 13, 1743. Roosevelt died on April 12, 1945. Jefferson, born a colonial aristocrat, nevertheless set the pattern for modern America and his ideas became the foundation upon which American democracy has been built. Roosevelt, also raised in the upper circles, took over in an age of reversion and reaction and helped guide the Nation forward in the Jefferson tradition. The third and the thirty-second Presidents both had overwhelming faith in the fundamental honesty of the American people and in their common sense.

It was Jefferson's ideas which resulted in making education by the state a fundamental article of democratic faith. Jefferson advocated the emancipation of slaves, It was Jefferson who warned the Nation against the danger of a large standing army.

In choosing his associates, Jefferson's only tests were honesty and knowledge. He is said to have known no social distinctions, writing at one time: "If it be possible to be certainly conscious of anything, I am conscious of feeling no difference between writing to the highest and lowest beings on earth."

Jefferson fostered education of the people with the great faith that ignorance can be eliminated. He believed that majorities rule not only by virtue of force but also by virtue of right. He was the champion of religious freedom, separation of church and State, and the right of the individual to follow the dictates of his own conscience.

Roosevelt, who died on the eve of his nation's victory over fascism, hated war. "I wish," he said, "that I could keep war from all nations, but that is beyond my power."

Rising to the Nation's highest office amidst clouds of economic crisis, Roosevelt turned words into deeds to back up his firm belief that, as he put it:

"Democracy is a living thing—a human thing—compounded of brains and muscles and heart and soul. The service of democracy is the birthright of every citizen, the white and the colored; the Protestant, the Catholic, the Jew; the sons and daughters of every country in the world, who make up the people of this land. Democracy is every man and woman who love freedom and serves the cause of freedom."

A firm believer in the sovereign power of the people, Roosevelt declared: "Americans must forswear that conception of the acquisition of wealth which, through excessive profits, creates undue private power over private affairs and, to our misfortune, over public affairs as well."

To business, Roosevelt said: "In the last analysis, consumer buying power is the milk in the coconut of all business. Whether you own a big department store, or do business in a small way on the main street of a small town, your sales are dependent on how much money the average family in the community is earning."

Storm clouds of economic crisis mass again and a war-weary world hears renewed talk of war. We must have statesmen again who have faith in the people and who hate war if we are not to lose the great gains made under the Jefferson-Roosevelt tradition of liberalism.

Who Pays Federal Aid?

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 28 (legislative day of Monday, April 11), 1949

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Who Pays Federal Aid?", which was written by Joe Lee, editorial writer of the Topeka State Journal, of Topeka, Kans.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO PAYS FEDERAL AID?

States' rights have come to mean, about as much as anything else, the rights of States to hold out their hands to Uncle Sam for extra spending money.

The States never seem to face the fact that it is their own money they are accepting in return for the privilege of licking the Federal boots. Every State government has come to depend upon Federal money grants, or "aid," as it is called, that when Washington says beg the States generally beg, just as when Washington says jump, they jump.

In 1932 Uncle Sam passed $269,000,000 around to his sovereign nephews.

In 1948 he passed out more than 20 times that much, or approximately $5,500,000,000 to the same.

People yell about State taxes, yet accept Federal grants to States out of Federal taxes as if the money were coming from Afghanistan instead of their own pockets. They bow and scrape and thank Washington for the favor. They send delegations to the National Capital to get more favors. Usually such a delegation walks in just as another local delegation demanding tax reduction is packing up to come home. Only the latter type of delegation always returns empty handed.

Take Kansas. According to the State chamber of commerce the State's share of the current Federal budget load is estimated at $486,000,000—almost a half billion—an amount which is more than four times the total of all State, county, township, school, and special property taxes combined.

According to a recent study of State finance put out by the University of Kansas bureau of government research, 21 percent of the State's revenues in 1947 consisted of money shipped to Topeka from Washington under the heading "Grants from the Federal Government." Total State revenues were approximately $112,000,000, so Federal "aid" amounted to about $23,500,000—almost as much as State revenues from income and inheritance taxes, license and privilege taxes, and unemployment taxes, combined.

To top it off, the same Kansas study classified these "grants from Federal Government" under the heading of the State's "nontax" revenue.

Nontax? Where do they think the Federal Government is getting the money—picking it off the Tidal Basin's cherry trees?

Yardsticks—Labor and Capital

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. RABAUT. Mr. Speaker, there is one question that seems to me to be basic to our entire consideration of labor-management relations.

That question is, Are the parties upon whom we seek to impose rules and regulations equal? Do they stand before us equally armed and equally powerful? If we impose an equal restriction upon both, does it fall with the same weight upon both?

On that matter, Mr. Speaker, I wish to call the attention of the House to an article published last summer in Life magazine, a magazine that by no stretch of the imagination could be called friendly to labor.

That article sought to prove the might and power of our labor unions. It sought to build up this idea of big labor about which we hear so much. And it sought to do this by showing the amount of money in the union's treasuries.

This article in Life magazine, after surveying all the unions in the Nation—AFL, CIO, railroad workers, mine workers, machinists, and other organizations—added up its figures and found that these 16,000,000 men and women had in their aggregate treasury a sum of approximately $224,000,000.

This $224,000,000 represented all the moneys in the treasuries, plus such funds as were held by banks, insurance companies, and other such institutions owned by labor organizations.

Now, $224,000,000 is a lot of money, Mr. Speaker. I would be the last to contend otherwise. But huge as the sum is, it represents merely the assets of the Delaware & Hudson Railroad in 1935.

If all the unions in the country dealt with the Delaware & Hudson Railroad Co.—if they did business with this company—then I would say that they sat down as equals.

But we know that they do not.

Take a specific instance. The United Steelworkers of America is a large organization. According to the Life magazine survey, it had assets of some $5,000,000.

One of the concerns it does business with is the United States Steel Corp., a corporation with assets of upward of $2,000,000,000.

I am sure, Mr. Speaker, that none of my colleagues would contend that these two organizations are equals in terms of the resources at their command. Yet, they persist in this talk about big labor.

The truth is, Mr. Speaker, that only in the laws of the United States do our labor unions and our corporations find

equality—or they did find it until the passage of the Taft-Hartley law upset the balance.

The Wagner Act, whose spirit we seek to incorporate in the bill now before the House, merely put into law some fundamental principles of equality with which we all agreed.

So I say, Mr. Speaker, that if we seek to promote genuine collective bargaining, if we seek to establish once again the principle that true bargaining must take place between equals, we must wipe from the statute books the Taft-Hartley law and return to the spirit of fairness and equality that prevailed for the previous decade.

Northwest Miners Support H. R. 1326

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my remarks I wish to place in the RECORD a statement of policy of the Northwest Mining Association regarding bills before Congress relative to import duties on certain metals and ores.

While the statement mentions the McCarran-Cain bill, which was a companion measure to a bill I introduced in the Eightieth Congress, it now refers to the perfected bill I am now sponsoring in the Eighty-first Congress, H. R. 1326.

This bill, H. R. 1326, would encourage the opening up of a new zinc-producing area in northeastern Washington by allowing ores mined there to be smelted at Trail, British Columbia, and returned to the United States duty-free for use here. Since there is no available smelter in the United States which can or wants to handle these ores and zinc is badly needed in the United States for commercial and national defense purposes, this is the most logical new source of zinc supply. It has been estimated that passage of H. R. 1326 would result in creation of approximately 1,000 new jobs for American miners and shippers.

POLICY OF THE NORTHWEST MINING ASSOCIATION BASED ON RECOMMENDATION OF NATIONAL LEGISLATION COMMITTEE

That the Northwest Mining Association support the McCarran-Cain bill, or any successor to it that provides for the reentry without payment of duty of an amount of zinc equivalent to that mined in the United States and exported for processing outside the United States. While this is contrary in principle to many actions taken in the past by the Northwest Mining Association, it is held that the bill should be supported; (1) because it will greatly benefit local interests, (2) because the lack of adequate zinc processing facilities makes it impossible to secure equally favorable smelting facilities in the United States, and (3) because the conditions which make export desirable are not believed to be of a permanent nature.

That the Northwest Mining Association oppose any extension of a general suspension of tariffs on copper, lead, or zinc for more than a 1-year term, and to protest vigorously any action taken which extends beyond a 1-year suspension.

Mrs. Nancy Belle Norton, "Angel of the Philippines"

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. LANE. Mr. Speaker, the names "Bataan" and "Corregidor" shook the civilized world in those grim days of 1942 when a handful of Americans and Filipinos held out against the crushing might of a modern Japanese Army.

Caught completely unprepared, these few thousand men were the only opposition we could offer throughout the vast stretches of the far Pacific.

Even we back home could sense that their position was hopeless. Their gallantry touched and shamed all of us. Somehow we felt that we, as individuals, were responsible for their plight. For if America had courageously faced the danger signals which were so apparent for many months before, these men would not have been abandoned to their fate. We would have prepared ourselves and would have been in a position to come to their assistance.

It was the same tragic story of "too little and too late."

The men and women on the peninsula and on the rock would have to fight on as long as humanly possible, to delay the enemy from other operations and gain for the folks back home precious time in which to organize for survival.

The war was going badly for us. It was a question of saving the United States. Some pessimists were saying that the war would last from 8 to 12 years. It would be a long road back to the Philippines and the men and women we were sacrificing to military necessity because we did not have help available for them.

As the news of growing disaster trickled in, another fear clutched at our hearts. What would happen to the men and women taken prisoner, whom we would not see again for many years, if ever? How would they be treated by an insolent foe, intoxicated by his spectacular conquests? How would our people hold up during the long, weary years of imprisonment, taunted by their masters, and hearing nothing of the true state of affairs in the United States? Would they crack under the terrible pressure of fear, hunger, and despair?

The haze of peaceful years has come between us, dulling the sharp outlines of those days when the flag came down on Bataan and Corregidor. In memory you can look back without pain, recalling those qualities of love and mercy which stood out from the general suffering and despair.

One above all we will remember—that of a woman who no longer had the physical vigor of youth to sustain her, but compensated for this with a splendid spirit that never knew the meaning of surrender. She, too, was a prisoner, but the enemy never conquered her faith, her hope, and her charity.

They call her the Angel of the Philippines, but she was also mother to thousands of homesick Americans, seeing to it that thousands of packages got through to them, visiting the hospitalized, and by the lift that her presence gave, bringing the priceless gift of morale without which many might not have survived.

How important this was is revealed in a War Department report which states that several times as many American prisoners of war died, mostly of starvation, forced hard labor, and general brutality, as the Japanese had ever reported. At one prison, Camp O'Donnell, about 2,200 Americans died in April and May of 1942. In the camp at Cabanatuan about 3,000 had died up to the end of October 1942. Even heavier mortality occurred among Filipino prisoners of war at Camp O'Donnell.

The calculated Japanese campaign of brutality against the exhausted, hungry Americans and Filipinos on Bataan began as soon as they surrendered in what thereafter became known among its survivors as the march of death.

Some men made that march of 85 miles in 6 days on one mess kit of rice. Others made it in 12 days without any food whatever. There was very little water. Much of the time the columns were given the sun treatment, which was a deliberate form of torture. Prisoners were beaten, bayonetted, and shot on the slightest whim or fancy. In his orgy of victory, the enemy gave vent to every form of savagery.

It is a miracle that any survived without going mad.

She talked back to the Japs who refused to listen to her and then sought out higher Jap officials in her determination to help the prisoners.

As they saw this frail but fearless schoolteacher standing up to them, perhaps they were reminded of their own mothers, for here was the personification of decency which they did not dare to harm. When they refused her pleas, she did not quit. With persistency and with sublime moral fervor she kept at her task until she was granted permission to carry foods and clothing to the sick and injured of which there were so many.

For her outstanding services, she has since been awarded the Medal of Freedom which is the highest decoration that the Army can grant to a civilian.

But I believe that she merits an even higher honor—namely that of the everlasting thanks of the people of the United States.

There are many people who are worried by personal problems, by developments within our own country, and by tensions on the international scene. To them I recommend the inspiring example of Mrs. Nancy Belle Norton.

From her they will learn that no problem, however hopeless it may appear, is

beyond the saving grace of high courage and devotion to the needs of one's fellow man.

I am proud to join in paying tribute to Mrs. Norton, and I wish her every blessing that grateful hearts may bring.

Newspapers' Death Knell

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Oregon City (Oreg.) Banner-Courier on the subject of the proposed increase in postal rates:

NEWSPAPERS' DEATH KNELL

Way back there, some 100 years ago, Congress offered a helping hand to the folks who needed and wanted educational and informative publications, but couldn't afford them because publishers just couldn't get the price within reach because of high transportation and distribution costs.

Congress placed such publications—weekly newspapers and farm journals—in a special class and gave them a low postage rate.

That was a national policy—to disseminate information helpful to the folks who were building America out beyond the city limits.

It still is national policy, but there has come into the first-fostered field, a group of mass-production publications whose aim is to profit from the postal rates through Nation-wide circulation.

To get this circulation, these publications have furnished entertainment rather than education and information. By offering a light, easily read, entertaining publication, they get mass circulation and, having such circulation, could reap fortunes from advertising.

That growth is not in line with national policy as founded way back there and proved sound down through the years.

Now comes the Post Office Department, blind to that policy, and demands that postage rates be increased on all publications as a matter of raising revenue—not in public service.

Further, the Post Office Department takes the attitude that advertising is an evil thing. If a country newspaper carries more than 75 percent of its space in advertising in more than one-half of its issues, that newspaper will be chastised by losing its second-class mailing permit.

Advertising is informative. Much of it is more educational and of wider appeal than the country correspodence that gets the blessing of the post-office arbiters of what is proper for the folks to read.

Under the proposed rates, however, subscribers would have to pay 25 percent more if a country newspaper publisher printed from 25 to 50 percent of the paper's space as advertising. If a paper carries 50 percent or more advertising, the postage rate would go up another 50 percent. The publisher could only pass on this charge to the subscriber; he hasn't a bottomless pocketbook to finance it.

Without advertising, this copy of the Banner-Courier would cost each subscriber about 50 cents. Under the proposed postage rates, it wouldn't cost much more, but it would not be complete, interesting, informative, and educational without the advertising which really pays the bill for the subscribers.

Stifling advertising revenue and increasing rates at the same time is, if approved by Congress, the death knell of country newspapers.

Atlantic Pact: The Road to a Hot War?

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an article that appeared in the Farmers Union Herald of April 18, 1949:

ATLANTIC PACT: THE ROAD TO A HOT WAR?

(By Israel Epstein)

A place of gloom today is Lake Success, seat of the United Nations. The lobby talk there is that the Atlantic military pact may kill the UN and even that the current assembly session may be the last. Noting that President Truman appeared at the signing of the pact but declined to officiate at the laying of the cornerstone of the new UN headquarters in New York, many experienced people believe that the United States is determined to bury the UN.

Open voicing of these fears has come not only from many writers and commentators but also from high officials of the UN and its western, as well as eastern, member countries. United Nations Secretary General Trygve Lie condemned the Atlantic Pact when it was first proposed. Australian Foreign Minister Herbert V. Evatt, opening the UN assembly April 5, stressed that "world-wide security * * * can be found only in a world-wide organization," and asked all nations present "not to allow yourselves to be deflected from your purposes, perhaps by the fainthearted, perhaps by the cynical, perhaps by the mischievous."

The UN was founded 4 years ago, as its Charter says, "to save succeeding generations from the scourge of war which twice in our lifetime has brought untold sorrow to mankind * * * to live together at peace with one another and as good neighbors." While verbal controversies have raged within it, it has helped these quarrels to remain verbal rather than military.

The Atlantic Pact, as admitted by no less a person than Republican bigwig John Foster Dulles, who has acted as America's chief UN delegate, is the road to war. "Our fellowship with the people of western Europe and particularly of Scandinavia ought not to seem to bring United States military might directly to Russia's border," he told the Federal Council of Churches of Christ March 8. "I do not know any responsible high official in this or any government who believes that the Soviet state now plans conquest by military aggression," Dulles said further.

"But if the pact goes into operation," he warned, "it would indeed involve a high tribute to the Soviet leaders to assume that * * * they would exercise more self-control than would our people under comparable circumstances, as for example if the Soviet Union had military arrangements with a country at our border."

Winston Churchill, who first coined the phrase "Atlantic community" and afterward helped inspire the Atlantic Pact, boastfully admitted that the pact is a war measure. Churchill said the great mistake of the West after the First World War was "the failure to strangle bolshevism at its birth." While he spoke of "settlement," Herald Tribune columnists Joseph and Stewart Alsop analyzed his words to mean "a settlement * * * that may require violent and precipitate action." The Alsops went on to say that "we must force a preventive crisis" before Russia has the atom bomb, meaning launch a war against her before that happens.

The Alsops' interpretation may be taken as the true one because these journalistic brothers are very close to Churchill and Americans who think like him, both in their sources of information and in their ideas. I myself can bear testimony to the fact that Joseph Alsop, the senior brother, talked of a United States-Soviet war as long ago as 1942, long before any vetoes, Czechoslovakias, or other acts which are now used to justify anti-Soviet measures. At the moment the Red armies broke out of Stalingrad and began driving the Nazis out of their country, Alsop, then a captain in General Chennault's Fourteenth United States Air Force, told a dinner group in Chungking, of whom I was one, that "the Russians would have to be stopped." He is still for a war, as is his ex-chief Chennault, who wants United States soldiers to fight for the beaten Chiang Kai-shek in China and like-minded gentlemen much higher up in the political and military world.

Resolution by Iowa General Assembly

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include House Concurrent Resolution 23, adopted by the Fifty-third General Assembly of Iowa:

House Concurrent Resolution 23

Whereas the use of alcoholic beverages is rapidly increasing in Iowa; and

Whereas the habit-forming practice of the use of alcoholic beverages in many cases results in lowered physical and mental efficiency, broken homes, juvenile delinquency, increased crime, and general disregard for law and order, all detrimental to the general public welfare; and

Whereas the General Assembly of Iowa does recognize the inherent right and duty of government to protect and safeguard the general public welfare of its people by all proper means; and

Whereas the above habit-forming practice is constantly being stimulated and encouraged by the use of advertising and propaganda, much of which comes from out of State and which has for its purpose financial profit rather than the general public interest and welfare; and

Whereas there has been introduced in Congress, at various times, legislation to prohibit the transportation in interstate commerce of advertising of alcoholic beverages; and

Whereas it is desirable to place this general assembly on record as not favoring such advertisement in this State: Now, therefore, be it

Resolved by the house (the senate concurring), That the Fifty-third General Assembly

of Iowa disapproves of the practice of advertising of alcoholic beverages in publications printed in this State or transported into Iowa in interstate commerce, and urges both the Congress of the United States and the next General Assembly of Iowa to take such steps as are necessary to control and eliminate such practice to the end that the general welfare of the people and especially the youth of Iowa and of the United States be safeguarded and protected.

I hereby certify that the foregoing concurrent resolution was adopted by the Fifty-third General Assembly of Iowa this 20th day of April 1949.

A. C. GUSTAFSON,
Chief Clerk of the House of Representatives.

Local Control of Public Schools

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. CHURCH. Mr. Speaker, a constituent of mine, George Fred Falley of Evanston, Ill., former president of Northwestern University Alumni Association, recently wrote his daughter, Priscilla, on the much-discussed subject of Federal support of our public schools. Falley said to his daughter, "We want local responsibility, not Federal," and sent along an editorial from the Tulsa Tribune which his daughter and wife wanted me to call to not only the attention of Members of Congress but to General Eisenhower who is quoted therein. The editorial is as follows:

[From the Tulsa (Okla.) Tribune of Saturday, March 26, 1949]

The little red school house made America. Now America is threatened by the big Red college.—SUBSCRIBER.

CHALLENGE TO COLLEGE PRESIDENTS

(By Richard Lloyd Jones)

Congressmen report they are receiving an unprecedented avalanche of letters urging them to make adequate appropriations annually out of the Federal Treasury to support our public schools. Most of these letters are from high-school pupils, obviously inspired by embittered teachers.

The hardships which our teachers experience have led them to forget, if indeed they ever knew, that the basis of our free education comes from our communities. Centralize the schools and you socialize the state.

Influence goes with money. If we turn our public schools over to Federal maintenance we turn them over to Federal influence. Thus Hitler rose to marshal his people to disaster.

Seemingly innocent in the beginning, such a tendency is a menace in the ultimate. Our public schools are supported from the public funds raised by taxation. If the Federal Government taxes to the limit of the people's ability to pay, there is little left with which the people can meet the needs of their community. Town, county, or State should be able, through legitimate tax levies, to raise enough money to build all the schools the community needs, and to pay our teachers the wages they earn but do not get. Our school teachers, school principals, school boards, chambers of commerce, and college presidents are all running away from America when they run to Washington with their tin cups.

Our colleges are impoverished. The college president is today harassed and bewildered by the necessity of raising money just for college maintenance. Donors who think they are contributing to educational causes are too often merely multiplying the college problem. Gifts generally are made to erect a specific building on the college campus which becomes a memorial to the donor.

Dr. Harper, the first president of the University of Chicago, complained years ago that he had no trouble getting memorial halls but no money for chalk.

Few men of means with benevolent impulses make substantial contributions to the college pay roll. Walls are erected over which ivy climbs and about which songs are sung. They impressively embellish the campus. But teachers remain poorly paid.

Time was when the president of a college was looked upon as a spiritual and inspirational force who devoted himself to the cultural life of students and through them to the Nation. Today, there is not a college president in the country of the caliber of Nicholas Murray Butler, David Starr Jordan, Andrew D. White, Charles W. Eliot, or Woodrow Wilson.

A few months ago General Eisenhower was made president of Columbia University. He is now on leave. He has dropped his civilian clothes to again put on the soldier uniform and take an Army job.

As a pedagog, as an administrator of faculty, and as a leader of students the presidency of a great university looked alluring to Eisenhower. But he found he was not supposed to be an inspirational academic marshal of a great student body. Even rich Columbia needed pay-roll money, and a lot of it. Brick, stone, and mortar, stately academic edifices, these Columbia had in plenty. But pay rolls memorialize no names. The general was told to go out and get. The begging job irked the general. So now speculation is current as to whether or not Eisenhower's leave of absence to wear his uniform may not mean his permanent departure from Columbia.

It is complained, and with ample foundation, that our colleges are infiltrated with communistic influences, if not direct communistic teaching. This is true. Yet the overwhelming majority of our high-school teachers and our college professors are good loyal American citizens. Their patriotism and their devotion to our country's cause are above question. But our college teachers find their jobs impose upon them an economic distress that makes any system that might bring them relief look inviting.

So the boy comes back from college to say, "Sure, Dad, the American system is O. K., but it needs radical changes. Don't close your mind to communism. It is a great new force in the world." And the boy got that straight from a teacher who was angry, a teacher who could not hope, on his pittance of pay, to send his own sons to college. Our schools and colleges are fostering resentments instead of cultivating patriotism.

In a recent issue of Collier's a professor tells why he quit teaching. Seven years of intensive study had been given to fit himself for the doctor-of-philosophy degree, necessary to qualify as a grade A teacher in a grade A college at $1,650 a year. When his baby came he couldn't find a bank that would lend a professor the money to pay the necessary doctor's fees. The banker thought a professor was a bad risk. The banker didn't know that he was society's bad risk. He knew that the teacher didn't have the rating given crude labor. But he had no desire to help do something about it.

A recent survey at Rutgers shows that faculty members there spent an average of $708 more in a year than they were paid. They spent it on bare necessities. How did they get the extra $708? By mortgaging whatever they might have or working on the side.

The result of this situation, and there is no intelligent crusade to stop it, is that college teachers are leaving the high vocation of their choice and fitness to take jobs as salesmen, as bricklayers, or plumbers. I know one who opened a liquor store. He said his wife couldn't take it any longer and he had no right to subject her to the privations of the wife of a professor. And our college presidents are going in exactly the wrong way to correct the menace.

Where does our tax money go? It goes to Washington. To the bureaucrats who bungle the people's business. And our college presidents are too dumb to marshal an enlightened protest against the tax abuses that are sending all our school influences into socialism. Our school heads are all rushing to Washington with their tin cups to get on the hand-out bandwagon.

The American way of life is no longer with us. Teachers wonder what has become of it. And there is where our college professors flunk. They do not see the truth so they do not know how to tell the truth.

General Eisenhower recently said: "The United States is in danger of falling under dictatorship through a creeping paralysis of thought and overcentralized government." This is the truth that our colleges do not teach. Our college presidents face a challenge and they do not meet it.

Imagine the impact on Congress were Eisenhower, the civilian, to marshal 100 of our university presidents to Washington to demand that the bureaucratic debauch be ended. That would return us to the American way of life.

History is filled with stories of more astonishing things than that. Our college presidents could serve no greater cause than to save our country. If Eisenhower would lead such a crusade he could save America. He could lead us back to the American way of life where our colleges would again find donors of endowments, local tax levies would again be equal to the community's school needs. And the free schools of the people would again become the "fortresses of our freedom."

Joint Resolution Relating to World Government

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD and in behalf of my colleague, Hon. NORRIS COTTON, I include therein the following joint resolution relating to world government which was approved by the General Court of New Hampshire on April 7, 1949, requesting that the Representatives from New Hampshire in the National Congress urge the President and the Congress forthwith to take the initiative in requesting amendments to the United Nations Charter strengthening the United Nations into a limited world federal government capable of enacting, interpreting, and enforcing laws to prevent war.

Joint resolution relating to world government

Whereas we believe that world peace can be created and maintained only under a

world federal government, universal, and strong enough to prevent armed conflict between nations, and having direct jurisdiction over the individual in those matters within its authority; and

Whereas in 1945 the General Court of New Hampshire solemnly declared "that all peoples of the earth should now be united in a commonwealth of nations to be known as The Federation of the World"; and

Whereas we are mindful of, and endorse the efforts of the United Nations to bring about a world community favorable to peace, and further believe that every avenue should be utilized so as to transform the existing organization of the United Nations into an effective world government: Now, therefore, be it

Resolved by the Senate and House of Representatives in General Court convened, That our representatives in the National Congress be and hereby are requested to urge the President and the Congress forthwith to take the initiative in requesting amendments to the United Nations Charter strengthening the United Nations into a limited world federal government capable of enacting, interpreting, and enforcing laws to prevent war. The secretary of state is directed to send a copy of this resolution to our representatives in the National Congress, to the Speaker of the National House of Representatives, to the President of the National Senate, and to the President of the United States.

RICHARD F. UPTON,
Speaker of the House of Representatives.
PERKINS BASS,
President of the Senate.
SHERMAN ADAMS,
Governor.

Approved April 7, 1949.

Economy in Government

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, April 28 (legislative day of Monday, April 11), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Gloomy Reality," published in the Cincinnati Enquirer of April 24, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GLOOMY REALITY

Addressing the American Society of Newspaper Editors in Washington, Senator HARRY F. BYRD, of Virginia, predicted a 3-year deficit of $11,000,000,000, and said that if our present rapid trend toward a more powerful Central Government is not halted "we are headed for regimentation equal to that which is now suffered by the English, if not worse."

The Virginia Democrat is a foremost authority on economy in government—or the lack of it. His words have more than ordinary weight, therefore, because he knows what he is talking about. As a matter of fact, however, it hardly requires the services of an expert to recognize that a constant increase in the scope and amount of Federal spending heads inevitably in the direction of a socialized state.

When government grows too great, it must undertake more and more regimentation of the lives of the governed in order to support itself. Our traditional pattern of democratic government was not predicated on the idea that the Government will be everything and do everything.

Senator BYRD's gloomy fiscal outlook did not take into account the recently proposed health plan, or a 70-group air force or universal military training—and it did assume that a high level of prosperity would continue. In other words, the picture may be even blacker than he painted it, unless Congress calls a halt in the onrush of centralization and greater spending.

Social Security Taxes

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New London (Conn.) Day of March 5, 1949:

STILL FOOLING THE PUBLIC

The other day Representative KENNETH B. KEATING, New York State Republican in the House of Representatives in Washington, pointed once more to a basic misrepresentation in the social-security system, mentioned here many times before and never remedied. It is, of course, the cynical business of collecting social-security taxes for a definite purpose (the social-security taxpayer fondly hopes that it is to accumulate a credit in his name, so that he may get the money back, and more too, when he reaches 65 years of age) and then turning the cash into the general fund, for ordinary expenses of the Federal Government. Of course, the Government does one more thing; it adopts about the same policy that the small storekeeper may follow when he takes $5 out of the till, goes down the street to buy a couple of shirts. He puts a "chit" in the cash register, saying he has taken the $5 and therefore it will be "light" by that amount, when checked at the end of the day.

But, as the New York State Representative notes, the Federal Government has now collected more than $12,200,000,000 in pay-roll deductions for old-age and survivors' insurance purposes—and has spent most of it for other purposes! The Representative puts it bluntly: "It is not the method of administering the old-age and survivors' insurance trust fund, so-called, to which I object, but the failure of the administration to inform the public of the facts. Staggering sums have been collected from pay envelopes to run the Government, on the pretext and representation to the workers that this is an insurance fund from which they will get back many times their payments in later life. Instead, he pointed out, even those who have directly benefited thus far have found their old-age payments, on reaching the age of 65 years, "pitifully small."

The truth is that the whole system is a snare and a delusion, calculated to delude the taxpaying public, and there is no other way of explaining it. The Government takes the money and uses it; it "replaces" the money taken out of the "fund" by putting Government bonds in the insurance trust accounts. But do the bonds mean anything, with relation to the money already paid into the Government's general fund? Not one solitary thing. A Government bond isn't money unless it is sold to someone. You can print a million of them and keep them in a Government vault and they mean exactly nothing. When the time comes for the Government to sell these bonds, it naturally follows that it can get the money. What happens then? The money received for the bonds in due time has to be paid back, with interest, to the purchaser when the bonds are retired. Where does the money come from? You may have two guesses! It comes out of the taxpayers. The taxpayer will pay twice for this social-security purpose.

In short the present working of the social-security system is not honestly explained; it is the kind of maneuver which, on the part of a bank or some other privately operated financial institution, would very likely land someone in jail. Parts of it are so Ponzi-like that it seems remarkable the people haven't arisen in all their wrath and demanded a new and honest approach to the subject.

Eggs

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include House Concurrent Resolution 21, adopted by the Fifty-third General Assembly of Iowa:

House Concurrent Resolution 21

Whereas Iowa produces, both as to value and numbers, more eggs than any other State in the Union; and

Whereas the farm income of Iowa from eggs alone in 1948 was approximately $140,000,000; and

Whereas the people of Iowa are strongly in favor of a fair and adequate price support program for eggs; and

Whereas the United States Department of Agriculture and all State Extension Departments have approved and promoted a program whereby eggs would be sold strictly on a quality basis, which program resulted in 80 percent of all eggs sold in Iowa being evaluated on standards of quality and grade; and

Whereas in the administration of the support program by the Federal Government only the price of dry eggs has been supported, while the price of frozen and shell eggs has not been supported, with the result that undergrade eggs in the present market command almost the same price as the top consumer grade AA eggs; and

Whereas this policy has destroyed the producer's ability to market eggs on a quality basis according to grade and has undermined the grading program, which formerly encouraged production of a quality product; Now, therefore, be it

Resolved by the house (the senate concurring), That the Congress of the United States is memorialized to require price support of eggs at the top grade, including frozen and shell eggs, with deductions for undergrade eggs, and to eliminate the present practice of supporting only the price of dry eggs; be it further

Resolved, That the chief clerk be instructed to send a copy of this resolution to the United States Senators from Iowa and to the Representatives in Congress from Iowa and to the Secretary of Agriculture of the United States.

I hereby certify that the foregoing concurrent resolution was adopted by the Fifty-third General Assembly of Iowa this 19th day of April 1949.

A. C. GUSTAFSON,
Chief Clerk of the House of Representatives.

Kenneth Royall Resigns as Secretary of the Army

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Durham Morning Herald and the Greensboro Daily News, both of April 23, 1949:

[From the Durham Morning Herald of April 23, 1949]

KENNETH ROYALL RESIGNS AS SECRETARY OF THE ARMY

Acceptance of Kenneth Royall's long anticipated resignation as Secretary of the Army removes from public life an able official. Royall has the distinction of serving as the last Secretary of War, one of the original Cabinet positions. In this office he was in succession to some of the most notable Americans. President Washington appointed Henry Knox, of Massachusetts, the first Secretary of War when he named the first Cabinet.

John C. Calhoun under President Monroe, Jefferson Davis under Pierce, Edwin M. Stanton under Lincoln, Newton D. Baker under Wilson, and Henry L. Stimson under Taft, and Franklin D. Roosevelt are among the illustrious who preceded the North Carolina attorney in this post.

In addition to the distinction of being last Secretary of War, Royall has the further distinction of being first Secretary of the Army in the reorganization which unified the branches of Armed Services in one Department of Defense. The difficulties in this post were great. In the first place, unification of service was wanted by neither Army nor Navy. Some officers did not appear concerned to make unification a success. With such obstacles, it is a tribute to Royall and his colleagues that so much progress has been made.

North Carolina regrets to see him leave a post of such importance and influence, but she welcomes him home—he has indicated that he will resume his law practice—heartily. The Old North State and the Nation as well will remember gratefully his public service and, noting he is in his prime, will hold him on call for future duties and responsibilities.

[From the Greensboro Daily News of April 23, 1949]

ROYALL RESIGNATION

After doing a difficult job well, Kenneth Royall has resigned as Secretary of the Army. Under the guidance of his exceptional qualities of intelligence, industriousness and resourcefulness the Army has been brought up from the debilitated postwar condition in which it had been allowed to fall and raised to a very considerable measure of power and a "posture of defense."

For this the country owes him a profound debt of gratitude, for it was no easy task. President Truman recognized this when in accepting the resignation which had been tendered more than once he wrote: "In war and in peace you have served your country faithfully and well. * * * Your service has covered the transition from active hostilities and through the period of demobilization and after that the coordination of the Department of the Army into the National Military Establishment. * * * For your part in all of these activities of such paramount importance to the national security, I tender you this assurance of heartfelt gratitude and appreciation."

It was natural and proper that the resignation should have followed the appointment of a new Secretary of Defense, especially in view of the fact that Royall had disagreed with Johnson on several matters including the progress of unification of the armed forces and of the desirability of abolishing segregation in them.

As Royall noted in his letter of resignation to the President, "my recent personal inspections in the overseas theaters have shown the Army everywhere to be in excellent condition and I have confirmed my belief that war is not imminent." North Carolina welcomes home again a distinguished son after a patriotic service effectively performed.

The Economic Balance Shifts

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Item of April 25, 1949:

THE ECONOMIC BALANCE SHIFTS

The domestic economic landscape brightened considerably Friday with a further relaxation in consumer credit controls by the Federal Reserve Board. Fears of inflationary pressures, voiced loudly in some administration sectors while vigorously denied in others, were obviously not in the minds of Chairman Thomas McCabe and his fellow Board members when they took this latest action.

Effective Wednesday, installment buyers will have 24 months in which to pay the balance due on their purchases of stoves, dish washers, ironers, refrigerators, washing machines, air conditioners, radios, television sets, phonographs, sewing machines, vacuum cleaners, furniture and rugs. The time limit has been 21 months since March 7. The cash down payment rule is now lowered from 15 to 10 percent of the purchase price. The only exception is made in the case of automobiles, which continue at 33⅓ percent. In addition, the blanket exemption for controlled articles under $50 has been raised to $100, which means that retailers may offer products costing less than $100 with no down payment.

It should be noted that installment credit now stands at a peak of $8,000,000,000. However, national income is running at a rate of about $230,000,000,000 annually, and there is no reason to believe the credit total excessive. Yet the demand of many retailers that controls be abolished altogether seems premature. As unrealistic as are the warnings of some of the more inspired economic seers, there are still too many imponderables to risk ending all restraints in the matter of extending credit to consumers. At today's prevailing wages and prices, the newest terms should be sufficiently attractive to permit all who so desire to purchase the controlled articles.

But if the Reserve Board's action is an encouraging indication that supply is again meeting demand, the other side of the coin is not so lustrous. A number of leading appliance manufacturers have recently announced small yet significant lay-offs in their working forces—evidence that the imbalance has shifted the other way. Other areas of the economy, such as metals and textiles show signs of softening. Talk of deflation, disinflation, or recession (take your pick) fills the air.

Without giving undue aid and comfort to the pessimists, it seems safe to say that the time is ripe for mature discussion of the means by which we can avert the more drastic effects of large-scale unemployment and business decline. In this connection, a proposal made by Representative BOGGS merits close attention. He would have the Congress appropriate $50,000,000 a year to stimulate advance planning of non-Federal public works. The resulting "shelf" of construction would be available for immediate execution should the situation warrant.

It takes from 6 to 18 months to plan most public buildings and other projects, and in the absence of blueprints a sudden crisis might find the Government unprepared to act. Last year's total of $14,000,000,000 in private construction would shrivel markedly in the face of a recession, Mr. BOGGS argues, and a heavy backlog of fully planned public projects would be needed to maintain employment on an even keel. Mr. BOGGS' proposal is not pleasant to contemplate, but we cannot afford to ignore the warning it carries.

Filbert Growers Crucified

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

MR. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an excellent editorial from the Oregon City (Oreg.) Banner-Courier of recent date on the subject of filbert imports. I have often called the attention of the House to the disastrous results to our filbert growers of our import policy. I commend this editorial to your reading as a further indication of the administration's total lack of interest in this important Northwest industry:

FILBERT GROWERS CRUCIFIED

Fixing tariffs to protect investments and lifetime labors of farmers raising specialty crops is a matter important to the filbert and walnut growers especially the former.

Hence, when the United States Tariff Commission refuses to make a cost study of the nut growers' operations to form a factual basis for tariff fixing, we know that the nut growers are being sacrificed by the administration.

The Tariff Commission didn't want to learn that it costs quite a bit more for the Northwest farmer to raise nuts than it does the peons of Mediterranean nations.

It wants to continue to use the imports of European nuts to trade these foreign growers machinery and other manufactured products from Eastern States where there are a lot more votes than out here in the Northwest.

The Commission's refusal to try to find out facts on costs in order to set fair tariffs and save its own people from bankruptcy is proof enough that the administration's policy is not to protect our economy if it interferes with its plans for political domination of the Nation.

The UN Is You

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. ASPINALL. Mr. Speaker, would peace will become a reality when, and only when, the hearts of men are ready to receive it. All programs, the League of Nations, the United Nations, and the like are essential, in the over-all development of the people so that at some time in the future they may be prepared to accept the advantages of a world in which peace shall be the motivating spirit.

With these thoughts in mind, it is well for all of us to take notice of any effort to attempt to instill within the hearts of man the blessings of a world dedicated to good fellowship between peoples. Just recently the pupils of the schools of Durango, Colo., have taken part in an editorial essay contest sponsored by the League of Women Voters of that community with the topic, The Unity Is You.

It is my thought that the first- and second-place winners of this contest express, to some extent at least, the attitude of the boys and girls of my district, especially around Durango, in regard to the United Nations. Because these two essays are so straightforward and personal in the thoughts expressed in them, I am sure others may desire to read and enjoy them. Accordingly, under leave to extend my remarks, I am having them printed in the CONGRESSIONAL RECORD at this time.

THE UN IS YOU

(By Mary Offutt, Durango High sophomore, age 14)

The United Nations is a wonderful organization, but people just don't know enough about it; and they won't, unless we, the guardians of the future, do something about it. I believe world peace lies in the hands of the young people. Steps must be taken to keep young minds free from hate and vandalism.

People must learn the functions of the UN before they are willing to help, and no one blames them for not knowing. Most adults learn a lot from their children, so teaching the principal facts about the UN should begin in schools. An example could be a Junior UN in every school, where every boy and girl could vote on, discuss, or veto problems presented to them. This way every pupil could learn the function of UN.

Pen pal letters help a lot in morale, and everyone should be urged to write. Both adults and young people should feel this to be a privilege and a duty.

If more backing could be given to universal 4–H Clubs and similar activities instead of to universal military training perhaps another stepstone on the road to world peace would be laid. And adults who organize groups working for world peace need our help and cooperation, too.

I believe if young minds were on other things besides hate and war, adults might soon learn not to hate, and world peace might eventually follow.

If we can accomplish these things, I believe UN, with God's help, can make our world free from war.

THE UN IS YOU

(By Guy Hafer, Smiley Junior High, seventh grade, age 13)

I am a schoolboy who has many opinions on many things.

People who are living in America are very lucky to live in a friendly nation, a country that has many friendly allies.

It is one of my opinions that United Nations should scrap all war material and use the metal for industry and farming material.

All school boys and girls should learn all they possibly can about UN, in reading articles, listening to news broadcasts, and discussing their countries in school classes.

They could also see many educational motion pictures about foreign countries and their people, and in this way understand their customs, interests, education, and occupations.

If older children and parents would not talk about war and fighting people of races, children would learn to like Negroes, Dutch, and other races.

American boys and girls could write to children in other lands and become personal friends with many.

If we boys and girls would do all these things, then we would all learn to be kind and understanding; then we could whip our evil souls.

The Federation of the Free

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of April 10, 1949:

THE FEDERATION OF THE FREE

It is in a way unfortunate that the European recovery program, the North Atlantic Pact and proposals for military aid to western Europe have all come up at once. The Senate's discussion of the ECA authorizations was inevitably affected by these related subjects. Friday's favorable ECA vote of 70 to 7 was encouraging, but the fight over the actual appropriation is still to come. This fight may be bitter and may involve our whole foreign policy. Yet it may have good results in the end if it emphasizes that in our relationships with the free nations we are not building several detached structures. We are building a single structure, which we hope will be a more effective peace palace than the one which took shape many years ago at The Hague. Anything that strengthens one part of this edifice strengthens all the other parts.

The amounts of money we are to spend, the ways and terms of spending have been subjected to questioning and will be so subjected. They should be. Neither House of Congress should be called upon to sign blank checks. But in essence there can be only two opinions on our great enterprise. Either we are committeed by historic circumstance and by the laws of our democratic being to join with other democratic nations in the world's great crisis, or, as the isolationists argue, we can escape that responsibility. Isolationism in the United States has been dying over a long period of years. It is not quite dead. We shall know in the course of the next few weeks how much of it survives.

We believe that honest isolationists must ask themselves, as they have not done before, how their policy would work. We think they would have to admit that isolationism—or any degree of isolationism which involves less than adequate aid to our friends—would throw us back on the defense of our own frontiers. We think it can be demonstrated that such defense, laying aside all moral questions, would be more costly than the policy of mutual aid on which we are already embarked.

If this argument is sound—and it is the argument on which our foreign policy has been based for at least 2 years—we must acknowledge that we cannot break our ties or our obligations toward the rest of the free world. We defend ourselves by uniting for defensive purposes with other countries. We ask the people of those countries to do the best they can economically and strategically to strengthen and protect themselves. Since they cannot now with their own resources do all that needs to be done, we have to come to the rescue. We do this for the same reasons that led us in the old days to build forts in the Indian country and to place coast artillery along our shores. We do it—and we need not call this action wholly unselfish—so that no enemy can safely come at us. For the same reasons, the nations of western Europe are under pressure to break down their own frontier walls and to cooperate among themselves not only in a military way but in coordinating their trade and their finances. If a unity of purpose and practice can be achieved in western Europe, and between western Europe and the United States, a free world will exist which cannot be conquered and almost certainly will not even be attacked.

The advocates of this kind of union would be the last to argue that western Europe should become permanently dependent on the United States. Self-help is the key to success here, as it is for the individual in a democratic society. The nations cooperating under the ECA and under the North Atlantic Pact must be equals in dignity and independence, no matter how much they may differ in wealth and population. Otherwise American aid to Europe would perpetuate the crisis which it is intended to relieve. The United States, if it were to remain indefinitely a source of gifts, would become merely another empire. We want no such empire. We should foresee, and work toward, a species of federation—an organization that might well be described as the federation of the free and into which all nations respecting human freedom would be welcome. We need not think now in terms of institutions. We already have one institution, the United Nations, which, if it could fulfill its purposes, would keep the world free and at peace. Whatever the institutional form, history drives us toward a closer union—not a merging of cultures or a submergence of national parliaments and governments, but an organized readiness to maintain together the democratic way of life.

Hon. John Sullivan

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. KENNEDY. Mr. Speaker, it is with great regret that I have learned

of the resignation of John Sullivan, Secretary of the Navy. The question of whether or not the Navy's great carrier should have been built was not an issue in his resignation. It was the arbitrary manner in which the Navy was shunted aside—its views not considered.

If the country expects the Navy to continue to demonstrate its fine devotion to duty, then it must insist that the Navy be treated as an equal partner in the business of defense.

John Sullivan followed the only course that a man of integrity could follow.

The Negro and Peace

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Mrs. Paul Robeson at the Progressive Party dinner April 27, 1949, Hotel Commodore, New York City:

I was very much struck by what Paul Robeson said about American Negroes in relation to a possible war.

I know it's a little unusual for a wife to pay attention to her husband's pronouncements, you know the saying—a prophet is without honor in his own country, in his own home, in his own time—but I thought this one was pretty important, and it certainly raised a storm.

He said, to quote him exactly:

"That it is unthinkable that American Negroes would go to war on behalf of those who have oppressed us for generations, against a country which in one generation has raised our people to the full dignity of mankind."

The professional Negro leaders rushed into print to refute this statement, and to explain that Paul does not speak for the "overwhelming majority of the Negro people."

Walter White, as head of the National Association for the Advancement of Colored People, perhaps the best known of those leaders said, and I quote:

"Negroes are Americans. We contend for full and equal rights, and we accept full and equal responsibilities.

"In event of any conflict that our Nation has with any other nation, we will regard ourselves as Americans, and meet the responsibilities imposed on all Americans."

Now I agree that we Negroes are Americans. Of course we are Americans.

But try and explain that to Rosa Ingram and Amy Mallard and the American courts of justice in Georgia.

Try and explain it to the Trenton six and the American courts of justice in New Jersey.

Try and explain it to the Negroes who worked in the garbage brigades, the laundry and cleaning and labor battalions in the American Army in our last war for democracy.

Try and explain it to the Negroes everywhere who are now trying to get into American public-supported housing, hospitals, schools, and work projects.

We Negroes are Americans, and we know it, but our country keeps telling us, time after time, in heart-breaking ways, that we have no rights and privileges as American citizens—except those it chooses to grant us when it feels indulgent.

So it is natural and inevitable that the majority of American Negroes have come to examine with a jaundiced eye the duties and obligations and responsibilities in their proper place, where they belong, that is side-by-side with the rights and privileges.

I know that every sensible Negro in this country, professional leaders notwithstanding, feels that if he must fight any future war for democracy, the proper place to begin such a fight is right here.

It is in the light of this normal, reasonable conviction that we must examine the relation of the American Negro to a possible war: If our country is attacked, invaded, I believe Negroes, along with other loyal Americans, will rally to our defense.

That's one thing.

But I also believe that if our country drafted Negro Americans, and many other sensible, reasonable, loyal Americans to fight a war in Greece, for a king the Greeks don't want, to fight a war in China, for Chiang Kai-shek, whom the Chinese people don't want, to fight a war for France and Holland, so that Indochina and the Indonesians can be kept in colonial slavery; I really believe that the Government of these United States will have a very hard time, indeed, luring sensible, loyal Americans into fighting such a war.

Now maybe Walter White can deliver up his 500,000 membership of the NAACP, maybe ADAM POWELL can deliver up his membership of the Abysinnian Baptist Church and his Twenty-second District in Harlem, and maybe other professional Negro leaders can deliver up their followers to fight such a war, but I doubt it.

But if they could, that would deliver up a theoretical 2,000,000 at most, men, women, and children.

Then what about the other 12,000,000 unorganized Negroes, the real vast majority of the Negro people? Who speaks for them?

It may well be that a giant Negro, one Paul Robeson, the son of a slave who caught the ear of the world with his golden voice, and who has always used that voice to call the attention of the world to the plight of his Negro people in America, in the West Indies, in Africa, and to the plight of all suppressed and oppressed peoples everywhere, it may well be that this golden Robeson voice is putting into words some of the thoughts of these unorganized voiceless people, this vast majority of the Negro people in this country.

Since he has never asked them for anything for himself, and is not doing so now, they may do well to listen to him. They have nothing to lose by doing so.

Public Works Problems

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following remarks of Ray C. Kirkpatrick, Director, Labor Relations, Federal Works Agency, before the Louisiana State Federation of Labor, Shreveport, La., April 4, 1949:

As the construction arm of the Federal Government, and as the Federal agency most frequently contacted by local governments about their public-works problems, the Federal Works Agency constantly must be thinking in terms of the future.

By their very nature, public-works projects must be planned painstakingly in advance of construction. The size and cost of most projects require that considerable time be spent in selecting sites, coordinating projects with comprehensive community plans, preparing detailed blueprints and specifications, making financial arrangements and letting contracts.

You know from your experience that it takes from one to two years from the time a job goes on the drawing board until the first construction trades worker reports at the site for employment.

It is generally agreed that a planned flow of public works based on immediate needs, backed up with an adequate reserve that can be called up at any time, is most advantageous to all concerned.

When I say reserve, I do not mean a potential of need but a potential that is blueprinted and ready to go. A reserve shelf of blueprinted projects must be large enough to permit a substantial and rapid expansion of public construction to meet a sharp cutback in private building or a general business recession. In either case, public construction can help to stabilize employment and stimulate recovery.

I don't want anyone to think I'm predicting a depression. But I do think we ought to be prepared. As a matter of fact, preparedness has been made our national policy under the Full Employment Act.

During the war, all but essential construction was halted so that manpower and materials could be concentrated on the war effort. Since the war, emphasis has been on housing.

Compounded through the years of reduced and curtailed public construction, the need today stands, according to the best estimates, as high as $100,000,000,000. Each of you is aware of the needs in your own communities, many of them urgent in terms of the health and welfare of the people. The list includes schools, hospitals, sewer and water systems, highways, conservation projects and public buildings.

Do we have an adequate reserve shelf of public-works blueprints to make the most effective use of this potential?

I want to answer that question with facts. It has been estimated that public construction for 1949 will amount to about $5,000,000,000. The existing reserve shelf has been estimated at $4,500,000,000, or less than the amount of public construction for a single year.

We must also take cognizance of the fact that a trend toward increasing public construction is developing. According to 1949 estimates, public construction will comprise 27 percent of a total of $18,250,000,000 in new construction. Last year, with the total at $17,600,000,000, public construction amounted to $4,000,000,000 or 23 percent. I think you'll agree with me that we do not have an adequate reserve shelf. Then, how can we build up an adequate reserve shelf?

As far as State and local governments are concerned, the Federal Works Agency's advance planning program proved itself to be an effective aid and stimulant.

Under this program, the FWA Bureau of Community Facilities made loans of $55,500,000 for the blueprinting of 7,000 projects with an estimated construction cost of slightly less than $2,500,000,000.

This advance planning program ended in June 1947, when the loan provisions of title V, War Mobilization and Reconversion Act, expired.

In passing, I want to point out that Congressman BOGGS, of this State, has recognized the importance of advance planning and has introduced H. R. 3086 to reestablish this essential planning program.

I want to say a few words to you about the Water Pollution Control Act. The act authorizes the Federal Works Administrator to make grants for the preparation of drawings and specifications for sewage-treatment plants and 2-percent loans for construction purposes.

However, authorization is not enough to make the law operative. Funds have to be appropriated, and this has not been done. The authorization is for $22,500,000 a year for 5 years for loans, and $1,000,000 a year for 5 years for grants.

Considerable attention has been called to the limitations of the law which place a $250,000 ceiling on loans and a $25,000 ceiling on grants.

The United States Public Health Service has estimated the sewerage works needs of Louisiana at $37,656,000, of which only 9½ percent is ready for construction. More than 73.8 percent of the total remains for future planning, while plans are in progress for 16.7 percent.

Other States have similar needs which can be met with the help of Federal aid if and when funds are appropriated under the Water Pollution Control Act.

The need for school facilities is particularly acute. At its recent meeting the United States Conference of Mayors pointed out that the lack of adequate school buildings is severely hampering the education of our children. By resolution the Conference of Mayors urged the Congress to enact legislation providing for low-interest bearing loans and grants to local public agencies for school construction. This school problem is one which affects each of you as skilled construction workers and as public-spirited citizens interested in the welfare of our children and country.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an excellent and enlightening editorial from the Express, Knoxville, Iowa. Mr. Casey, the writer, is a Democrat and a good newspaperman whose editorials are widely read throughout the State of Iowa.

The editorial follows:

Let us pray that socialized medicine never becomes a fact in these United States of America. Theoretically it offers a wonderful promise of medical care without cost to the patient—practically it will result in more disunity than anything that has ever happened to the American people. Patients will flock to the doctors' offices and to the hospitals by the hundreds of thousands; doctors will find themselves engulfed with patients, some with real, and some with imaginary ills; of necessity they will have to be treated in classes with the same treatment to all regardless of the need; it will cost billions of dollars in taxes; the lazy will use it as an excuse to avoid work and secure pensions; it will build up a political power which can finally ruin the entire country. Other nations in the world have tried it with failure and disillusionment. Men and women have died while waiting for the red tape to be untangled. And there are not enough doctors, and there cannot be enough doctors, to administer such a program. Such a step as socialized medicine is pure socialism no matter what else it may be called. If medicine can be socialized then the railroads, the steel mills, the food industry, the farming industry all can be socialized. This trouble could all be eliminated very easily by just letting Russia take over this Nation tomorrow.

Peace Can Be Won

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. KLEIN. Mr. Speaker, all Americans who cling to the democratic ideals of popular representative government on which this great Nation was founded watch with sympathetic interest the development of the same philosophy of government in the Holy Land, adapted to the smaller scale and different conditions of the Middle East.

The Republic of Israel is 1 year old.

Israel has, in that year, and in the face of hostile conditions which might have destroyed a less stubborn devotion to freedom and independence, gained relative stability in its political, military, economic, and social problems. Great courage, great vision, and great faith were required to achieve that result in 12 short months.

In a tiny nation in which every man, woman, and child was enlisted in the struggle for freedom, it is impossible to say that any one man was responsible for the result. In a nation of heroes, who is to be called the chief hero?

Nevertheless, a people must have an effective and devoted leadership for efficiency, and much of that leadership in Israel has come—with no lack of credit to other great leaders—from the Honorable Moshe Sharett, the Minister of Foreign Affairs of Israel.

Under leave, I am inserting the text of a recent address by Mr. Sharett in New York, delivered at the dinner forum of the Nation Associates on April 7. The topic of discussion of the forum was Peace: How Can It Be Achieved?

I believe, Mr. Speaker, that you will agree that Mr. Sharett has made a brilliant contribution to discussion of the subject.

PEACE CAN BE WON
(By Moshe Sharett)

(Israel's Minister for Foreign Affairs, Moshe Sharett, delivered the following speech at the dinner forum of the Nation Associates held at the Waldorf-Astoria in New York on April 7. The forum's subject for discussion was Peace: How Can It Be Achieved?)

I suppose it is a commonplace to say that an anxious and restless world can derive little comfort from the reflection that war is not imminent and that with luck it may be averted for a long time to come. What mankind wants is not merely the absence of war but real peace. The mere possibility of another world war is a haunting nightmare. You cannot stand indefinitely on the brink of a precipice and pray that the sense of balance will never forsake you or that you may never be pushed unawares into the chasm. It is an ordeal which may of itself produce the fatal loss of equilibrium.

Each one of us is prone to view the world scene from his particular angle and to draw from his own national experience conclusions which may or may not be of value for international statesmanship. I plead guilty to this egocentric approach. The experience and international position of Israel appear at first glance to be relevant to the point at issue on four main counts.

First, the part played in Israel's establishment by the international authority of the United Nations. The record of the General Assembly in this regard has been a striking demonstration of the capacity of the United Nations for creative statesmanship—its ability to formulate and morally to impose a bold and constructive solution for a complex and explosive international problem. It is true that, as far as the United Nations is concerned, high purpose in the conception of policy has not been equaled by determination and effectiveness in execution. It was the defense army of Israel and not the Security Council which in the hour of decision in Palestine saved Israel and the moral authority of the United Nations from utter collapse. Nevertheless, the role of the United Nations in shaping the country's destiny has proved decisive. The historic resolution of November 29, 1947, has in its broad outline set the pattern of a settlement which has already been woven into the fabric of the world. The Assembly itself never swerved from the course it had once adopted. It resisted twice the attempts made in its own midst to distort and stultify the great decision. The Security Council, after its initial indecision when faced with a brutal defiance of United Nations authority, rallied to arrest the growth of the conflict. In the final stages the achievement of Dr. Ralph Bunche and his associates in bringing to a successful conclusion three successive chapters of armistice negotiations stands as an example of international mediation at once resourceful, effective, and fair.

Second, Israel's paramount and compelling interest in peace. Its birth was attended by a war forced on it by a brazen aggression. Once alive and firmly established, its very breath depends on international peace. Any major outbreak of hostilities on the world scene will immediately affect the Middle East and may engulf Israel in a tidal wave of destructive violence. Israel's imperative need to grow and develop by immigration, influx of capital, and importation of technical skill and scientific talent can only be satisfied in a stable world. A world war would be fatal to that process. Moreover, Israel's vital connection with the Jewish people throughout the world makes peace a supreme injunction of its foreign policy. In the wake of the First World War that people suffered pogroms and economic ruin in eastern Europe. In the Second World War three-quarters of European Jewry were destroyed, and the virus of anti-Semitism became more malignant in many parts of the world. There is no people today which in obedience to a sheer instinct of self-preservation dreads another world war more than the Jews. Israel expects that its claim to be considered a peace-loving nation will be accepted as genuine not because of any supposed ethical superiority but because of its own evident interest in peace.

Third, Israel's potential role in the development of the Middle East. It is a commonplace of the "anatomy of peace" that its maintenance depends not merely on a stable political relationship between nations but on social contentment within each. Gross inequalities of wealth, mass poverty, and ignorance are a perpetual source of internal strife. Undeveloped potentialities lead to external dislocation. Both are most potent menaces to international peace. Weakness or vacuum invites aggression from outside, provoking

conflict among those bent on conquest. Injustice and oppression breed explosion from within, with inevitable international repercussions. There can be no stable peace on the basis of class privilege, mass privation, and general backwardness. It is in this context that the Middle East is one of the world's danger zones. The newly won independence of the Arab countries will remain precarious as long as the empty shell of political sovereignty is not filled with a solid content of economic development and social progress. To this process the state of Israel, by virtue of its own interest and for purely objective reasons, can serve as a powerful catalytic agent. Here again the basic interests of Israel are in full dynamic harmony with those of a constructive world peace.

Fourth and last, Israel's demonstration of the coexistence within its national framework of divergent economic systems and ways of life. This unique diversity in unity is a feature of the Jewish reconstruction effort in Palestine which has as yet received scant attention from the world outside. Two basic principles have governed the social and economic evolution of the new Jewish society: first, the complete social self-determination of the settler—that is, his freedom to choose a form of social life which accords with his ideas; second, the freedom of economic enterprise, individual and collective. As a result, a structure has been built up and is steadily growing wherein different types of production and ownership function side by side, from the ultra-capitalistic and individualist to the ultra-socialistic and collectivist, with various intermediary types in between. In the process of peaceful growth the different forms shade into each other and replace one another as in a living tissue. The foundations of this social order, thus characterized by a symbiosis of socialism and capitalism, were firmly laid in the period preceding our independence. They will be retained and strengthened within the framework of the state. The new state democracy will safeguard these essential freedoms while subordinating them to the national purposes of the state, to its social principles and its international obligations. With all the stresses and frictions obtaining in Israel as in any modern society, there are inherent in this system the makings of a social peace.

This in brief expresses Israel's tenets and experience in grappling with the problem of peace. But it would be unwarranted to project those four elements to the world scene and expect the macrocosm to conform to the microcosm. The results achieved by international statesmanship in Palestine do not demonstrate the capacity of the United Nations to settle graver conflicts and solve problems of wider dimensions. What has proved decisive in the case of Palestine is the fact that the two major powers which stand at the opposite extremes of the world arena have alined themselves, broadly speaking and at least at certain stages, in support of the same policy. Yet this incidental harmony does not yet seem to have established a precedent, and the fundamental disharmony between the two contending giants continues.

As to the pursuit of peace, all nations profess to be consecrated to that high objective. Yet the threat of war grows ominously. It is not enough merely to abjure and repudiate it. The accelerated development of backward territories and the removal of their worst inequalities would certainly make for greater contentment and therefore peace. Yet that avenue of progress alone by no means settles the issue. As such countries develop and mature, they may take their place in one of the two warring camps into which the world is today divided, thereby only enlarging the scope of the conflict. Moreover, the conflict is not now raging primarily in the backward areas of the globe. Its cockpits are rather located in the world's most civilized countries. In more than one country of Europe a struggle is being waged for the mastery of its soul, or rather two souls are struggling for supremacy.

This brings us back to the fourth element—the coexistence in one frame of divergent social systems and outlooks. Here, indeed, is the crux of the problem. For reduced to its fundamentals, the problem of world peace today is the problem of a peaceful development of two distinct social and political civilizations side by side. Whether a synthesis between the two is possible only time can show, provided humanity survives. As long as they diverge, and unless they learn to live together, the threat of a deathly clash will be ever present. If they cannot live together, neither an equilibrium, which cannot but be unstable, nor the preponderance of one system over the other, which must remain indecisive, can avert the catastrophe. The crucial question is therefore: Can they, will they agree to coexist, either forever or until such time as they will merge in some synthesis or one of them will prevail over its rival in peaceful evolution?

The experience of Israel does not, of course, resolve the enigma; yet it offers a clue to its solution. Why has the mutual adjustment of different systems proved feasible in Israel? Because they are subordinated to and united in a transcendent common purpose—the achievement of national salvation. The problem of world peace resolves itself, therefore, into the question: Is there a common world purpose which overrides the conflict between the two divergent political systems?

To that question the answer must be an emphatic affirmative. There is such a common purpose. It is the salvation of mankind. The common denominator of humanity is basic, elemental, and compelling. It is the will to live—the urge to survive. War has ceased to be a gamble between victory and defeat for either party. It spells a certainty of destruction for both, a danger of annihilation for all. Peace and survival have become synonymous. Peace is no longer a means to an end. It is an end in itself; it is life itself. The hope of mankind's survival thus lies in the common realization of the deadly peril. Will that realization penetrate deeply into the mind of man? Will it determine conduct? On the answer to these questions depend the peace of the world and the future of mankind.

Chatham Takes Crack at Holifield

EXTENSION OF REMARKS
OF
HON. THURMOND CHATHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. CHATHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Winston-Salem (N. C.) Journal:

CHATHAM TAKES CRACK AT HOLIFIELD

WASHINGTON.—Representative CHATHAM, Democrat, of North Carolina, suggested last night that General Sherman rides the South again in the person of Representative HOLIFIELD, Democrat, of California.

CHATHAM took issue with a statement he credited to Representative HOLIFIELD in which the Californian said:

"I will guarantee you that if the southerners and the Republicans get their coalition working against the Taft-Hartley repeal bill, then about 100 administration Democrats will be ready to fight every bill affecting the South that gets to the House floor.

"I am not sure how it (the fight on the labor bill) will come out, but of this you can be sure—the House will get an opportunity to vote directly on repeal of the Taft-Hartley Act. And if it refuses to carry out that pledge of the Democratic platform, then the war with the southerners will be on."

REMINDED OF HISTORY

CHATHAM told reporters: "Representative HOLIFIELD'S guaranty that the war with the southerners will be on reminds me of the history of the Civil War.

"When the hired troops of the North started their march through Dixie, they were met by patriots who were fighting for their homes and fireside. Not until overwhelming strength was mustered was the South conquered.

"If General HOLIFIELD thinks he can scare the southerners by his threats I hope they will accept the challenge.

"The repeal of the Taft-Hartley is not the question—the point is that General HOLIFIELD controls about 100 administration Democrats by his own admission who, upon his command, will attack below the Mason-Dixon line at his bidding.

"I suggest that we of the South not only accept the challenge but would remind the general to read the particulars of the Battle of Manassas—known in the South as Bull Run."

HOLIFIELD was not available for comment.

National Health Insurance

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. HELLER. Mr. Speaker, one of the most significant and thoughtful editorials I have seen recently on the subject of national health insurance was published in the New York Post of April 21. Under leave to extend my remarks I include it in the CONGRESSIONAL RECORD.

HEALTH OF A NATION

As President Truman prepares to announce his views on a national health-insurance program, it may be useful to review rapidly some of the main features of the controversy.

Most probably the President will urge a sweeping measure covering medical care, hospitalization, prescriptions, glasses, artificial limbs, etc. He will probably urge amplification of the old Murray-Wagner-Dingell bill to provide for hospital construction, and medical training and research. This broad program would be financed by pay-roll deductions and employer contributions.

As matters stand today about 40 percent of the counties in the United States have no full-time health departments. According to some estimates this fact alone results in 200,000 needless deaths every year. Consequently no one directly opposes the proposition that the Federal Government should move in and help. The question is, how?

AFL and CIO leaders are uncompromisingly behind a national health-insurance program of the broadest and fullest type. Leading the opposition is the American Medical Association, which has $3,500,000 to spend. To the AMA, the administration proposes socialized medicine, a term which is a handy smear for anything which might bring down the cost of illness or lessen the AMA's power to push doctors around.

The AMA actually wants a pauper's law. That is, they want the Federal Government

to put up the money to expand existing voluntary programs. In other words, if you can't afford to join a hospital plan, let the Government pay your dues for you. Or, in still other words, let the Government support anything which the AMA can control; let the Government, in fact, create a Federal Health Department with an AMA-controlled M. D. in charge of it.

The Republican scheme is even franker. It proposes a $280,000,000 expenditure the first year which would be a charity system pure and simple—a straight dole to people who can't pay doctors and hospitals at present rates.

Certainly, we want to give the poor all the help they need. But the problem of improving national health is deeper than any question of poor relief. Any Nation-wide health program worth having should be one that is good for everybody. The maximum number of people should belong to it.

The AMA and Republican schemes are both programs for keeping the costs high and putting anyone who can't meet them on a sort of dole. Much more sensible and infinitely more democratic is a program to bring the charges down, not only for the poor but for everyone else, through an insurance program with the widest possible membership.

And back of, and, in some senses, more important than the cure of the illness of any individual, is Nation-wide aid for medical research, for more and better hospitals, for more and better medical schools. That type of program would lift the level of public health by a pooling of all the Nation's resources.

Judge Learned Hand

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. MULTER. Mr. Speaker, the following editorial appeared in the New York Herald Tribune of April 28. It is a brief but deserving tribute to a fine man, an excellent judge:

LEARNED HAND'S 40 YEARS

For 40 years Judge Learned Hand has graced the Federal bench, almost a quarter-century of this expanse on the circuit court of appeals. The anniversary had its special observances, such as the dinner of his former law clerks. But the stimulation of Judge Hand has been such that it stands alone without formal recognition. His quality is pervasive; as a man, judge, and spokesman of the American ideal, his enduring contribution is unique. The law is his medium, but more than that, Judge Hand is the artist and philosopher adding his own ennobling strain to the national character. From him has come the constant statement of truth as he saw it, for others to be guided and inspired. This is far more than being a judge; it transforms legalism into a superior leadership.

Judge Hand is a man in marvelous accord with himself and the universe. A few years ago he had the notion that he might like to be a physicist if his span could be knowingly repeated, but at the age of 77, Judge Hand thinks that he probably would repeat his career. As he says, "The longer I've been with the law, the better I like it." And for this statement an untold number of people, perhaps even those who never heard Judge Hand's name, can be grateful for his great and good influence.

The Panama Canal

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a thrilling and gripping article written by Josephine Crisler which appeared in the Saturday Evening Post of last week, April 23, 1949.

I have known this charming writer for many years. Endowed with a great brain, she is the mother of three splendid sons and the widow of a fine and capable Federal Government executive. She has written an article which has excited the interest of people throughout the Nation. Would that we had more Josephine Crislers in the world.

The Senator mentioned in this article without formal designation is my senior Senator, Senator KENNETH MCKELLAR, of Tennessee, now President pro tempore of the United States Senate. You will be interested to read this story. It should reveal to you the quick and useful mind and soul of a man who has done so much for Tennessee, the South, and the country. The Senator has served longer than any other man now sitting in the Senate. In all of the years of his marvelous activity, he has never failed for 1 day to do something for his fellow man and for the country he loves. This story gives but one incident out of a rich and full public service.

I SAVED THE PANAMA CANAL

(By Josephine Crisler)

No more fitting description of housework was ever made than that classic by a cleaning woman who said of life, "It's so sort of daily." The monotony creates a lurking fear that you are growing stale. Perhaps that is why, between doing dishes and defrosting the refrigerator, I amuse myself with those quiz columns like Increase Your Word Power, Test Your Horse Sense, and How's Your I. Q.? They take less time than crossword puzzles and the score is occasionally reasurring. For instance, if you know 9 out of 10, you are "superior," 8 is "excellent," and so on down to "good" and "fair." One day I got all 10 right and discovered I was a "genius." I went around for nearly an hour feeling like a member of the intelligentsia. It seemed a sort of pity that such an intellect had to be subjected to the steam of a pressure cooker, the vapor of scalding dishwater, and the dust of a vacuum cleaner. Then the rice boiled over.

But the thrill of being a temporary genius was nothing to compare with the spine-tingling discovery that I had saved the Panama Canal. I know it sounds fantastic, but before you wire me the name of your favorite psychiatrist, hang on until I get that documentary proof out of the desk drawer and I'll tell you how it happened.

First, I ought to explain that I am just a Washington housewife whose husband—a former insurance executive—had been in the Government for more than a dozen years prior to his death a short time ago. You never heard of me before and probably never will again. The only thing you might remember about me is that if the little Dutch boy who put his finger in the dike and thereby saved his country from inundation were alive today, he and I could hold a convention in a telephone booth.

My story begins in 1938, about that time of year when the children were busy cramming for exams. The spring semester, when term papers and finals are the paramount interests, would soon be at hand. We had two sons in college that year, and one in junior high. I was glad they were too absorbed to notice how preoccupied their father had become. He had been like that for months and, it seemed to me, he was finding it harder each day to be his normally cheerful self.

Of course, 17 weeks is a long time to stand up under the strain of being isolated and completely ignored. Those of you who have never worked for the Government and are unfamiliar with that type of hazing will require a little background to make you understand. This was the first time it had happened to John, and it seemed so incredible that we couldn't believe it ourselves.

You see, my husband had been with the same Federal agency for 2½ years. It was one of the largest ever to be organized, and he had played an important part in setting it up. It was his first experience with Government and he had given it all he had. For more than a year he had worked until midnight or after, and spent every waking hour devising means to do the job quicker and for less money. One night he and his administrative assistant discovered they had saved $11,000,000 on one operation, and they were elated. That is, until the next day, when his secretary, who was an old hand, laughed and said, "That's a sure way to be out of a job. No one in this man's Government wants to hear about doing anything for less money. They want the boys who can spend more. You won't last long if you mention the word 'economy.'" But John's experience in a business where efficiency and economy had been practically synonymous was too recent to be shed lightly, and he persisted in his efforts to get the job done without waste and delay.

In his office there were two stenographers, an administrative assistant and a desk piled high with papers. Both phones rang constantly, and the secretary kept a jug of coffee and brought him a sandwich on days when he felt he shouldn't leave for lunch. The men who administered the act sent people in to see him in a steady stream, for there were approximately 35,000 jobs to be filled.

Then there was a change at the top. The chairman of the agency was replaced by one of the other members. The new chairman had lots of friends who had to be put on the pay roll. Many of them immediately began to use the time of a much-needed stenographer, the resources of the agency and their first experience in the Government as a means of getting their doctorates. Lots of books were written on Government time with the use of Government stenographers. No one seemed to think it was out of the ordinary, but to comparative newcomers like us, it did seem a little irregular. Also, a lot of aliens were beginning to be recommended as consultants.

Among his other duties, my husband was chairman of the personnel-selection committee handling top jobs. This seemed to worry him no end. Often he would say to me, "I don't know where all these peculiar people are coming from. Few of them speak English, most of them need a bath, and all seem to have degrees, dandruff and a starry look. But there's a great deal of high-up pressure to put them on and find work for them to do."

In the course of these interviews, my husband had evidently made the mistake of asking, "Are you an American citizen?" and "If not, do you intend to take out your first papers?" The invariable answer to both questions was an indignant "certainly not." But despite his objections and the existing Civil Service Regulations, they got on the

pay roll just the same. Most of them were German or Russian aliens.

John told me he could not, in conscience, approve such applications, when at that time there were hundreds of equally or better qualified Americans who were capable of filling these jobs. He made the mistake of saying so. For him, that was the beginning of the end.

The next morning, he had one stenographer instead of two. His administrative assistant was transferred to another office, mail service ceased, and he was reduced to one phone, which remained strangely silent. An embarrassed messenger, leaving a file on his desk, reappeared a moment later to explain that it was an error, and removed it. That was the last piece of paper to be laid there. His office, which had been a beehive for more than a year, suddenly became completely isolated. Day after day he sat with nothing to do. The iron curtain is not new, and he was definitely behind it. It was the old doghouse technique, effectively designed to make a man quit in disgust.

Most men can't endure it for long, and it is a frightful strain on even the stoutest-hearted, but John stuck it out grimly for 17 sickening weeks—sickening because he felt he was being paid money money he had not earned. Not even the memory of the days and nights and Sundays he and his staff had worked—sometimes completely around the clock—seemed to ease that awful feeling of taking money he had not worked for.

When the doghouse technique fails, there always remains the coup de grâce employed by certain bureaucrats who want to get rid of an official—the job can always be abolished. And, of course, set up again with another occupant and a different title. So they did.

Any long-time Government employee—or, for that matter, any seasoned Washington taxi driver—can tell you there is nothing unusual about abolishing a job one day and setting it up again the next. It's a routine practice in Government circles. The technique is as common as featherbedding or expense-account padding.

When they finally gave the coup de grâce to John, it was something of a relief to us both. The strain and uncertainty were over. We told each other we were glad. He would find something better before long. His work was widely known and had attracted favorable comment. Other agencies were being set up and he would be needed. So the round of the agencies began. Almost every day there was a new possibility, a new hope. It looked promising for a while, as men who knew his capabilities passed his file from one to the other. But always, when it reached the highest level, someone had been tipped off not to put him on. It's a very close-knit corporation, the Government. Old pals, old school ties, the bright boys who share the same philosophy can do a lot with a telephone or a knowing look. The first few weeks we were not discouraged, but finally the pattern was unmistakable.

Savings dwindle fast when nothing is coming in. School was almost over and I was beginning to get panicky. Could the boys go back to college? Were we going to fail them at this important time of their lives? One day I read of the suicide of a man who had been replaced in that same agency by the usual process of having his job abolished. That did it. Suddenly I was mad enough to chew up a nail and spit out a box of tacks. And right then I knew I was going to find the answer to something that was troubling me. I went to the only place I could to ask about it—the office of a Senator from my home State.

One of the secretaries in that office was a charming woman who seemed happy to see me. We sat down. "There is something on your mind," she said, smiling.

"Yes," I agreed, "and I've got to find the answer. Let me begin by asking you a question. You are an intelligent, good-looking woman who has proved herself a competent secretary and an expert stenographer. Will you tell me this: If you went to a foreign country, would you expect to get a good position with the government of that country in competition with its citizens?"

"Certainly not," she said.

"Well, why does our Government employ those who are not citizens and have no intention of becoming citizens? Is there no law against it?"

"There must be," she answered, frowning. "I'll find out." And she picked up the telephone and asked for the Legislative Reference Service of the Library of Congress. The man on the other end said he would look it up and call her right back. We chatted for about 10 minutes. Then the phone rang and the report was in. We had no such law.

She couldn't believe it. "The agencies must be full of Fascists and Communists," she remarked grimly.

I told her of a conversation with another Senator in 1937. In response to my comment on the fellow travelers in the agency where my husband worked, he had observed, "Relatively speaking, there are perhaps not as many in that particular agency as in some of the others. They have swarmed in like flies in a molasses barrel."

My Senator was in committee meeting, but she would call it to his attention the moment he returned, and let me know. I later learned that he, too, was aghast to discover that there was no such law. He couldn't believe it. He had it checked again. Fortunately, my Senator was on the Appropriations Committee—he still is—and it was that time of year for the deficiency appropriation for the independent offices, which in simple language means that the independent agencies, which always spend more than they get, had come up for another handout. It invariably happens just before the new fiscal year begins, which is on the 1st day of July.

Well, the Senator thanked me for bringing it to his attention. He said he would do something about it, and quickly. He didn't like it any better than I did. And when your Senator talks like that, it makes you glad you are an American. It's good to know that even though you are only an obscure housewife, you can talk to a United States Senator face to face. As long as that situation exists, no one can take this country away from the people it belongs to, no matter who tells you the Congress is a disgrace and ought to be abolished.

And so my Senator—who has been called everything you can print and some things you can't—went to work. He said he would do something quickly, and he did. First, he introduced a Senate resolution calling upon the departments and agencies to report the number of aliens in their employ. The result was startling. Civil-service regulations to the contrary notwithstanding, well over 10,000 aliens were on the Federal pay roll.

As I have already explained, the independent offices deficiency bill was then pending. So the Senator tied a rider to it which said, in part: "No part of any appropriation contained in this act or authorized hereby to be expended shall be used to pay the compensation of any officer or employee of the United States * * * unless such a person is a citizen of the United States * * * or being eligible for citizenship has filed a declaration of intention to become a citizen or who owes allegiance to the United States."

The usual lobby—that is, the agency officials regarded as smoothies—hand picked to handle Congressmen and influence legislation, would normally have swarmed up on the Hill to defeat the measure. But unhappily for them, they were caught in a legislative trap. Their deficiency bill, rider and all, had to pass, and quickly. They had to have that money, no matter what, because it was already obligated or spent.

A day or two later, the Senator's secretary telephoned me, "Go ahead and have a good cry. The conferees have agreed, the Senate and House have concurred, and our little rider—God bless it—is the law of the land."

The affected agencies and the never-give-America-a-break group screamed to high heaven. They said the usual. It was reactionary, undemocratic, and discriminatory. But the jig was up. And what's more, it set up a chain reaction. Other legislators, alerted to our threatened safety, attached alien restrictions to the appropriations for other agencies. About 30 days later the military and defense establishments, including the Panama Canal, were covered by similar riders.

Government reporters predicted that only a sprinkling of Federal employees would be affected. No one—not even the Senator, much less I—was prepared for what happened. That phrase "no part of any appropriation * * * shall be used to pay" is pure magic. Guess what? In Washington they went out in droves. But that was nothing compared to the exodus from arsenals, navy yards, depots, airfields, laboratories, experimental research and social agencies. Hundreds went out at Boston, New York, Norfolk, Savannah, Galveston, Los Angeles, San Francisco, Portland, Seattle, and the Canal Zone. It was estimated that a total of 10,000 aliens, predominanly Japanese, German, and Russian, were discharged or resigned.

Less than 4 years later we were at war. One day while John was at a staff conference at the Pentagon, a group of officers were berating the Congress in general and my Senator in particular. After all, it's the delightful prerogative of Americans to gripe. But when each in turn had expressed some typical military tribute such as "He's a first class, revolving so-and-so," one very senior officer remarked gravely, "Gentlemen, you can say what you please, but, in my opinion, we have that Senator to thank for the fact that we have the Panama Canal today."

That first little rider became law 10 years ago. It's pretty much the same, except that over the past decade it has grown longer and stronger, with penalties attached. The 1948 version reads like this:

"Unless otherwise specified and until July 1, 1949, no part of any appropriation contained in this or any other act shall be used to pay the compensation of any officer or employee of the Government of the United States * * * unless such person (1) is a citizen of the United States, (2) is a person in the service of the United States on the date of enactment of this act, who, being eligible for citizenship, has filed a declaration of intention to become a citizen of the United States prior to such date, or (3) is a person who owes allegiance to the United States: *Provided,* That for the purpose of this section, an affidavit signed by any such person shall be considered prima facie evidence that the requirements of this section with regard to his status have been complied with: *Provided further,* That any person making a false affidavit shall be guilty of a felony, and upon conviction, shall be fined not more than $4,000 or imprisoned for not more than 1 year, or both." All of which may sound highly legalistic, but it's sheer romance to me. To have had even a small part in such legislation is the answer to a housewife's prayer.

If you want to read it for yourself, you will find it on page 19, title II, general provisions, section 202, of Public Law 491.

As long as it remains a law, I feel I've still got my finger in the dike. Maybe women ought to get mad more often.

Thomas Jefferson: Apostle of Liberty

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of my colleagues the following editorial which appeared in the New York Journal American on April 13, 1949, and in other newspapers from coast to coast:

THOMAS JEFFERSON: APOSTLE OF LIBERTY

(By Harry H. Schlacht)

"Except the Lord built the house,
They labor in vain that build it."
—*Psalms 127:1*

Greatness is the essence of immortality. Its reach is from horizon to horizon. Its power fills the heart with music from the spheres.

Such a man was Thomas Jefferson. He was the third President of the United States.

We salute the two hundred and sixth anniversary of his birth. We revere his memory. We worship at his shrine. We rejoice in the grandeur of his achievements. He was the eloquent apostle of liberty. He was the father of our democracy.

Jefferson was one of the greatest humanitarians of his age. He was one of the foremost liberators of the human spirit. He was one of the outstanding exponents of Americanism. He was one of the principal architects of the Republic. His fame walks in the pathway of the stars. His name is too great for any one nation, too noble for any generation. His life was as pure as the golden stream of the dawning sun. His friendship for mankind was as deep as the ocean. His faith in the people was the philosophy of his life, the touchstone of his thoughts, and the mentor of his actions. He dedicated his power to the common good of all mankind.

Aristotle taught that man was a social animal.

Jesus taught the moral virtues of man and his relation to God.

Jefferson taught man his proper place in society. He opened the windows into the souls of all humanity.

Jefferson fought his battles with his pen and not with the sword.

Jefferson inspired men by the humility of his greatness, by the inherent trust in Divine Providence, and by the ineffable belief in human brotherhood. He gave liberty and its heroes the Bible of American freedom—the Declaration of Independence. He wrote the words which became marching armies for freedom. He wrote the preamble which set forth the truth that governments derive their just powers from the consent of the governed. He wrote the undying expression that every citizen is entitled to the unalienable rights of life, liberty, and the pursuit of happiness.

"All men are created free and equal." These words are the foundation stones of good government. These are the words of the apostle of man.

Jefferson named for himself his own passport to immortality when he wrote his own epitaph. It is inscribed upon the monument that rises from his grave at Monticello. "Here was buried Thomas Jefferson, author of the Declaration of American Independence, of the statute of Virginia for religious freedom, and father of the University of Virginia."

Here is no boast of offices he held. Here is no boast of honors he bore. Here is recorded in utter simplicity a man's innate greatness—the three imperishable monuments of his crowning glory—human liberty, religious freedom, public education.

The Declaration of Independence is truly a declaration of dependence on God. It is the substance of our Government. It is the insistence of the God-given character of the rights of man. It is the soul that gives America its breath of life. It was to save that soul that we engaged in global conflict.

"Eternal vigilance is the price of liberty." It has echoed through the years. Its wisdom should be heeded now. It should be engraved upon our hearts. It should be framed and hung on the walls of our homes. It should be carved in the archways over the doors of our schools. It should be read and reread in every pulpit and public place. It should be taught to our children throughout the land.

Today many European countries lie prostrate under the brutal heels of Communistic tyranny. Today communism challenges democracy all over the world. The supreme issue that challenges every American is, "Shall we preserve our American way of life among liberty-loving people, or shall we permit liberty to be wiped off the face of the earth?"

Today the spirit of Jefferson calls for the rededication of the ideals for which he lived, for which he fought and for which he wrought. To us he passed the torch. Let us consecrate ourselves to the principles of our sainted forefathers. Let us remember that its perpetuation is a trust. Let us remember that upon its adherence depends the happiness of millions who owe it allegiance. We must be strong if we are to remain free. A weak and irresolute America is a threat to our liberty, an invitation to war. A strong and resolute America is a safeguard to our security, a guarantee of our liberty. May the law of our land ever rest on the postulate of the law of God. For God's law means peace.

"He is immortal—only he,
Who stands for right unflinchingly
On watch from dark to dawn;
By God's eternal stars he steers,
Nor stays the storms nor fails for fears,
For truth is truth, a thousand years.
God's heroes march forever on."

Let us keep America a free land for freemen.

The Coast Guard Saves Lives and Scores Again

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. CANFIELD. Mr. Speaker, the House Appropriations Subcommittee on Treasury-Post Office Appropriations in the Eightieth Congress, of which I was chairman, did much to give impetus to the Coast Guard weather-station program, a program now being encouraged by the committee under the chairmanship of the distinguished gentleman from Virginia [Mr. GARY].

I was much pleased today to receive the following letter from Capt. A. C. Richmond, of the Coast Guard, regarding the lives saved in the Atlantic early Wednesday morning when a plane was forced to ditch and its crew of four were rescued by the Coast Guard cutter *Sebago* on weather-station duty:

UNITED STATES COAST GUARD,
Washington, D. C., April 27, 1949.

Hon. GORDON CANFIELD,
House of Representatives,
Washington, D. C.

MY DEAR MR. CANFIELD: You undoubtedly noted the news item that a C–47 MATS plane flying the Atlantic developed engine trouble and was forced to ditch in the Atlantic. Fortunately the plane was able to proceed to one of our ships on Station DOG before landing. The pilot made a good landing approximately 100 yards from the Coast Guard cutter *Sebago* and the plane crew of four were picked up by a motor self-bailer from the cutter. The plane sank in 12 minutes after landing, so it was fortunate that there was a weather ship available. There were no passengers on the plane and no casualties or injuries to the crew of the C–47.

Station DOG is one of the stations occupied during the last year as a result of augmenting the ocean weather station program. Knowing of your great interest in this program and the part that you played in seeing that the funds were appropriated to make this work possible, it is a pleasure to call this incident to your attention. I think you may well take justifiable pride in the fact that you had a major part in the saving of four lives today.

Sincerely,

A. C. RICHMOND,
Captain, USCG, Chief, Planning and Control Staff.

House Leader McCormack

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Lynn Telegram-News, Lynn, Mass., Sunday, April 17, 1949:

MAGIC OF M'CORMACK

The holy season of Easter is here and as always at Easter time, House Majority Leader JOHN W. MCCORMACK, of the National House of Representatives, and his charming wife and helpmate, Mrs. McCormack, are again home in Massachusetts with their numberless friends and well-wishers.

The press of the Nation has again acclaimed the leadership of Massachusetts' outstanding citizen for his effective masterminding of America's most important legislative position.

Momentous moments arrive, and critical crises come but Leader MCCORMACK meets them head on. Through his legislative magic, what at one time appear to be insoluble problems, finally go through the legislative channels smoothly and quietly and become a part of the warp and woof of our governmental processes.

Down through the years, House Leader MCCORMACK has demonstrated this extraordinary ability to mold public opinion and to produce legislation which meets almost unanimous approval of Congress.

During the hectic years of the depression, Congressman MCCORMACK was always in the vanguard of our progressive governmental forces that were seeking remedial legislation

to cure the ills which produced such distress, discouragement, and near disaster.

When World War II, with its turmoil, trouble and turbulence, broke upon a disheartened world, again the magic of McCORMACK came into being, and again huge appropriations for armament and defense became law under his guidance. All the necessary legislation to take care of business, rationing, shortages, and a million other dislocations in our national economy, received the magic touch of McCORMACK in the legislative halls at our National Capital.

With the end of World War II, House Leader McCORMACK was again confronted with innumerable requests for his services in straightening out our postwar economy. In addition to our own domestic problems, rent control, housing, veterans' care, taxation, and so forth, there came a crushing burden of legislation whose objective was to crush communism and to further the American way of life.

Thus as time goes on, President Harry S. Truman finds modest Mr. McCORMACK of Massachusetts as his best bet when it comes to getting things done. Under McCORMACK'S direction, the aid to Greece and Turkey bill, the Marshall plan for European relief, the Economic Cooperation Administration with Paul Hoffman as director, the Treaty of Rio with its necessary appropriations, as an aid to hemispheric solidarity and defense of North and South America, and now the epoch-making North Atlantic Pact with its huge billion-dollar program for rearmament of Europe in order to prevent the spread of Marxian communism and to contain Soviet Russia within its own territorial domain, have all become part and parcel of the legislative burden that our own JOHN W. McCORMACK has had to shoulder.

But Congressman McCORMACK has broad legislative shoulders that have been broadened by 20 years of intelligent, intense leadership. His habit of industry and his intense devotion to his country, to his President, to his church, and to his dutiful wife have made JOHN McCORMACK, of Massachusetts, one of America's great leaders and a great Christian gentleman.

May the Honorable and Mrs. John W. McCormack enjoy their well-earned and well-deserved Easter vacation here in their own native State of Massachusetts.

When this holy Easter season shall have come to an end and Mr. and Mrs. McCormack have again returned to take up their great tasks in our Nation's Capital, the magic of McCORMACK and the melody of Mrs. McCormack will be remembered by many, many multitudes of Massachusetts people who treasure this great couple among their friends.

So to House Leader and Mrs. John W. McCormack, we say happy Easter to you both; may God be good to you and spare both of you for many Easters to come, so that America and its citizens may have the benefit of your wise guidance, splendid counsel, and the extraordinary example of exemplary living in a troubled world.

The Railroads and America's Future

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and an article by Ambrose W. Benkert:

CHICAGO, *April 11, 1949.*

The Honorable RALPH E. CHURCH,
House of Representatives,
Washington, D. C.

DEAR RALPH: This is one of the best articles I have read on the railroad situation, and thought you might be interested. If there is anything you can do to help the railroad picture, would certainly be grateful.

Kindest regards.

Sincerely yours,

ARTHUR A. FRANK.

THE RAILROADS AND AMERICA'S FUTURE

(By Ambrose W. Benkert)

During the past 100 years we have developed under free enterprise the most comprehensive, efficient and dependable railroad plant in the world. It provides the safest service at the greatest speed and the lowest cost that can be found anywhere on earth. This is vital for America, for without the railroads our future would be dismal indeed. Without mass transportation we could have no mass production. Industry would stagnate; commerce would be paralyzed; great cities would disintegrate and our common well-being and national unity would be destroyed.

Why are the railroads so essential? Why are we so vitally dependent upon them?

Because man has not yet developed any other means of transportation for the mass movement of freight and the mass movement of people even remotely comparable in cost and efficiency to power on wheels applied to cars on rails. One Diesel locomotive pulling a freight train of 5,000 tons with a crew of five and using one teaspoonful of fuel oil per ton-mile illustrates the observation. It would take 500 trucks, with each truck carrying 10 tons, to duplicate this feat.

Just last Tuesday here in New York City, headlines in the press announced: "Long Island Railroad wins fare rise to stave off crisis." In its decision, the Public Service Commission of New York said:

"The stark issue and the only present choice seems to be: Is there going to be railroad transportation on Long Island continued and improved, or is there likely to be disintegration of service, confusion, and receivership?"

Here is striking evidence indeed that there is no substitute whatever for this railroad in the transportation of 200,000 Long Island commuters. Even at the increased fares authorized, 5-day tickets will cost the user about 1¼ cents a mile compared with local taxicab rates in excess of 20 cents a mile. Despite the belated order authorizing higher fares, bankruptcy was announced a few days later. Such an occurrence should awaken the public everywhere to support railroad petitions for decent compensation.

The common measurement of freight service is the ton-mile. Last year the railroads moved freight over 700,000,000,000 ton-miles, as compared with 447,000,000,000 in 1929. The average haul was 403 miles. For every man, woman, and child they moved a ton of freight about 600 miles in 1880, and over 4,500 miles in 1947. During the next 24 hours the railroads will move 1,800,000,000 ton-miles of freight, equal to 1 ton for a distance of 12½ miles for every man, woman, and child in the United States. And, in the same 24 hours, nearly 2,000,000 passengers will ride an average of 60 miles.

The cost of freight service during the depression and throughout the war was less than 1 cent per ton-mile, and even today, less than 1¼ cents. No other form of transportation can remotely compete with these charges.

INTERSTATE COMMERCE COMMISSION

Freight rates and passenger fares are fixed by the Interstate Commerce Commission under Federal laws requiring a rate structure adequate to the needs of an efficient transportation system. For the past 30 years the Commission has substantially met these requirements. It is mandated to do so in the future. This fact, and the innate cost advantage of the railroads over every other form of transportation for the mass movement of goods and passengers, are the two fundamental bases upon which rest constantly improving service of the railroads to future America.

In doing their job, the railroads as private enterprises stand on their own feet without any Government subsidy whatever. They will continue to do so. This is of vital importance to America's future. Every competitor of the railroads is subsidized by the American taxpayer in one form or another. Trucks and busses, river barges, ocean shipping and air lines all are dependent on the taxpayer for their continued operation.

Only the railroads pay their own way. Paradoxically, their taxes are used to subsidize their competitors. Railroads carry 94 percent of the intercity mail and receive less than the air lines get for carrying the other 6 percent.

RAILROAD TAX BURDEN

In 1947, out of every dollar received, the railroads paid out nearly 11 cents (10.8) in taxes. This amounted to nearly $1,000,000,000 in 1947, equal to one-fortieth of the entire tax receipts of the Federal Government. This is important to America's future.

ADDITIONS AND BETTERMENTS

In the 11 years ended December 31, 1948, the railroads spent over $6,000,000,000 on improvements. Of this, over $1,000,000,000 was spent in 1948. This in addition to expenditures for maintenance. The total investment in improvements since World War I exceeds $13,000,000,000. This resulted in improved efficiency and in reduced costs to the public.

PERFORMANCE

For each person in the United States the railroads performed the equivalent of transporting one ton of freight the following distances:

	Miles
1880	645
1890	1,211
1900	1,863
1930	3,142
1940	2,851
1944	5,363
1947	4,567

PRIVATE VERSUS GOVERNMENT OPERATION

In World War I, Government operation of the railroads cost the American taxpayers $1,616,000,000—an average of about $2,000,000 a day, although both freight rates and passenger fares were materially increased.

During World War II, under private operation, the railroads cost the taxpayer nothing. Freight rates remained at prewar levels and passenger fares were advanced but slightly. In the 4-year period (1942–45) the privately operated railroads actually paid the Government $2,500,000 a day in Federal income taxes.

Taking losses under Federal control into account, the Federal Government was nearly $4,500,000 a day better off under private operation in World War II than under Government operation in World War I.

During World War I, under Government operation, passengers paid 51 percent more per passenger-mile and shippers paid 80 percent more per ton-mile.

During World War II, under private operation, passengers paid 2 percent more per passenger-mile and shippers paid 1½ percent less per ton-mile than in 1939.

As compared with World War I, under Government operation, the railroads in

World War II, under private operation, moved each month twice as many troops, performed twice as many passenger-miles of service, moved 5 times as much Army freight and express, 20 times as much Navy freight for overseas, and double as many ton-miles of freight of all kinds—and they did all this with one-fourth fewer employees, one-third fewer locomotives, one-fourth fewer freight cars, one-third fewer passenger cars.

Since 1939 railroad wage rates have increased 86 percent; prices of fuel, materials, and supplies, 118 percent; and the tax bill is 177 percent greater. These greatly increased costs have been offset with rate increases totaling only 52 percent.

This performance record demonstrates the importance to America's future of the railroads constantly having adequate funds for improvements.

Trying to condense the story of railroad accomplishments and railroad indispensability into a few words is like trying to engrave the Lord's prayer on the head of a pin.

INVESTMENT AND CAPITALIZATION

The investment in railroad property as of January 1, 1948, was over $28,000,000,000. This is $12,000,000,000 greater than the total par value of all railroad stocks, bonds, and other securities. Railroad stocks are not watered. They are outstanding to the tune of $12,000,000,000 less than the investment in the property. It is vital for America's future that this fact be known.

The undercapitalization is due to the fact that year after year the railroads have plowed earnings back into property without issuing any stock against such investment. This explains the high earnings per share of many railroads. The Atchison, Topeka & Santa Fe is an example. During the past 4 years, this great railroad showed earnings averaging $15.88 per share per annum. Immediately this figure gives the impression of high earnings. It is cited by labor leaders as proof that the road could pay higher wages, and still make big profits. It becomes a target for shippers who want lower rates and point to high earnings. But actually, earnings are not high on the Atchison. Each share represents not only the original $100 but a reinvestment from earnings down through the years of an additional $200 per share. If the Atchison would capitalize this investment, it would issue two additional shares to each holder of one share and the earnings over the past 4 years would have averaged only $5.29 per share per annum.

Instead of issuing stock to represent this additional investment of $200 per share, the Atchison shows this investment in its balance sheet under "Earned surplus." How many labor leaders and shippers who oppose rate increases look at "Earned surplus" in balance sheets before saying profits are big enough to warrant higher wages and lower rates?

The managements and boards of directors of every railroad in this country are doing the railroad industry and America's future positive harm by failing to issue stock for earnings invested in the property so that the stock at par actually will reflect the whole investment in the propery, not just one-third or one-tenth of the investment.

Net value (after depreciation) of the property investment in all railroads is about $23,000,000,000. To this should be added $2,000,000,000 in cash and nearly $1,000,000,000 in materials and supplies, making a total net investment of $26,000,000,000—on which the 1948 earnings amounted to only 4.3 percent, or about $1,200,000,000. After all interest charges, there was left for the stockholders $711,000,000.

STOCKS NOT "WATERED"

Investment versus capitalization

Recorded investment in railway property	$28,732,752,000
Securities outstanding in the hands of the public:	
Par value of stocks	7,076,379,000
Par value of bonds, equipment obligations, and other funded securities	8,803,937,000
Total	15,880,316,000
Undercapitalization	12,852,436,000

In 1948 American railroads employed an average of 1,327,000 persons. The total payroll amounted to $4,743,000,000, making an average compensation per employee of $3,575. This, the world's highest wage for such work, was made possible by a capital investment averaging $21,650 behind each worker's job. It is estimated that the railroad plant could not be replaced at today's costs for less than $50,000 per employee.

Rates have increased only 50 cents for each dollar of increase in wages and other costs. This greater efficiency has been made possible by continuous investment in the railroad plant:

Year:	*Gross capital expenditures*
1941	$543,021,000
1942	534,897,000
1943	454,282,000
1944	560,112,000
1945	652,980,000
1946	561,957,000
1947	864,689,000
1948	1,250,000,000

TROUBLE LIES IN PUBLIC'S THINKING

In other words, there is nothing the matter with the railroads. They have the finest plant and equipment and the largest cash and working capital position in their entire history. The trouble lies in the thinking of the public about the railroads—due obviously to lack of knowledge.

Adequate knowledge of the facts would lead every right-thinking citizen to favor a square deal for the railroads. So long as the railroads are denied a decent return on their invested capital, and so long as they are compelled to subsidize all their competitors, they are not getting a square deal.

Notwithstanding the present magnificent plant and equipment, hundreds of millions of dollars could be spent right now for additions and betterments to the railroad plant which would result in improved service, increased efficiency, and still lower costs to the public.

During the past few years one Midwestern road spent $80,000,000 in track realinement which reduced this road's transportation costs by nearly 10 percent. On the basis of present gross revenues of $200,000,000, this means a saving of nearly $20,000,000 per annum or 25 percent on the investment. Another railroad has installed an automatic classification yard at a cost of $10,000,000 with commensurate savings.

FINANCING PROBLEM

The expenditure of the vast sums involved in such a program is only possible if the funds can be obtained from the public. Accordingly, the price level of railroad securities and the cost of raising and servicing the funds is a matter of vital concern to America's future. This invites examination of the present situation in the railroad securities market.

What do we find? Stocks of leading roads selling for less than twice 1 year's earnings; bonds at prices to return over 10 percent per annum despite large coverage for interest requirements. Whole railroads priced in the market—some for less than their salvage value, others for less than cash and rolling stock alone—the railroad plant itself being given away.

Assets and earnings are such that on a comparable basis many of these securities are worth enough to make financing possible right now if the facts were known.

Let me repeat: There is nothing basically unsound about American railroad securities. The unsoundness is in the thinking of the public lacking the facts.

To know the fact is of vital importance to America's future. We need a public aroused to give the railroads a square deal and to keep them as private enterprises.

If the withering hand of Government ownership ever falls upon our railroads, God help us all.

WHAT DIESELS CAN SAVE FOR YOU

America has 38,000 steam locomotives. Thirty-two thousand burn coal. Six thousand burn oil. In addition, 5,000 Diesel-motor locomotives are operating on the railroads.

But today each Diesel engine uses so little fuel oil to pull a train that, if all 38,000 steam locomotives were completely replaced by Diesels, the railroads would use fewer barrels of petroleum products than are now consumed in the 6,000 oil-burning steam locomotives alone.

To replace the steam locomotives now would cost $3,800,000,000. This would save the railroads at least $760,000,000 each year. Much of this saving of more than $2,000,000 every day would be passed on to the public in lower passenger fares and lower freight rates.

RAILROAD REVENUES, 1948

(Preliminary)

Sources of the railroads' gross revenues and their relative importance:

		Percent of total
Freight revenues	$7,952,000,000	82.6
Passenger revenues	954,000,000	9.9
Mail	191,000,000	2.0
Express	121,000,000	1.3
All other	408,000,000	4.2
Total operating revenues	$9,626,000,000	100.0

(Mr. Benkert has offered to send you a printed copy of the principles and fundamentals underlying this presentation. For your copy of these principles or for information concerning any particular aspect of the railroads, write to A. W. Benkert, 70 Pine Street, New York 5, N. Y.)

In Newark, N. J., a railroad worker heard Mr. Benkert, walked across the street to a friend's home and said: "Did you hear that broadcast about railroads? I have been a railroad worker all my life and have thought of railroads as rich corporations. That broadcast about what investors have done to make my job possible changed my attitude. Something should be done to get a fair deal for them."

A doctor wrote: "Early in life I began investing my savings in stocks of three railroads. In two my investment was wiped out and the third, which I still hold, is much lower than when I bought it. With this disastrous experience, I have ceased buying although at present prices they seem attractive—if one knew which rails to buy."

A widow wrote: "To care for me in my old age my husband left me railroad stocks, now seriously depressed, but this broadcast gives me hope that something can be done to obtain justice for those of us whose money has been invested in railroads."

These are typical of thousands of responses to Mr. Benkert's presentation. He has, in

few words, portrayed the over-all railroad situation as it has never been presented before.

Only an informed public opinion can get fair treatment for the railroads. A long step toward that would be wide distribution of this broadcast. Every railroad employee should have an opportunity to read it. If they knew the facts, they would see that they will serve their own interests by insisting upon a fair deal for those who provide the capital.

Every railroad stockholder should put these facts behind his demands to his representatives in Congress.

Every one of the 65,000,000 insurance policyholders should be made to realize that part of his future safety depends upon a fair return on railroad securities in which insurance companies have invested many hundreds of millions of insurance policyholders' money.

Whether you are a railroad employee or a stockholder, or just an average citizen, you have—everybody has—a vital interest at stake. You should:

1. Speak to your representatives in Congress. Demand that Congress give the Interstate Commerce Commission a mandate to allow the railroads rates that will allow a fair return on invested capital.

2. Send a copy of this broadcast, with a letter expressing your viewpoint, to your Congressman and two Senators and to your State legislators and governor.

3. Help spread the truths in this folder. Have 5 or 10 others read your copy. Ask for additional copies: Three free upon your request. Buy in bulk as a tuck-in for your mails. Distribute to fellow workers, investors, clergymen, editors, heads of service clubs, community leaders. Bulk prices, postpaid, anywhere: Twenty for $1; 50 to 700, 4 cents each; 1,000 or more, 3½ cents each. We will stand the cost of supplying three free copies, upon their request, to those to whom you distribute. Ask for: The Railroads and America's Future.

COMMITTEE FOR CONSTITUTIONAL GOVERNMENT, INC.,
205 East Forty-second Street, New York, N. Y.

Disastrous State Department Policy in China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Constantine Brown in the Washington Star of April 27, 1949:

The southward advance of the Chinese Communists, who are advised and controlled by Moscow and its officials in the field, will proceed henceforth as rapidly as the Red leaders desire.

Nothing lies in the path of the Red armies—not even token resistance. In fact, there is no longer any Nationalist Government in China. The officials who took over the Nanking Government from Chiang Kai-shek are scattered now over the vast territory of China.

Some Nanking officials decided to save their skins by joining the Communists as collaborators. Others have taken refuge in far-off places where they hope to remain safely for some time. A handful of others have gone either to Canton or to Formosa, which they hope will remain outside the Communist grasp.

UNITED STATES POLICIES BLAMED

The complete disintegration of the Nationalist armies is due principally to the fact that the American Government—that is to say, the State Department—has stubbornly maintained a policy of doing nothing for the Nationalists.

When the Nationalist armies, lacking vital supplies for the American manufactured equipment, gave way and surrendered or sold American equipment to the enemy, spokesmen for the State Department announced that American supplies would be wasted if sent to the corrupt Kuomintang Government.

Every vestige of resistance was abandoned, however, after the unfortunate statement of Secretary of State Acheson 2 weeks ago saying that America no longer can do anything for the Chinese National forces. According to reports received in Washington from American observers, this statement, which was spread over all of China, was the straw which broke the camel's back.

The tremendous strategic advantage gained by the USSR through the victories of its puppets in the Far East is fully appreciated by all American military men.

OPPOSED TO ANY ACTION

The fact is that a daring attempt to revitalize the Chinese forces in the south by providing them with new American equipment and a large crop of American instructors could still prevent the Reds from reaching the South China Sea and the Indian Ocean. But the Europe-minded State Department is definitely opposed to any action which may involve us in the Far East.

General MacArthur already is on record warning his superiors in Washington of the dangerous situation which will develop, not only on the Asiatic mainland, but also in Japan and the Philippines as a result of Russia taking over the Far East.

The British, who have always been passive partners in that area, are equally alarmed and would like to go into action, but they do not have the means to do so alone. The French, who have expressed the most serious concern over the eventual capture of the whole of Asia by the USSR, are in the same predicament.

The warnings that the reverberations of the spectacular Russian victory in the Far East might affect the whole Asiatic continent as far as Iran and the Arab states have fallen on deaf ears in Washington, where there is a strong desire to refuse to admit that the policy adopted by State Department in the summer of 1946 was wrong.

Vatican Is Pleased by Weizmann Talk

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. MULTER. Mr. Speaker, the following article appeared in the New York Times of April 25, 1949, and is worthy of note at this time:

VATICAN IS PLEASED BY WEIZMANN TALK—HIS STATEMENT THAT ISRAEL WOULD RECOGNIZE INTERESTS OF CHRISTIANITY HAILED

ROME, April 24.—The statement of Dr. Chaim Weizmann, President of Israel, in New York that the Israeli Government was ready to recognize the interests and concerns of Christianity regarding the immunity and protection of holy places was welcomed in Vatican circles today as a conciliatory and reassuring gesture.

However, the Vatican refused specific comment because, it was explained, the text of Dr. Weizmann's speech had barely reached here late this evening.

Officials stated that Pope Pius XII, in his encyclical of April 15, had specifically asked that Jerusalem and its surroundings should have a judicial status, security of which under existing conditions should be insured with the support and cooperation of all peace-loving nations.

It was noted furthermore that he had also asked for an international guaranty of all those holy places which are in other cities and towns in regions besides those situated in Jerusalem.

These, they said, are what the Vatican believes to be the conditions necessary for the protection of the interests of Christianity in Palestine, and that if Israel is ready to accept them, the means can easily be found for a solution.

Dr. Weizmann's statement, Vatican circles remarked, seemed to indicate that the Israeli Government would be willing to give guarantees and to accept international enforcement of those guarantees. The Israeli president, they added, did not express agreement on the internationalization of Jerusalem. This, they said, was not what the Pope had asked in his encyclical. While no opinion could be voiced at this time, officials said that their impression was that Dr. Weizmann's offer might be inadequate.

RECALL PREWAR SITUATION

These circles recalled that from 1870 to 1929 the Holy See was placed in countless awkward positions because the physical existence of the Vatican had been guaranteed only by the Italian state, and its international character had not been recognized by Rome.

They stated that during World War I, the Vatican's freedom of action had been considerably impaired because of its situation in the territory of a nation at war.

A similar situation could develop in Palestine if Israel were involved in a war, Vatican circles said. In that case, Catholics could not have access to the holy places because many of them might belong to the nations fighting Israel. The Israel Government would, of course, apply restrictions justified by the exigencies of war.

On the other hand, if Jerusalem were an international city the situation would be entirely different because its neutrality would be guaranteed by its international juridical status and not affected by the national interests of a state at war.

Catholic officials, speaking in their personal capacity, particularly noted Dr. Weizmann's statement that if there is a genuine desire to reconcile the interests of the Vatican with those of Israel a harmonious solution can swiftly be secured with international consent.

HIDDEN MOTIVE DENIED

This, they said, would seem to imply that Dr. Weizmann suspects the Vatican of having some hidden motive for demanding adequate guaranties to safeguard Catholic interests in Palestine. They stated emphatically that in this event Dr. Weizmann was mistaken.

They declared that the Vatican had consistently abstained from expressing an opinion on the Palestine war. It could not therefore be suspected of having taken sides. Its sole aim, they stressed, was that of safeguarding religious interests and was not concerned with the political aspects of the Palestine question.

This, they emphasized, should be clearly explained because otherwise world public opinion might be led to believe that the

Vatican favored one nation at the expense of another. On the contrary, the Vatican, they said, in keeping with its traditional attitude, was always willing to cooperate with any nation that would respect the interests of the Catholic religion.

Puerto Rico

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include copy of a letter I addressed to the Honorable Luis Muñoz-Marín, Governor of Puerto Rico, and his reply:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 8, 1949.

Hon. LUIS MUÑOZ-MARÍN,
Governor of Puerto Rico,
San Juan, P. R.

DEAR GOVERNOR: In your message to the insular legislature on February 23 you are quoted as saying: "We ought to clarify the situation regarding United States investments in Puerto Rico. It is not the philosophy of the Government over which I preside to seek the closing of factories in the United States in order to have them open in Puerto Rico."

I am interested in securing more detailed information on this matter, which is of vital concern to the textile district which I represent in Congress. For the sake of my constituents, will you kindly answer the following questions?

1. Do you favor complete independence for Puerto Rico?

2. What is the total amount of subsidies granted by the United States to Puerto Rico in each of the following years: 1946, 1947, and 1948?

3. Have you ever entered into correspondence with, or have you ever granted an interview to, any textile manufacturer from Lawrence, Mass., United States of America, on the subject of locating a textile plant in Puerto Rico?

4. What is the minimum wage on the island?

5. Is organized labor active in Puerto Rico? If so, to what extent? Do you approve of collective bargaining?

6. Does the Government of Puerto Rico pay any of its tax revenues into the United States Treasury?

7. What products do the Government-owned plants in Puerto Rico produce? Is it possible for a private industry in the United States to purchase such a plant?

8. For what term of years does your Government grant income-tax and property-tax exemptions to industrialists from the United States who purchase or build plants in Puerto Rico?

9. May goods produced in Puerto Rico be imported to the continental United States free of duty?

10. Has any second-hand textile machinery arrived at Puerto Rico from Massachusetts and New Hampshire, United States of America, during the past year? If so, kindly give details.

Confident that your answers to these questions will help to clarify a situation that is of genuine concern to both of us, I remain,

Respectfully yours.

LA FORTALEZA,
OFFICE OF THE GOVERNOR,
San Juan, P. R., March 22, 1949.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I am very happy to answer to the best of my knowledge and ability your inquiry of March 8. I feel confident that Resident Commissioner Fernós-Isern has answered many of them in his participation and testimony in various House committees, and he will no doubt be glad to give you any further information that you might desire.

Inquiry No. 1: Do you favor complete independence for Puerto Rico?

I was elected by a very large majority on a platform of which the political plank is the right for Puerto Rico to make its local constitution in a manner similar to that in which States do so. The Independentista Party, founded for the express purpose of working for complete independence, constituted the most active opposition to my election and obtained only 10 percent of the total votes.

Inquiry No. 2: What is the total amount of subsidies granted by the United States to Puerto Rico in each of the following years: 1946, 1947, and 1948?

Federal grants and other payments were as follows:

1945–46	$19,358,000
1946–47	15,353,000
1947–48	7,429,000

Operating expenditures of Federal agencies administering grants or payments were as follows:

1945–46	$3,234,000
1946–47	3,215,000
1947–48	2,542,000

Triple A payments to sugarcane farmers fluctuated between $13,271,000 in 1945–46 and $15,492,000 in 1947–48.

Expenditures for armed forces, veterans' payments in all forms, and other functions that the Federal Government normally carries out according to its own policy everywhere under its jurisdiction, regardless of local government factors:

1945–46	$109,447,000
1946–47	93,654,000
1947–48	87,418,000

These latter expenditures, you may readily see, cannot in any way be classified as subsidies, or grants-in-aid any more than similar expenditures could be so classified in any State of the Union.

Inquiry No. 3: Have you ever entered into correspondence with, or have you ever granted an interview to, any textile manufacturer from Lawrence, Mass., United States of America, on the subject of locating a textile plant in Puerto Rico?

I have not. From a search of the files at the Executive Mansion I find that my predecessor did write a circular letter to a number of prominent citizens, one or two of which in Massachusetts, calling their attention to opportunities for industrial expansion in Puerto Rico. I took over on January 2 and in my inaugural speech took occasion to say very explicitly that it would not be the policy of my administration to induce industrialization on the basis of sweatshop labor. In my first message to the legislature several weeks ago, I took occasion to repeat this more explicity by stating that it would not be our policy to induce the moving of industries from the continental States to Puerto Rico, but to induce the investment of new capital, of which our United States economy produces billions every year, to invest itself in this part of the economy where it is most urgently needed. I may add that the executive council which I preside is on record as (1) opposing tax exemption to homework industries; (2) directing the Commissioner of Labor, a member of the executive council, to inquire into the labor relations of any manufacturer requesting tax exemption in order to expand his activities in, not to remove them to, Puerto Rico; (3) opposing the granting of tax exemption to any industry when it is ascertained that its purpose is to close a factory or shop in any State for the purpose of opening it in Puerto Rico. The executive council, I may add, has the power by law to grant or deny tax exemption and its decisions cannot be appealed to the courts by a manufacturer whose petition has been denied.

Inquiry No. 4: What is the minimum wage on the island?

Our minimum wage law requires the fixing of a minimum for each industry, including agriculture, by the minimum wage board after due study and public hearings, according to the capacity of each industry to pay without having to close down. As you probably know our population is 630 per square mile, which is a tremendous figure for an agricultural economy, and therefore industrial development is a must, leaving no alternatives short of economic collapse in a few years or putting our people permanently on a Federal dole, or perhaps both.

Under the Fair Labor Standards Act, the lowest wage paid in Puerto Rico is 15 cents per hour and this is for some manual processes within the needlework industry, where the competition comes from the Orient and where the tariff protection is very low. For other processes in the needlework industry there are different wage minima that range from the stated 15-cent rate to 40 cents per hour.

Under the Insular Minimum Wage Board the lowest minimum is 25 cents per hour. Under the Insular Act, instead of a flat minimum rate as provided by the Fair Labor Standards Act, wage scales are provided with specific minimum rates for the different occupational classifications, some of which go above $1 per hour. Most of the insular wage orders prescribe vacation and sick-leave periods with pay.

In 1947, the latest date for which there are complete data, the average wage in the liquor industry was 48 cents an hour; in the sugar industry, 54 cents an hour; in tobacco products, 28 cents an hour; in stone, clay, and glass products, 47 cents an hour.

Inquiry No. 5: Is organized labor active in Puerto Rico? If so, to what extent? Do you approve of collective bargaining?

Labor is well organized in Puerto Rico, partly in affiliates of the AFL, but mostly in local federations and independent unions. I definitely favor collective bargaining and while President of the Senate initiated and supported the insular labor-relations law which guarantees the right of workers to bargain collectively through representatives of their own choosing. A very large part of my constituency, which is of course island-wide, as is that of Resident Commissioner FERNÓS-ISERN, is composed of workingmen.

Inquiry No. 6: Does the government of Puerto Rico pay any of its tax revenues into the United States Treasury?

Not directly. Ever since the American flag was raised in Puerto Rico that has been the policy of the Federal Government in order to facilitate the gallant fight that our people have to wage with their very tough economic problems. Indirectly, of course, due to the fact that Puerto Rico is one of the largest markets in the whole hemisphere for continental United States' goods, it produces revenue to the Federal Treasury, as well as employment in continental industries and agriculture (calculated at about 200,000 workers), and income to business and agriculture in the States.

Inquiry No. 7: What products do the government-owned plants in Puerto Rico produce? Is it possible for a private industry in the United States to purchase a plant?

The plants established by the Puerto Rico Industrial Development Co., which is a public corporation, produce cement, glass bottles, clay products, paper boxes, shoes. It is not the policy of the government to establish industries in preference to private initiative. Private initiative always has the first crack at establishing a new industry. The government has gone into these few industries when private investors failed to do so. The policy is to sell these industries to responsible citizens or firms from the continental States or Puerto Rico under terms that will safeguard for the public the money invested in them. In the case of cement, the establishment of the government plant acted as an inducement for the opening of a private plant by Puerto Rican investors and both are now functioning successfully. Our need for increasing production is so great that our government sometimes has to run the risks that in the continental States are always run by private venture capital.

Inquiry No. 8: For what term of years does your government grant income tax and property tax exemptions to industrialists from United States who purchase or build plants in Puerto Rico?

The tax exemption is not limited to industrialists from the continental United States. It also includes industrialists from Puerto Rico. The term of exemption is 12 years counting in all cases from the law's date of approval in 1947. We figure that such term is necessary to overcome the natural disadvantages that an agricultural community faces during the period of transformation into an industrial one. Our situation in Puerto Rico is now at about the stage in which yours was in Massachusetts and in the States generally in the first half of the nineteenth century, when government protection was a matter of life and death to infant industries. We do not feel that tax exemption for such a period of years is an advantage but rather an offsetting of many natural disadvantages at this particular period of the island's economic development.

Inquiry No. 9: May goods produced in Puerto Rico be imported into the continental United States free of duty?

Yes; but there is a quota limitation on raw sugar and a very drastic quota limitation on refined sugar. As sugar is, up to now, our principal industry by far, you may readily see how large a limitation on free trade these quotas constitute.

Inquiry No. 10: Has any second-hand textile machinery arrived at Puerto Rico from Massachusetts and New Hampshire, United States of America, during the past year? If so, kindly give details.

No second-hand textile machinery has arrived in Puerto Rico from any State in the Union so far as the Puerto Rico Industrial Development Company knows. The only textile mill now under construction in Puerto Rico is obtaining new equipment from New England firms, such as Draper, Sacco-Lowell, and others. Over $2,000,000 worth of machinery has been imported in the last 12 months from New England States into the island. These orders have no doubt provided job opportunities for many New England workers.

I hope the above information may be helpful in clarifying the situation. Allow me particularly to call your attention to the facts contained in the answer to inquiry No. 3, which constitute a practical air-tight guaranty against the developments with which you are rightfully concerned.

If I can be of any further service, please let me know. Please feel also that you will be sincerely welcome to Puerto Rico at any time when you may wish to take a first-hand look at the situation here and the efforts our people are making to put their economy on its own feet.

Cordially yours,

LUIS MUÑOZ-MARÍN,
Governor.

Delay by Congress on ITO Held Worry

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include a dispatch from Annecy, France, which appeared in the New York Times on Tuesday, April 26, 1949.

The article tells how our delay in passing the extension of the Reciprocal Trade Agreements Act is tying the hands of the United States representatives in their negotiations on mutually advantageous tariff reductions with 11 other nations.

DELAY BY CONGRESS ON ITO HELD WORRY—OTHER NATIONS UNEASY OVER FAILURE TO RATIFY CHARTER OF WORLD-TRADE BODY

(By Michael L. Hoffman)

ANNECY, France, April 25.—Congressional delay in passing extension of the Reciprocal Trade Agreements Act is causing serious apprehension among other major world-trading countries as to the future of United States trade policy.

As a practical matter, the delay in extending act ties the hands of the United States negotiators seeking mutually advantageous tariff reductions in talks with the 11 nations here seeking to join a general agreement on tariffs and trade. The United States Delegation can only negotiate on lists prepared prior to studying other countries' full list of offers and demands, which considerably narrows the range of items that can be discussed.

Far most important is the fact that lack of legislative support deprives the United States of leadership in the trade discussions at a time when United States objectives for establishing a framework of regulations conducive to the expansion of private international trade are being threatened on all sides.

The fight against discrimination and burdensome restrictions on private trade and excessive trade barriers has never been an easy one. Evidence is accumulating that soon as there are any signs of weakening on the part of the United States the beginnings of a new world trade structure already laboriously erected start shaking and slipping on its foundations.

In the opinion of trade experts here, if the United States continues to show hesitation in support of principles it has repeatedly laid down, United States exports will soon face in many parts of the world continuous discrimination embodied in permanent or at least long-range systems of preferential tariffs.

Discrimination against United States exports, which is now maintained under an emergency guise, tends to become "normal."

An important straw in the wind is considered here to be a resolution introduced into the economic conference of the countries participating in the Council of Europe now meeting in London. This urged the abandonment of the most-favored-nation clause in commercial treaties of European countries.

While this body has no governmental authority, the support given to this resolution reflects a strong movement just underneath the governmental level in many countries participating in the European recovery program. Its objective is to create a large preferential area within which dollar goods would meet high tariffs and more burdensome quantitative restrictions than other goods.

This is the case now, but adherence of most European countries to the Geneva trade agreement and the assumption that they will ultimately adhere to the Habana charter gives strong leverage to the United States for eliminating discriminations as soon as the emergency period is over. Abandonment of the most-favored-nation clause by European countries would give what are now exceptions to the status of approved practices.

Israel and Arabs Plan Division of Jerusalem

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. MULTER. Mr. Speaker, it is always pleasing to take note of efforts leading to the establishment of permanent peace in the Holy Land. The following article by Gene Currivan, which appeared in the New York Times of April 24, 1949, is further indication of the fact that Israeli and Arab nations will peacefully settle their problems if improper pressures are not exerted by those whose interests lie in creating turmoil and confusion:

ISRAEL AND ARABS PLAN DIVISION OF JERUSALEM—BOTH OPPOSE INTERNATIONALIZATION AND SEE HOPE FOR OWN AGREEMENT

(By Gene Currivan)

TEL AVIV, ISRAEL, April 23.—The division of old and new Jerusalem, which seems to be one of the world's perplexing problems, may be solved on the home grounds. While the United Nations Conciliation Commission is preparing to go to Lausanne to discuss the refugee question and ultimate peace, Arabs and Jews have met here without benefit of the United Nations to settle their immediate problems.

This is one of the most important steps taken in the post-cease-fire era and it shows that, as many experts have often said, these two people can get together if left to their own devices.

Neither side wants internationalization, as originally suggested by the United Nations and recently pressed by Pope Pius XII. Their differences are at the moment more or less local in Jerusalem and can be worked out locally with a little patience and give-and-take on both sides.

The outside world aparently is greatly interested in access to the holy places and in their protection. Strangely enough, these matters are considered academic here and not principal obstacles to peace. Except for war itself, which has no conscience, the holy places have been and will be accessible to all when the final agreement is reached. Even with the war there has been no great amount of damage to ecclesiastical places, with the exception of Notre Dame in the new Jerusalem and some synagogues in the old city.

HOLY PLACES UNDAMAGED

But aside from a few shell marks here and there and a hardly noticeable scar on the dome of the Church of the Holy Sepulchre, there is nothing to substantiate reports from outside that the holy places were main targets.

The Arabs could easily have hit many sacred structures near which shells never landed. The Jews likewise could have leveled the Arabs' Mosque of Omar in the center of the old city, but they never fired a shot that way; it is the outstanding structure in the walled city and one of the most sacred buildings in the Moslem world.

Both Jews and Arabs have had enough of outside interference by commissions and in-

ternational delegates. Neither side has benefited because it seems that few people understand the oriental mind. Both parties derive from Semitic origin, although there are few Jews now who are not far less oriental than their Arab brethren.

The fact remains that Jews and Arabs have lived together for centuries and can live together again if their international cousins will keep out of the family quarrel. No one can solve family disputes like members of the families themselves.

On that theory, Jews and Arabs comprising a special joint commission met this week in the no man's land near the old city of Jersualem to thresh out their differences. A principal item on the agenda was article 8 of the Israel-Transjordan armistice agreement dealing with the holy places, the opening of roads, and a certain amount of line-straightening.

DIRECT EFFORTS

International bodies can discuss these things for months without arriving at a satisfactory conclusion; but the actual parties concerned, if left to themselves without external pressure, might be able to achieve something tangible.

The main problems are (1) the opening of the Bethlehem-Jerusalem road; (2) opening of the Mount Scopus road to Hebrew University, which is now in the neutral zone and not accessible to the public; (3) resumption of the supply of water to Jerusalem through Latrun, and (4) access to the Wailing Wall.

The Arabs are said to be asking for suburban areas of Jerusalem such as Talpioth so they would have a direct road to Bethlehem. At the moment the Jews hold 2½ miles of the Jerusalem-Bethlehem highway.

The problem in the opening of the Mount Scopus road is similar. The Arabs hold about 1 mile of this road in the New Jerusalem.

While Jerusalem now has a fairly adequate water supply, there may be a deal by which the Arabs will resume the pumping of water to Jerusalem through Latrun if the Jews agree to supply the old city again with electricity.

So far as the Wailing Wall is concerned, it is possible that the Arabs may soon open the old city generally as they did for the privileged few at Easter; and then all the holy places will be accessible.

Free access for everyone everywhere is hardly to be expected before the peace pact is signed, but there is likelihood that Christian pilgrims may have keys to the city and that special arrangements will be made for occasional Jewish pilgrimages to the Wailing Wall.

This was the pious hope of many Arabs with whom this correspondent talked in the old city during Easter Week. The Arabs are badly in need of the tourist trade and would welcome anyone who could bring them dollars or pounds. Their shops are overflowing with fresh vegetables, fruit, canned goods, meat, and all the oriental trinkets that tourists like, but there are few tourists to do the purchasing.

BARGAINS IN ARAB MARKETS

Prices are ridiculously low. The best Arab meal costs less than $1, while the equivalent here in Tel Aviv runs to more than $3. American cigarettes cost 27 cents a pack against 75 cents to $1 here.

An Arab who has a shop in the shadow of the Holy Sepulchre summed it up with the remark:

"The war is over. Let's open the gates. I'm sick of being a prisoner behind these walls."

Every day hundreds of Arabs climb to the top of the walls and look over into modern Jerusalem. They probably wonder why their leaders are being so obstinate. Virtually everyone agrees there will be no more fighting; and most of all they are hoping for the day when the gates again will be open and no one will ask or care whether you are a Jew or an Arab.

A strange phenomenon after all the bitter fighting between old and new Jersualem is that there is little enmity on either side at the moment. Jews in modern Jerusalem do not hate Arabs in the old city and Arabs have no feeling generally against Jews. As in all wars the personal element soon disappears and when scars are healed it is easy to forget who caused them in the first place.

This, however, applies only to near-by Arabs with whom Jews have mingled over the years. It does not apply, for example, to Egyptians, Syrians, or Iraqis. Jews and those "foreign" Arabs with whom they have had very little contact are as far apart as ever.

Only those who have lived in Jerusalem can realize fully how intermingled were Jews and Arabs of that particular area. The old city's gates were never closed. The more wealthy Arabs lived in new Jerusalem and there was the same cosmopolitan atmosphere that could be found in any middle eastern capital.

CONDITIONS NEAR NORMAL

Now that the siege is over and conditions are returning to normal, the Jews are quite happy. They have acquired freedom from fear. However, the Arabs in the old city feel hemmed in and can see no valid reason for it. Some of their leaders still feel a certain degree of resentment against the Jews, but this is understandable. They have suffered considerably and have nothing to show for it but a regimented existence not compatible with the Oriental love for leisure and a free, unencumbered life. The so-called man-in-the-street only wants to get back to the way of living he knew a year ago when he could circulate freely and get the most out of life.

We Must Not Be Afraid of Change

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Raymond B. Fosdick:

WE MUST NOT BE AFRAID OF CHANGE

(By Raymond B. Fosdick)

When the last glacier retreated northward from what is now Connecticut, it left behind, as mementos of its visit, great boulders of rock which are now strewn lavishly across the State. Several of them, as large as a corncrib and many tons in weight, were deposited on my farm, and for 15 years I have watched one of them fight a losing battle with an ash tree. The tree evidently started in a seed lodged in a tiny pocket in the top of the rock. When I first saw it, it was a sturdy sapling that had made for itself a comfortable crevice for its roots. Today its irresistible growth has torn the massive rock into fragments.

This is the law of life. The future belongs not to rigid absolutes, whether they are primal rocks or unyielding social arrangements, but to the thing that can grow, whether it is a tree or a democracy.

It is strange that a principle as familiar as this should today need underscoring, but we are living in years of uncertainty and fear, and fear induces a kind of spiritual astigmatism. To be sure, in our generation we have reason for our fears, and every justification to resist the threat that creates them. But I am thinking of fear as an evil in itself and what it does to human emotions and reactions.

For one thing, fear breeds an instinctive hostility to growth, because growth means change, and in anxious hours men tend to cling to the shelter of the present or to put their faith in nostalgia for the past. But history's current is sweeping us into the future and we cannot stand still, nor is there now any place left to go back to. The illusion that security can be found in immobility, or that safety is dependent upon the absence of change, is perhaps the most dangerous form of imbalance which plagues the minds of men.

Nothing is static in this world, least of all our ideas. Values change from age to age and the interpretation of one generation is seldom the interpretation of the next. Social conceptions must constantly be retranslated and reexpressed in contemporary idiom to accord with contemporary conditions. Even our conceptions of freedom and democracy are not static principles. The Declaration of Independence was a broader definition of freedom than that which came out of the revolution of 1688, just as 1688 widened the freedom of Magna Carta.

Today the conception of freedom is once again taking on a larger meaning. Our generation is thinking of the threat to freedom which comes from poverty and insecurity, from sickness and the slum, from social and economic conditions in which human beings cannot be free. In many countries, including our own, this new conception of freedom is struggling to make itself articulate, and irresistible change in older points of view is taking place before our eyes.

Democracy is another conception which must also be reinterpreted from generation to generation. It is government by the people and for the people, but its limits were not finally determined by the political concepts of the eighteenth century. Rather it is a growing, dynamic faith, a perpetually evolving adjustment between freedom and justice, between individual rights and the demands of society. This adjustment, however, is never perfectly and finally attained; it remains a problem which mankind must solve again and again. "It is provided in the very essence of things," said Walt Whitman, "that from any fruition of success, no matter what, shall come forth something to make a greater struggle necessary."

Here again we have a familiar concept to which most of us would doubtless subscribe. But it needs to be re-emphasized today because our current fear of communism is driving some of us to believe that change is somehow subversive, and that anyone who advocates new ideas is probably a fellow traveler who should be watched. Not only the House Un-American Activities Committee but similar State committees and various self-appointed groups are creating a climate of opinion definitely hostile to those who fail to conform to predetermined standards, and suspicion is thrown on individuals and organization who dare to think in unorthodox or nonconformist terms.

With the possible exception of John Adams' administration, there is a risk today in being a liberal that has never existed before in the history of this Republic. If you sign a petition to admit colored people to public housing developments, if you favor fair employment practices or are concerned about civil liberties, if you fight for the protection of the rights of the foreign born, if you oppose religious prejudice and Jim Crowism, if you sanction cultural exchange with foreign countries, if you aline yourself with those who are working for more effective labor unions or more adequate medical care, if you take any point of view which involves the implementation of the Declaration of Independence that all men are created equal, you

are apt to be suspected in some circles as a knowing participant in the Communist front, or at the very least as a witless dupe of Moscow's hypnotic influences.

There is hardly a progressive organization or undertaking in the country to which the adjective "communistic" has not been applied in the last few years—from the Tennessee Valley Authority and water power developments generally, all the way to farmers' and consumers' cooperatives and plans for rural electrification. Fingers are even pointed at organizations like the YMCA, the YWCA, and the defunct Epworth League. In many States teachers and college professors have been frightened into sterile silence, and even the pulpit has not been free from fear.

The tragedy of this business is that it plays into the hands of the Communists. It identifies Russia with the process of social change at the same time that it limits us to a bleak and hopeless status quo. It concedes the Soviet claim of concern for the underprivileged while it stigmatizes the achievement and promise of democracy toward this same goal. A prominent doctor, head of a State medical society, recently condemned the idea of the broader distribution of medical care on the grounds that it was being pushed "by Soviet agents in this country."

That is the kind of reckless statement which creates an atmosphere favorable to communism. If the idea of making available to all the people of our country the curative techniques of modern medicine is communism, if communism has a patent on the idea, then communism has something for us which we very much want. But it isn't communism. It is democracy. Its roots go back to the Declaration of Independence, long before Karl Marx was born. It is a translation into social terms of a concept that was first conceived as a political idea. It is part of our developing spiritual testament. It is in line with all that is best in our tradition and hope. It is democracy facing the responsibilities of its maturity.

Those frightened people who use the word "communism" so easily had better reckon with its implications. There are plenty of arguments against communism. It is a facade for a ruthless tyranny. It is a brutal hoax by which millions of confused and hungry people are persuaded or coerced to sign away their freedom in exchange for utopian promises. But to paste a label of communism on the yearnings of men everywhere for a better life, to classify as subversive those goals of equality and human service toward which our democracy is moving, is to concede to the Communists all the best arguments and make a mockery of the faith that sustains us.

It is undoubtedly part of the Communist strategy to frighten us into a position which seems to identify our democracy, not with forward-looking movements related to the hopes of men, but with outmoded patterns of social thinking. If in the eyes of the nations America could appear as a victim of spiritual paralysis, frozen to the present, deaf to the impact of new ideas of human equality which are sweeping the world, it would be an overriding victory for Soviet policy. That is the picture the Communists are trying to paint of us, and that, unfortunately, is the picture that some thoughtless and panicky people in this country are trying, unwittingly, to help them paint.

I do not underestimate the necessity which we face in times like these of keeping the Communists clear of our Government and rooting out treachery wherever it may be found. Split loyalties or loyalties that respond to strings pulled in Moscow cannot be tolerated in positions of power. We must know who our enemies are. But this is a task requiring consummate judgment and skill. If, in a clumsy attempt to exercise evil, we proscribe the good as well, the damage will be irreparable. To act as if the term "communism" covers all the plans and dreams of men for making this world an inviting home to live in instead of a place to freeze and fight and starve in is no more intelligent than using a steam shovel to weed a flower garden.

In our concern over what communism may do to democracy we have overlooked the danger of what we ourselves may do to democracy under the stimulus of fear. Fighting fire with fire is an easy but misleading slogan which has betrayed more than one cause in the past. Challenged by authoritarianism, men begin to build an authoritarianism of their own; they tend to take on the mood and techniques of their opponents; they answer heresy-hunting with heresy-hunting; they become like the thing they fight. That is what fear does to people. If the tactics of the Soviets succeed in inducing us to try to stamp out dissent and to measure loyalty by conformity, if they scare us into a denial of our historic goals, then they have maneuvered us into retreating from the field before the battle has even begun.

If democracy means anything at all, it means the promise of growth. Democracy is not a finished project; we are engaged in building it. There is no blueprint which covers all the contingencies that may arise, or the new ideas and patterns that may be developed in the future. There is no final and absolute form of democracy which has been handed down from some political Sinai. We have no Karl Marx in our past. Democracy is a method of evolution, a maturing way of living, a conception of human relations rooted in the worth and dignity of the individual and inspired by the developing idea of freedom.

This is what our democracy has always meant. We have given it its preeminent place in the world because we have welcomed diversity of opinion, because there has been no fixed creed to which our citizens have had to subscribe, no Siberia for our intellectual and spiritual nonconformists. Our national life has been healthy and vigorous because dissenters have been encouraged to think critically of the political, social, and economic order in which we live.

Indeed, as we look back on our history we realize that the periods when we rose to moral greatness were periods of nonconformity—when Thoreau wrote his essay on civil disobedience; when Seward appealed to the country with his revolutionary thesis: "There is a law higher than the Constitution"; when Theodore Parker from his pulpit in Boston denounced the iniquity of our war on Mexico in words that burned their way into the conscience of the Nation. "If there is any fixed star in our constitutional constellation," said the Supreme Court in the Barnette flag-salute case in 1943, "it is that no official, high or petty, can prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion, or force citizens to confess by word or act their faith therein."

It is this kind of tolerance and adaptability that makes the evolving will of the people effective in reaching new definitions of liberty and equality. It is this philosophy of growth that gives us assurance in the present crisis. The only adequate way to answer the challenge of communism is to continue the building of an economic and social system whose concrete results in terms of the welfare of mankind will far outstrip anything that communism can even promise. Democracy thus interpreted as a positive force can create new hopes and new initiatives in human life and can capture the imagination of the world.

Here is a faith worth fighting for. Stalin boasts of his "new order." We have a new order, too, based on the capacity of each generation to experience what Lincoln called a new birth of freedom. The Communists extol the youth and virility of totalitarianism. In the evolution of democracy we have a world that is perpetually young.

I started by saying that the future belongs to the thing that can grow; a tree can demolish a rock. In spite of the present impetus of its revolutionary program, communism, by encasing itself in an ironclad orthodoxy, is sealing its own ultimate doom. Whether the field is science or economics or literature or art or music, the Kremlin has circumscribed it with an adamantine authoritarianism. The conformist reaction which holds the intellectual and humanistic life of Russia in a vise-like grip can end only by strangling the vitality of the system it seeks to preserve.

In such an atmosphere there can be no flowering of the human spirit; it withers and dies from suffocation. The Communists are fighting against the laws of nature. In their fanaticism they have forgotten, if they ever knew, that stagnation and death await ideas as well as social and economic arrangements which have lost their power to grow. They taunt us for being the supporters of a crumbling status quo, but it is they who are looking backward, they who are trying to build a status quo far more rigid and absolute than anything the world has ever seen. It is they who would put blinders on men and establish boundaries beyond which ideas and dreams shall not be allowed to go.

Four hundred years ago Galileo shook the world with the question: "Who is willing to set limits to the human intellect?" Well, the Communists are not only willing to do it, they are attempting to do it; and in that attempt which flies in the face of history lie the seeds of their own ultimate disintegration.

There is no future for such a system, any more than there is a future for a rock stranded by a glacier. Ultimately the irresistible power of a thing that can grow will shatter it. That is why democracy, rightly interpreted, is the last best hope of earth. It is rooted in the principle of growth; it is adaptable to new concepts of social justice. It is built, not on a fixed creed or on a system of regimented ideas, but on the sure knowledge that frontiers are never stationary, that the thrust of events is steadily forward, that there are no privileged ideas around which magic circles can be drawn to protect them from competition. It is only free men who dare to think. And it is only through free thought, freely expressed, that the soul of a people can be kept alive.

Committee for a Democratic Far Eastern Policy Branded a Communist Front

REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. JUDD. Mr. Speaker, I am glad that the Department of Justice has at last discovered the nature of the Committee for a Democratic Far Eastern Policy. This committee has been the mainspring of the successful propaganda campaign throughout our country against any program of effective assistance to China—a campaign which I described here more than 4 years ago.

The mainspring behind the Committee for a Democratic [sic] Far Eastern Policy, the Attorney General belatedly finds has been the Communist Party. Had the Attorney General taken the trouble he could have found many months ago the kind of literature I hold

in my hand about that committee. It is a letter on the official stationery of the Communist Party of New York State calling the attention of the "dear comrades" to the resolutions on China which the committee adopted recently. Incidentally, for several years its recommendations have consistently given a preview of what our State Department would shortly thereafter adopt as its policy on China and the "line" which it would soon begin to pass out to the opinion-forming agencies of our country.

I approve and commend the action of the Attorney General yesterday in revealing officially that the committee is nothing but a Communist front, a fact which the Communist Party itself has been vigorously advertising for months, and months, and months. I fear it is another case of our Government's locking the barn after the horse is stolen; but perhaps it will be of value for people who have naively accepted the vocal advocates of our disastrous policy in China as being unbiased experts on the Far East, to look through the list of directors, sponsors, and consultants of the Committee on a Democratic Far Eastern Policy. It will be found, for example, that at least 15 of them have been trustees, sponsors or writers of the Institute of Pacific Relations, making clear how that organization, which the unsuspecting public has supposed was an authoritative source of objective studies on Asia, has been used to propagate Communist distortions about China rather than the truth. At least a dozen more are prominent and prolific writers and lecturers on China.

The Communist Party's letter recommends the Far East Spotlight, the publication of the Committee for a Democratic Far Eastern Policy, as the only source now available of "the positive and encouraging facts about the Chinese people's great and successful fight against American reaction."

Read the committee's program for action on China and you will find out what sort of forces and people have been behind the propaganda in this country for policies which have led to the loss within 4 years after the war in the Pacific of what 4,000,000 Americans fought there 4 years to win:

COMMUNIST PARTY OF NEW YORK STATE,
New York, N. Y., March 1, 1949.
To All Sections and Counties.

DEAR COMRADES: Enclosed please find program for action on China policy, as voted upon by a united-front-action conference on China, held in New York on January 29, 1949.

We are sure that you will find this material not only informative, but helpful in planning actions on China in your communities.

A special outline has also been issued by the National Education Committee on Communist Policy in China. This can be secured through orders from our district education department. The outline can be used as the basis for discussion in your sections and branches.

Any inquiries in relation to further activity can be received by writing to the Committee for a Democratic Far Eastern Policy, at 111 West Forty-second Street, New York City.

Comradely yours,

MAY MILLER,
Assistant Organizing Secretary.

PROGRAM FOR ACTION ON CHINA POLICY AS SUGGESTED BY THE ACTION CONFERENCE ON CHINA POLICY, NEW YORK CITY, JANUARY 29, 1949

PROGRAM OBJECTIVES

1. Demand a congressional investigation—

A. Of the Chinese lobby in Washington. One of the largest-spending foreign influences in our Capital; not registered as foreign agents.

B. Of the billions of dollars of private accumulation deposited in American banks and investments by Chinese officials and individuals.

2. Demand a new China policy—

A. An end to all forms of American intervention in China and of plans to aid any elements and remnants of the Kuomintang.

B. Preparation by our Government to recognize the government which the people of China are now establishing.

C. Planning now by our authorities for genuine and self-respecting cooperation with the people's government in China, including normal and friendly trade relations free of any political conditions.

3. Get the facts and implications of the Government's China policy to the American people.

IMMEDIATE STEPS FOR CARRYING OUT THE ACTION PROGRAM

1. Get your organization immediately to pass a resolution on China policy (use the enclosed January conference resolution for suggestions.)

Send copies of your organization's resolution to your Senators and your Congressmen. Give it publicity in your organization's publication and elsewhere. Send a copy to the Committee for a Democratic Far Eastern Policy.

2. Make use of the political ammunition of facts. The American people, if they know, will act.

A. Make a drive to get readers and subscribers to Far East Spotlight, the committee's monthly magazine. This is the indispensable tool for every fighter for a new and friendly policy toward China. Previous sources of reliable information about China and the Far East now have an NAM slant. Only Far East Spotlight gives you the positive and encouraging facts about the Chinese people's great and successful fight against American reaction, and keeps you up to date about Washington's evil plans to go on backing reaction in China and the Far East. Subscription: $2 a year. Introductory offer: $1 for 8 months. Members of the CDFEP get this free.

B. Push the sale and reading of Anna Louise Strong's Tomorrow's China. Paper bound, 65 cents; cloth bound, $2. Organizational orders for 5 or more, 25 percent discount.

C. Have meetings on the China policy issue.

(a) The committee can furnish speakers. In the New York City area telephone the speaker's bureau of the committee any afternoon, Bryant 9-6343. In California, the San Francisco area, contact Mr. William Kerner, 1841 Ellis Street, San Francisco. Los Angeles area, contact Mrs. Jeanette Orel, 362 South Columbia Avenue, Los Angeles.

(b) Send your organization's own speakers to the briefing session on China. First session, Friday night February 18, 7:30 sharp. Telephone the committee for registration blanks, Bryant 9-6342. No fee.

You can't fight without facts. Far East Spotlight is your basic source of information. Meetings on China will bring facts to hundreds of others.

3. See to it that the President and the Members of Congress hear from hundreds of individuals on China policy right now. Order prepared post cards from the committee, 1 cent each. Write your own messages. Make calls, in person and by telephone, on your Senators and Congressmen.

4. Have your organization make an immediate contribution to the work of the committee or plan to give a regular (monthly, quarterly, or yearly) contribution.

5. Support the Committee for a Democratic Far Eastern Policy.

A. By becoming members and by getting your friends to join. Membership includes subscription to Far East Spotlight.

B. By securing individual contributions for the committee. Your own; your friends; throw a party for the committee.

C. By doing volunteer work at the committee's office, 111 West Forty-second Street, fifth floor—any time; any day. Every Tuesday night the staff is "at home" to friends who come to help.

The Chinese people are defeating the American reactionaries. So can we.

China policy reveals the over-all character of Washington's foreign policy: It harms the American people.

China policy is directly related to our domestic struggle for homes, for more consumption goods, for lower prices, for increased social security, for healthy international trade, for freedom from depression and militarism.

China shows up the weak spot in our reactionaries' program.

Let's fight on China policy and take advantage of the blow the Chinese people have dealt the American reactionaries.

COMMITTEE FOR A DEMOCRATIC FAR EASTERN POLICY,
111 West Forty-second Street, New York City.

Ways and Means Committee Denied the Right To Consider Socialized Medicine—Why?

REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. JENKINS. Mr. Speaker, I ask in all seriousness why has the President's health bill not been referred to the Ways and Means Committee? Heretofore, all bills introduced in Congress referring to social security have been first referred to the Ways and Means Committee. Are the President and his social-security advisers afraid to risk this socialized-medicine bill with the committee that heretofore has handled all social security legislation? The first social-security law, passed in 1935, was prepared by the Ways and Means Committee after long and exhaustive hearings. This law was extensively amended in 1939 and this amendatory program was all carried on by the Ways and Means Committee.

That legislation provided for old-age pensions and pensions for the blind and aid for dependent children and for other social-security relief. It also included a plan whereby employers and employees should contribute jointly to a fund which should be used as social-security payments to employees after they arrived at the age of 65.

That legislation also carried provisions for the financing of all these pensions and social-security payments.

Then, surely since this proposed health legislation is proposed to be financed in much the same way, it should be considered by the Ways and Means Committee.

The President's socialized-medicine bill is to be financed by the appropriation of a sum equal to 3 percent of the wages of those who are included under the provisions of the bill. This bill is intended to take to a great majority of the American people social security for health and hospitalization and it is to all intents and purposes the same kind of legislation as the original social-security law.

This so-called socialized-medicine bill, the passage of which has been requested by the President, has been referred to the Committee on Interstate and Foreign Commerce. The administration has effectively bypassed the Ways and Means Committee, which will now have no jurisdiction over the legislation.

Why this has been done has already caused a great stir among the Members of Congress. It is being pointed out by Congressmen also that the Reorganization Act, passed by Congress just about 2 years ago, specifically provides that all legislation concerning national social security is within the jurisdiction of the Ways and Means Committee.

When a bill has been once referred to a committee, it is a difficult matter to accomplish its re-referral. However, this can be done, and I maintain that it should be done immediately. My persistence in this respect is not to be considered as any reflection on the great Interstate and Foreign Commerce Committee.

It is evident that those who drafted H. R. 4312, which is the bill that has been referred to the Committee on Interstate and Foreign Commerce, intended to draft it so as to enable it to detour the Ways and Means Committee and land it in the Committee on Interstate and Foreign Commerce.

The real test as to which committee should have jurisdiction over this bill is the test as to how the program shall be financed. The Interstate and Foreign Commerce Committee has no jurisdiction over tax matters. All tax matters are exclusively within the jurisdiction of the Ways and Means Committee.

The jurisdiction of the Ways and Means Committee has been defined both by the Constitution and by the rules of the House. To that committee has been given the responsibility of raising the revenue necessary to implement all legislation passed by Congress.

I should now like to discuss briefly this so-called President's health bill, which contains 163 pages. On pages 147 and 148 of this so-called health bill appears the following language:

(b) There shall be appropriated to the account for the fiscal year ending June 30, 1952, and for each fiscal year thereafter—

(1) sums equal to 3 percent of all wages estimated to be received during such fiscal year;

(2) sums equal to the estimated cost of furnishing dental services and home-nursing services as personal health-service benefits during such fiscal year; and

(3) any further sums required to meet expenditures to carry out this title.

(c) There shall be appropriated to the account in the fiscal year 1951, a sum equal to 1 percent of all wages estimated to be received during such fiscal year, to constitute on July 1, 1951, a reserve for the purposes specified in section 772 (a).

This language indicates that those who drafted the bill are artfully trying to write language into the bill that will make it appear that the method by which the money is to be secured for financing this program is not taxation. In this language an effort has been made to substitute the Appropriations Committee for the Ways and Means Committee for the purpose of raising funds by which this bill can be implemented and made effective. In this bill the participants are required to pay a certain percentage of their wages and salaries, just exactly as the workers are required to pay under the regular social-security laws, heretofore passed by Congress in 1935.

Mr. Speaker, I know no reason why this effort should be made to enact this legislation under different circumstances than those under which all other social-security legislation has been enacted, unless it might be that those sponsoring this legislation felt it could be more easily enacted through the committee to which it was referred than through the Ways and Means Committee.

It might also be that those in favor of this legislation have decided that for purely political reasons it would be better to follow the course which they have followed. If they have no other reasons than political reasons, then I repeat that it is a disservice to the people of the country to attempt to enact such important legislation in any other way than in the accepted, customary way.

It is a well-known historical fact that President Truman spent much of his time in the last campaign in finding fault with the Eightieth Congress. A fair analysis of all the facts would lead any reasonably minded person to the conclusion that Mr. Truman's principal complaint was that the Eightieth Congress had refused to cooperate with him in his wild spending program. Likewise, the Eightieth Congress had passed legislation that reduced taxes very materially. The Eightieth Congress also kept Government spending down, so that the budget was balanced and a very large surplus was shown.

Ever since his inauguration on his second term, President Truman has indicated an insatiable desire to spend money. His budget is the largest ever presented by any President in peacetimes. From the beginning he demanded that Congress pass legislation increasing taxes by at least $4,000,000,000. He has launched programs and demanded passage of legislation which, if passed, would exceed the income of the Government by billions of dollars.

I shall take time here to discuss only two of these programs which I think are the most expensive. Both of these are new programs.

First. He has recommended the passage of H. R. 2892. This bill, if passed, would provide that the Federal Government should enter the field of public assistance to such an extent that eventually all public assistance would be under the control and direction of the Federal Government. This would bring about what the uplifters describe as the "welfare state." The cost of this legislation is variously estimated as from $6,000,000,000 for the first year, to $25,000,000,000 per year within a few years. Just how the President and the Social Security Board, which is under his direction, can advocate the adoption of any program placing such a terrifically heavy additional tax load on the backs of the American people is difficult to understand.

Second. I think the most expensive individual program advocated by the President is his so-called health program as outlined in a recent message he sent to the House of Representatives. In short, he recommends the adoption of H. R. 4312, which is in effect legislation providing for socialized medicine. I have heretofore discussed one feature of this proposed legislation.

Mr. Truman in his message on the socialized-medicine bill, very smoothly slides over the important matter of what it is going to cost. This has been characteristic of all New Deal administrations. They have learned that the easy way to elect is to spend. In discussing his so-called socialized-medicine plan, President Truman evasively said, "Many people are concerned about the cost of a national health program. The truth is that it will save a great deal more than it costs."

When he says that the program will save more than it will cost, he evidently means to take care of all the health needs of all the people. If so, it naturally follows that he does not want to venture a guess as to what the expense will be. It is certain that it will be from $10,000,000,000 to $50,000,000,000 a year. A well known national writer says, "If Congress approves President Truman's program, social security will cost the American people $1,250,000,000,000 in the next 50 years." The long string of figures in written words is one trillion, two hundred and fifty billion dollars.

I think that nearly every American feels kindly toward every program that will improve the sanitation and health of our people. Likewise, every American would be glad if he could afford to furnish for himself and his family everything that money could buy. However, his good sense indicates to him that it is not for the best interest of himself and his family to incur obligations that he cannot possibly meet. In other words, reckless spending does not guarantee to him and his family happiness and contentment. It almost inevitably brings sadness and positive disadvantages.

As it is with the individual, so it is with the Government.

While I am discussing the President's program for socialized medicine, I should not fail to note that spokesmen for the administration have indicated that this proposed legislation will not be pushed for passage at the present session of Congress, and that it will be held back for consideration in the session of 1950. We must not lose sight of the fact that 1950 is another election year. Socialized medicine would be a splendid platform on which to stand when handing out promises to the American people.

I confidently predict that H. R. 2892, through which the administration seeks

to bring about the "welfare state," will not be recommended for passage by the Ways and Means Committee, and for that reason will not be brought up for consideration in this session.

It is my prediction that the administration for political reasons will not force the socialized-medicine legislation for consideration in this session of Congress, but will withhold it until the session of 1950.

The President's socialized-medicine program is being severely criticized by many of the newspapers of the country. It may be of interest to know that the Cincinnati Enquirer, one of the oldest and most influential Democratic newspapers in the country, recently said:

A proposal can be fine in principle and very grim in actual execution. Therefore, those who react unfavorably to President Truman's shower of blueprints for a vast health program need not feel that they are standing against the public interest. Significantly, not even the Congress elected from President Truman's own party is showing any liking for his idea of compulsory medical insurance.

If it is the Government's business to finance medical care, it is likewise the Government's business to impose a toothbrush tax on everyone and have toothbrushes issued from Government warehouses; to impose umbrella and overshoe taxes, and require that everyone wear GI umbrellas and overshoes on rainy days; to impose a religious tax, and build Government churches which everyone would be required to attend, and so on, ad infinitum.

It is not our intent to try to reduce to an absurdity the proposal of pay-roll taxes for medical care. We mention a few seemingly rather farfetched other possibilities merely to indicate that should the Government take another great step toward official management of our personal affairs, there will be no further logical point at which it should stop. Quite plausibly we would reach a day when the Government withholding tax reached the point of complete confiscation, the Government taking all of one's earnings and doling out only such services and goods as were deemed proper for the individual to have. That isn't the democratic way, nor the American way. It does bear an ugly resemblance to the Soviet way, however well intended the motive.

Our present scheme for improving and safeguarding public health is far from perfect. Much needs to be done—and several of the side recommendations made by President Truman are on the proper course. But we seriously question Mr. Truman's assertion that the Government could do a better job financing health care. Ours is not a pauper state in which desperate recourse to socialized medicine is necessary. We can raise up the low without tearing down the high. And no matter how plausibly presented, the proposed program would not merely elevate the health care of a needy segment of the population, but would act as a brake upon the health care of the whole population. The deeper we enmire the Nation's health care in the tax structure and the more we enmesh it in a Federal bureaucracy, the lower the quality of that care will become.

Mr. Speaker, the social security of our people is greatly to be desired. Those who from poverty or physical infirmity or incapacity cannot help themselves should be assisted freely. Those who wish to contribute to a program that will guarantee them social security in the sunset of their lives should be given an opportunity to do so. The Government should not risk its own solvency in an effort to give everything to everyone who might ask for it and thereby stifle individual initiative which has characterized Americans in all generations and which has brought our great country to its present stature as the greatest Nation of all times.

Reduction in Cost of Government Most Vital Problem Facing Congress Today

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following letter and statement from Mr. H. A. Elcock, president of the Idaho State Chamber of Commerce. This frank open statement regarding the steadily increasing cost of government should be read by every American. I am confident this statement of the situation in Idaho could be paralleled by nearly every other State in the Union.

IDAHO STATE CHAMBER OF COMMERCE,
Boise, April 8, 1949.

Senator GLEN H. TAYLOR,
Senator BERT H. MILLER,
Representative JOHN SANBORN,
Representative COMPTON I. WHITE,

GENTLEMEN: It is my hope that this letter, addressed jointly to you as members of the Idaho delegation in the Congress of the United States, makes you as angry and unhappy as the facts disclosed herein made me.

Of course, it is not particularly important in the global scheme of things whether I am unhappy or ill-tempered. I sincerely believe, however, that each of you have some common interest with me, in the aggregate unhappiness and the combined ill-temper of the citizens of Idaho.

One of my responsibilities is to try to express the composite thinking of a cross section of the citizens of Idaho who are dependent upon the stability of industry, agriculture, commerce, and the professions for their continued prosperity and financial security.

To a certain degree that is also the responsibility of each of you in your official capacities as Senators and Representatives.

Today I made a comparison of Federal taxes collected through the office of the collector of internal revenue in Boise, for the fiscal years ended June 30, 1941, and 1948. To this I added the collections made for the same periods of time by the State of Idaho for the use and benefit of the Federal Government's unemployment compensation program.

The total Federal taxes collected in Idaho, for the period ended June 30, 1941, was roughly $8,535,000 and the total for the period ended June 30, 1948, was roughly $83,671,000. This, of course, does not include Federal taxes paid by Idaho citizens on cigarettes, liquor, and similar taxes collected at the source.

The 1948 figure was 9.8 times the size of the 1941 figure and that is what made me angry and decidedly unhappy.

There are several things definitely wrong with this picture.

First of all, we didn't need nearly 10 times as much Federal Government in 1948 as we needed in 1941.

Secondly, we were not 10 times as well able to pay the bill for Federal Government in 1948 as we were in 1941.

Finally, not enough of us are doing anything to stop this trend.

Because you may want to look at the individual items that make up this crushing burden of Federal taxation, I am attaching a copy of the detailed comparison. I particularly call your attention to the fact that the citizens of Idaho paid almost exactly 55 times as much Federal income tax in 1948 as they did in 1941. The combined individual and corporation income-tax payments were nearly 20 times as great in 1948 as in 1941.

On behalf of those citizens of Idaho who must meet the combined cost of living, provide for their future security, and at the same time support Federal, State, and local government, out of their income from whatever source it may be derived, we plead with you to make reduction of the cost of Federal Government your first order of business.

There can be no greater service to our Nation than the preservation of our form of Govenment. It cannot survive if the people of the Nation cannot maintain it in a financially sound condition and a burden nearly 10 times as great as that borne only 7 years ago is clearly beyond the endurance of either the citizens of Idaho or the economy of our State to sustain.

As Members of Congress you will soon be called upon to consider recommendations made by the Commission on Organization of the Executive Branch of the Government. It seems to me that this will afford an opportunity for constructive action looking toward the elimination of many unnecessary expenditures by the Federal Government.

It would give me a great deal of personal satisfaction if I could report to our members that each of you has agreed to give support to a program of reduction in the cost of government. Obviously, taxes cannot be reduced until Government expenditures are drastically cut. We are urging this as the only realistic approach to what we believe to be the most vital problem facing Congress today.

Very truly yours,

H. A. ELCOCK,
President.

UNITED STATES GOVERNMENT TAX COLLECTIONS IN IDAHO

The following extracts from reports of the Commissioner of Internal Revenue show Idaho payments, exclusive of such taxes as liquor and cigarette taxes collected from manufacturers:

	Fiscal year ending June 30—	
	1948	1941
Income:		
Individual	$55,510,079	$1,100,552
Corporation income	14,474,202	2,236,606
Second Revenue Act, 1940		42,204
Excess profits	126,402	
Unjust Enrichment Act		14,711
Declared value excess profits	2,912	64,037
Total corporation	14,603,517	2,357,558
Total individual and corporation	70,113,597	3,458,110
Employment:		
Federal Insurance Contributions Act	3,515,759	1,237,452
Federal Unemployment Tax Act	384,674	142,512
	3,900,433	1,379,964
Railroad employment	205,693	52,419
Total employment tax	4,106,126	1,432,383

	Fiscal year ending June 30—	
	1948	1941
Capital stock	$292	$225,009
Estate	656,868	71,355
Gift	112,367	5,620
Seizures, penalties	225	1,423
Floor tax		76,143
Wholesale liquor dealers	513	12,453
Retail liquor dealers	24,305	33,814
Retail liquor dealers (medicinal)		137
Retail wine dealers	61	
Retail wine and malt dealers	111	
Malt liquors	561,396	249,235
Tobacco manufacturing	112	17
Cigarettes (floor tax)		12,303
Oleomargarine:		
Colored	173	
Wholesalers:		
Colored	160	
Uncolored	1,191	
Retailers:		
Colored	304	
Uncolored	2,734	41
Narcotics	1,431	1,177
Stamp taxes	124,234	22,084
Manufacturers:		
Lubricating oils	3,256	341
Gasoline	189,370	153,446
Automotive parts	6,967	113
Auto truck bodies	4,370	458
Other auto bodies	4,534	
Electrical energy	279,212	174,519
Sporting goods	11,174	
Photo apparatus	264	
Firearms, etc	48	
Electric bulbs, etc	52	
Total manufacturing	499,249	328,877
Retailers:		
Jewelry	604,210	
Furs	138,657	
Toilet goods	276,664	28
Luggage	116,691	
Firearms	1	
Admissions	1,063,572	167,532
Cabaret	188,509	
Club dues	32,334	3,014
Bituminous coal		290
Sugar	82,492	194,629
Telegraph and telephone	42,929	4,010
Leased wires	498	
Local telephone	25,573	
Safe deposit boxes	26,626	5,398
Bowling alleys and pool tables	17,164	
Coin-operated devices	474,283	
Transportation of persons	119,360	
Transportation of property	432,912	
	79,868,935	6,305,087
Unemployment compensation tax collected by State of Idaho for Federal Government	3,802,000	2,230,000
Total	83,670,935	8,535,087

Central Valley Project

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include a speech which I made on April 23, 1949, at the annual Jefferson-Jackson Day dinner of the First, Second, and Third California Congressional Districts, in Sacramento, Calif., on the Central Valley project:

One reason I am glad you asked me to come to Sacramento tonight is because here we meet in the heart of the greatest reclamation project on this continent. The news of the discovery of gold, broken at Sutter's Fort—down the street—a hundred years ago, gave assurance of the greatness of your past. On the day when you have news that your waters are going to be put to their fullest use, and for the fullest public benefit, then you will know that the greatness of your future is assured. That day has not come yet, and you are going to have to fight to make it come.

It is not enough to talk about full development. There are too many people who talk about full development of every drop of water for the fullest possible benefit, but who don't act the way they talk. They spend their time helping to destroy the unity, and the legal, and economic and administrative integrity of the Central Valley project. When others are in the thick of the fight for transmission lines and steam plants, they are busy doing something else. They use their time picking away at the law, and at the agency which Congress established as the best way the entire American Nation could extend help in developing the West. In short, as much as they dare, they are a drag on California's efforts to get full development and full public benefit from her water and land, and they hope you won't know the difference.

They try to cover up. They never say they are against full development. You remember the good old spiritual, that says "Everybody (who) talks about Hebbin isn't gwine (going) dere"? There's lots of wisdom and penetration in the words of that spiritual. In the spiritual it was important not to be misled by talk about getting to Heaven. In this great Central Valley it is important not to be misled by talk about getting full development.

Anything less than full development you cannot afford. That is why our Democratic Party has taken a strong and clear-cut stand on reclamation of Central Valley. The Democratic Party knows how to get full development, and we tell the people in plain words how to get it. Because we speak plain words that people can understand—Harry Truman carried the Central Valley for President last November by 50,000 votes. That's the reason why the congressional district next to your own retired Gearhart and sent the Democrat, CECIL WHITE, to Washington.

Let me read our Democratic Party platform to you. This is what we adopted here in Sacramento on the 7th day of last August. We said:

"Water and power are the essential requirements of future industrial and agricultural prosperity of California.

"We affirm the position taken by the Democratic Party in California that the great Central Valley project be completed at the earliest possible time as an integrated basin-wide publicly owned development of our water and power resources by the United States Bureau of Reclamation.

"We endorse and support the principles incorporated in the Federal reclamation law of 1902, specifically acreage limitation and protection against land speculation and monopoly.

"To safeguard these resources and retain them as our public heritage, water must be provided for the maximum agricultural development of family-sized farms, and cheap public power must be increasingly available."

That's a good platform, and every Californian, regardless of party, ought to know what it says. Because that platform spells out a good future for these Sacramento and San Joaquin Valleys, and for all California.

We are beginning to learn what rapid growth means, and the requirements of rapid growth. The Bureau of the Census tells us that the number of people living in our State has grown by 45 percent since 1940. There are nearly three Californians for every two there were 8 years ago. We are larger in population since World War II, by a number equal to the 1940 population of the State of Virginia. And we still are growing fast.

That's one big reason why water and power are the essential requirements of future agricultural and industrial growth and prosperity. Water grows crops—the food and fiber that feed and clothe people. Families need water on the land so they can support themselves by their labors. Water builds communities.

When we talk about new people coming to California, and the need for water and power to support them, don't think it's only their standard of living we're talking about. It's our own standard of living, too. There is no way of keeping ours up while theirs stays down—not for long. New Californians and old—in the long run our standards living will go up or go down together.

I have been talking about water, spread out on the land to grow crops. Now let's talk about the power of falling water. The Chinese coolie can generate water, too. He runs in a treadmill, or inside a great wheel, like a squirrel in a cage. The power he generates lifts water to irrigate rice fields, or to turn the slow wheels of a simple machine. We Americans could do that, too. We are husky enough to irrigate our valleys and turn our industrial wheels by the same power of human muscle and human endurance. But if we did, our standard of living would be the standard of the Chinese coolie.

The better we can water the land in our valleys, and the more power we can generate from falling water, the higher the standard of living of the people of California will be. If ever we get comprehensive development of this Central Valley Basin, the project will generate more than 8,000,000,000 kilowatt-hours of electric energy, annually.

Isn't everybody in California in favor of all the electric power that we can possibly harness our waters to generate?

You know the answer. It's "No," not unless some people can do it themselves and upon their own terms. Some of the interests which talk the most about building for the progress of California, actually hold back progress unless they think they can control it, actually hold back the building of dams and transmission lines and steam plants unless they can control them. That is the record.

Let's look at the record.

In 1922 the people of the State of California began their present long fight for public power. They began it in the legislature. What did they encounter? The stubborn resistance of the private utility.

That resistance was an obstacle in the fight for public power development but not a tombstone. In 1933 the people of California were asked to say in a special election whether they wanted public water and power development or not; whether they wanted a Central Valley project or not. They went to the polls and they said that they did. They wanted progress in California.

The secretary of state, as you know, places in the hands of every voter a pamphlet containing arguments for and arguments against.

Those who argued against the Water and Power Act told the voters that "It will take 10 to 20 years to absorb the surplus (power) now existing or being developed." That was the counsel given in 1933.

Do you remember, last year, in spite of all the power we've been developing, how your electric clocks all ran slow, and how you missed your appointments and trains, because California didn't generate encugh power to run your clocks on time?

And yet, those who argued against the Water and Power Act in 1933 argued that—

"Profits from energy sales are likely to be illusory in view of the excess electric energy in California (now 50 percent over demand), and, on completion of Boulder (Hoover) Dam, the power available will be twice the amount now sold."

The trouble, they said, was with our surplus California power.

Well, last year the switches were pulled in the San Joaquin Valley by our private utility company, and the pumps of the farmers were stopped. I don't think the farmers have yet forgotten that. I think they remember the help they got from the "excess" electric energy sent up from southern California. Of course we really haven't any excess in southern California, or anywhere else in this State, but that's what some people call it.

Those who supported the Water and Power Act to develop Central Valley told the people the truth. In the election pamphlet of 1933, they said:

"The project will produce hydroelectric power at low cost which will be sold to pay costs of the work. A main transmission line from Kennett to Antioch will make available cheap electric energy to farmers, home owners, and industrialists, as well as cities and districts. * * *

"Chief opposition to this project comes from one source—the Power Trust. Do not be deceived on that score. Admitted representatives of the power companies did their utmost to defeat this recovery program in the legislature and they now seek to defeat it on the ballot. You will be flooded with propaganda against this measure—propaganda issued by the power companies with your money.

"But the issue is clear cut. This act will help your State. It will reduce your power rates. It is vital to every laboring man, every farmer, every businessman. * * *

"Vote for your own interest.

"Vote 'Yes.'"

The people of California did vote "Yes" in 1933. They voted for dams and power plants and transmission lines.

There's one thing about hydroelectric power that we never should allow ourselves to forget. We cannot exhaust the supply of water that falls on our watershed, by using it. Generation of hydroelectric power is perfect conservation. It is a perpetually self-renewing resource.

But our oil reserves underground are not self-renewing. They are dwindling with use. Someday they will be gone. I wonder if those who increase our drafts on oil while they continue to obstruct our use of falling water to generate power ever have thought of that.

The Democratic Party platform we adopted here in Sacramento as we went into last year's campaign, said:

"We affirm the position taken by the Democratic Party in California that the great Central Valley project be completed at the earliest possible time as an integrated basin-wide publicly owned development of our water and power resources by the United States Bureau of Reclamation."

Everybody knows that special interests and their spokesmen in Congress have been blocking the building of public power plants and transmission lines in your valley. It was in February, only 3 years ago, that Mr. Black, of the P. G. & E. in opposing a congressional appropriation to assist your development, made his famous statement in answer to a Congressman's question, Is there any power shortage now? He replied:

"There is none now; there has been none, and there will be none in the future."

It is plain enough that the head of the private utility, that under State law is mainly responsible for keeping this part of California supplied with power, did not know that in two short years more than 5,000 factory workers in the San Francisco Bay area would be counting the dollars cut from their pay checks because of a power shortage. He did not know that the State government of California would make a survey and have to report that in 39 factories the average weekly earnings had dropped from $62.04 in February 1948 to $53.17 in March, because of power shortage. But he should have known it, for the Bureau of Reclamation, which he was opposing, was forecasting it and working to prevent it. The wage earners of San Francisco Bay learned it the hard way, even without the State survey to tell them. And the farmers and everybody else in California learned it when we were put on daylight-saving time, and kept there until New Year's, because power was short.

To all this some skeptic may say, "Well, 5,000 factory workers aren't very many, considering there are millions of them in California." No; 5,000 aren't many, looked at that way.

Back in colonial days in New England, the Sunday sermons were pretty long, and some of the congregation used to get pretty drowsy. So they made it the duty of a warden to go up and down the aisles during the sermon, carrying a stick long enough to reach down the pews. On one end of the stick was a soft tuft of horsehairs; on the other end was a hard round knob. If the tickle of horsehairs wouldn't waken the sleeper, then a rap with the knob would.

If you want to, you can debate the question whether wage cuts handed out to 5,000 factory workers in 1948 were just a tickler, or whether that was a rap on the skull. I say, whichever it was, the Democratic Party in California is wide awake.

Right here I want to say, the House of Representatives in this Democratic Eighty-first Congress has just put through the best appropriation bill for public power in Central Valley that any Congress ever passed. But you will have to keep your eye on the Senate.

Our Democratic Party platform says we must have an integrated, basin-wide development, operated by a single responsible agency, the Bureau of Reclamation. We say that with good reason.

The comprehensive plan for Central Valley calls for 38 reservoirs, hundreds of miles of main canals, thousands of miles of lateral canals and drains, 28 hydroelectric power plants and supplementary steam plants, hundreds of miles of transmission lines, feeder lines and substations, and a canal system that will link every stream in the valley into the project as a unit.

We must have unity, unless we are prepared to see the future of California sold down our own rivers.

It is a complex business to operate a watershed 450 miles long and 50 miles wide, with all those reservoirs and canals and laterals and drains, and power plants and transmission lines. One of the best statements I have ever seen as to why we cannot have two agencies in Central Valley—not two, even if both are good ones—was a statement presented to Congress by Neil Haggerty of the California State Federation of Labor. That was in 1947 just at the time when three chemical plants on the bay suspended some of their operations because power was short. That should have been a tickler to wake up a good many people, even though it was many months before the 5,000 wage earners had their wages cut.

Neil Haggerty recognized it. It didn't take a rap on the skull to waken the State federation of labor, or the Grange.

I want to read a few passages from Mr. Haggerty's statement to the house public lands committee. He said:

"Water control is not the simple task which some may suppose it to be, something to be parceled out to whomever may be ready to build a dam here or there. * * *

"The end to be attained is stability and dependability in the use of every drop of water that can be made available for irrigation, for power, and for the other purposes to which it can be put. This great and difficult end must be achieved by harnessing a resource which in its natural condition exhibits the widest diversity and instability. Along the 500-mile watershed of the Central Valley the rains and snows fall unevenly. From north to south, precipitation tapers off sharply. From year to year it fluctuates in volume irregularly.

"The uses of water caught in the reservoirs also are diverse, changing, and at times contradictory. Flood control demands the emptying of reservoirs in anticipation of coming floods; irrigation demands the filling of reservoirs to capacity while floodwaters are high, with release during seasons after the danger of flood has long passed; power demands the release of water through the turbines steadily and evenly through the year.

"The technical problem of achieving the maximum potential of these uses requires that the intricate system of reservoirs and other works which we are creating shall be so skillfully interlocked in design that the whole shall indeed be greater than the sum of the parts.

"The task of operating the water controls of the great Central Valley development will tax the highest capacities of a master dispatcher of water, one who can foresee by many days the need of an irrigator for water in a field 400 miles away, and the requirement for power of an industry in a distant city.

"Two or more agencies simultaneously attempting to develop and operate so intricate a system of controls can only cause friction and confusion and cannot possibly achieve the full economic potential to which California is entitled. To do this is a task for one agency alone.

"The California State Federation of Labor has watched the drive by special interests to destroy the unity of Central Valley water development for their own purposes with an ever-deepening apprehension."

That's why we must have unity; that's why we must tie the American River and the Kings River and the other river projects close into the Central Valley project. That's why we cannot afford to have sectionalism. We never can get the most efficient use of our limited supply of water for irrigation and for power until we get a unified project with unified operation. Any engineer, any administrator, knows that. Any wage earner and any farmer who stops to think about it, knows that. And some day, with the help of the Democratic Party, if we keep working at it, every one elected to the United States Congress will know it. Even the legislature and the administration of this State will know it.

Our platform says:

"We endorse and support the principles incorporated in the Federal reclamation law of 1902, specifically, acreage limitation and protection against land speculation and monopoly."

The party of Thomas Jefferson doesn't have to be told why speculation and water monopoly are bad. That's bred in the bones of every true Democrat. In 1776 Thomas Jefferson introduced in the colonial Legislature of Virginia his famous bill to abolish entailed estates.

"In the earlier times of the colony," he said, "when lands were to be had for little or nothing, some provident individuals procured large grants; * * * desirous of founding great families for themselves. * * * The transmission of this property from generation to generation, in the same name, raised up a distinct set of families * * * privileged by law in the perpetuation of their wealth (and) thus formed into a patrician order. * * * To annul this privilege, and instead of an aristocracy of wealth, more harm and danger than benefit to society, to make an opening for the

aristocracy of virtue and talent, which nature has wisely provided for in the direction of the interests of society, and scattered with equal hand through all its conditions, was deemed essential to a well-ordered republic."

What Jefferson meant was, "no democracy can be founded on great landed estates, picked up for speculation and made perpetual." What that means today in Central Valley is, "No water and land monopoly or speculation, especially by corporation farms." The party of Jefferson, by its plank adopted here in the Central Valley, stands squarely in favor of the water limitation in the national reclamation law that Congress first enacted 47 years ago and has reapproved a dozen times since.

It isn't just because we revere the principles of democratic past that we stand for reclamation law. It isn't just because we believe that Thomas Jefferson and Andrew Jackson grasped something of eternal truth and made it warp and woof of American policy. It is also because we believe that the truth they grasped is our guide to a better future. To a better future for this Central Valley.

Nearly everybody knows by this time that when we get all of the waters of the valley put to the purposes of irrigation under the comprehensive reclamation plan, our valley will be a better place if we multiply communities like Dinuba, than if we multiply places like Arvin. And they know that enforcement of reclamation law means fewer Arvins and more Dinubas. That's one reason water contracts containing the reclamation law are winning by popular vote in Central Valley—by a vote that is pretty close to unanimous.

The people of this valley are fair. They want as high a proportion of citizens as possible to make their livings as operators of farms, as men of business or one of the professions, and they want as few as possible to be landless laborers.

You know, without anybody telling you, that enforcement of acreage limitation means better towns and cities to live in, to do business in, and to raise your families in. You know that the fair sharing of reclamation water is going to help us to perpetuate our American democracy.

A citizen of northern California wrote a letter to the chairman of the House Public Lands Committee about a year and a half ago. He was president of a well-known businessmen's club. I do not know his party affiliation, and I do not care. Whatever it is, his letter, written in our own State, expresses the truths that you know, that we wrote into our platform. I want to read you a few passages from that letter:

"We urge first of all that as small-town merchants and professional men we have a dollars-and-cents motive of the very strongest nature in developing and fostering the development not only in Siskiyou County but throughout California of small individually owned land and operated land holdings. We prosper and increase only as the small farm owner and small industrial class prosper and increase. We desire to see the rich agricultural potential of California developed by large numbers of stable, energetic, and intelligent farmers, who and whose families, will patronize us with the strong and stable purchasing power which experience throughout California has, over a long period of years, demonstrated that that economic class possesses. It is not our experience that development of large industrial farms or of tenant farming develops or sustains a large, permanent, nontransient group with strong purchasing power to patronize the merchants, professional men, and service tradesmen of the small country town. We believe the studies of your committee will demonstrate as a fact the proposition that large industrial farms under modern conditions in California are operated by machinery with a small labor force or with large transient labor forces and drain the major portion of the profits into the hands of a few individuals whose requirements do not furnish sufficient business to sustain a large and substantial professional class, or drain the profits into corporate enterprises centered in the large metropolitan areas and that similar results follow from large holdings let to tenant farmers without permanent local ties and with a substantial portion of the income of operation paid to an absentee landlord class. With the tremendous increase of population in this State we feel it cannot be too strongly urged that a large portion of the increase should be diverted not only into the farms as owners, but also into the small country towns of California to furnish the services necessary to such an increased farm population. In our opinion, the repeal of the limitation will not be conducive to the diversion of that increased population into the country areas of California.

"Aside from our own immediate interest in the promotion of the business welfare of our group and of ourselves it is our thought that the strength of American democracy lies in our rural areas, in our small-farm owners, in the small towns and villages of our country. It is our thought that the more people own and operate small farms and small-business enterprises the stronger will be our Nation. In the warmer lowland areas of our State, 40 acres will well support a farmer and his family and provide them not only with the necessaries of life but also with a goodly portion of the luxuries and modern comforts and the children with a sound education. Such results take hard work, intelligence, and some sacrifice, but produce as a whole some of our soundest citizens. The children on such farms learn from earliest infancy the value of industry, frugality, and honesty. The elimination of the limitation will not encourage or foster the growth of that group of our citizenry. We cannot help but feel that its repeal will foster rather a small wealthy class and a transient laboring and tenant class lacking either the wealth or attachment to the community which we deem essential to development and maintenance of sound democracy in our rural areas. We, as taxpayers, who bear the initial cost of the Central Valley's project and other water developments by the Federal Government, are not in favor of use of our tax dollars for the type of development we feel inevitable from the removal of the limitation.

"We shall not labor the point further. The entire matter will, no doubt, be examined in detail by your committee. We do, however, wish to make most emphatic our thought that economically, sociologically, and politically the development which will follow from taking available cheap water to large land holdings at public expense is unsound and not in the best interests of either the State or Nation."

I find it hard to believe that any citizen of this valley, once he gives that statement thought, could do other than to subscribe to it. When I think of how CECIL WHITE rode into Congress on the 160-acre limitation in the very district where opposition to it was supposed to be strongest, then I am sure the Democratic Party will win on this issue. The more people learn about it, the more the people—farmers, labor, businessmen, veterans, church people, citizens—come to the standard that we have raised.

This valley with its resources is your heritage. Our Democratic platform says:

"To safeguard these resources and retain them as our public heritage, water must be provided for maximum agricultural development of family-sized farms, and cheap public power must be increasingly available."

What we are seeking is to release, here in this valley, the American spirit of enterprise. We are opposing the dead hand of monopoly upon you, and the palsied hand of a "regulation" that has broken down under the modern demands for cheap power. We are opposing the private monopolization of speculative gain from public investment in water, or power.

We believe in conserving your natural resources, and in distributing the benefits among you as widely as possible. We believe in creating more sound, American communities in this great Central Valley.

And we know that if we continue to work and struggle for these, our democratic beliefs, under American institutions, we shall win.

ECA Announces New Policy Regarding Procurement of Lumber

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 29, 1949

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

ECONOMIC COOPERATION ADMINISTRATION,
Washington, D. C., April 29, 1949.

Hon. HENRY M. JACKSON,
House of Representatives,
Washington, D. C.

DEAR MR. JACKSON: Because of the concern which has been expressed by the west coast lumber industry as to its more equitable participation in the European recovery program, we are attaching, herewith, a statement of a policy which we are inaugurating with regard to the issuance of procurement authorizations for the purchase of lumber.

We are taking this method of advising you of this so that you may receive the information at the earliest possible moment. Mr. Mathias Niewenhous, Chief of our Lumber Branch, will be on the west coast during the week of May 2 to discuss these matters with the lumber industry.

Sincerely yours,

HOWARD BRUCE,
Acting Administrator.

STATEMENT OF NEW POLICY EFFECTED BY ECA REGARDING PURCHASES OF LUMBER AND PLYWOOD

In the future ECA will request all participating countries desiring to purchase lumber or lumber products for dollars to afford the United States lumber industry an opportunity to compete for the business. Before writing a procurement authorization where the requested area of source is other than the United States, ECA will find out—

(a) What it is they intend to purchase.

(b) Why any other country, instead of the United States, is named as the source.

(c) Whether definite specifications were furnished bidders.

(d) Whether firm bids were requested and obtained from the United States lumber industry and any other pertinent information we deem necessary.

ECA policy on non-ECA dollar purchases by participating countries will be as follows:

In order to be consistent with the United States policy of nondiscrimination and in line with the general policy of ECA, which is to encourage participating countries to be economical in the use of their resources, and particularly their dollar resources, ECA will request participating countries (when using non-ECA dollars)—

(a) To make dollar purchases in the cheapest source;

(b) To canvass all possible dollar sources, including United States sources, in order to insure they are obtaining the lowest possible bids; and

(c) Certainly not to pay more from any dollar source than United States suppliers quote.

ECA recognizes that current market prices are not the sole consideration in the placing of purchase contracts. Where participating countries find that exceptional circumstances warrant paying higher prices with non-ECA dollars from certain dollar sources than prevail in others, they should be prepared to submit reasonable justification for such action to ECA.

ECA is always willing to discuss with representatives of industry any problems affecting their industries. Meetings may be arranged with Howard Bruce, Deputy Administrator; Samuel W. Anderson, Director, Industry Division; or Mathias Niewenhous, Chief, Lumber Branch, Industry Division.

Mr. Truman's Blunder

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of April 29, 1948:

MR. TRUMAN'S BLUNDER

During the general debate on labor legislation in the House on Wednesday, Representative ARTHUR KLEIN, of New York, called for a 1-day general strike (he termed it a "national work stoppage") as a means of demonstrating to "reactionary Republicans and Dixiecrats" that American labor is solidly behind the pending administration bill. He disclosed that he had sent telegrams to the Nation's top labor leaders urging such action.

The New York Member's proposal drew prompt fire from his colleagues, Republicans and Democrats alike. These rebukes, it need hardly be said, were richly merited. The suggestion that Congress be coerced into accepting the kind of bill the unions want by a public demonstration of organized labor's economic power is, of course, thoroughly shocking.

Yet who will say that Representative KLEIN'S proposal differs other than in degree from the pointed remarks offered by President Truman at his press conference just as the House was preparing to consider the two rival labor measures yesterday. Mr. Truman chose that particular moment to issue a warning that political patronage might be withheld from those Democrats who refuse to support legislation carrying out the party platform. Moreover, lest the timing of this pronouncement wasn't sufficient evidence in itself of its immediate significance, he proceeded to point out that one of the chief tests of party loyalty would be how Members of Congress voted on repeal of the Taft-Hartley Act.

This action of the President was, in our opinion, profoundly unfortunate. Coercion is no less coercion because it is political rather than economic, and as such it has no place whatsoever in the democratic legislative process. Stronger Executives than Mr. Truman have lived to regret efforts to dictate to Congress under threat of political reprisals. We hope our legislators will have the courage and wisdom to disregard this pressure and deal with this question on its merits as they see them.

Address Before the Clan-na-Gael

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me before the Clan-na-Gael, Easter Sunday, April 17, 1949, Hotel Astor, New York:

It is a very high privilege indeed for me to address this historic and militant organization this evening. I have long admired the many contributions which you have made not only to your native and adopted countries but your long-continued, unselfish and unflinching loyalty to the cause of human freedom whenever it was assailed by the hand of the oppressor and the tyrant.

You are aptly described indeed as the vanguard and embodiment of Irish nationality which has nobly kept the national flag and national principles to the front in dark and evil days.

By no means are your contributions confined to the political field alone. In charity and benevolence, literature and history, in the cultivation of the language, letters, art, science, and music of ancient and modern Ireland you have contributed mightily to the best and noblest traditions and aspirations of our race.

Your unyielding and unexcelled devotion in peace and in war to our own beloved and great American Nation and the exalted principles of freedom and justice upon which it is founded have furnished deepest inspiration not to your own members alone, but to millions of true Americans in every walk of life. You have inculcated and disseminated, by your efforts to perpetuate and maintain the true spirit of the Declaration of Independence and to foster, promote, and enhance the historic friendly relations existing between Ireland and America since the days of Washington and Lincoln, an example of stirring and noble patriotism which has certainly never been exceeded in this or any other nation.

Down the unbroken channels of time, suffering under the cruelties of oppression and tyranny, denied their God-given rights as freemen, evicted from their homes, subjected to poverty, want, famine, and pestilence, and finally cast as exiles over the seven seas, there is no story more pathetic, more touching, or more inspiring than the story of the Irish people. In the land of saints, scholars, heroes, and martyrs, whose people have always been passionately devoted to the cause of freedom and the cause of Christ, even the Dark Ages were not able to extinguish the fiercely burning zeal of the Irish for learning and culture.

And when the Goddess of Liberty was in danger, when ruthless and powerful enemies were seeking to disenthrone her and cast what she symbolizes into the discard, it was the heroism of your sons and the blood of your faith and race so gloriously consecrated on the altar of American patriotism in a spirit and to a degree never excelled, which contributed a surging and irresistible force in defense of our country and its priceless institutions, and so I can say to you tonight in the spirit of gratitude and pride as well for my own fellowship with this noble company, "Well done thou gallant Gael, you have fought the fight for liberty, your sons have died to preserve our freedom, your blood has been unselfishly spilled until it has drenched the soil of virtually every nation in the world in defense of the security, freedom of the land, and the perpetuation of its precious heritage of freemen and the dignity of the individual soul."

In the veins of most of us here tonight runs the rich red blood of these Irish martyrs who loved liberty and God so much that they would rather die than live in security and plenty under institutions which would deny them the right to be free and the right to worship their God according to the dictates of their own conscience.

Irish contributions have not been confined to the military alone. As I said, they have influenced for the good practically every phase of American life—the church, the courtroom, the hospital, the market place, and the public platform. But the Irish have brought no radical, alien theories to America, they have brought no dictatorships dressed up as bureaucracies, no willingness to attach themselves to communism, fascism, or other isms that would destroy the rights of the individual and kill human freedom. They have brought no supine surrender to the will of unbridled, unconstitutional authority, no weak hearts, no cowardice in the face of danger. They have brought no intolerance, no bigotry, no hatred of others, no feelings of class or caste, no bitterness in their hearts for their fellow American. Their sense of humor, their wit, their simple philosophy of live-and-let-live embellish the Irish character more than any words of mine.

On the other hand, the Irish have brought love of family, devotion to home, obedience to law and constituted authority, love of God, and love of liberty. They have brought loyalty to America, loyalty to freedom and democracy, loyalty to American institutions, tolerance and justice toward their fellow man, and they will never bring themselves to join the ranks of modern destructionists now visible on every hand, who through stealth, subterfuge, and secret conspiracy have infiltrated the American body politic with the poisonous doctrines of communism, hate, and social disorder. For the Irishman knows, from 700 years of tragic struggle for liberty, that when man surrenders personal freedom for temporary security he thereby turns himself over to the whim and caprice of dictators and soon will lose both security and freedom. He knows that if men expect to receive tolerance they must be tolerant themselves and that bigotry, racial and religious persecution are but the means to ultimate self-destruction, as well as the betrayal of democracy's basic rights.

How anyone can gaze even so briefly at the history of the Irish people and then conclude that they can be dragooned into surrendering their independence, their right to self-determination, is beyond my comprehension. As one great Irish patriot said of the oppressors of his country, "They may kill every man in Ireland and the women of Ireland will rise up and fight them. They may kill every woman in Ireland, and the little children will rise up and fight them. They may kill every child in Ireland, and then the blades of green grass growing on holy Irish soil will rise up and fight them."

Yes, my friends, you have been in the vanguard of every fight for freedom, of every struggle to preserve democracy, of every effort to protect the Constitution and its principles of justice and peace.

And together with the great company of Irishmen everywhere you can hold your heads high tonight for the matchless achievements

and accomplishments that have been made in the name of Christianity, freedom, and democracy and in defense of the most precious thing which humankind possesses, the right to his immortal soul and the freedom of his own mind and body.

A great patriot once said:

"Whether in chains or in laurels, liberty knows nothing but victory."

It is very appropriate, therefore, that tonight on the anniversary of the glorious Easter rebellion Americans of Irish blood and their friends should gather here and in other parts of the Nation and world to pay tribute not only to the carrying forward of a great ideal implicit in this historic event but also to the memory of the gallant and passionate lovers of Ireland and of human freedom who gave their all and who unselfishly dedicated their lives, their fortunes, and their sacred honor in order that the bitter, bloody struggle of over 750 years should one day be crowned with the brilliant achievement of deliverance from bondage and the glories and triumphs of self-government and independence.

The events we celebrate were not new to this world. They have had many counterparts throughout history. Since the deliverance of the most ancient slave from his chains and shackles mankind has struggled to be free from the curse of tyranny and oppression. Through the centuries the clarion call has rung out. Down through the years the trumpet has been heard sounding the rallying call for liberation and freedom. It was heard in the days of the ancient emperors and of the kings and rulers of medieval Europe. It was heard on the plains of Runnymede and across the fertile fields and valleys of France. It was heard on historic Boston Common and the halls of Philadelphia and at Valley Forge. And it was heard that fateful Easter day in 1916 in the streets of Dublin town.

Like their predecessors of historical time, like the French patriots and the American revolutionists, these men sought no selfish gain. These men sought no personal aggrandizement. These men sought no territorial conquest save what was their own. They sought what the human soul has sought since the dawn of history—the right to be freed from bondage; the right to be delivered from cruel and tyrannical rulers; the right to speak their own minds, to worship the God of their own choice, to set up the government of their own selection; in a word, to find self-expression, self-realization, and self-development through the medium of free institutions.

Great events are often moved by a few. The people, as a whole, are often inspired by a small group. The number of these heroes of the Irish volunteers and citizens' army was not large, but the spirit of freedom, sacrifice, and gallantry which they displayed animated and infused their fellow citizens with an insuperable courage to go forward, never to give up the fight for freedom until it had been won, never to cease resistance until their liberties had been secured, never, never to know the meaning of the word "defeat." Under the then existing orders and edicts of a great imperial tyranny these men were liable to be shot at sight, but their courage was not abated for one moment.

Although hundreds of people were shot and murdered in cold blood, the spirit of the people was never broken. In the words of a great British leader, "Grass can grow over a battlefield, but it cannot grow over a scaffold." The execution of the leaders created martyrs. They aroused a flood of both sympathy and resentment which swept across the land like a prairie fire. The nation was awakened, as it had been many times before, by the blood of its heroes and the sacrifice of its martyrs until the lines of resistance to oppression were redrawn and strengthened, and it was only a question of time until the nation was on its way to the realization of a greater measure of freedom and unity than it had enjoyed for centuries. Just as the shot fired by the humble citizens of Lexington and Concord "at the rude bridge that arched the flood" was heard round the world, the martyrdom and sacrifices of an Irish Eastertide ultimately swayed the sympathies of democratic-minded peoples everywhere and led directly to the capitulation which resulted in the establishment of the Irish Free State.

There were many Irishmen and Americans to whom this first settlement was entirely unacceptable. It was not deemed to be complete. It was not considered to permit full and unlimited autonomy. It was not the desired fulfillment of many of the spokesmen and leaders. But at least it was the beginning of the rebirth of a free Irish nationality and political entity. From the dark days of 1916 and the early twenties there has been a steady march forward in the affairs of the Irish Government and people. Led by a succession of brilliant, farsighted statesmen endowed with great talents, zeal, courage, and statesmanship, it has steadily developed its free institutions, its resources, its native capacity for self-government, and its position among the nations of the world. Like every other nation, it has enjoyed its periods of prosperity and depression, its times of political stability and political ferment, its times of security and apprehension. It has moved through smooth and stormy seas, through changes, vicissitudes, and shifting tides of power and opinion, but, in the main, it has clung to the course of freedom charted long ago by century-old leaders and loyally adhered to by their successors down through the ages.

But there was certainly one essential characteristic of democracy that was still lacking in that government, and that was its God-given geographic unity. Every free state is entitled to that kind of unity. Democracy is ruled by the majority, and seeks the protection of minorities. Practically every modern state has enjoyed this type of geographic unity. It would be incredible and objectionable to Americans, for example, if New York, or California, or Massachusetts were to be severed from the continental United States and permitted to maintain and conduct their separate governments without reference to the over-all authority of the Federal Union. No extensive argument is required to demonstrate the accuracy in principle and practice of the statement that a modern democratic state is entitled to its natural, traditional, geographic unity and the sovereign powers incident to it. Yet that right and that prerogative of sovereignty has been willfully and deliberately denied to Ireland in contravention of every principle of democracy, every canon of self-determination, and every tenet of justice as they are known between men and nations. Ireland was deliberately divided and partitioned by the designing, calculated, and arbitrary action of a superior and powerful imperialistic force. An imaginary geographic line was drawn across the nation in such a manner and with such a purpose as to include the maximum territory that could be included without endangering political control of the servient territory.

The same thing has been done to other small nations, but that does not give moral sanction to the unconscionable act. The same thing in principle has been done to Poland, to Lithuania, to Latvia, to Estonia, and to other free nations now consigned by the arbitrary dictum arising out of compromise and appeasement of the great Red colossus which stands astride of all Europe reaching its powerful tentacles in all directions to encompass the destruction of human freedom, to live in bondage behind the iron curtain.

The rulers of the Kremlin are well on their way to bringing under their dominion and ruthless control possibly half the population of the earth. Some of these gains have been accomplished, just as Irish partition was accomplished, by the drawing of imaginary geographic lines, by the consent and with the approval in some instances of high officials of our own and other Allied Governments. This mighty force of the Soviet is directed at the destruction of organized religion, the destruction of the church and the family unit, which is the one vital social institution upon which our civilization is based, directed at the suppression of the human being to the status of nothing more than slave or serf, and ultimately the envelopment of the whole world in a cruel and fanatical dictatorship in which free institutions shall be forever banished and freedom of the individual and the dignity of the human soul and personality shall be a mere shibboleth.

Like many of you, like all of you, I would profess to believe, during my service in the Congress and before, I have been striving, working, and fighting against these detestable tyrannies which have beset almost every part of our troubled world. I cannot here fully or adequately describe the causes of these developments, the emergence of atheistic radicalism on a world-wide front, the creation of the political, social, and economic Frankenstein which now threatens the world with unwelcome ideologies and streamlined and modernized tyrannies. The causes are no mystery to me or to you, and the sooner this Nation can detach itself through the affirmation of strong, declarative, pro-American policies from the odium, blame, and censure which surrounds these nefarious developments the sooner our great and powerful Nation will rise in respect of our people, the oppressed small nations of the earth and the teeming millions of peoples in so many parts of the world who are helplessly and silently suffering under oppression and who yearn and plead for nothing more than speedy deliverance from tyranny, the reestablishment of their free institutions, the blessings of democracy, security, and peace.

Yes, my friends, I have been protesting with every ounce of my energy against the outrages which have been perpetrated against free peoples, against the principle of self-determination and free government. I have been doing my level best to warn our people against the encroaching spread of communism and subversion at home and abroad which endangers the moral, physical, political, and economic security of this Nation, and which threatens the perpetration of our free democratic way of life for which so many bitter sacrifices have been unselfishly made by millions of boys and men of this and preceding generations.

That is why I am here tonight to join, my friends, with you in your reverent impressive tribute to the Irish martyrs, your rededication to the principles for which they stood and died, your strong resolution to perpetuate and preserve the cause and the gains which their sacrifices insured, and above all your heartfelt pledge in all circumstances to stand loyally, devotedly, courageously, and inalterably by the institutions, liberties, and security of our great Government which, if Christian civilization is to be preserved, must continue to blaze a brilliant, shining, high example, and furnish hope and inspiration to the afflicted peoples of the world. And that is why I must join you also tonight in your demand and plea for full, complete, and unlimited justice for the Irish Nation, for the elimination of partition and for a proper, just, geographic and political unity of that land and government based upon the very principles of freedom and oft-repeated commitments upon which in two great world wars our sons and daughters laid down their lives.

It is our own great free nation that should assume the leadership in existing interna-

tional tribunals and in every other way to right the wrongs and injustices of the past, and to use its good offices and its matchless influence and power in world affairs to rectify oppressive conditions affecting the freedom and well-being of millions of liberty-loving and peace-seeking peoples. I am proud to say that our Government has acted in some instances to insure application of the principle of self-determination and national autonomy to peoples who are entitled to their freedom. We have recently moved together with other nations I am proud to say, and I vigorously joined in the successful efforts to establish a national homeland and free autonomous government for our esteemed and long and bitterly afflicted Jewish breathren. We were thrilled with this great victory for freedom and wish for the new government greatest success in the future. In logic and decency no nation can oppose partition in Palestine and favor it in Ireland. There is a fundamental principle at stake and all true Americans and all lovers of liberty everywhere must rally to its support. Let us seek to effectuate at the earliest date possible the unification of Ireland and the final accomplishment of the age-old dream of Irish patriots and people of a freely ordained, completely liberated, fully coordinated, free autonomous Irish nation.

And by all means, mindful of our own origin, heritage and traditions, let us join with all other oppressed peoples who are seeking freedom to achieve their high aim. Let us secure the Nation against communism and all its evil works, against internal enemies promoting moral decay and spiritual disintegration, against the nefarious conspiracies which are seeking to overthrow our freedom, against all those who are aiming at the destruction of free institutions. If we work resolutely, courageously, and perseveringly toward these great ends we will not only insure the preservation and continued glory and blessings of our own unparalleled democracy, but we will also lend our influence and strength to the eradication of all forms of tyranny, the establishment and reconstitution of free government dedicated to human happiness and the maintenance of a just, lasting peace on this earth and between peoples and men everywhere which will make democracy secure for future generations and give evidence again to a demoralized and languishing world that the beacon light of liberty is still held aloft, shining forth its rays of hope, of inspiration, of justice and spiritual fufillment to those who have suffered and died in order that mankind may remain free.

In that way, truly, it can then be said that men have been delivered from bondage, from oppression and tyranny and that liberty—that great moral ideal of the human race has once again been restored to her throne knowing nothing but victories for God, for country, and the humankind.

As proud Irishmen, faithful soldiers of Christ, and loyal Americans, whose loyalty will endure to the end of time, let us rejoice in our heritage and in the immortal words of the rune of St. Patrick:

"At Tara today in this fateful hour
I place all heaven with its power
And the sun with its brightness
And the snow with its whiteness
And fire with all the strength it hath
And lightning with its rapid wrath
And the winds with their swiftness along this path
And the sea with its deepness
And the rocks with their steepness
And the earth with its starkness
All these I place
By God's almighty help and grace
Between myself and the powers of darkness."

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks, I include an article on compulsory health insurance which was prepared by Dr. Paul R. Hawley, major general, United States Army, retired, and which appeared in the April 16, 1949, edition of the Christian Science Monitor. Dr. Hawley served successively as chief surgeon, European Theater of Operations, as General Eisenhower's medical chief in charge of all medical service for United States Army Forces in the European theater, and as chief medical director of the Veterans' Administration. Since his retirement from active Government service, he has also served as chief executive officer of the Blue Cross and Blue Shield Commissions, voluntary health plans which are well known to many Members. He is well qualified to discuss the dangers and fallacies of Federal compulsory health insurance, and I commend his article to the attention of everyone who is interested in the merits of such a proposal.

The article follows:

THE RIGHT TO CHOOSE—WOULD COMPULSORY HEALTH INSURANCE INVADE INALIENABLE RIGHTS OF CITIZENS?

(By Dr. Paul R. Hawley)

I am opposed to compulsory health insurance because I believe that it should be the inalienable right of every free American to choose the amount and kind of medical care he shall have, or whether he should have any, provided only that his choice does not prejudice the health of others. "Compulsion" is an ugly word in the American tradition, and it is particularly offensive when applied to the intimate arrangements of our private lives.

I am opposed to compulsory health insurance because no necessity has yet been shown for such forcible intrusion into the personal affairs of American citizens. In Rome, during the days of the empire, the average length of life was 24 years. When I drew my first breath, I had a life expectancy of 43 years. Two thousand years' progress in health care had added only 19 years to the length of the average life—only one additional year of life for each 100 years of progress. A defensible case might have been made for compulsory health insurance during those 20 centuries of snail-like progress.

My youngest grandson, born last year, embarked upon life with an actuarial expectancy of living 65 years. Had he been a girl, this expectancy would have been more than 70 years. Within the short span of my own life, more years have been added to length of life than were added to the previous centuries. Nor has this improvement shown any evidence of slowing up. On the contrary, 6½ years have been added to the average life in the past 15 years—1 additional year every 28 months instead of every century. Never, in all history, has there been a less propitious time than the present for a drastic change in our pattern of health care. To make such a revolutionary change at the very time we are capitalizing so handsomely upon our investment in health would be more than stupid—it would be tragic. It is hard to understand how, in the face of such facts, anyone can advance such a fatuous proposal.

I am opposed to compulsory health insurance because its cost to the taxpayer will be terrific without giving him any return whatsoever upon his investment. No one knows what compulsory health insurance will cost the citizens of this country. The most realistic estimate is that the cost will reach $15,000,000,000 annually when it is in full operation. Lesser cost can be achieved only through lowering present standards of quality. Present costs in England are considerably more than twice the initial estimates made by the socialist government; and there is every reason to apply the same factor of safety to the estimates made by those socialists who are trying to perpetrate this fraud upon the American people.

Pay-roll deductions and employer contributions will not furnish 40 percent of the cost, and even these will be passed on to the taxpayer in increased prices of the goods he must purchase. The remainder of the cost must come directly from the pocket of the taxpayer. Even in these days when money has lost much of its value, the addition of this huge sum to the national budget will be a threat to the solvency of the United States; and the most ardent proponents of compulsory health insurance are wisely silent upon the question of meeting this heavy charge during a business depression.

I am opposed to compulsory health insurance because all it can offer is more medical attention. If we are in need of anything in the field of health, we are in need of better medical care. There is a vast difference between medical attention and medical care. In every country in which compulsory health insurance has been tried it has resulted in doubling the demand for medical attention with the inevitable results that medical care has been proportionately diluted. This increased demand for medical attention has been largely for inconsequential ailments that people ordinarily disregard. Since facilities for providing medical attention are never increased proportionately—and can never meet unrestrained demand without bankrupting the country—people really in need of care are slighted to the extent that the time and facilities of health services are monopolized by neurotics, malingerers, and chiselers. Let no one confuse medical attention with medical care.

I am opposed to compulsory health insurance because it is pure socialism and because its adoption will make the United States a socialistic state. The issue is not whether compulsory health insurance socializes medicine, but whether it socializes the United States. Of the latter there can be no doubt. The adoption of compulsory health insurance will not mean the immediate end of free enterprise in this country, but it will fix the time of the end within the foreseeable future. If we are to learn anything from the history of excursions into socialism, we need only to look at the history now being made in Great Britain. The road to socialism has no turning; and no steps thereon are ever retraced. We have already taken one or two strides along the road. Compulsory health insurance is the greatest stride yet advocated. Once we take that we are irrevocably committed to traveling the entire distance. It is impossible to retrace the steps we have already taken; but we have this opportunity to brace ourselves and declare, thus far, but no farther. If we do not seize this opportunity for a determined resistance, we shall never have another.

These are not empty warnings of impending disaster. One has only to consult contemporary history and that of the immediate past to be convinced that compulsory health insurance has made a mockery of health care, has increased loss of time and earning power of working people, and has placed heavy burdens upon taxpayers. The United

States, the only Nation of importance in which free enterprise exists today, is now supporting almost the entire world. If there were no other reason for the United States to guard jealously its free economy, it would be that there is no nation left to support us if and when we adopt the economic practices of those European nations which are now the principal beneficiaries of our system of free enterprise. It seems inconceivable that any American citizen should advocate that the United States adopt a social system characterized principally by its association with European nations, whose standards of living are at a level which would be intolerable in this country. It is interesting to note, too, that the most vocal of the advocates of compulsory health insurance are to be found within departments of the Federal Government—in theory, but only in theory, servants of the taxpayer, who are using the taxpayers' money in this effort to add to the taxpayer's burden.

Opposition to compulsory health insurance is no denial of the necessity for continued improvement in health services. It is unreal to expect improvement in the techniques of health care at a rate more rapid than now obtains. However, the problems of the economics of health care are not yet completely solved. Great strides are being made toward the solution of all of these problems through voluntary agencies; and there is every indication that full success is not far distant.

Voluntary methods have the great advantages of freedom from political control, efficiency, and economy of operation never obtained in Government agencies, and of forestalling the creation of more and more bureaucracies in Washington. Above all, they leave with each citizen full freedom of choice of when, where, and to what extent he shall seek health care.

Statements by Paul Robeson

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, April 29 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Artist's Grave Mistake," published in the Oil City (Pa.) Derrick of April 27, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ARTIST'S GRAVE MISTAKE

It is difficult to have any feeling other than sadness and sympathy for Paul Robeson, highly talented Negro singer who has been honored by both races in this country, like Marian Anderson. After he got to Europe on his current singing tour, he must have met some strange characters. He now declares he will sing no more but will devote his life to speaking for communism, thereby reminding again of the grievous harm which the Communists are doing to the colored race for which they claim to be protagonists.

Obviously, Robeson has been misled. Somebody has deceived him woefully. He surely knowns in his calmer moments that he can do more with his wonderful voice to increase the stature and status and hopes and destiny of his race by music than by orations against the very principles of democracy which permitted him to rise in the first place.

White Americans pay great and abiding tributes to Negroes who achieve—people like George Washington Carver, Booker T. Washington, Joe Louis, Dorothy Maynor, Roland Hayes, General Davis, Jackie Robinson. Just a few days ago, Dr. Ralph Bunche, a Negro, after weeks of patient work, brought about a truce in Palestine's war.

Paul Robeson is an artist who has been elevated—yes, and enriched—largely by white people in America. It is just a Communist trick and talking point to array blacks against the very country which makes people like Paul Robeson possible.

Music lovers in Oil City and elsewhere do not want Robeson to stop singing; most organizations of his own race, judging from resolutions, disownings, condemnations, etc., from them now being published, also do not want him to forfeit his esteem and status as an artist for the Communists' mess of pottage.

Address by Hon. Wayne Morse, of Oregon, Before New York Young Republican Club

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Friday, April 29 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Republican Opportunities in the Eighty-first Congress," delivered by me at the annual meeting of the New York Young Republican Club, in New York City, on April 28, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REPUBLICAN OPPORTUNITIES IN THE EIGHTY-FIRST CONGRESS

As a Republican Senator from the State of Oregon, I am justly proud of the record and activity of the Young Republicans of my State.

Many of my former students at the University of Oregon Law School have taken an active part in the growth of the Young Republican Federation in Oregon, and it has been interesting to me to note the effect their participation in that organization has had on their own individual growth, both in personality and leadership and also in helping them become influential members of their respective communities.

The Oregon Young Republican Federation works as an effective auxiliary to the organized Republican Party. It seeks to be of service to the Republican Party in winning elections. It is generally recognized in Oregon that our success in placing our State on the list of Republican States in the last election was in a large measure due to the efforts and influence of the Young Republicans. I firmly believe that the Oregon Young Republicans are now one of the best-informed and effective groups in our State.

However, I know the Young Republicans of Oregon will be the first to admit that there is a lot to be done in Oregon and it has been with that in mind that they are working energetically to organize every county in the State.

It was my privilege to be the principal speaker at the Oregon Young Republican State Convention last December, at which time they elected Mrs. Vivian McMurtrey as their State chairman. Mrs. McMurtrey was formerly the Multnomah County Young Republican chairman, and during her term of office the membership of that group was increased 100 percent. I think her election was a great tribute to the time and effort she has given to the Young Republican Federation.

There are, of course, many ways that the Young Republicans can be of service to the Republican Party, and I think our group in Oregon has examined every avenue and participates in every activity, which will have the ultimate effect of winning elections for the Republican Party.

Through their activities on the precinct level, the Young Republicans have integrated themselves into the regular organized Republican Party, to the extent that at the present time five of the largest counties in Oregon now have county chairmen under the age of 35.

Also, at the Republican State Central Committee meeting last month Sig Unander, who has been an active member of the Young Republican group and who is only 35 years of age, was elected as State chairman of that committee. Newell Elliott, also an active member of the Young Republican group, was reelected as secretary, and Lawrence Neault, a young Republican, of Baker, Oreg., who is also a county chairman, was elected treasurer of the State central committee.

In looking over the list of members of the Oregon Legislature, I find a great many young men who are active Young Republicans. It is my hope to find more and more young men and women on this list in the years to come.

A former State Young Republican chairman, WALT NORBLAD, is now a Congressman; and Bob Elliott, also a former State chairman of the Young Republicans, is now chairman of the Republican Central Committee of Multnomah County, which includes the city of Portland.

You may be sure that the activities of these young men in the Young Republican Federation in a large measure fitted them for the very important offices they now hold in the Republican Party and as elected Republicans to Government positions.

Another great service the Oregon Young Republicans have rendered to the Republican Party has been their educational program and their activity in organizing Republican college groups in our State.

I have always listened to and considered very carefully the suggestions and views of Young Republicans not only in Oregon but also throughout our Nation. Your keen interest in and understanding of the problems facing the Congress and the Nation as a whole is, I assure you, a great help to one in my position in the Congress who wishes to judge each issue on the basis of the facts.

I would like to read an excerpt from a letter I have just received from Steve Anderson, a former State chairman of the Oregon Young Republican Federation. He makes this statement: "We have regarded our organization duty bound to impress the views of young party members upon the official policy of the party, reversing the usual practice of having the policy evolve from the big boys, with the young Republicans taking no part in the formation of that policy, but being expected to go for it and sell it."

It is without a doubt that their attitude in this regard has been very influential in achieving such a large membership composed of the outstanding young men and women in our State. It stands to reason that you are not going to interest young men and women in the Republican Party if they are not given an opportunity to express their views on the

issues which so vitally affect their future welfare.

It is my understanding that your federation is holding a national convention this June in Salt Lake City. You may be sure that I, as well as all others who are interested in the welfare of the Republican Party, will be watching that convention with interest.

I know that your organization, as well as the Oregon Young Republican Federation, will be well represented at that convention and will be cooperating to the best of your ability to make that convention a success.

I have talked to many hundreds of young Republicans throughout the country who are deeply desirous of making the Republican Party a winning party. I have met with many groups such as yours, which are composed of astute, interested, and capable young Republicans who have the know-how in regard to making the young Republicans of service to the Republican Party.

It is my sincere hope that you will all get together at Salt Lake City on a common ground and work out a program whereby you will use your representative young men and women who have that know-how in organizing to activate all the young Republicans throughout our Nation into such groups as yours.

As I stated recently in an article for the Sunday magazine, Parade, those of us in the Congress who are seeking to revitalize the Republican Party and to mobilize its forces behind a forward-looking program, recognize that the greatest organizational need of the party is to change the trend of registration among young people from the Democratic to the Republican Party.

This means that we must insist that the National and State party organizations alike give increased opportunities for party positions and public office to young Republicans.

Your interest and activity in organizing your local, State, and national Young Republican Federation into an effective force within our party, will prepare you for the responsibilities which you will take upon yourselves as leaders in the Republican Party.

The task of modern, liberal Republicans in the present Congress is twofold: To revitalize the party and to mobilize its forces behind a forward-looking program; secondly, to guard against unsound legislative proposals or existing devices endangering the rights of free Americans and our free enterprise system. Let me explain why I feel that this is so.

Republicans need to remember that competition is the dynamic force of a free-enterprise system. Dynamic competitive principles must also be applied by the two major political parties in the contest for votes. The criticism directed at those of us who are fighting for a more modern, forward-looking Republican Party, to the effect that we are proposing a me-too political course of action, overlooks some basic principles of competition.

In the economic life of our free-enterprise system, a successful businessman is always alert to the public's interest in and approval of the merchandise of his competitor. He does not refuse to stock more up-to-date goods when he discovers such goods are filling his competitor's store with purchasers. Rather, he tries to secure better quality goods that will fill more economically the needs of the buying public.

The analogy has its limitations, but does help to focus attention on the fact that the supporters of reaction in the Republican Party need to learn much from business if they hope to satisfy the voters' wants. Their me-too charge against liberal Republicans is but an alibi for their own lack of appreciation of the needs of our people.

Why do liberals find it necessary, and why have they always found it necessary, on the floor of the Senate, to make a great many speeches on the various issues which come before the Senate? For the simple reason that usually they can make, in caucus, little dent on the political organization of their party in the Senate. They always have found it necessary to take their case to the people. It is very interesting over the years to find how, by that process, they have been able sometimes to help their party lift itself by its own boot straps.

It has been very interesting to note that on various liberal issues the Republican Party is much closer to some agreement on those very issues than it was even four short years ago. Take, for example, the general consensus of opinion developing in the Senate that we ought to do something about the Armed Services Reorganization Act. It is very interesting to hear men on both sides of the aisle, who were obviously not in favor of a true reorganization and unification program in fact as well as in name, talking now in terms of the necessity for an Under Secretary of Defense, and for giving to the Secretary of Defense the authority he should have been given in the first place. Such a change in the law is necessary if we are to have a true unification of our armed services, in order to eliminate the petty jealousies, rivalries, jurisdictional disputes, and lobbying on the part of the separate agencies for greater appropriation of funds.

It was about 2 years ago that some of us who consider ourselves liberals in the Congress of the United States introduced an armed forces unification and reorganization bill. It will be very interesting to take that proposed unification and reorganization bill which was introduced by liberals, and which I reintroduced this year, and lay it alongside of some of the proposals being made by those who have not shared our point of view on this as well as on other issues, and see how close they are now to the position we took on the issue 2 years ago.

As a member of the Armed Services Committee, I say again, that if my party wants to make one of the greatest contributions it can make to the security and the defense of this Nation, it will proceed without further delay to adopt as a major policy a proposal for an effective unification and reorganization of the armed services along the lines of the bill I introduced a year ago.

Again I assert that confusion, inefficiency, departmental jurisdictional strife, and lack of effectiveness characterize the administration of the armed forces of America and will continue to characterize that administration so long as we have a unification law that is neither fish nor fowl. It is only a truce between and among the Army, Navy, and Air Forces, with a Secretary of Defense lacking in effective power to knock heads together at the Pentagon and the Navy Department in an attempt to give the American people a well coordinated, unified armed services organization operating under a single Secretary of Defense with an Under Secretary, a single Chief of Staff, and operating also under a single procurement office.

As I said about 2 years ago—and the evidence has mounted and mounted ever since I said it—there is no question about the fact that any suggestion for a single procurement office covering the procurement for our armed forces stirs up tremendous fears not only in certain vested interests within the armed services, but also within the circles of certain vested economic groups in America.

Once again, I say, convinced as I was 2 years ago, and more convinced than ever today because of additional evidence that section of my bill which calls for a single procurement office would save us at least $3,000,000,000 a year out of the armed services appropriation.

I have the advice of men well informed in regard to the operation of our armed forces administration that my figure of $3,000,000,000 is too low, possibly to the extent of another $2,000,000,000. I prefer to make the understatement as to the possible saving. But I desire to repeat that I think the duplication, I think the waste, I think that what amounts to very questionable practices in the procurement policies of the armed forces of this Government, ought to be stopped, in the interest of national security and defense. It ought to be stopped in the interest of making a contribution toward the establishment of a sounder American dollar, because everything we can do to save without sacrificing the welfare of our country ought to be done. It ought to be done quickly, and the Republican Party ought to make it one of its major endeavors in the Eighty-first Congress.

This year I again invited my Republican colleagues in the Senate to consider a few of these liberal issues, because I would say that the only definition of liberalism for which I stand is that definition which relates to a man's voting record on specific issues. Let me see that record, let me see it in its entirety, and I am not going to have any difficulty, nor will anyone else have any difficulty in deciding in his own mind and heart as to whether or not the specific voting record of any Senator is a liberal voting record or a reactionary one.

Now, take the North Atlantic Pact. I here and now disassociate myself from those Republicans who seem to hold to the view that if we enter into the North Atlantic Pact we are not entering into any moral obligation to protect freedom and self-government from Soviet aggression. We cannot escape it. I do not believe in form over substance. I think we ought to come to the substance of this matter. The substance of this matter is the question of whether or not the American people are willing to recognize that our national self-interest, our own skins, if you will, depends upon our making clear now that we are going to stand out against aggression of totalitarian ideologies against freedom whenever that aggression takes the form of an act of war against a free people.

I do not share the opinion that the issue means that other people will declare war for us, and we shall be thrown into it through the back door. To the contrary, I am satisfied that because of the understandings and machinery which will be set up under any pact, and because of the machinery of the United Nations, the American people have no need to fear that they will not be protected from any possible coalition or devices or strategy that would throw us into war against our will.

No Member of the United States Senate will vote more quickly than I will against any attempt on the part of any combination of people to take advantage of the United States in respect to any professed aggressions against their rights. But when I say that I am not going to kid the American people in regard to the world-security problems which confront us, I wish to make it clear that I believe if we do not keep ourselves strong enough to defend ourselves against Russian aggression and make it perfectly clear to the Soviet Union that we are going to help other people defend themselves against Soviet aggression, we have not a chance of stopping a third world war. But I think we can win the peace if, as a people, we make clear that we went into World War II in support of freedom—in support of freedom for keeps, and not just for the war.

Thus I happen to hold to the point of view that the best evidence we can give to the Soviet Union that she must be willing to live in peace with us and the other countries which join with us in the North Atlantic Pact is to make clear that we will not permit of any aggressions against the peoples who join in that pact.

There are many other international issues upon which I should like to comment; but I wish to reiterate here that I think it is good Republican policy to make very clear to the signatories to the United Nations Charter that we expect the principles of the United Nations Charter to be lived up to by the signatories thereto. That means, of course, that we expect the signatories to the United Nations Charter to live up to the decisions of the Security Council. In my opinion, that means specifically that the Dutch cannot justify ignoring the decisions of the Security Council in Indonesia, and then, by a turnabout, say to us that they are entitled to funds under the ECA.

These things must work both ways. Good faith cannot be limited to Europe in this modern day. A nation either acts in good faith around the world in her relations with all the world, or she does not act in good faith at all.

Last week we had before us in the Senate the public housing bill. One of the amendments introduced by a member of the Republican Party prohibited discrimination or segregation under the act because of race, creed, or color. This created a very difficult political situation for those who have been fighting for civil rights, because this amendment was in effect one of political strategy, as was pointed out on the floor of the Senate.

In my judgment, the adoption of the amendment would have made perfectly certain the defeat of public housing in this session of Congress. The wording of the act itself places the primary responsibility in the local municipalities to proceed with applications for funds under the bill. It was brought out by one of the southern Senators that the adoption of the amendment would result in no applications for housing projects being filed in the Southern States.

Such parliamentary strategy as represented by this type of amendment in connection with other great pieces of social legislation to be voted upon during this session of Congress is a source of great concern to me. The use of such civil-rights amendments to various pieces of social legislation would not solve the great civil-rights issue which confronts this Congress but would succeed in defeating needed social legislation.

I stand ready, as I always have stood ready, to meet the issue of an over-all civil-rights program whenever a majority of the Members of the Senate are willing to go forward with an all-out fight for a civil-rights program. But, as a civil righter in the Senate of the United States, I am not going to be a party to or give support to an amendment which amounts to a bit of embarrassing political strategy, and which, in my judgment, will have the effect not of advancing civil-rights bills but of retarding them.

There is room in the Republican Party for broad differences of opinion on specific issues. In fact, one of the great strengths of our party is to be found in the fact that we have made great progress in our party over the years by hammering out on the anvil of conscionable compromise the differences of opinion which have existed from time to time between conservatives and constitutional liberals within our party.

We Republicans have always recognized the importance to sound Republican government of making steady middle-of-the-road progress within the checks and balance system of constitutional procedures. Conservatives and liberals alike in the Republican Party have rejected the technique of the Democratic Party of circumventing constitutional procedures whenever the Constitution stood in the way of some end sought by the Democrats.

Right now is the time for us to analyze the new crisis in the Republican Party. What do I mean by the new crisis in our party? Obviously, I refer to the significance of the walloping which the voters handed the Republican Party at the polls on November 2, 1948. It is clearly the worst election licking Republicans have taken since 1932, especially when viewed in the light of the long head start which our party was given.

These are days when all Republicans, conservatives as well as liberals, should conduct a searching post mortem in an endeavor to detect any heretofore undisclosed political diseases which killed our party's expectant victory at the very critical time when most of us thought it was aborning. There is no point in trying to rationalize or alibi the political realities which caused our defeat.

So many campaign advantages were handed to the Republican Party during the weeks preceding election day that we cannot, with intellectual honesty, deny the fact that President Truman gave us an unmerciful whipping.

As I listened to the clear evidence of the Communist Party line during the last political campaign in this country, I recognized that if the Communist infiltration should gain a foothold in the social, political, and economic institutions of our country, our system of political democracy and capitalistic economy upon which our individual rights and freedom depend gradually would be weakened.

How should we meet their threat? Those of us who believe so deeply in the personal liberties guaranteed by our constitutional system should join with all other loyal Americans in meeting the challenge of citizen statesmanship in America today. That challenge is to see to it that the capitalistic system is made to work as it can work for the benefit of the common good rather than for the selfish interests of a privileged few.

Many of you in this audience are businessmen and as businessmen I say you must be your own severest critics so far as the abuses of the capitalistic system are concerned. The abuses and disjointures of the capitalistic system should not discourage us but make us rather bear the ills we have than fly to other that we know not of.

Our capitalistic system being a human institution, is bound to develop defects. It is the obligation of a representative government, acting through the elected representatives of the people, to pass whatever legislation is necessary from time to time to check, control, and correct the abuses that develop within our economy.

However, I would point out that the greatest strength we have against the threat of communism is derived from the benefits that can and should flow from our capitalistic system for the welfare of our people as a whole. The best way to preserve and advance legitimate private-property interests in America is to see to it that the capitalistic system constantly improves the standard of living, the health, the security, and the happiness of our people.

We must retain the inducements and incentives of our private-property system because without those economic freedoms we cannot avoid economic statism. However, I deny that the capitalistic system necessarily means the exploitation of the weak for the strong. I grant that too frequently too many have confused a laissez-faire economy with a capitalisic economy. I grant that under a laissez-faire economy the economic pattern takes the form of a repetition of a business cycle of a boom and bust. I admit that a laissez-faire economy produces basically a program of exploiting the weak for the benefit of the strong. However, I contend that a laissez-faire economy and a successful capitalistic system are entirely different economic phenomena.

Further, I contend that without the inducements and the incentive of the private-property system, which is the essence of a capitalistic economy, we cannot escape going down the road toward a national economy of statism.

I am not going to take the time to apply this thesis to a great many issues, but I want to apply it to one.

The one I shall select is considered a very dry issue by many people but it is basic to this whole matter of making the capitalistic system work. It is an issue in regard to which I say most kindly and in a spirit of complete friendliness that our businessmen and thousands of others like them across this country during the last few years have not done all they should do in carrying out their job of citizen statesmanship. I refer to that very dry political subject of taxation reform.

Too many people in America, particularly businessmen, have been making the mistake of discussing taxation from the standpoint of support or opposition to proposals for either tax decreases or tax increases. There has been too much discussion of the taxation problem from the standpoint of personal selfishness rather than from the standpoint of the one great tax need of the country.

What is that need? It is the need for tax revision. It is the need for eliminating from our Federal tax structure the many inequities which are interfering with making the capitalistic system work for the benefit of the common good. It is the inequities in our existing tax structure which are discouraging business incentive and which are preventing the needed investing of millions of dollars of venture capital into new wealth-creating projects so essential to maintaining prosperity in this country. It is only out of new wealth; out of new job-creating enterprises; out of a further development of our economic resources, industrial and natural, that we can ever meet the fiscal problems of our Government.

You will never, in your lifetime or in the lifetime of your grandchildren, meet the fiscal problems of this Government if you try to do it from the standpoint of juggling existing percentage tax rates either up or down. The job of statesmanship in the field of taxation is a job of complete tax revision in order to eliminate the inequities from our tax structure.

If you are not to share part of the responsibility for the failure of the Congress of the United States to adopt a program of tax revision, you must face this problem from the standpoint of the one great tax need of the country, which, I repeat, is tax revision.

I doubt if most of you have been any different from most Americans during recent years in thinking that your tax problems would be solved or at least helped by the adoption of a tax bill by your Congress which would provide for a reduction in tax rates.

However, the juggling of tax rates is not the solution to the tax problem. Rather if the Republican Party wants to try to stabilize the American dollar by adopting a sound tax program it must proceed without further delay to give primary attention to a thorough overhauling and revision of her tax structure. Until someone can show me a better program I propose to continue to offer in the Senate of the United States the tax revision program of the Committee for Economic Development. I have introduced the tax amendments of the Committee for Economic Development in two sessions of the Congress and I intend to introduce them again in the next 2 or 3 weeks.

When the Republican Party was in control of the Eightieth Congress it missed a golden opportunity to pass a tax-revision program. Instead of holding hearings on the recommendations of the Committee for Economic Development it played around with the Knutson percentagewise tax-reduction bill and as a result made no substantial contribution to sound tax reform. It is interesting to note that tax experts, bankers, industrial leaders, and economists generally are in agreement that the proposed tax amendments of the Committee for Economic

Development would provide a great incentive to venture capital and would encourage many people in our country to develop new wealth and new job-creating enterprises out of which new tax dollars would flow.

It is my position that the only sound and worth-while, tax-reduction program that the Republican Party can propose is one based upon a thoroughgoing, tax-revision program such as that recommended by the Committee for Economic Development. Both major parties have been playing politics with the tax issue. The Democrats have been appealing for votes on a soak-the-rich tax program and the Republicans have been appealing for votes by promising a percentage-wise, tax-reduction program. Neither party has come to grips with the economic reality that until we eliminate some of the gross inequities in our present tax structure we will not have a stable dollar.

While I do not want to embarrass anyone, still, after noting one item in the news lately I desire to say one word about the Senator from Ohio, Mr. TAFT. I want to say that a published statement of his views, concerning the obligations of our party to go forward with constructive legislation which will meet the needs of the American people, is a statement I once again heartily endorse. It is a cry for liberalism in the Republican Party which some of us, often subjected to bitter criticism for uttering, nevertheless have continued to utter for years and years gone by. We welcome new recruits always. I shall always be happy to join with the Senator from Ohio in trying to lead the Republican Party down the straight road of constructive liberalism for which liberalism the press recently reported he pleaded the other day in a Republican caucus.

I repeat, I think we are getting somewhere. I think we are going to be a different party when we go to the polls in 1950 and 1952 than we were when we went to the polls in 1948. Not only do I think we are going to be a party that pledges itself to constructive liberalism, but if we can go forward with the type of legislation the liberal Republicans are offering in the Eighty-first Congress on taxes, health, labor, agriculture, the Military Establishment, conservation, and other issues of public need, we can go to the polls in 1950 and 1952 with a record of constructive liberalism. Some of us urged more of such legislation in both the Seventy-ninth and Eightieth Congresses. I think if the Republicans had adopted some of our liberal proposals we would have won in 1948.

The future of the Republican Party, as I see it, will be marked by further defeats unless the party can unite its forces in support of a sound, middle-of-the-road program of constitutional liberalism. Such a program will be unacceptable to the leftists who seek to destroy our capitalistic economy and set up economic statism; it also will be opposed by the political and economic reactionaries—and there are too many in both major political parties—who stand for a laissez-faire economy and a return to the normalcy of the boom-and-bust cycle of the 1920's.

The last election has demonstrated, in unmistakable terms, that these extremist philosophies are not favored by the American people. It is plain, therefore, that constitutional liberals within the Republican Party have a real opportunity. They must offer a program based upon the view that one of the primary objectives of the American system of representative government should and must be to protect the economically and politically weak from the exploitation of the economically and politically strong. Such a program, however, must be achieved within the framework of a private-property economy and in accordance with the legal principles and guaranties of the Constitution, including its precious bill of (human) rights.

The Young Republicans of the Nation have a great opportunity to revitalize the Republican Party by reorganizing it along the lines of constitutional liberalism. Unless we win the confidence and support of the young voters of America, future defeats rather than victories will confront us. Although the crisis in our party is a serious one, the challenge facing young Republicans to lead the Republican Party down the road of constitutional liberalism is a great one.

The hour is an historic one and the opportunity for political statesmanship squarely confronts us. You must not fail either our party or our country in meeting the challenge of political leadership essential to a Republican victory in 1952.

The Threat of the St. Lawrence Seaway Project to the Economy of Maryland and East Coast Port Areas

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Friday, April 29 (legislative day of Monday, April 11), 1949

Mr. O'CONOR. Mr. President, in Baltimore last Friday, at the twenty-fifth anniversary meeting of the Maryland Utilities Association, the chairman of the National St. Lawrence Conference, Mr. Carroll B. Huntress, gave a vigorous presentation of the threat posed by the proposed St. Lawrence seaway project to the economy of the State of Maryland and of east coast port areas, generally.

The case against the St. Lawrence seaway project is so vividly portrayed in this masterly address that I ask unanimous consent that it be inserted in the Appendix of the RECORD so that the people of our country, who would be called upon to bear the huge cost involved, may be fully apprised of the situation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A more favorable forum than the metropolis of the free State of Maryland for an exposition of the St. Lawrence scheme is not presently known. Over the years, in holding the lines against assaults of the minions of Government subsidy, the efforts of labor and business interests of this State have been highly effective. City and State officials and the members of the Maryland congressional delegation constitute a mighty bulwark.

On the floor of the United States Senate last year, Senator TYDINGS and Senator O'CONOR vigorously fought the St. Lawrence project measure, then known as Senate Joint Resolution 111, and contributed greatly to the outcome, recommittal of the measure to the Senate Foreign Relations Committee by a vote of 57 to 30. The senior Senator from Maryland is now one of the 13 members of that committee, to which the next Senate proposal will be referred. The several bills, already introduced in the House, have been referred to the Public Works Committee, of which Representative FALLON, Baltimore, and Representative BEALL, Frostburg, are two of the 27 members.

The damaging effect the navigational phase of the project would have on the port of Baltimore has been lucidly portrayed before congressional committees by executive vice president Pouder of the association of commerce. At a Senate hearing in 1946, Mr. Pouder stated that, using formulas of a Department of Commerce survey, there was indicated a prospective diversion from Baltimore of 1,056,077 short tons of cargo, or 9.2 percent of the average annual foreign and coastwise traffic of the port for the 10-year period of 1928–37, inclusive. Port workers, numbering 15,000, and investment in port facilities, amounting to $200,000,000, would be adversely affected.

To the power phase of the project less attention in this territory has been given. In a kind letter of instruction, your president, Mr. Hughes, made reference to a multi-purpose project, namely, Raystown, right in your own back yard. Now there's one of those things in the neighborhood from which I originally came—northern New York State.

As the St. Lawrence proposal is ostensibly designed to develop both power and transportation, I had thought of it as a dual-purpose project. Recently I have learned that this designation has gone out of fashion and that all these things are now dubbed multi-purpose jobs. It seems that the planned-economy boys feel that alliterative similarities too closely point the fact that a dual-purpose project might more properly be called a duplicity project. In a very real sense that is the case on the St. Lawrence; as it was in the Tennessee Valley, where the lately canonized Senator Norris gave his famous dictum, "We must make it hang on navigation."

And now look at the thing. None can be so naive as still to believe that the Tennessee Authority is anything much beyond a power project in its primary objective. The little $2,500,000 opener for the New Johnsonville game tells the world what's being played for—and with deuces wild.

There is nothing against multipurpose developments, as such, provided the purposes are honest and justified. There is everything against a plan which is sold to the public as a navigation, an irrigation, or a flood project when the real objective is to put Government into the business of developing public power; when beyond that is the purpose to spread the tentacles—euphemistically called transmission lines—over the economy of an area embracing many States to the destruction of the enterprise processes which have made this country. In the St. Lawrence project, a nonrevenue-producing function, transportation—the tolls proposal is merely a red herring—is arbitrarily assigned an investment burden way beyond even its speculative value to the community, in order to make it seem that collectivism can produce energy more cheaply than it could be produced in the same physical development in the hands of private enterprise.

If anyone doubts the interest of the apostles of public power to blanket the Nation with regional agencies, a program which would obliterate the sovereign States, let him cast his eye around from Passamaquoddy and the St. Lawrence down through the Tennessee Valley, to the Southwest, out to Boulder, north through Hetch-Hetchy to Bonneville and Grand Coulee, east to Fort Peck, through the Missouri Valley, with a few little fill-ins here and there and a few fringe areas which can be taken over once the collectivists have established their framework.

The private power industry has built networks for the correlation of steam and hydro energy to the point where diminishing returns begin to figure. But that isn't enough for the public power advocates. They want supernetworks, whereby the whispering pines of Maine can be heard on the wooded slopes of Oregon, and the sunny savannahs of the smiling South sing to the frigid regions of the frozen North.

Already they are pretty well on their way. A common phrase nowadays is creeping socialism, but it doesn't describe public power. That is definitely a leaping form of socialism. Twenty years ago the public-power boys had in their hands 6½ percent of the electric-generating capacity of the country. Today they have 20 percent. The change has come about while the country was doubling its generating capacity as a whole. Capacity provided by private enterprise grew 70 percent; and that provided by public agencies—Federal and local—grew 500 percent. A report of the Hoover Commission tells us that Federal agencies now have more than 14,000 miles of transmission lines and have tentative plans for the construction of new generating capacity equaling that of all the generating plants of private enterprise in the whole United States at present. Meantime, private enterprise has actively under construction an increase of 39 percent in its own generating capacity to meet the growing needs of its customers.

The canny commissars knew what was slipped over when Muscle Shoals became T. V. A., and today they delight in seeing the river which flows through 7 States drain 48. Sometimes their strategy appears mysterious. This French proverb may then help—forever changing and forever the same. However, their legislative allies speak bluntly. I have in mind a speech made by Senator AIKEN before a luncheon club in Keene, N. H., 3 years ago, in which the Vermont solon said that, "The St. Lawrence project will mean a T. V. A. for the Northeastern States." Maryland and the District are embraced in that proposed Federal power transmission grid.

Should these collectivists succeed in their efforts to hamstring the power industry and to take over great rail systems, having enfeebled them by part-time subsidized competition, does anyone doubt they would move on to new conquests? Savings banks and insurance companies are likely targets. The greed of the collectivists has by no means been abated by their partial ventures into those fields. The mutual life insurance companies and savings banks are tremendous holders of securities in the power and railroad industries.

This question may be asked: Inasmuch as the Federal Government engages in the power business, why should it not engage, on a large scale, in the businesses utilizing this power? Look to the Tennessee Valley, where the duplicity process has plunged the Government into the manufacture of fertilizer and other commodities.

The more rabid of the public power advocates seek to strip the Aluminum Co. of America of its water-power rights on the St. Lawrence. Under the excuse of wartime necessity, that great pioneer in the metallurgical field was forced to disclose its technical knowledge to two favored competitors, which were set up in business with the taxpayers' money. It would be a logical extension of this divide-and-destroy process for the American Muscovites to ask why their vaunted cheap energy should be sold for the private benefit of the capitalistic buccaneers who own this split industry, particularly if they can invoke some "conjure" words like national defense.

Speaking of national defense, our multipurpose projects speedily become multi-reason processes. First one and then another reason is adduced for pushing each of the alleged purposes. The latest trick has to do with iron ores from Labrador, South America, and Liberia.

It seems we are flat on our backs for domestic ore supply; or if not, we shortly shall be; or if not, that's their story and they stick to it, anyhow. And so, instead of developing processes for the beneficiation of our own low-grade ores, including taconite, and keeping alive the miners who work the Mesabi range, we propose to fix it so that a few private exploiters can bring ores up the St. Lawrence during the summer thaw to prevent too active development at Sparrows Point. The difficulty seems to be that all-year-round delivery by the magnificent ships that discharge their ore in this vicinity just doesn't give an excuse for building a power dam on the St. Lawrence.

A recent famous analysis of the state of the Nation hinted pretty broadly at Government in the steel business. Even without that advance notice, it can reasonably be assumed that, should the Government sink a billion dollars in the St. Lawrence canal and harbor entrances, national defense would be advanced as an excuse for collectivizing that industry also. Why should a billion dollars be spent to benefit the Great Lakes steel barons Can't you hear them—haven't you heard them—those socialists with their jaundiced opinion of the profit-and-loss system? To anticipate possible charge that undue importance is attached to political ranting, these words, spoken last week by President Tower, of the American Iron and Steel Institute, are cited. With reference to the campaign against steel, Mr. Tower said, "Behind the barrage of speeches and legislative proposals one may see the shadow of great American industries no longer private enterprises but properties of the state."

And then there is the necessity of developing power for national defense; another of the specious multireasons for the duplicity project. It is sheer fantasy to assume that the proposed power development could affect America's ability to defend herself against a military enemy. That power development would, however, smack of the economic, social, and political philosophy of her one conceivable aggressor. The St. Lawrence job would generate for this Nation only 570,000 kilowatts of firm power. This corresponds to the minimum flow of the river when Lake Ontario is low and ice restricts the river channel. I don't need to tell you that every one of its 240,000 kilowatts of infirm capacity would preempt 1 kilowatt of first-class dependable steam capacity to firm it up. So that on balance the infirm capacity adds nothing to the power supply.

Special pleaders will tell you that 570,000 kilowatts is a lot of power; so it is. It is almost, but not quite, of the dimension of any one of four existing steam plants in the State of New York. It would be almost big enough to take care of the increase in requirements of the State of New York for 2 years. It amounts to 10 percent of that one State's present plant capacity. But were it many times as big, it would not add one flea power for defense or for anything else to the plant capacity of that region. You, as practical utility men, know full well that plants are not built to stand idle; that if a block of 570,000 kilowatts, either your own or that of someone else, came into your area, you would back away to the extent of 570,000 kilowatts from other new construction. It's somewhat worse than that if your competitor is the Public Treasury, with spurious allocations, immunity from taxes and interest rates, predicated on pledging the power of taxation of the people and industry of the Nation. Private investors would have the everlasting daylights scared out of them and be loath to venture equity capital or debt investment. Look at what has happened in the Northwest.

The power aspect has its plurality of purpose. Not only would the 570,000 kilowatts, available even during the winter freeze, make the Nation militarily safe, not only would it relieve a power shortage that never existed in fact, not only would it electrify the farms of one of the most highly electrified farm States in the Union, but it would make energy so cheap that the cotton-duck industry would move from Baltimore to Watertown, N. Y., or possibly Ogdensburg, along with the bromo-seltzer business—and how New York would need the latter.

The pundits of collectivism promise that the St. Lawrence power would mean a saving of $20,000,000 a year against steam power production. That estimate is unsound and the scheme does involve your tax bill and mine; but aside from all that, let's see what old-fashioned arithmetic tells us. By the time the project could be in operation, the State of New York will be using 50,000,000,000 kilowatt-hours per annum. Twenty million dollars divided by 50,000,000,000 is something like four one-hundredths of a cent per kilowatt-hour. One twenty-fifth of a cent isn't so significant as $20,000,000.

With reference to an alleged power shortage, consider your own area. The State of Maryland and the District of Columbia in 1938 produced and sold 2,253,000,000 kilowatt-hours. In 1948 this was more than doubled, reaching the figure of 5,486,000,000, five and one-half billion for short. You know that during that period the Federal Power Commission found your assured capacity consistently on a level with the load requirements in spite of the stupendous burdens you assumed. You didn't have to curtail use as was done in the Tennessee Valley, in the Northwest, and in the Province of Ontario; those notable centers of government activity. The story is substantially the same in New England and the State of New York. With the exception of two short periods of comparative tightness, it has been true wherever free enterprise has been given a chance. Between the end of the war and the end of 1948, 160,000 kilowatts of new generating capacity were completed in this area. And your current construction activities will bring into commission an additional 140,000 kilowatts in 1949 and still another 140,000 kilowatts in 1950, according to schedules published by the Federal Power Commission for the so-called power supply area No. 6. That all adds up to a 34-percent addition to the capacity that was in this area on VJ-day. At this rate your postwar additions will soon be larger than the St. Lawrence power project.

Our telephone friends here are acquainted with the congressional measures to authorize REA to make loans to telephone companies, and thus encourage the building of cooperative lines. In other words, the planned-economy front is working for the socialization of the telephone industry by initial promotion of cooperative telephone systems, financed 100 percent by Washington. Reference has been made to the St. Lawrence subsidy threat faced by great rail systems. The public-ownership movement, patterned somewhat after the British plan, places in jeopardy every system of transportation.

In fine, every branch of the utility industry is confronted with the urgency for bold action. A rear-guard action, however adroitly maneuvered, is apparently no longer the answer. The public-ownership movement must be countered now—head on. During the past 16 years more and more people have been tempted to abandon hope and impassively await the impending deluge toward which their world seems to be headed. Such a mood is temporary. They will soon lay their hands on the steering wheel. There are signs, such as the recent organization of the Independent Electric Utility Operating Company Committee, that that time has arrived in the electric-utility field. It is important that all utility people, throughout the industry, make certain that newspapermen in their respective areas, along with business and labor leaders, are aware of the activities of those who, behind the scenes, connive for public power. Many outstanding labor men are your allies. They not only

know the multiple purposes to be served by public power works but also are cognizant of the multiple tax scheme that makes those works possible; a scheme which has become the staff of life for the march toward socialism. It enables the collection of enormous funds with which to build collectivist projects that, like the St. Lawrence, couldn't pay their own way.

On the note of national defense I close. If either one of the World Wars taught us anything it is that the extraordinary strength of our people, both as combatants and suppliers of munitions, lies in initiative and resourcefulness, backed up by faith in the institutions of liberty. In the next war, if and when it comes, we shall be without prime essentials of defense if we have lost the initiative and resourcefulness and the devotion that comes from living within the framework of freedom. That means we should maintain an economy which is not tax-ridden and discouraged; and above all else, retain a population that has not been taught to look to government for its ideas, its faith, or even for the material things of life. This is a defense to be prized above all else.

GI Home Loan Building Program

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. HOLIFIELD. Mr. Speaker, I wish to call to the attention of the Members the fact that up to the present time the Congress has not tackled the problem of reactivating the GI home loan building program.

I have introduced a bill, H. R. 1324, and Senator THOMAS has introduced an identical bill, S. 616, which we believe will help to solve this problem.

The four largest veterans' organizations in the State of California have formed a joint housing committee and have endorsed these two bills. Under leave to extend my remarks, I include herewith a resolution which they passed on April 13, 1949:

Whereas the California department commanders present at this conference represent 261,000 veteran members of their constituent organizations in the State of California; and

Whereas the department commanders present represent the major organizations engaged exclusively in preserving the rights and privileges of the 1,350,000 ex-servicemen in California and the American principles for which they fought; and

Whereas the major essential necessary to the Democratic way of life for which our members fought was individual home ownership designed to provide a share in this Nation for all American families; and

Whereas this essential was promised the returning veteran by the grateful citizens of this country but deprived him by selfish interests and unforeseen developments in the ever-changing financial mechanism of this Nation; and

Whereas the Veterans' Home Loan Act of 1949, H. R. 1324 and S. 616, will provide a workable solution whereby all veterans throughout the entire Nation can obtain homes for their families as promised them in the original GI bill in 1944: Now, therefore, be it

Resolved, That the California State department commanders here assembled, of the American Legion, Veterans of Foreign Wars of the United States, Disabled American Veterans, and American Veterans of World War II (AMVETS), with the support and endorsement of their respective organizations, hereby pledge to crusade in behalf of all veterans by aggressively supporting H. R. 1324 and S. 616, the Veterans' Home Loan Act of 1949, as the most complete and realistic approach to the problem of acquiring single-family homes for veterans; be it further

Resolved, That copies of this resolution be forwarded to all United States Congressmen and Senators with an urgent request that they support the early passage of this vitally needed legislation.

REX F. WHITTEMORE,
Commander, Department of California, American Legion.
S. TEX ROSE,
Commander, Department of California, Disabled American Veterans.
ALVIN F. KIME,
Commander, Department of California, Veterans of Foreign Wars of the United States.
JAMES J. KEHOE,
Commander, Department of California, American Veterans of World War II (AMVETS).

Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. ADDONIZIO. Mr. Speaker, the Taft-Hartley Act has been pictured by its proponents as a law that is in the best interests of workers and designed to promote better labor relations. In refutation of this argument that is never buttressed by facts, I wish to submit the following survey of some of the harmful effects of the Taft-Hartley law on trade-unions in New Jersey recently made by the New Jersey State CIO Council:

It is over a year and a half now since the Taft-Hartley law has been enacted. The experience which the American trade-unions have sustained since this law has become operative has fully substantiated the charges made before its enactment that the law provides no solution to industrial strife, but rather has resulted in increased friction between labor and management heretofore enjoying peaceful relations.

In short, the Taft-Hartley law has inspired employers who are still not willing to accept collective bargaining as a permanent fixture in our economic system to invoke Government aid in furthering opposition to the legitimate functions of trade-unions. It has encouraged employer resistance to the justifiable union activities and it has provided antiunion employers with a weapon possessing the potential destructive power to legislate the trade-union movement into obscurity and oblivion.

The Taft-Hartley law is actually a legal invitation to employers to employ the technical restrictions and complex verbiage of the law as a means of first, frustrating union activity, and secondly, attempting to destroy the trade-unions. The law has converted the Federal labor policy from a code for the protection of self-organization and collective bargaining into a twisted instrument capable of depriving the American worker of the benefits of collective bargaining by breaking his trade-union.

An examination of the impact of the Taft-Hartley has made upon labor unions in the State of New Jersey points up the evils inherent in the law.

Its operation in New Jersey has corroborated charges made on previous occasions by impartial students of labor-management relations that the law has:

(a) Prevented trade-unions from performing their legitimate functions.

(b) Thwarted the future development of trade-unions often by placing insurmountable barriers in the path of union organization.

(c) Has failed to offer any solution to industrial strife and has actually increased strikes for organizations.

(d) Offered legal weapons as an incentive to employers to thwart union activity so that labor-management relations which were heretofore harmonious have become strained.

(e) Withheld the facilities of the National Labor Relations Board, forcing unions to resort to strikes in order to gain recognition as collective-bargaining agents.

(f) Offered an incentive to employers to isolate small groups of workers by establishing separate bargaining units, thus weakening the structure of industrial organizations.

(g) Encouraged the return to individual bargaining, in spite of the tremendous advances made by our country under collective bargaining; and

(h) Resorted to a subtle blow against trade-unions by increasing a union's responsibilities for the actions of individuals, while simultaneously weakening the union's disciplinary powers.

The experiences sustained by New Jersey unions have not been unique since the enactment of the Taft-Hartley law.

They are but a fabric of the complete pattern of antiunion activities which have been intensified under the inspiration of the Taft-Hartley law.

Here is one particular instance in New Jersey where the Taft-Hartley was responsible for the complete destruction of one labor union.

The collective-bargaining agent for 2,100 employees of the New Jersey Bell Telephone Co. in its accounting and general departments had been the Communications Workers of America, Accounting Division No. 64. This local participated in the national telephone strike in 1947, and had aggressively engaged the company in arbitration proceedings under the New Jersey State compulsory arbitration law.

During the summer of 1948 the company challenged the majority status of the union. On September 17, 1948, arrangements were completed between the company and the union for a consent election under the auspices of the New Jersey State Mediation Board. Three days later, however, the company announced it was granting additional wage increases of $4 a week.

This was done without consultation with the union and on a completely unilateral basis.

On September 22, 1948, the union filed charges of unfair labor practices against the company, charging violations of section 7, section 8 (a) 1, and section 8 (a) 5.

The union asked the board to proceed under section 10 of the act asking for an injunction to restrain the company from giving wage increases until an election could be held in an atmosphere free from interference from the company's bald attempt to influence the employees in the exercise of their rights to self-organization and manipulating a "no union" vote in the election.

The papers presented to Robert N. Denham, general counsel of the Taft-Hartley NLRB,

charged that the company was attempting to circumvent the New Jersey statute calling for compulsory arbitration of labor disputes affecting public utilities; that the company had saved almost $100,000 in retroactive payment alone, and was also endeavoring to get away from its obligation to mediate and arbitrate some 23 issues which the union had presented to the State Mediation Board for several months previous.

In spite of the company's flagrant violation of the law, the general counsel refused to act, stating that he did not believe the law had been violated, and that he only proceeded by injunction in cases that had serious implications and involved large numbers of people.

The NLRB has ruled in a large number of cases that attempts by employers to impose unilateral increases while representative elections were pending were violations of the law.

The general counsel himself had instituted injunctive proceedings against unions where only 10 or 15 people were involved. Yet here were 2,100 New Jersey Bell Telephone employees directly concerned and 20,000 additional New Jersey and 500,000 other employees of the A. T. & T. indirectly affected.

The refusal of the general counsel to prevent a violation of the law in this instance, compared with the haste and speed with which he has acted against trade-unions in other cases, is first-hand evidence of the fact that the Taft-Hartley law is being administered in such a fashion as to bring about the destruction of the trade-union movement.

The attorney for the union in this instance summed up all in a letter to the general counsel, when he stated, "In the circumstances, I have been instructed by my client to withdraw the charges of unfair labor practice. It would be an idle ceremony to process the charge, wait a year or two for its disposition and wind up with a slap on the company's wrist in the form of a cease and desist order."

It is easy to see that a company ill-disposed toward the organization of its employees, can invoke many of the restrictive provisions of the Taft-Hartley law to destroy existing unions and to defeat attempts to organize new unions.

The case cited above presents tangible evidence of the partiality of the general counsel and the Taft-Hartley NLRB.

With the one rare exception in the UAW-General Motors case, injunctions against employers are virtually unheard of. Yet, the general counsel responds with alarming alacrity to the petition of an employer for injunctive proceedings against unions.

There are several instances where this has taken place in New Jersey.

In both cases, the law has been invoked to the detriment of the workers' status while the companies involved have directly benefited from the tactics they employed.

For instance, the case of the CIO United Automobile Workers, representing the 200 employees of the Harnischfeger Corp. in Newark.

In a flagrant display of dictatorial tactics, the company informed the local union that it would not bargain unless the union's president had been replaced.

This attempt to dictate not only wages and conditions for the workers, but also to handpick suitable union representatives was a typical maneuver of the company. The action becomes even more odious when it is realized that the company's objection to the president of the local was predicated solely upon the fact that he was a Negro.

The union president offered to resign in his desire to avoid a disastrous strike. However, the local's members stood shoulder to shoulder in a masterful display of union solidarity and insisted that the democratically elected officers of the union be permitted to carry out the functions for which they were chosen.

On the basis of the company's refusal to bargain with the Negro president, the union was forced to call a strike.

The company, intent upon breaking the union, invoked the Taft-Hartley law, and succeeded in securing an injunction restraining the union from picketing. The intention of the injunction soon became obvious. An advertisement was placed in a newspaper from a nearby town offering employment to veterans at attractive rates of pay, but specifically ignoring all mention of the labor dispute.

The company picked up the veterans at a central point, herded them into cars, drove them to the plant and then attempted to spirit them past the token picket line to scab on the striking auto workers.

It is obvious that the company employed the injunction restricting picketing in order to facilitate the transportation of scabs into the plant.

It is necessary to add, however, with a justifiable feeling of pride, that when the veterans came upon the scene, and realized that they had been unwittingly drawn into a strike situation as prospective scabs, they refused to take any part in the proceedings and returned to their homes.

Today, the plant is closed and the 200 workers have been forced to seek employment elsewhere. The case is just another example where the Taft-Hartley law has served to thwart the processes of collective bargaining and has resulted in the demise of a local union.

Another illustration of the antilabor character of the Taft-Hartley law can be found in a study of the strike of the United Packinghouse Workers against the Swift & Co. in Jersey City a year ago.

Participating in the Nation-wide strike against the country's largest meat packers, members of local 221, of the Packinghouse Workers were prohibited from picketing by an injunction obtained under the Taft-Hartley law.

Then, under the guise of guaranteeing the right to work, the company embarked upon a long-range bust-the-union program. Scabs were imported, violence was fomented, arrests were made, and workers were intimidated. Letters were sent to the strikers informing them of their discharge if they continued to participate in the walkout. Invoking the Taft-Hartley law, the company was able to completely demoralize the workers and as a result the Swift employees were forced to return to work at conditions far below a decent standard.

Another trend discernible in the application of the Taft-Hartley law in New Jersey has been the facility with which employers have been able to attempt to weaken the industrial organization of their unions by invoking the principle of "divide and conquer."

Under the guise of protecting professional workers, the Taft-Hartley law has encouraged antilabor employers to split the bargaining units of the workers in their plants into separate, isolated, weaker units. In many instances, workers who for long periods of time have enjoyed the benefits and advantages of collective bargaining as a member of the industrial unit in a plant, have found that they are no longer able to continue in that manner. In several plants in New Jersey, this has occurred with the worker sustaining serious setbacks from this diminution of his bargaining power, while the employer has used this as a basis to institute wage cuts, and more difficult working conditions.

Two outstanding examples of this trend can be seen in an investigation of the procedures followed by the Wright Aeronautical Corp. in Paterson, and the Westinghouse plant in Bloomfield.

In both instances, salaried employees had been covered by the industrial organization unit in the plant for several years, during which peaceful relations had existed between the union and management. However, upon the passage of the Taft-Hartley law with its invitation to breaking up industrial units into small, weak crafts, serious conflicts erupted, with its resulting defalcations in the processes of collective bargaining.

At the Wright plant, members of the salaried employees union, were excluded from the contractural relations between the company and the union. The union president charged that the many benefits gained for these workers had irritated the company, whom, she added, was bent upon depriving these employees of the benefits of their union.

The Westinghouse plant in Bloomfield witnessed another such attempt by management. After having been members of the United Electrical, Radio, and Machine Workers of America and covered by the national agreement which the UE had successfully negotiated with the company, the salaried workers were carved into three tiny, weak crafts by the company. The technique employed was provided by the Taft-Hartley law. A company-fostered independent union made claims of representation of the salaried unit and succeeded in petitoning for an NLRB election for those groups. The UE was deprived of the facilities of the Board and, being unable to secure a place on the ballot, was compelled to stand by idly while these workers were deprived of their right to choose a bargaining agency of their own choosing.

I may add, in passing, that in direct contradiction to the avowed intentions for which the Taft-Hartley was passed these situations carried with them at all times the imminent threat of a strike for recognition. It is only because of the high sense of responsibility and duty manifested by the union leaders involved that a series of disruptive work stoppages have been avoided.

The Taft-Hartley requirements that all officers of every international or local union must sign non-Communist affidavits before the facilities of the National Labor Relations Board are made available is the one provision which demonstrates more plainly than any other perhaps that this law has singled out trade-unions for restrictive and punitive application.

Of the vast segment of our American economy, labor, and labor alone, has been isolated for the purpose of affirmatively stating their allegiance to the United States. The resentment felt by responsible labor leaders against this single provision has been understandable. An appended corollary has been added, with much justification, I may comment, that perhaps certain American industrialists should sign affidavits stating they are not Fascists.

Experience has shown that our workers are capable of sweeping subversive elements from control in unions. The examples set by the United Automobile Workers, the Maritime Union, the Transportation Workers are precise evidence of this.

The affidavit provision not only violates the American concept of civil and political liberties, but authorizes Government intervention into the internal affairs of voluntary organizations. The fact that such intervention is restricted solely to labor unions reveals the true antilabor nature of the Taft-Hartley law.

Because of the principle involved, several unions have refused to comply with this particular provision of the law. Outstanding among these is the United Steelworkers of America, headed by CIO President Philip Murray, an outstanding foe of communism and totalitarianism.

Yet, because of this one provision, the steelworkers have become enmeshed in a rash of serious conflicts. As a result, we can see that, rather than bringing about a solution of industrial strife, this law has

succeeded in increasing strikes for recognition and has fostered antagonism in situations where harmonious relations previously existed.

The law has also thwarted the organization of new shops. In Bloomfield the 800 employees of the Eastern Tool Co. have indicated their desire to join the United Steelworkers. Backed by the Taft-Hartley law, the employer has refused to bargain, and the union is unable to use the facilities of the NLRB for an election. There are only two alternative paths for the union to pursue: Either forego the organization of these workers or else strike. The result is easy to see.

Similar situations have arisen in other plants in Newark.

Workers in the following shops in the Newark area, International Edge, Cyclone Fence, Continental Can, and Heller Bros., have all been faced with the imminent need for striking in order to maintain or receive recognition of their union.

The experiences of still another CIO union, the United Office and Professional Workers of America serve to emphasize the adverse effect of this bill on labor, and how antilabor employers use it to break labor unions.

Employees of the Prudential Life Insurance Co. had been covered by a UOPWA contract for 6 years prior to the enactment of the Taft-Hartley law. However, at the first expiration date subsequent to the effective date, the company informed the CIO workers that they would no longer recognize the union for the purposes of bargaining.

The reason was soon forthcoming. Because the UOPWA had not qualified to use the NLRB, the company had sponsored intervention by an outside group, with the sole hope of holding an election where the Board would prevent the appearance of the UOPWA on the ballot.

There was no question that the loyalties of the individual workers remained with their union. Yet, the company refused to negotiate and simultaneously pushed along the election which they hoped would produce a no-union vote.

At the present time, an NLRB election is scheduled for March 18, at which time the UOPWA will appear on the ballot because of its subsequent action authorizing its officers to sign the non-Communist affidavit.

However, another interesting sidelight appears in this particular case, in that the union which intervened at the solicitation of the company may possibly be unable to qualify for a place on the ballot. The paradox of the situation is that the contesting union is apparently a paper organization, set up at the request of the company and is unable to present proof of an existing organization with responsible officers.

The same union has been involved in still another dispute created by an employer attempting to break the processes of collective bargaining. Here, the Metropolitan Life Insurance Co. resorted to the same tactics. A contract had been in effect between the union and the company for 6 years, yet at the very first expiration date following the enactment of the Taft-Hartley law, the company refused to negotiate, asserting it wanted proof that the majority of the workers desired representation by the UOPWA. Of course, such information was readily available to the company by virtue of the fact that the overwhelming majority of the workers had signed cards authorizing the check-off of their union dues. Yet, impelled by the desire to bust the UOPWA because of the union's inability to secure a place on a NLRB ballot, the company encouraged the intervention of a competing union, which subsequently filed a petition for the election.

Just another interesting note is the fact that the company-inspired intervener could not produce a single signed card in New Jersey to support its claim that it represented the workers.

These are just a few of the situations created by the Taft-Hartley law. The few evils described here are ample proof of the assertion that the Taft-Hartley law contains within it not only the seeds of destruction for the American trade-union movement, but also our entire system of democracy.

There can be no question that the Taft-Hartley has failed to produce the solution for which it was intended. Its application has pointed up dangerous trends. It must be repealed.

Social Security, Whither Bound?

EXTENSION OF REMARKS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, April 29, 1949

Mr. REED of Illinois. Mr. Speaker, on April 14, 1949, Mr. Robert C. O'Hair, well known certified public accountant of Chicago, appeared before the Committee on Ways and Means to give them the benefit of his study of H. R. 2893, upon which hearings were then in progress. This concise statement, emanating from an expert in mathematical calculations, and one who has had long experience in public accounting, reveals some startling conclusions concerning this legislation designed to expand Federal old-age benefits and survivors insurance. Believing every Member of Congress will be interested in Mr. O'Hair's views, and, leave to extend my remarks having been heretofore granted, I insert herewith his statement in full:

Mr. Chairman, members of the House Ways and Means Committee, the Eighty-first Congress of the United States. My name is Robert C. O'Hair, of Chicago, Ill. I am engaged in business under the name of the R. C. O'Hair Co. I am an economist, a certified public accountant, and author of the Federal deposit insurance plan. I am appearing before you in my own behalf.

I am not opposed to a sound plan of Federal old-age benefits and survivor insurance. I am opposed to H. R. 2893 for the reason it is economically and actuarially unsound. Generally speaking, the proposal is to collect a pay-roll tax from 60,000,000 people. The present plan covers approximately 40,000,000. There are 2,500,000 citizens of the United States with incomes of over $5,000 per year. The wages of the other 37,500,000 citizens under the plan should equal the national wage of about $57 per week. Assuming full employment of 37,500,000 at an average wage of $3,000 per year, and the proposed pay-roll tax of 2 percent on the employee and 2 percent on the employer be collected the amount would be $4,500,000,000.

Assuming full employment of 2,500,000 with incomes of over $5,000 per year, and all members of the plan and the proposed pay-roll tax of 2 percent on the employee and 2 percent on the employer be collected, the amount would be $480,000,000. With 40,000,000 covered by the plan, with full employment and maximum taxable wages, the total pay-roll tax collections for Federal old-age benefits and survivor insurance would be $4,980,000,000 in 1950 and thereafter until changed by Congress. Under present law, with 40,000,000 covered, full employment, average wages of $3,000 and a pay-roll tax of 1 percent on employee and 1 percent on employer, the maximum collection for Federal old-age benefits and survivor insurance would be $2,400,000,000.

In the March 1949 issue of American Economic Security, page 14, Mr. O. C. Pogge, director, Bureau of Old-Age and Survivor Insurance, Federal Security Agency, wrote:

"However it should be remembered that even to finance the present program, with its low scale of benefits, the tax rate will probably have to be doubled and this would automatically halve the ratio of administrative costs to tax income."

By doubling the tax rate of the present plan the maximum income under above conditions would be $4,800,000,000.

Under H. R. 2893, the maximum tax would be $4,980,000,000. In the calculations I have omitted the tax income on an estimated 20,000,000 in the low-income brackets that is to be added under the proposed legislation. The comparisons drawn here are on the most favorable basis, and show that the additional taxes expected will not exceed $180,000,000 whereas the expanded benefits under the proposed plan, are almost doubled.

If the proposed legislation progresses as outlined with rates of 5½ percent on employee and employer in 1955, collections should reach a rate of $13,000,000,000 per year and in 1990 with a rate of 9 percent on employee and employer collections should reach a rate of $24,000,000,000 a year.

What will be the cost of this expanded plan?

The population growth is expected to level off after it reaches about 175,000,000.

The life span is increasing rapidly and it is estimated that one-third of the population will be over 65 years old. This is approximately 58,000,000 persons, or 29,000,000 families. The annual pension at $150 per month per family would amount to $52,200,000,000. In addition large sums would be required to pay sickness, injury and other impairment benefits for which no direct taxes are collected.

The cost of this program to the United States Treasury for benefits, interest and bond retirements may well reach $35,000,000,000 a year in excess of total taxes collected for this purpose.

To finance such a program, one-third of the population would work to support the other two-thirds. It would require a 100 percent tax on the $21,000,000,000 corporate profits for 1948, the entire savings of all individuals in 1948, estimated at $4,900,000,000 and the deficit would still be $9,000,000,000.

Gentlemen, I submit, that such a plan is economic suicide, and will terminate in one of four ways:

1. Complete socialization of the United States.
2. Imposition of a capital levy.
3. Repudiation of the program.
4. National bankruptcy.

And with any of these will come disillusionment to 100,000,000 Americans, in our Government, our Congress and our national leaders.

The trend toward socialism has been insistent and has been increasing with every session of Congress. Before passing laws that carry the threat of forcing a change in our form of government, I propose a referendum through a national election. Thus, the issue would be put directly to the voters, so Congress can be guided by the expressed desire of the electorate.

I cannot believe the people of the United States would approve of any proposal which would ultimately lead to chaos.

There are many inequalities in H. R. 2893. Among them, the penalty on the self-employed. I do not want to be blanketed into this plan, although I have no objection to making membership optional.

I am not here to recommend amendments to H. R. 2893. Before experimenting further, the present plan should be put on an actuarially sound basis and the trust funds used for the purpose for which they were collected. Gentlemen, I have a plan for your consideration.

Make no change at this time in the present rate or coverage. Change the Social Security Act to require the deposit of all collections of taxes for Federal old-age and survivor insurance to the credit of the Federal old-age and survivor insurance fund in the Federal Reserve bank in the district where the tax was collected.

Change the Federal Reserve Act to permit Federal Reserve banks to make collaterialized loans of funds from the trust account to banks that are members of the Federal Reserve System and to collect a reasonable handling charge, and to make loans to other Federal agencies organized to make self-liquidating loans.

Change the acts creating those agencies to permit them to borrow from the trust fund and issue debentures therefor. This would relieve Congress from appropriating money for this purpose. Some of these agencies have demonstrated over a period of years that they operate without serious losses. It is reasonable to expect these loans would be repaid with interest, and meantime would be employed in the various Federal Reserve districts to aid business, housing and for other constructive purposes.

The Social Security Board would call upon these various Reserve Banks for funds at times and in sufficient amounts to pay their administrative expenses and claims for old-age and survivor insurance.

In this manner the money could be profitably employed in the districts that provided it, and when needed would be available without budget or appropriation consideration.

This plan will not make up the reported actuarial deficit of several billion dollars. It will keep the trust funds from being spent as collected, and provide a framework upon which to establish a solvent plan, either by increasing rates or reducing benefits.

Cancellation of Supercarrier Will Cost American Taxpayers Approximately $20,000,000

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. VAN ZANDT. Mr. Speaker, recently I called to the attention of the House that when the Veterans' Administration canceled 16,000 beds in the hospital program and reported saving $279,000,000, to do so it cost the American taxpayers $13,000,000 in funds already expended for the hospital program.

The other day when Defense Secretary Louis Johnson arbitrarily canceled the building of the carrier *United States*, the same situation prevailed. The estimated cost of the carrier was $189,000,000: (a) 3,000 tons of steel have already been delivered to the Newport News shipbuilding yards; (b) ninety to one hundred thousand tons of steel have been fabricated; (c) lines, drawings, and blueprints have been released to contractors; (d) obligations in firm of intent to contractors, $150,000,000; (e) estimated commitments by shipbuilder to subcontractors for boilers, auxiliaries, and so forth, $10,000,000; (f) actual expenditures by Navy Department to date, $7,500,000; (g) to terminate the contract and all subcontracts, it will cost the American taxpayer approximately $20,000,000.

Thus, if we add the $13,000,000 wasted by the Veterans' Administration to the $20,000,000 wasted in canceling the supercarrier contract, we can truthfully say the American taxpayer has taken a loss of $33,000,000. This is another illustration of poor planning and false economy.

Hollywood's Reply on Quotas

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent I include in the Appendix a letter from Art Arthur, executive secretary of Motion Picture Industry Council. Mr. Arthur's letter attacks with logical arguments the fallacy of the present British quota regulations on American films. This letter was printed on the editorial page of the Los Angeles Times April 25:

HOLLYWOOD'S REPLY ON QUOTAS

In view of the importance of the British quota issue to the thousands of people employed in Hollywood and to the American film industry in general, I have asked Mr. Art Arthur, our executive secretary, to prepare a full statement detailing the American view of the film-quota situation, couched in the form of a reply to Mr. Marthason's letter published April 18.

CECIL B. DE MILLE,
Chairman, Motion Picture Industry Council.

Mr. A. Marthason, of Santa Monica, a resident Englishman, has sent you a letter defending the British film quota aimed at American films. In view of the letter's distortions it would seem to require reply.

The letter lets slip one remarkably frank admission. "Basically," states Mr. Marthason, "it's really not a question of dollars at all." This is a simple fact that we have been trying to convey to both the American and British peoples.

We are glad to have Mr. Marthason place it on the record. It confirms the opinion expressed by Mr. Ronald Reagan, fresh back from England, that restrictive measures aimed at American films had gone far beyond economic necessities born of dollar shortages. It underscores Mr. Reagan's belief that Britain's current difficulties were being used to camouflage actions against American films representing trade warfare totally unrelated to the hardships endured by the British people.

Mr. Marthason observes that "the time is not far off when American films will only be exhibited in England on their merits." That is exactly what the American motion-picture industry is asking. And nothing more. We would settle for that right now.

Our objection is directed at the artificial trade barriers and restrictions that the British Government has erected to keep the British public from responding to American pictures as freely as they see fit. By this quota system the British Government tries to force British audiences to sit through films they don't care for and keep them from seeing American films they prefer.

The results have been disastrous for British exhibitors and humiliating for British producers, as no less than a half dozen British Members of Parliament candidly admitted in the British House of Commons on March 30 last. They included Tom O'Brien, Member of Parliament, and general secretary of the largest British film trade-union.

Similarly the confession of British misguidance was echoed in the House of Lords by the Earl of Drogheda, chairman of the Films Council, and others. Even the Cinematograph Films Council has joined in the admission of grave economic error.

Mr. Marthason professes to believe that the American film industry is afraid of what he calls "stiff competition." On the contrary, we welcome competition anywhere at any time. There are no quotas set up here in America. Any British film is free to play anywhere its merits can develop a demand from American film audiences. The long runs of both "Red Shoes" and "Hamlet" clearly demonstrate that when the American film audiences want to see a picture, their will is law.

But we find a wholly different situation in England where quotas and other artificial trade barriers eliminate precisely the kind of competition the gentleman from Santa Monica says the Americans fear.

The sort of thing that Mr. Marthason advocates is exactly what has disrupted the entire British film industry, shut down British studios, and thrown thousands of British film workers out of employment, while British film exhibitors struggle desperately to keep their theaters open.

Simultaneously, this vain, ill-considered policy is creating new difficulties for the American film industry and developing wholly unnecessary antagonism on both sides of the Atlantic.

Neither Mr. Roy Brewer nor Mr. Ronald Reagan are seeking to tell the British film public "what kind of entertainment they must like." They merely are pointing out how harmful for the British film industry, as well as the American film industry, is the British Government's efforts to tell the British film public what kind of entertainment Britons must like.

We cannot hope that our "resident Englishman" will accept wholeheartedly an American view of the quota situation. Let him, then, listen to comments of Britons as expressed in the British House of Commons and House of Lords.

Tom O'Brien, the member from West Nottingham, declared: "We cannot make people see films they do not want to see—no quota, whether high or low, will succeed in doing that * * * It is my own view as well as that of other people that this 40-percent quota will create further unemployment. Whether we like it or not, we have to have American films."

Oliver Lyttleton, Member for Aldershot: "It is clear that our film industry is in great jeopardy, and the first step to take is to secure the cooperation of the Americans, who are as much hit as we are in trying to clear up the mess."

William Shepherd, Member for Bucklow, declared in the House: "If we pursue a course antagonistic to our American friends, the industry in this country will never really get on its feet. * * * I hope that the president of the board of trade will do all he can in the next 2 or 3 months to try and get some agreement with our American friends. What is happening now is damaging to the interests of both the American and the British industries."

Let Mr. Marthason cup an ear toward the House of Lords as the Earl of Drogheda laments: "It is a fact, I fear, that many

British films produced this year have been very disappointing. * * * We tried to go too far and too fast. * * *"

Let him note the words of Viscount Swinton: "I cannot but agree with the criticism in another place that the handling by the British Government of the American industry has been singularly inept. I must say that I had a large measure of help and cooperation from the American industry. * * * I do hope the board of trade will learn from experience and be more realistic. * * *"

Let Mr. Marthason note the words of Viscount Bridgeman describing the quota as a "fools' paradise" and observing: "The real judge is the ordinary man or woman who goes to the pictures; they are the ones to decide. * * * It is impossible for anybody like the board of trade, (our) producers, or anybody else to keep the public content with something they do not want."

If Mr. Marthason truly is willing that American films be exhibited in England only on their merits, then the Motion Picture Industry Council urges him to write at once to R. E. Barclay, private secretary to Foreign Secretary Bevin, declaring that British quotas should be eliminated immediately.

ART ARTHUR,
Executive Secretary, Motion Picture Industry Council.
BEVERLY HILLS.

The Star Chamber Wasn't As Bad

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. RAINS. Mr. Speaker, under leave heretofore granted, I attach herewith, for the consideration of the Members, an editorial from the Traffic World pointing up a serious situation:

THE STAR CHAMBER WASN'T AS BAD

It would hardly be fair to term the proceedings in which the Civil Service Commission, a fortnight ago (see Traffic World, March 19, p. 19), disqualified a number of trial examiners of the Interstate Commerce Commission, the Maritime Commission, and the Civil Aeronautics Board star-chamber proceedings. To do so would be unfair to the court of the star chamber, the execrated judicial tool of the Tudors and the Stuarts which, bad as it was, still was less violent to the Anglo-Saxon, and hence the American spirit of justice and fair play.

True, star-chamber proceedings were secret. But those who were hailed before it met their accusers, had an opportunity to plead, and were granted the right to reply to evidence adduced against them. No semblance of such elementary right was granted to those who now find themselves sentenced to the loss of positions in which some of them have performed loyally, intelligently, and efficiently for many years.

Of course, the process by which the Civil Service Commission arrived at the conclusion that these men were not qualified to serve as trial examiners was not a judicial one. It consisted merely of a simple, oral examination before a board of consultants, and a subsequent peremptory notice to the administrative body by which they were employed that they were to be discharged—were to be separated, as the euphonious but hardly less-bitter Federal gobbledegook has it.

The Civil Service Commission, in its press release announcing its action, said, among other things, that the Administrative Procedure Act gave it sole authority over the procedures to be used in removals of trial examiners. There are, we understand, more than a few authorities on the law who disagree with that statement.

Assuming, however, that what the Civil Service Commission said about its sole authority in that matter is true, the Commission must then also accept sole responsibility for the procedures it chose to adopt—and upon it, therefore, must fall the onus for as amazing a perversion of discretion and fair play by a Federal body as has been witnessed in our day.

It is equally hard to understand how a body of consultants, the membership of which included two former presidents of the American Bar Association, a former Assistant Attorney General, and two members of State supreme courts could have lent itself to such a curious course of action.

As we understand it, the oral inquiries were of the sketchiest kind. They have been described to us by some who submitted to them—and who, fortunately, did not fall under the Civil Service Commission's ban—as little more than passing examinations of opinions, with only incidental questions intended to develop the qualifications that the Commission later said the condemned men did not possess.

The Civil Service Commission has declined to make public the names of the examiners involved. Undoubtedly, when appeals from the order are taken, the identities will transpire; and when they do, we predict added amazement on the part of those who do business before the Commission.

So far as we have been able to ascertain, neither the consultants nor the Civil Service Commission itself made any effort to discover whether the examiners they investigated had the approval and respect of the many men in transportation who had, over the years, cheerfully submitted their disputes to those examiners in hearing rooms.

The spirited defense of the unfortunates written by William A. Disque, himself for many years one of the most respected of the Commission's examiners, may well serve as the collective opinion of the larger group of practitioners and traffic men. We quote from Mr. Disque's letter to the Civil Service Commission a single paragraph which should express that opinion:

"I would rather present the average case before an examiner who had years of experience in ICC work or traffic matters, with practically no law experience, than before a good and experienced lawyer, with no ICC or traffic experience."

We commend to our readers, too, the outspoken disapproval of Commissioner Aitchison, who, in his recent address at Chicago, sees the action of the Civil Service Commission not merely as an injustice to faithful and efficient employees, but as a blow at the Interstate Commerce Commission's own prestige. After all, for years, the Commission has tacitly expressed its confidence in the men attacked and its satisfaction in their work. Now, in effect, it finds an outside agency telling it that it lacks discernment in selecting its examiners and in promoting experienced and worthy employees to those positions.

"I tender these men my personal expression of confidence and of appreciation for their loyal, efficient, intelligent service in the past," said Commissioner Aitchison.

The Commissioner, never noted for timidity, exhibited the kind of audacity seldom seen in Government circles when he thus expressed, at one and the same time, his admiration for those who work with him, and his contempt for the Civil Service Commission. In the face of loss of position, which many of the "disqualified" examiners worked long years to attain, there is some consolation in his words.

The commendation, however, may prove small satisfaction to the men ordered discharged should the action of the CSC so bravely defied by the Commissioner prevail. We hope that appeals to the CSC may bring it to a higher regard of the rules of fair play, or failing that, that court action may remedy the injustice.

It Pays To Have Friends in High Places in the Roosevelt-Truman Administration

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. CURTIS. Mr. Speaker, on April 26, 1949, an article appeared in the New York World-Telegram which, if true, should be interesting to the taxpayers of the country. In the billions and billions of dollars that America has sent abroad, just how much of it has been for the benefit of special interests? Is the American taxpayer required to support all the royalty of the world in the degree of luxury to which they are accustomed? To what extent have the special interests both at home and abroad profited by the desire of the American people to relieve starvation and establish justice?

Mr. Speaker, incidents are showing up constantly pointing to the fact that the economic royalists who have dominated our foreign policy throughout the Roosevelt-Truman administration have not been unmindful of the needs of their friends. The taxpayers who are burdened with such a heavy load have a right to ask an accounting. The article I refer to is as follows:

COURT SETS ASIDE AWARD OF MILLION MADE TO MOFFETT—CAN'T PAY FOR SERVICE OF KIND, JUDGE HOLDS; APPEAL IS PLANNED

A verdict awarding James A. Moffett, oil executive, $1,150,000 for services to the Arabian American Oil Co., was set aside today by Federal Judge Edward A. Conger.

The office of William P. Maloney, counsel for Mr. Moffett, announced that Judge Conger's ruling will be appealed.

Mr. Moffett had claimed that as a result of his intercessions with such figures as the late President Roosevelt, Harry Hopkins, and Jesse Jones in 1941, the oil company's wealthy concessions in Saudi Arabia were protected.

Granting the motion to set aside the verdict, Judge Conger based his ruling in part on a contention by Joseph M. Proskauer, Aramco counsel, who said Mr. Moffett's suit was contrary to public policy because no man can sell his influence with a public official.

COURT CITES LAW

Judge Conger noted that Mr. Moffett had "an intimate friendship" with the late President, who had appointed him Federal Housing Administrator, a position which the oil official held during 1934–35.

The judge expressed the belief that the oil company selected Mr. Moffett to represent it in Washington "as much, if not more, for his close relations with the President, one who, if anyone could, might obtain relief" for the oil company in its "hour of peril from the man who might be able to help them."

Judge Conger asserted that Mr. Moffett's services "are the kind that the law, says may not be compensated for."

PAID KING IBN SAUD

Mr. Moffett had claimed as the result of his intercessions the British were required to make certain payments to King Ibn Saud out of a $450,000,000 loan granted by this country. The king had demanded the oil company pay him $6,000,000 a year to make up for a wartime diminution in his income, according to the testimony.

A letter was introduced which Mr. Moffett said he received from Jesse Jones, then Chairman of the Reconstruction Finance Corporation, who had negotiated the British loan.

In it Mr. Jones said that at the "instance of the President and the Secretary (of State) I suggested to the British Ambassador that Britain consider providing King Ibn Saud with such funds as, in its opinion, were necessary to meet his requirements."

We Must Protect Our Chief Agricultural Industry—Dairying—From Unfair Competition.

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. WHITE of Idaho. Mr. Speaker, since appearing before the House Committee on Agriculture in support of the dairy industry and in opposition to the removal of the tax on the butter substitute, oleomargarine, at the invitation of radio station KSL of Salt Lake City I have broadcast an address entitled, "Dairying, the Backbone of Agriculture," which is submitted herewith for the consideration of my colleagues:

DAIRYING, THE BACKBONE OF AGRICULTURE

My friends of the air, I want to talk to you a few minutes about one of our chief farming industries—a farming industry that has contributed more to the upbuilding of America than any other branch of farming.

The legislation now under consideration by Congress deals with one of the most important issues affecting agriculture and the welfare of the American people.

Our national leaders have long recognized the paramount importance of the dairy industry to the growth and welfare of our country. The Congress in its wisdom has enacted laws to safeguard our principal dairy product—butter—from the destructive competition of cheap butter substitutes.

My friends, the milk cow has followed the pioneer in every State in the Union, bringing sustenance and support to the men and women with their families that have built America. In the covered-wagon days, it was the milk cow and her progeny that accompanied the settlers in their migrations to the Nation's frontiers and supported them with milk, butter, and beef while they reclaimed the land and built the homes and communities of this great country. The old-fashioned churn and the farm wife with her golden rolls of delicious butter did more to sustain the farmer and finance the building up of early-day American agriculture than any other product of the farm. This was so in the South, where now so much of the support of cheap butter substitutes comes from.

Well do I remember as a boy, when I grew up in the Deep South, the system of cultivation followed by my father to increase the fertility of poor land. "Crawfish land" Southern people called it when the little white chimney of the crawfish indicated the deficiency in fertility of the soil. My father practiced what he called "cowpenning the land." A cow pen was built on this poor land and the milk cows were penned on the ground every night. Next spring, the cow pen was moved and a good crop was produced on the land where the cow pen had been the year before. Each year the cow pen was moved to another piece of land and in time the fertility of the farm was built up while the dairy herd thrived and grew. The butter and the increase from the dairy herd was sold in town to finance farm improvements and purchase the machinery used on the farm.

Let me remind you that England has long recognized the importance of dairying and beef production. We are indebted to the English for the excellence and productivity of the dairy herds in this country by their contribution of Jersey, Guernsey, Alderney, and Ayrshire milk- and butterfat-producing cows, perfection achieved by generations of painstaking selection and breeding. So it is with their contribution of the beef strains of Shorthorn and Herefords to our matchless herds of beef cattle.

The prowess of the English race in conquering and colonizing many parts of the world must be credited in a large measure to the fighting ability and rugged physiques of her "beef eaters."

When Japan was making a bid for military advancement some years ago, we read that she endeavored to ascertain what could be done to improve her national diet and increase the stature and prowess of her fighters, and we learned that the commission reported that milk, butter, and beef were the answer.

Let anyone show me a community or a country that is devoted to dairying and I'll show you a hardy race and a prosperous people. Today, little Denmark with its dairy farms, its butter and bacon, a byproduct of the dairy, is an example of farm thrift, and national stability to the rest of the world.

Little Holland, with its canals and dairy farms that gave to us and to the world her famous dairy strains of Holstein-Friesian milk- and butterfat-producing cows—a country minus timber, without deposits of coal, iron, or oil, dependent on her farms and dairy herds—was before the war one of the richest of European countries.

Now the processors of cheap vegetable oils, surplus fats and grease have taken over the soap trade and the tremendous business of supplying the Nation's cooking fats and compounds, together with the vast market for lubricants.

They have even come in and taken the market for our dairy product, cheese, with their tinseled, adulterated "cheese" substitutes.

My friends, today there is hardly a grocery store in the country where you can buy a piece of honest-to-goodness full cream cheese. Not content with taking over these vast markets, now these processors of cheap vegetable oils, surplus fats, and grease propose to come in and tear down the last legislative safeguards to the main product of our dairy industry, butter, and flood the market with their cheap butter substitute, oleomargarine, that will masquerade as butter in the stores of many communities and deprive the housewife of any opportunity to buy genuine butter. If the oleomargarine dealers have their way and this law is repealed, when the housewife goes to the store and asks for real butter, she will get the same response we get today when we ask for full cream cheese, "Sorry, we don't keep it."

Now, when the world is struggling with inflation and is crying to us for fats and oils, we are being pressed by these profiteering packing-house companies and the manufacturers of the cheap butter substitute—oleomargarine—to reverse our national policy and tear down the laws that Congress has enacted to protect the purity of the food of our children and safeguard our chief agricultural industry; yes, to protect the very stability of our farm economy by preserving our home markets for our principal dairy product—butter.

They would impoverish the farmer and dwarf our children to enrich profiteering manufacturers and unscrupulous oleomargarine dealers.

My friends, we know and sympathize with the cotton growers of the South. They have been struggling for generations with their soil-depleting one-crop standard—cotton. Naturally, they are demanding a bigger and better market for their byproduct, cottonseed oil. They need the money to buy commercial fertilizers if they are to grow another good cotton crop and more cottonseed oil.

Let me remind you that our Government undertook the construction of Muscle Shoals to provide fertilizer for the worn-out cotton-fields of the South.

There has been a concerted effort in the cotton-growing States to get away from cotton and soil depletion; valient attempts have been made with some success to build up the livestock and dairy industry as a means of increasing the fertility of its worn-out soil.

To meet a temporary price emergency caused by inflation, we are called upon to repeal our laws and deprive agriculture of the security of its dairy industry and the means of maintaining the fertility of the soil.

We cannot, we must not, adopt a short-sighted policy that will bring the standards of agriculture down to the production of soil-depleting crops in order to expand the market for vegetable oil and the purchase of more commercial fertilizer to build up a one-crop soil-depleting industry.

My friends, in the light of a lifetime of observation and experience in watching the growth of the business of manufacturing and marketing cheap butter substitutes and the inroads these butter substitutes have made in the market for dairy products in this country, I cannot bring myself to believe that this Congress can be persuaded to tear down the safeguards of our dairy industry by repealing the last of the laws that previous Congresses in their wisdom have enacted to preserve our basic farm industry—dairying.

Philippine Tragedy

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. KEARNEY. Mr. Speaker, all America was shocked on hearing the news of the wanton murder of Mrs. Manuel Quezon, the widow of our former colleague and the late President of the Philippine Republic; her daughter, and son-in-law.

According to press dispatches this dastardly crime took place at a time when she and members of her party were on their way to dedicate a hospital.

While on the journey the party accompanied by members of the constabulary were ambushed by a large body of "Huks" armed with machine guns. The dispatches state that Mrs. Quezon, her daughter and son-in-law and others of her party were killed and many others wounded.

I know that all necessary steps will be taken to apprehend and punish those responsible. It is war—war against those who would govern by terrorism—war against Communists and Communist-inspired groups whose only object is to overthrow a legally established, orderly government. Our Government should be sympathetic to the Government of the Phillipines if the call should come for aid.

I know I voice the sentiments of our people when I offer heartfelt sympathy to the family and the people of the Philippine Islands.

Art Exhibits for Paraplegics

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. JAVITS. Mr. Speaker, "It's funny," said the paraplegic veteran, "I never thought I'd be able to understand what art was all about. But, hell, I just liked these pictures." It was remarks such as this that greeted Look magazine's photographers who recently visited the wards of St. Albans Naval Hospital, where paintings were being exhibited and explained to paralyzed veterans who otherwise never would have been able to see them and experience the pleasure of art for art's sake. I have appended hereto an article from Look magazine, along with a letter from these patients themselves, attesting to the therapeutic value of the exhibit presented them and stating that no effort was made to propagandize them in connection with the exhibit. Certainly the art exhibits can serve an excellent purpose and should be continued. This can be done without lending them to political propaganda, but without art censorship.

PAINTINGS FOR PARAPLEGICS

Paraplegics are paralyzed as a result of injury to the spinal cord. The men who signed the following letter are in the paraplegic ward of the United States Naval Hospital at St. Albans, Long Island. They took their wounds in war action and afterwards. Each has been through the long private hell of getting used to partial life, and each has concluded that life on any terms is worth the candle. These men are quick to resent too much sympathy. Unnecessary favors annoy them. But when their old friends, Carroll and Henrietta Sharon Aument, offered to show them some paintings, they were all for it. There was a party atmosphere in the ward when the Auments wheeled paintings in on mobile units. Pictures, many by well-known artists, were taken to beds and explained. The men talk of them weeks afterward, ask constantly to see more.

MARCH 29, 1949.

To Whom It May Concern:

We, the undersigned paraplegic patients at St. Albans Hospital, would like to state publicly that the art show that was shown to us here at the hospital by well-known artists recently, was not a propaganda show as some Congressmen have stated.

Some of us saw Mr. Carroll Aument's paintings last year and at the time suggested that it might be a good idea to have the show brought out to the hospital to be shown to patients that couldn't get out to see it.

The artists also thought it a good idea and finally arranged for the show to be brought out.

We can truthfully say that most of the fellows who saw the show were very interested in the paintings and found that once they were explained, they were also very educational.

At no time did any of the artists try to inject any kind of communistic propaganda.

We were so well satisfied with the show that we suggest it should be shown more often and to more hospitals where patients are unable to get out themselves to see such shows. We know, because we have seen it, liked it, and benefited by it. We are—

Sincerely yours,

Peter Youakim, Jr.; Lionel La Flamme; Peter J. McArdle [1]; Harvey Andrew Beasley [1]; Leonard Chest [1]; Walter E. March; William G. West; Raymond C. Hansen; Theodore R. Krebs, Andrew W. Mikita, Muncy Lucas, Edward L. Gurka.

Jewish Appeal Is Criticized

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a letter that appeared in the Washington Star of April 27, by Faiz El-Khowri, Minister of Syria. The letter is in response to an editorial that appeared in the Star on April 25.

JEWISH APPEAL EDITORIAL CRITICIZED BY SYRIAN MINISTER

To the Editor of the Star:

As a representative of Syria to this great country, it is obviously my duty to advise my government about everything which serves the interest of both our peoples. It is equally my duty to enlighten the American public—when the opportunity arises—about matters that influence the policy of their Government toward my country and its people.

On the 25th of April I read your editorial entitled, "The Jewish Appeal" urging the American people to help collect the "irreducible minimum" of $250,000,000 "in the weeks immediately ahead." The objectives of the appeal being, as you describe them, humanitarian and of great historical significance, opening up a new era of peace and well-being in the Middle East.

These are certainly noble objectives and describe the nature of the American people who have given the highest example of serving humanity and alleviating suffering everywhere in the world.

But, allow me to tell you frankly, sir, that your objectives are being abused and your dollars are being spent for purposes other than those for which they were given. The fact is that American dollars are used to purchase arms from the U. S. S. R. and its satellites in order to fight and kill the Arabs and to drive them out of their homes.

Thus, the Jews, who were able to play on emotions and sympathy, now have a powerful army and are applying in Palestine against the Arabs the horrible lessons they learned from Nazi Germany.

The peace which you cherish was dominant in the Middle East. The Arabs and the Jews were living as brothers in Palestine until the Balfour Declaration, the American dollar and support and Soviet arms interfered. All these forces cooperated together and peace was driven away, not only from Palestine, but also from the whole Middle East. In its place, chaos, poverty, and homelessness now prevail.

Peace left Palestine with the Arab refugees and will not be reestablished until and unless these 800,000 Arab refugees return to their homes where they were for a millenium of years before Moses, Joshua, Azra, and the modern Zionists like Chaim Weizmann, Ben-Gurion and others.

Finally, I should like to affirm that every dollar given to the Jews and every assistance, moral or material, tendered to them, will only result in further distress and disorder in the Middle East. The fire which the foreigners kindled there will not be extinguished unless they themselves put it out by ceasing to nourish it.

FAIZ EL-KHOURI,
Minister of Syria.

[1] These fellows, being paralyzed from the neck down, and unable to sign their own names, gave authorization to someone else to sign for them.

State of Israel?—Does Its Establishment Impose Jewish Nationality on Americans of Jewish Faith?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a letter which I have received from Mr. Norman Buckner, Pontiac, Mich., which relates to the problem of Israel and Americans of Jewish faith, together with a news item which appeared in the New York Times of April 3, 1949:

JERUSALEM TO BE CULTURAL CENTER—ISRAELIS EXPECT POPULATION TO BE DOUBLE IN 5 YEARS—HALL FOR ZIONISTS IS PLANNED

(By Gene Currivan)

TEL AVIV, ISRAEL, April 2.—Elaborate plans have been drawn to make Jerusalem the cultural and educational center of Israel and to double the city's population within 5 years. The first step will be to erect a congress hall with 1,800 seats, where the World Zionist Congress will meet in the future.

A comprehensive rehabilitation program, most of which is ready for execution, is being underwritten by the Jewish Agency, the Jewish National Fund, and private capital. Some aspects of it, such as roads, utilities, and the erection of buildings for small industries, are being undertaken by the state itself.

In addition to the congress hall, which will be ready for next year's Zionist Congress, there will be a large hotel in the center of Jerusalem, a university city on Mount Scopus, where the abandoned Hebrew University now stands, and an airport within Jerusalem. Development of the university city must obviously await the outcome of the Transjordanian armistice talks as Mount Scopus at present is a neutral zone between the Israeli and Transjordanian forces.

The Jewish Agency intends to encourage a "back to Jerusalem" movement to bring

back all those who left after the siege and to influence others to make their homes in the city. Work projects have been planned to provide employment for additional thousands while lucrative contracts will be offered to those already in the city.

TO AWARD CONTRACTS

In connection with its housing program for immigrants the Agency will award a contract of $150,000 for beds and mattresses to some local concern. Another contract of an equal or greater amount will be let for doors, windows, and floor blocks.

There will be opportunities for employment in the rebuilding program and on the road to be built around the southern arc of Jerusalem, where vast areas are to be populated.

The hotel planned for the center of the city will be seven stories high and have 150 beds. Construction will start this year.

The congress hall will be one of the largest projects, and construction is supposed to start some time this year. The initial cost has been placed at $900,000, of which one-third each will be paid by the Agency, the Jewish National Fund, and private capital. The building, of a native pinkish granite, will be used for all kinds of international conferences as well as concerts and ballets.

UNIVERSITY CITY PLANNED

On Mount Scopus, where the Hebrew University buildings are now empty and guarded by both Israelis and Arabs, it is hoped to build a university city with educational institutions of all kinds, not necessarily connected with the university itself.

There are also visualized plans for the manufacture of precision and optical instruments and for a large printing establishment for religious books.

The Government will assist this development by transferring more ministries to Jerusalem and providing buildings for them.

The "back to Jerusalem" plan obviously is laying groundwork for an ultimate "Jerusalem the Capital" plan.

APRIL 20, 1949.

HON. LAWRENCE H. SMITH,
House of Representatives,
Washington, D. C.

DEAR MR. SMITH: As a member of the House Foreign Affairs Committee, I am writing you about a problem that should be of great concern to you in your efforts to guide American foreign policy for the best interests of all the people of our country.

I am an American who happens to be a Jew by religion. I reject the concept that because I am a Jew by religion, I have also a "Jewish" nationality and that through that nationality, I have obligations to the state of Israel or attachments to it or sentiments about it not shared by Americans of other faiths. The state of Israel, to me, is a foreign state, just as China, England, or Pakistan.

I also consider it the responsibility of the United States Government to protect me and 5,000,000 other Americans of Jewish faith from invasion of my American nationality by the Israeli government. And whenever that government, through any of its representatives or instrumentalities, speaks in terms of rights or obligations for "the Jewish people" to Israel, or of Jews to Israel, it is such an invasion of my clear-cut American nationality.

When such an invasion of my American nationality may lead to serious, international political involvements, the failure of the United States Government to protect its 5,000,000 Americans of Jewish faith serves to place them in a position where their security and future status may be seriously jeopardized.

My particular reason, for writing you at this time, is that one such hazardous situation has arisen. I respectfully call you attention to the following facts:

1. The United Jewish Appeal is represented as an American institution. Since it holds itself out to be a philanthropic agency, contributions to it are tax exempt.

2. The largest beneficiary of the United Jewish Appeal is the United Palestine Appeal. The United Palestine Appeal, in turn, allocates most of its money to the Palestine Foundation Fund and the Jewish National Fund. The largest beneficiary of the Palestine Foundation Fund is the Jewish Agency.

3. During the past winter, the Jerusalem section of the Jewish Agency came to the United States. A member of that body "without portfolio" was Mr. Eliezer Kaplan, Minister of Finance of the State of Israel. This delegation imposed upon the United Palestine Appeal, a formula and officers that were to the satisfaction of the Israeli Government. In this move, the president of Israel and its prime minister, Mr. Weizmann and Mr. Ben-Gurion, publicly expressed their support of the Jerusalem Jewish Agency's effort. Following the imposition of this formula and these officers, Mr. Sharet, Israeli foreign minister, and Mr. Eban, Israeli representative to the United Nations, have figured prominently in the fund-raising campaign of the United Jewish Appeal.

The direct Israeli interest in and control of the United Jewish Appeal is therefore obvious.

4. Attached you will find a photostatic copy of a despatch from Tel Aviv, taken from the New York Times of April 3, 1949.

Note that the Jewish Agency and the Jewish National Fund, referred to above as beneficiaries, directly or indirectly, of the United Jewish Appeal, allegedly an American institution, are now preparing to spend considerable sums in public-work projects in the city of Jerusalem. These public-work projects are at the instigation and with the approval of the Government of Israel.

5. It is to be observed that this Israeli action is in defiance of and contradictory to the United Nations' resolution to internationalize Jerusalem. I believe that the Government of the United States stands in support of that United Nations' policy.

6. What is involved here then is use of tax-free American funds for the purposes of aiding the State of Israel to satisfy one of its announced territorial objectives, in defiance of all international attitudes about Jerusalem at the present time.

7. This action assumes new seriousness in the light of the Papal Encyclical, reported in the American press on April 16, 1949. With strong Catholic tendencies, in the Latin-American nations, serious damage may be done to our Western Hemisphere foreign policy should the United States close its eyes to the powerful support for Israeli aggression which comes from the Israeli-Government-dominated United Jewish Appeal. In that event, the most serious consequences to Americans of Jewish faith, referred to above, may eventuate.

I consider it of the most extreme importance therefore, that you give due consideration to these facts and that, as a member of the House Foreign Affairs Committee, you do all within your power either to separate Israeli national projects from the United Jewish Appeal or compel the United Jewish Appeal to register as the agent of a foreign government and to meticulously comply with the requirements of such registration.

Such action would adequately protect Americans of Jewish faith against the confusion of their status and the consequent confusion of their actions and of opinions about them on the part of their fellow Americans of other faiths. I believe they are entitled to that protection.

If I may be of any further service to you, please let me know.

Very respectfully yours,

NORMAN BUCKNER.

PONTIAC, MICH.

Water and Electric Power Situation in California

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 29, 1949

Mr. WHITE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I released to the press today:

The way I feel about the water and power fight in California is this: Any stream in California, south of the Sacramento River, which is capable of producing enough water to warrant its being harnessed for flood control, is producing enough water to be dammed up for irrigation. Or to make it short: If a stream will make a flood, it will irrigate farm land.

We all know that water is almost like gold in California, south of the Sacramento River, and that it is a crime against future generations to build these flood-control projects and let that water flow into the ocean when we need it so badly for irrigation. Flood-control projects already started should, of course, be rushed to completion, but we know it is foolhardy not to use our streams to produce every kilowatt of electricity that we can, because we are rapidly using up our oil and gas supplies. Posterity will see the day when there is no such thing as oil and gas, and we of the present generation will surely be held in irreverent memory by our descendents if we build these flood-control projects and leave out the hydroelectric power provisions which will supply our progeny with light, warmth, and fuel to cook their food when our gas and oil supplies are exhausted. I cannot understand the viewpoint of men in political life, regardless of whether they are Democrats or Republicans, who are taking the short-sighted position of lining up on this flood-control program with the private power interests to the detriment of our State and its people in the generations to come.

It is easily understood why the supporters of the Army engineers and the private power companies are so closely allied. Any dam built under the Flood Control Act by the Army engineers carries no provision for applying the proceeds from the sale of electric energy to the defraying of irrigation costs. Unless this is done, the cost of the irrigation water becomes so high that the farmers cannot pay it and the project is rendered nonfeasible. This puts the Government out of the electric-power picture and leaves the field open to the private power people, which is just what they want. This is the main basis of the fight by the power interests and we would not be having such a hard time settling the water issue in central California if it were not for the power interests backing up the Army engineers with their political lobbying and money.

In addition to the electric power issue and the flood control versus irrigation issue, there is also the issue of 160-acre limitation. That limitation is, of course, written only into the Reclamation law and would apply only on projects built by the Bureau of Reclamation under Reclamation law and would not apply on projects built by the Army engineers under the Flood Control Act. It is only natural then that the big land owners have combined with the private power monopoly to fight the Bureau of Reclamation and the Democratic Party.

The Democratic Party's platform adopted at Sacramento in August 1948 says:

"That the great Central Valley project be completed at the earliest possible time as an integrated basin-wide publicly owned development of our water and power resources by the United States Bureau of Reclamation."

In my opinion the publishers of certain California newspapers and certain of our California Members of Congress are either being hoodwinked, or are lined up with the private power interests through alliance with the Army engineers. Although on the surface these publishers and these Members of Congress are for public power, they play footsie under the table with the private power groups through the Army engineers to the detriment of our future generations in California. It is my intention to expose this whole business on every possible occasion.

One of the first proposals I made immediately after coming to Washington was the proposed consolidation of the Bureau of Reclamation and the civil functions of the Army engineers. This proposal was made in order to stop the fight between these two groups which is so costly to the present taxpayers of our Nation and entails the loss of our natural resources to future generations.

I am glad to state that recently the Hoover Commission has advocated the consolidation of these two agencies and it is my hope that this consolidation will be carried out in the very near future.

The President and Labor Disputes

EXTENSION OF REMARKS
OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 29, 1949

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention of the House to the splendid publication, The President and Labor Disputes, by Prof. Clinton L. Rossiter, from Cornell University, as published recently in the Journal of Politics. The research of Dr. Rossiter on this interesting question of these additional duties of the President in labor matters should prove helpful to the Congress in our present study of labor legislation.

THE PRESIDENT AND LABOR DISPUTES

(By Clinton L. Rossiter, Cornell University)

Harry S. Truman, speaking to the National Conference on Family Life on May 6, 1948, delivered this illuminating exposition of the powers of the Presidency:

"And people talk about the powers of a President, all the powers that a Chief Executive has, and what he can do. Let me tell you something—from experience.

"The President may have a great many powers given to him in the Constitution, and may have powers under certain laws which are given to him by the Congress of the United States; but the principal power that the President has is to bring people in and try to persuade them to do what they ought to do without persuasion. That's what I spend most of my time doing. That's what the powers of the President amount to."[1]

Another part of this speech, an observation that "children and dogs are as necessary to the welfare of this country as is Wall Street and the railroads," stole the headlines, but those who went on to read this Presidential interpretation of Presidential power in the light of events then transpiring found positive evidence of a notable development in the condition of our first office. That very day and the next such persons as W. T. Faricy, of the Association of American Railroads, and Alvanley Johnston, of the Brotherhood of Locomotive Engineers were in the White House being prevailed upon to do what they ought to have done without the President's intervention, namely, come to terms that would spare the country the havoc of a Nation-wide railroad strike. It was plain that the application of this principal power uppermost in Mr. Truman's mind was in the field of labor-management relations.

A cardinal feature of the Presidency in Transition is the evolution of the Chief Executive's role as an emergency participant in labor disputes. Indeed, this is one of the most prominent of those developments that permit us to assume, not alone for the purposes of this symposium, that the Presidency is in one of its great transitional periods. The general expansion of Government activity in labor-management relations rendered necessary by the complete unionization of many basic industries and the rise of industry-wide bargaining has had visible influence upon the Presidential office.[2] The Presidency, in which the elements of prestige and power are uniquely mixed, is an office peculiarly fitted for persuading the American people to do what they ought to do without persuasion and we have simply given the screw another turn in calling upon the final object of the public wishes to become a third party to those labor disputes that are recognized national emergencies. With the normal processes of governmental participation in industrial relations the President has little to do. The scope of this investigation will therefore be confined to his emergency powers in major labor disputes.

The growth of this power has been natural and unforced, for it fits comfortably into the general pattern of Presidential authority. One of the important functions the President performs is that of protector of the peace. There is a "peace of the United States," as Justice Miller reminded us in the Neagle case,[3] and long before his time it had been demonstrated that the President was primarily responsible for keeping that peace. When we think of the hours Mr. Truman has spent since 1945 in writing labor messages to Congress, sponsoring labor-management conferences, appointing emergency fact-finding boards, sending personal pleas to strike-minded union leaders, seeking injunctions from Judge Goldsborough, and seizing plants and whole industries threatened or paralyzed by work stoppages, we can understand how essential a component industrial peace has become in the general pattern of the peace of the United States. The Labor Management Relations Act of 1947 speaks wistfully, if somewhat obliquely, of "sound and stable industrial peace." The prime responsibility of the President for preserving that peace is now, and will continue to be, one of his major, time-consuming concerns.

The authority of the President in labor disputes is best described by classifying the situations in which it can be brought to bear. His powers fall under three headings: (1) the power literally to "keep the peace of the United States," by instituting military action in strikes attended by violence and public disorder; (2) the power to remove obstructions to the flow of industrial production in time of war (or just before and after war) by establishing emergency agencies to settle labor disputes and by enforcing their decisions with seizure and other sanctions; (3) the power to intervene in disputes, not necessarily wartime or touched with violence, that constitute an economic national emergency. The first and second of these powers are well established and will therefore be examined only briefly in this article; the third, in which the elements of transition are most clearly present, will be considered at more length. It goes without saying that these situations can merge; that one great industrial crisis might answer two or all of these descriptions.

The constitutional and statutory sources of the President's authority in each of these situations will become apparent as this discussion proceeds, but another source should be recognized at this early stage. Franklin D. Roosevelt once characterized the Presidency as "preeminently a place of moral leadership,"[4] and nowhere has the moral force of this office been more fruitfully exerted than in the field of labor disputes. It was the inventive Theodore Roosevelt who first discovered that the champions of labor and management are more likely to give heed to the public interest if the field of combat is shifted from a hotel suite to the White House.[5] Since his time the prestige of the Presidency has been the deciding factor in the settlement of some of our most noted industrial struggles. It is a long step up from the Director of the Federal Mediation and Conciliation Service, however excellent a public servant he may be, to the President of the United States, and neither the court nor Congress can contest the moral primacy of Presidential intervention.

I

The particular power of the President to send troops into an area menaced or racked by strike violence is a part of his general power to deploy the armed forces to maintain order and authority throughout the Nation. When industrial relations degenerate into industrial warfare, the President may step in and take whatever military measures are necessary to preserve the peace. In most instances the policing of disorderly strikes is the duty of the State and local authorities. The President will order Federal intervention in two situations only: When he has been requested to act by the proper State authorities, who thereby acknowledge their own incapacity to preserve order (and he may, of course, refuse the request); or when Federal laws and rights are being flouted and the national interest in a restoration of order is clear.

The President may base his actions on both the Constitution and the laws.[6] To his indefinite range of powers as Commander in Chief and Chief Executive has been added a healthy display of statutes through which Congress has turned over to him the responsibility for "calling forth the militia," and the Regulars as well, "to execute the laws of

the Union, suppress insurrections, and repel invasions." [7] Just how deeply the use of these powers may cut into the liberties of the people has never been determined, but the best authorities agree that, should circumstances dictate, the full power of martial law is at his command.[8] Since "necessity," whatever that means, is the only limit placed upon the arbitrary power of the Executive prosecuting a state of martial law, "necessity" must also be considered the limit of the President's power to use troops in a widespread condition of strike violence. He may take whatever steps the situation demands, even suspend the writ of habeas corpus for strike leaders (or strikebreakers) who are fomenting violent action.[9] The close tie-in with martial law of the President's power to police violent strikes is illustrated by an incident that took place during the Colorado coal strike of 1914. One of the Army commanders who had been sent into the area of conflict under President Wilson's orders suggested to the War Department that martial law be declared in his district. The answer of Secretary of War Garrison was conclusive and instructive:

"I do not know of anything that you cannot do under existing circumstances that you could do any better if there was a written proclamation of martial law posted in your district.[10]

The first of the great industrial struggles, the bitter railroad strike of 1877, was likewise the first occasion for the exercise of this power.[11] The unexpected violence of that strike, or rather series of strikes, spread over 14 States; 9 governors called for Federal assistance. President Hayes, faced by an unaccustomed form of internal disorder, moved from one step to the next with careful judgment and set a number of precedents that are valid to this day. His view of presidential power in this situation was naturally somewhat limited, for he was a cautious man with a respect for the Federal system and had a horror of innovation. The use of troops was directed to three ends: Answering the formal request of a helpless State, protecting Government property, and enforcing the orders of the Federal courts. Among the outstanding precedents established were Hayes' decision, taken in consultation with the Cabinet, that he could, if necessary, declare martial law; the insistence on formal and proper requests for Federal aid; [12] the issuance of proclamations as required by Revised Statute 5300; [13] and the judicious use of troops under Federal orders to preserve order and protect property, but not to break the strike. The most signal aspect of this incident, however, was the instinctive manner in which the whole Nation, including many of the strikers, turned to the President for aid in restoring order. From this time forward no violent strike on a national scale has taken place without evoking concerted pleas for presidential action.

The next important instance of Federal intervention in the warfare of labor and management, that of President Cleveland in the Pullman strike of 1894, was at once the most forceful and questionable employment of this Presidential power.[14] A 7-week strike of 2,500 workers at the Pullman Palace Car Co. in Chicago, touched off by an arrogant display of "industrial statesmanship" by the officers of the company, became a national problem when the American Railroad Union voted a boycott of all pullman cars. Riots, derailings, burnings, and general obstruction of the railroads occurred at many points in the West, particularly in the Chicago area, and President Cleveland was called upon to preserve the peace. The actions of the President, which were really the actions of Attorney General Richard Olney, were ill-conceived, disconnected, and thoroughly effective in breaking the strike; the procurement from the Federal court in Chicago of an exhaustive injunction,[15] based on the Sherman Act of 1890, against the American Railroad Union, its officers, and "all other persons;" the use of Regular troops to enforce Federal judicial processes, remove obstructions to the mails, and break up "conspiracies against commerce between the States"; the belated issuance of a proclamation advising those who persisted in rioting that they could "not be regarded otherwise than as public enemies";[16] the appointment of a Presidential investigating commission;[17] and the high-handed disregard through all this hurly-burly of the opinions of Governor Altgeld of Illinois. At every point in the course of the strike and its suppression, the wishes of the railroad officials, who acted through their General Managers' Association, found support in the Federal Government's actions. Like Hayes, Cleveland intervened to restore public order; unlike Hayes he accomplished this by judicially and physically breaking the strike. The exertions of the President, however unfortunate, nevertheless set a precedent, especially his arbitrary action in overriding Altgeld's protest against the unrequested dispatch of Federal troops and their deployment within his State. The President, as Revised Statute 5298 should have already made plain, does not have to wait for a State to beg assistance; the Federal principle presents a very low barrier to his use of troops in policing major strikes. Nor should it be forgotten that the Supreme Court gave a sweeping endorsement to the President's course of action in its decision affirming the conviction of Eugene V. Debs of the railway union for contempt of the lower court's injunction.

" 'We hold it to be an incontrovertible principle that the Government of the United States may, by means of physical force, exercised through its official agents, execute on every foot of American soil the powers and functions that belong to it. This necessarily involves the power to command obedience to its laws, and hence the power to keep the peace to that extent. * * *'

"If the emergency arises the Army of the Nation, and all its militia, are at the service of the Nation to compel obedience to its laws." [18]

In the years since the Pullman strike the Presidents have employed this dictatorial competence with more circumspection and less severity, and with considerable success in achieving the limited purposes of this type of intervention. The lessons learned by Hayes and Cleveland, and by a somewhat befuddled McKinley in the Coeur d'Alene, Idaho, strike of 1899, have been put to good employment by the twentieth century Presidents. The refusal of Theodore Roosevelt to be improperly drawn into the Colorado coal strike of 1903–4; the same President's firm actions in the Goldfield, Nev., miners' strike of 1907 when he forced an unwilling governor, who had deceived him into dispatching troops, to police his own bailiwick; the powerful and impartial exertion of force by President Wilson in the Colorado coal strike of 1914; President Harding's use of troops in the West Virginia miners' strike of 1921, in which he prepared but never issued a proclamation of martial law; and Franklin D. Roosevelt's refusal to intervene in several strikes in which the State authorities had by no means exhausted their military resources—all these are instructive instances of the Chief Executive's discretionary power to interpose his authority in industrial warfare.[19]

This power continues in the President's possession, embracing every type of military action from the mere threat of force to outright martial law. His decision to intervene in a violent strike and his determination of the measures necessary to restore order would seem to be conclusive; [20] in the employment of this vast discretionary authority, as in the exercise of most of his great prerogatives, the President's only responsibility is to the political process and the judgments of history. Only in the most extreme circumstances should he order Federal intervention; gubernatorial requests for assistance should be carefully investigated before any action is taken. In view of the increased potency of the National Guard, it seems likely that the President will in fact have less occasion to intervene in the future. The use of this authority must be as neutral as it is sparing. The employment of troops is for one purpose only, the preservation of law and order; never should they be used to break a strike or force a recalcitrant employer to terms. It is interesting to contrast labor's general distaste for the National Guard with its high regard for the Federal troops. It was a great day for American democracy when the arrival of the Regulars in Louisville, Colo., in 1914 was greeted by the strikers with their brass band.

II

The President displays an unusual degree of interest in labor disputes that occur in time of war.[21] As Commander-in-Chief he is concerned before all others that the production and delivery of weapons and supplies continue without interruption. Under the conditions of total war he becomes the dominant figure in industrial relations. His power is exerted along two related lines. First, he makes it his immediate business to see that peaceful relations are maintained between labor and management, and to this

end institutes special agencies to aid them in resolving their differences. Second, he enforces the orders of these agencies by the application of "indirect sanctions" and prevents critical work stoppages by the ultimate sanction of governmental seizure. The moral force of the Presidency is noticeably enhanced by the fact of war; a plea from the Commander-in-Chief is almost irresistible—almost, not absolutely.

The path that Presidents Roosevelt and Truman followed in the Second World War was unmistakably blazed by Woodrow Wilson in the first. Wilson always evidenced special concern for labor problems; the war gave him repeated opportunities for vigorous action.[22] He set up several boards and commissions to investigate or mediate in particular industries or regions and sponsored important labor-management conferences. The leading wartime governmental agency for the settlement of labor disputes was the 12-man, tripartite National War Labor Board established by Presidential proclamation April 9, 1918.[23] The agency's mandate was to "settle by mediation and conciliation controversies arising between employers and workers in fields of production necessary for the effective conduct of the war."[24] In pursuit of an unusually fair-minded statement of governmental policy, approved by the President and appended to his proclamation, the War Labor Board functioned until August 1919, as a high court of industrial relations. Findings and awards were made in some 490 cases. The importance of the Board's work was attested by the stature of the renowned public servant who acted as one of its co-chairman, William Howard Taft.

The War Labor Board was not based on congressional authority; its decisions therefore found their usual sanction in the force of public opinion. In the rare instances in which they were challenged by labor or management, the President stepped in to force an acceptance and prevent a strike. Twice in the course of the war he was compelled to commandeer the plan or industry that was the arena of the dispute. The persistent refusal of the Western Union Telegraph Co. to heed a decision of the War Labor Board or the pleas of the President led to a joint resolution of July 16, 1918, authorizing Government control; seizure followed 2 weeks later.[25] A similar attitude toward governmental authority on the part of the Smith & Wesson Co., of Springfield, Mass., was met by seizure under section 120 of the National Defense Act of 1916.[26] The most celebrated instance in which workingmen felt the heavy hand of Presidential authority was the Bridgeport case of September 1917.[27] When Wilson learned that certain machinists employed in manufacturing munitions in that Connecticut city had gone on strike in protest against a disappointing award of the War Labor Board, he sent them a strong letter threatening to have them drafted into military service and prohibited from seeking employment in the community's war industries for 1 year.[28] The strikers voted immediately to return to work.

Throughout the war Wilson gave full moral and legal support to the War Labor Board and all other agencies engaged in the amicable adjustment of labor-management grievances. "He acted the part of a fair-minded and intelligent statesman in dealing with the industrial situation,"[29] and his prestige and policies had a healthy influence on the success of the American productive effort. It is a notable fact that the first definite governmental labor policy in our history, the statement of principles heralding the establishment of the War Labor Board, is to be found in a proclamation of the President of the United States.

The labor activities of the Commander in Chief in the First World War were thoughtfully observed by his subaltern in the Navy Department. Franklin Roosevelt moved on familiar ground. In the second war, as in the first, the chief Federal agencies engaged in the settlement of labor disputes were wholly the creations of Executive authority. The most important of these was the National War Labor Board,[30] established by President Roosevelt January 12, 1942, on the ruins of the National Defense Mediation Board. The latter had been set up in March 1941 as a tripartite body with investigatory and mediatory powers in disputes in defense industries,[31] and had functioned with reasonable success in the disposition of about 100 cases certified to it by the Secretary of Labor. This agency's days were abruptly ended by the withdrawal of its CIO members in protest against a rejection of the United Mine Workers' demand for a union shop in the captive mines.

Shortly after Pearl Harbor the President convened a labor-management conference that agreed on three principles: There should be no strikes or lock-outs during the war; all disputes should be settled by peaceful means; the President should create a new agency to handle these disputes. The 12-man,[32] tripartite National War Labor Board functioned until December 31, 1945.[33] In the 4 years of its existence it disposed of thousands of cases through arbitration and mediation. In addition to its executive authority to settle labor disputes, it had important wage-approving duties under the amended Price Control Act of 1942.[34] As it finally evolved, the NWLB sat in Washington as a policy-determining supreme court of labor to which one of its 12 regional boards could refer leading cases and unenforceable decisions.

The enforcement of the Board's orders was once again primarily a Presidential responsibility. The War Department, the War Production Board, the Bureau of Internal Revenue, and particularly the Director of Economic Stablization (under an Executive order of August 16, 1943) [35] were called upon to assist in assuring compliance with the NWLB's decisions. Labor was punished by withholding union dues, union security, and retroactive pay raises at seized plants, and by cancellation of draft deferments; management by the denial of essential fuels, material, and transportation, and the cancellation of contracts. The extent to which this business of indirect sanctions can be carried was demonstrated in the first of the two ill-tempered battles between the Government and Montgomery Ward. At one point in the pre-seizure skirmishing the Post Office Department simply withdrew 70 of its 75 employees at Ward's and refused to deliver first-class mail. The effect of this move on both Ward's business and the Nation's farm population has unfortunately not been the subject of a doctor's thesis.

The final sanction of Presidential seizure was resorted to three times in aid of the National Defense Mediation Board, about fifty times in the course of the shooting war, and eight times from September 2, 1945, to September 2, 1948.[36] The President's constitutional power to commandeer plants and industries was supplemented by several statutes,[37] especially the Smith-Connally (War Labor Disputes) Act of 1943 [38] and, in respect to transportation, the very convenient act of August 29, 1916.[39] In the light of the President's constitutional status as Commander in Chief, many of these provisions, especially section 3 of the Smith-Connally Act, were supererogatory. Usually both Mr. Roosevelt and Mr. Truman cited all their authorities in one jumbled sentence, leaving it to the commentators to determine which was the most reliable in the particular case. The pattern was set in the very first seizure of the unlimited national emergency, that of the North American Aviation plant at Inglewood, Calif., in June 1941; the President announced that he was acting pursuant to the powers vested in him by the Constitution and laws of the United States, as President of the United States and Commander in Chief of the Army and Navy of the United States."[40]

Such an overpowering combination was usually sufficient to convince both labor and management of the validity of presidential commandeering. Only once was this power seriously challenged in the courts. The high publicized seizures of Montgomery Ward & Co. were submitted to judicial scrutiny when the Government brought suit for a declaratory judgment to establish the legality of its possession of Ward's retail stores. The intrepid Judge Sullivan of Chicago held that the seizure was improper, since the company was engaged in distribution rather than production. The circuit court reversed this decision, and the Supreme Court held the case moot with the cessation of hostilities.[41] The President's wartime power to seize and operate industrial facilities extends far into civilian territory, especially in view of the Government's contention in the course of this litigation that

Atty. Gen. 83 (1944).

the company deserved seizure because its defiance of the NWLB's orders threatened "the disintegration of the wartime structure of labor relations which * * * cannot survive successful repudiation by a company of the size and economic importance" of Montgomery Ward. This power exists at the time of this writing, as Mr. Truman's seizure of the Nation's railroads May 10, 1948 clearly demonstrated.[42]

The recent lessons concerning the delicate problems of wartime governmental intervention in labor disputes should be thoroughly studied and filed away for future use. The policies, organization, and methods of operation of the first and second national war labor boards would seem to provide satisfactory working models for a third, should the disaster of war overtake us once more. It would be advisable, however, to institute such a board on the basis of a detailed statute rather than again to throw the burden on the heavily laden Commander-in-Chief clause. The next board should have direct, legal sanctions for enforcing its orders. All this speculation depends, of course, upon whether we so much as get a chance to set up our boards and bureaus.

III

The most important aspect of the President's authority in labor disputes is his power to prevent or settle strikes that substantially endanger the health and safety of the Nation. Quite apart from the manifest threat to the national well-being presented by strike violence or the stoppage of war production is the continuing problem of strikes in the basic industries and the transportation system. The American people know from first-hand experience how injurious a widespread work stoppage in the telephone system or steel mills can be, and long before Judge Goldsborough began his lecture course for John L. Lewis we recognized that a strike of long duration in the railroads or coal mines might cause society itself to disintegrate. The powers of the President in this area flow from three main sources: his position as President, the Railway Labor Act of 1926, and the Labor-Management Relations Act of 1947.

The President need not cite constitutional or statutory clauses to interpose his authority in labor disputes. For 50 years Presidents have been summoning up the prestige of their high office to persuade labor and management to do what they ought to do without persuasion. Whatever statutory techniques of governmental intervention we have at present or may develop in the future, the matchless opportunity of the President to mobilize and express public opinion remains his keenest weapon.

It is not surprising that the first unsheathing of this weapon took place in the incumbency of Theodore Roosevelt, the leading expounder if not practitioner of the "Stewardship Theory."[43] The tactics of the President in the anthracite coal strike of 1902, even his mere participation in its settlement, established impressive patterns of action for those who were to follow him.[44] The personal pleas to both camps in the struggle, the White House conference at which the contestants were reminded (in a high, shrill voice) of the public interest, the appointment without statutory authorization of an investigating commission, the promise of future administrative or legislative action to redress long-range grievances, even the preparation to mine coal with bayonets—all these things, done by Roosevelt in 1902, have been done many times since. He was accused, of course, of having acted in the interest of a second term; yet whatever his motive he forced the termination of one of the most painful disputes in American history in a neutral manner and without breaking the strike. This was the first time that a President had ever intervened to mediate a major labor dispute imperiling the health and safety of the Nation. The Rhadamanthine exertion of moral power, of which this President had more than his share, was decisive in the settlement.

"It illustrated as well as anything that I did the theory which I have called the Jackson-Lincoln theory of the Presidency; that is, that occasionally great national crises arise which call for immediate and vigorous executive action, and that in such cases it is the duty of the President to act upon the theory that he is the steward of the people, and that the proper attitude for him to take is that he is bound to assume that he has the legal right to do whatever the needs of the people demand, unless the Constitution or the laws explicitly forbid him to do it."[45]

Succeeding Presidents have invoked their prestige to ward off or end other disastrous strikes. The personal nature of the office, the fact that the President is at liberty both in law and conscience, to be as big a man as he can,[46] has convincing demonstration in the labor history of the twentieth-century Presidents. As might be expected, Presidents Wilson and Franklin Roosevelt intervened most repeatedly and decisively, but even Mr. Harding was sent down into the arena by the stern commands of the American public. Several more vigorous techniques have been developed since 1902. Three times (the threatened railroad strikes of 1913 and 1916 and the railroad crisis of 1946) Presidents have sought congressional aid; and four times (the bituminous coal strike of 1919,[47] the railway shopmen's strike of 1922,[48] the miners' strike of 1947,[49] and the threatened railroad strike of 1948[50]) they have taken a leaf from Cleveland's unfortunate book and secured injunctions, with varying degrees of justice and success.

This force first exerted by Theodore Roosevelt is one of those Presidential powers of customary origin that can be used for great good or greater evil. It must be exercised frugally, with impartiality and discretion, and particularly not in such a way—as we shall see that it has been on several occasions—that it cuts the ground from under regular statutory procedures of mediation and arbitration. There are limits to the use of Presidential prestige in the settlement of industrial disputes.

IV

The first of the two present-day statutes in which Congress has explicitly requested the President to be an emergency participant in labor disputes is the Railway Labor Act of 1926.[51] This law was the outgrowth of a long and educational legislative history, for in the field of labor relations, too, the railroad industry was the first to feel the strong arm of Federal power. The pioneer attempt to meet the special problem of railroad labor disputes was an act of 1888.[52] This statute, which provided for voluntary arbitration in the transportation system, singled out the President for a special role. He was empowered to appoint a temporary investigating commission to aid in settling a particular controversy, on his own responsibility or upon application by one of the parties or a State governor. The law was a failure and was used only once, when Cleveland belatedly set up a commission to report on the causes of the pullman strike. Nevertheless, the way had been pointed out for future action.

From here the long trail wound through the Erdman Act of 1898, the Newlands Act of 1913, the Adamson Act of 1916, the period of Federal control from 1917 to 1920, and the Transportation Act of 1920.[53] It was the third of these statutes, the Adamson Act,[54] that Wilson persuaded Congress to enact in an historic effort to settle a major labor dispute by direct legislative action. A struggle over the 8-hour day between the united brotherhoods and the equally united railroad industry was about to erupt into a strike when the President moved in. "I feel that I have the right, therefore, to request, and I do hereby request, as the head of the Government, that before any final decision is arrived at I may have a personal conference with you here," wrote the President to the disputants.[55] A series of White House conferences ensued directly. When the railroad managers rejected the President's proposals, he secured from Congress, in the space of 4 days, a law establishing the 8-hour day, and thus staved off a major strike. Presidential demands for drastic powers to prevent railroad strikes during national emergencies were, like similar demands in May, 1946, effectively sidetracked. This incident convinced both managers and unions that only efficient Federal administrative machinery would prevent every dispute from becoming a subject for extraordinary Presidential or congressional action, and after several more false starts a solution was reached. The Railway Labor Act of 1926 was the product of a joint committee of union and management representatives. This was one labor law that both sides wanted.

The normal administration of the Railway Labor Act is the responsibility of the National Mediation Board and the National Railroad Adjustment Board, two establishments quite independent of Presidential supervision. Only when a railroad labor dispute threatening "substantially to interrupt interstate commerce" cannot be settled by the regular procedures of the National Mediation Board may the President be called upon to act under section 10 of this statute. At his discretion he may then appoint

[55] New York Times, August 16, 1916.

a public emergency board, of whatever size and membership he thinks necessary, to "investigate and report respecting such dispute" within 30 days. For the duration of this period and another 30 days "no change, except by agreement, shall be made by the parties to the controversy in the conditions out of which the dispute arose." With his decision to withhold or publish the emergency board's report and recommendations, the President's statutory competence comes to an end.

For some years the act and its emergency provisions functioned effectively, and the railroad industry was quite free of strikes. Recently, however, the emergency machinery has been overworked and circumvented, and for both these reasons the entire pattern of governmental intervention in railroad labor relations has been endangered. In the first 8 years of the act 11 emergency boards were instituted, in the next 7 only 9; in the single year 1947, 9 disputes were referred to emergency boards established under the Railway Labor Act and 13 to the temporary wartime national railway labor panel created in May 1942 to supplement the emergency procedures under section 10.[56] It is evident that these procedures have virtually become part of the regular machinery, that no major dispute is settled until it has been carried all the way. This, of course, is a result that defeats the very purpose of the emergency provisions. Moreover, informal Presidential bypassing of the Railway Labor Act has injured it considerably. President Roosevelt intervened improperly on several well-remembered occasions by setting up special fact-finding boards, persuading the carriers to grant pay increases in addition to those recommended by one of his regular emergency boards with a veiled promise that rates would also be increased, and even offering himself as arbitrator in one major dispute. Through the use of his great prestige and his status as Commander in Chief he managed to avert railroad strikes in time of war, but he did heavy damage to the act and a disservice to the Board. Nor can it be denied that the railroad strike of 1946 * * * was a direct result of the policy initiated by President Roosevelt and inherited by his successor.[57] The railroad unions had been led to believe that no President would ever countenance a Nation-wide strike, but would step in at the last moment to effect a settlement on their terms. The present efficacy of the emergency provisions of the Railway Labor Act is a matter of considerable uncertainty.

V

The emergency provisions of the Taft-Hartley (labor-management relations) Act of 1947 have added, however temporarily, a stout new weapon to the President's arsenal.[58] As in the case of the Railway Labor Act, the President has little to do with the normal administration of this law. The Federal Mediation and Conciliation Service has been set up as an independent agency, although the power of the President to remove its Director is unfettered by statute; the National Labor Relations Board remains an independent commission. Title II of the act, under the heading "National emergencies," singles out the President for his new responsibility. He may participate in labor disputes under the following conditions:

"SEC. 206. Whenever in the opinion of the President of the United States, a threatened or actual strike or lock-out affecting an entire industry or a substantial part thereof engaged in trade, commerce, transportation, transmission, or communication among the several States or with foreign nations, or engaged in the production of goods for commerce, will, if permitted to occur or to continue, imperil the national health or safety, he may appoint a board of inquiry to inquire into the issues involved in the dispute and to make a written report to him within such time as he shall prescribe. Such report shall include a statement of the facts with respect to the dispute, including each party's statement of its position but shall not contain any recommendations. The President shall file a copy of such report with the Service and shall make its contents available to the public."

According to section 207 any particular board of inquiry is to be "composed of a chairman and such other members as the President shall determine," and has the same powers as the Federal Trade Commission to compel the attendance of witnesses and the production of papers and documents. It may "sit and act in any place within the United States" and conduct public or private hearings. Upon receipt of a board's report, which may not, in contrast to those rendered by emergency boards under the Railway Labor Act, contain any recommendations, the President "may direct the Attorney General to petition any district court of the United States having jurisdiction of the parties to enjoin such strike or lock-out or the continuing thereof, and if the court finds that such threatened or actual strike or lock-out—

"(i) affects an entire industry or a substantial part thereof engaged in trade, commerce, transportation, transmission, or communication among the several States or with foreign nations, or engaged in the production of goods for commerce; and

"(ii) if permitted to occur or to continue, will imperil the national health or safety, it shall have jurisdiction to enjoin any such strike or lock-out, or the continuing thereof, and to make such other orders as may be appropriate."

The anti-injunction provisions of the Norris-LaGuardia Act of 1932[59] are not applicable in the case of this explicitly granted Presidential power. Appeals to the higher courts are authorized.

When an injunction has been issued, the parties to the particular dispute are obligated to make every effort to come to agreement, with the help of the Mediation and Conciliation Service. The Service has no power to force terms upon either party. Meanwhile the President is to reconvene the same board of inquiry. If the dispute is still unresolved after 60 days, the board "shall report to the President the current position of the parties and the efforts which have been made for settlement, and shall include a statement by each party of its position and a statement of the employer's last offer of settlement. The President shall make such report available to the public. The National Labor Relations Board, within the succeeding 15 days, shall take a secret ballot of the employees of each employer involved in the dispute on the question of whether they wish to accept the final offer of settlement made by their employer as stated by him and shall certify the results thereof to the Attorney General within 5 days thereafter.

At this time, or sooner, if a settlement has been reached, the Attorney General must move for a discharge of the injunction. The President is to report to Congress the facts and history of the dispute together with such recommendations as he may see fit to make for consideration and appropriate action. Meanwhile the strike (or lock-out) may take place without further prohibition or penalty.

Finally, this important exception must be noted:

"SEC. 212. The provisions of this title shall not be applicable with respect to any matter which is subject to the provisions of the Railway Labor Act, as amended from time to time."

These provisions, like the whole of the Taft-Hartley Act, are complicated, controversial, and open to conflicting interpretations. The fact that everyone in the Government seems to get in the act at one stage or another cannot, however, obscure the axial position of the President in this emergency machinery. The two most critical steps, the original constitution of a board of inquiry and the petition for an injunction, are matters for his exclusive discretion; and all through this process, from the first White House release announcing that the President is contemplating a resort to the Taft-Hartley machinery to the final recommendations to Congress, his prestige whets the edge of this statutory competence.

The background of these provisions is too familiar to require restatement. Suffice it to remark that all indications pointed to a thoroughgoing readjustment of the Wagner Act long before the Eightieth Congress arrived on the scene. The postwar rash of strikes in major industries brought on a sympathetic rash of bills in Congress; these offered every solution from compulsory arbitration to outright nationalization of basic industry. Considerable testimony concerning strikes injurious to the public interest was taken by the Senate and House Labor Committees.[60] Twenty of the twenty-two persons who discussed this problem before the House committee favored the establishment of emergency machinery; all 20 held an ingrained promanagement point of view. The spokesmen for labor, who obviously had little to do with the proceedings at any stage, were strongly opposed to these emergency powers as arbitrary, one-sided, and impossibly involved.[61] The antecedents of the various techniques in sections 206–210—the fact-finding emergency board, the cooling-off period, the district-court injunction, and the final strike ballot—are easily traced in our labor history.[62] They were thrown together by a Congress determined to do something about strikes that were manifest national emergencies. The threat of a coal strike and the actuality of a 6-week telephone strike accompanied the progress of these provisions through Congress.

Mr. Truman's disapproval of the entire Taft-Hartley Act was mirrored in his criticism of the emergency provisions. "I find that the so-called emergency procedure would be ineffective. It would provide for clumsy and cumbersome governmental intervention; it would authorize inequitable

[61] See the House minority report on H. R. 3020, Legislative History of the Labor Management Relations Act, 1947, National Labor Relations Board (Washington, 1948), vol. 1, pp. 390–398.

[62] The evolution of the emergency provisions embodied in the original House and Senate bills may be traced in Legislative History, vol. 1, pp. 87–92, 146–151, 214–219, 274–279, 567–569. The Case bill (H. R. 4908, 79th Cong., 2d sess., sec. 6) provided for Presidential fact-finding boards and a 35-day cooling-off period.

injunctions; and it would probably culminate in a public confession of failure. I cannot conceive that this procedure would aid in the settlement of disputes." [62] This was the sum of the President's low opinion of sections 206–210. His own recommendations for a solution to this problem—fact-finding boards and a joint investigating commission—had been embodied in several postwar messages to Congress.[64] The Taft-Hartley provisions were far more than he had requested or was apparently willing to receive. Nevertheless, with the passage of the act over his veto the President stated, "It has become law * * * I shall see that this law is well and faithfully administered." And like many another President before him he seems to have felt no qualms about using a statute of which he had warmly and constitutionally disapproved.

Indeed, Mr. Truman should be the last man to engage "in a public confession of failure" concerning these emergency provisions. With the yeoman aid of C. C. Ching, Tom Clark, and Dr. John R. Steelman (his own special instrument for exercising Presidential powers in labor disputes), the President has made this part of the act work surprisingly well. The emergency machinery has been set in motion on seven occasions; in four of these instances the Attorney General has obtained an injunction. The facts of these disputes should be briefly reviewed.

The President's first use of his emergency powers was initiated March 5, 1948, more than 8 months after they had been placed in his hands. He couldn't have picked a more suitable industry in which to test his authority. A sharp dispute between 1,000 workers affiliated with the Atomic Trades and Labor Council (AFL) and the Carbide & Carbon Chemical Corp., operating agency for the Atomic Energy Commission of the Government's Oak Ridge plant, ran the full course of the emergency provisions: a three-man board of inquiry,[65] a report to the President that a work stoppage would endanger the Nation's safety, an 80-day injunction (issued by Judge George C. Taylor in Knoxville, March 19),[66] a reconvening of the board, a secret vote by the union to reject the company's final order, a dissolution of the injunction, and at the last moment a settlement with the aid of the Mediation and Conciliation Service. The proceedings were tedious and cumbersome, but they were also successful. A solution was freely reached and there was no strike. It should be noted in passing that the special problems of labor relations in atomic energy projects are now under study by a Presidential board of inquiry consisting of William H. Davis, Prof. Edwin E. Witte, and Aaron Horwitz. The appointment of this board September 3, 1948, was the most outstanding recent instance of nonstatutory Presidential intervention in labor relations.

Nine days after he had appointed the first board Mr. Truman acted again, this time in a dispute between some 90,000 members of the United Packinghouse Workers of America (CIO) and the meat packers. His only action in this instance was the appointment of a three-man board.[67] In the face of this order and a personal plea from Mr. Truman the strike got under way 2 days later. No injunction was ever issued because, with the AFL workers still on the job, the industry was by no means tied up. The strike lasted more than 2 months until the men finally returned to work on the packers' terms. This dispute demonstrated that the President has no power to stop a strike until after the board reports, a truth already pointed out to Congress in the President's veto message.

The third and sixth occasions for employing the emergency provisions involved John L. Lewis and the United Mine Workers of America. The facts of his two 1948 tussles with the mine owners are far too scrambled to be set forth here, what with the President, John L. Lewis, T. Alan Goldsborough, Robert Denham, Ezra Van Horn, Speaker Martin, Styles Bridges, Tom Clark, Dr. Steelman, assorted Federal judges and process servers, southern operators, and miners on a holiday storming across the stage and back with "drums, flourishes, and shouts of the people within." The President appointed two boards of inquiry, March 23 and June 19; [68] the Attorney General secured a temporary restraining order April 3 and a full injunction April 26. In the second dispute there was no need for an injunction, although General Counsel Denham of the NLRB obtained one for his own purposes, i. e., forcing Lewis to recognize the designated industry representatives as bargaining agents. It was for disregarding the order of April 3 that Goldsborough imposed heavy fines on Lewis and the UMW.

An emergency board was appointed May 18 to inquire into a dispute between the long-lines workers of the American Union of Telephone Workers (CIO) and A. T. & T.[69] Hearings were postponed at the request of both parties, who were able to reach terms June 4.

Next, the President intervened in a Nation-wide dispute in the shipping industry with mixed results. A scheduled strike of seven of the sea-going unions was blocked by the issuance of a series of 10-day restraining orders in New York, Cleveland, and San Francisco on June 14. A five-man emergency board, appointed June 3,[70] had reported 8 days later that a strike in this industry would seriously menace the national health and safety. The walk-out was subsequently enjoined the full 80 days. Although the east-coast unions and employers were able to come to terms on the major points of contention (wages and the hiring hall) before the expiration of the injunction September 2, no agreement could be reached on the west coast. With the dissolution of the injunction the strike was on; the President made clear at his September 2 press conference that his emergency powers were at an end. The strike, one of the most costly in our maritime history, was not terminated until early December.

Finally, a strike of 45,000 east-coast members of the International Longshoremen's Association (AFL) was put off from August 21 to November 9 by order of the New York District Court. In this instance, too, the dissolution of the Federal injunction was the signal for the strike to begin. The duration of this costly stoppage was 18 days. The most instructive aspect of this seventh instance of Presidential intervention under the Taft-Hartley law was the speed with which the three-man board carried out its task; the members were named August 17,[71] held their hearings August 18, and reported to the President August 19.

It is far too early to sit in certain judgment on the emergency provisions of the Labor-Management Relations Act. This machinery (or whatever the Eighty-first Congress may wish to substitute for it) must be tested on other occasions, by other Presidents and their labor trouble shooters, and under other conditions than the tense yet prosperous days through which we are presently passing. Provisions that now seem effective and reasonable might yet prove fruitless and dangerous, and the machinery could, like that of the Railway Labor Act, be so overworked that it would become an accepted part of the normal process of collective bargaining in the basic industries. Nevertheless, several facts seem clear on the basis of these pioneer experiences:

1. The provisions have thus far been used with discretion. All the industries in question were "basic," and the actual or probable work stoppages were definite threats to the national health and safety.

2. At least two distressing strikes were successfully balked, two postponed. Injunctions under this act are not likely to be flouted, not after Lewis's unprofitable passage at arms with Judge Goldsborough.

3. This does not, however, represent a revival of "Government by injunction." [72] It is absurd to equate section 208 of this act with the injunction craze of 1880–1930. This is the President of the United States seeking to prevent a national calamity, not a group of employers bent on breaking a strike or wrecking a union with the aid of some notoriously antilabor court. This Presidential power may yet be abused, but so may all his mighty prerogatives. It should be noted that no injunctive period can exceed 80 days; no matter how many temporary restraining orders precede the final injunction, it must be dated back to the first order. Nor, it seems clear, may the President pile one injunction on another.

4. The processes of free collective bargaining have not been damaged in any of these instances. No one has been forced to settle on the Government's terms.

5. The President's powers under this act have been, and will doubtless continue to be, exercised by one of his administrative assistants. From now on one of the "anonymous six" will be a loyal follower trained in labor relations and known to both labor and management as intelligent and fair-minded. It would perhaps be advisable for the President to revive the moribund Office for Emergency Management and put his assistant at its head as his general emergency aide. Other parts of the emergency machinery would seem to be little more than "window dressing." Once a President has made up his mind that a strike or threatened strike is a national emergency, no three-man board is going to tell him that it isn't; nor is his Attorney General's request for an injunction likely to be refused.

6. The last step in this emergency procedure, congressional action directed to the settlement of a particular dispute, should not be held in scorn as impractical and ineffective. The passage of the Adamson Act in 1916 shows how swiftly Congress can move in a manifest national emergency. Should Congress be adjourned, the President would have plausible grounds for calling a special session.

7. Finally, whatever the Eighty-first Congress elects to do with the rest of the Taft-Hartley Act (and it apparently elects to do it to death), these emergency provisions would seem to have at least a sporting chance of survival. In their recent, post-election calls for a swift repeal of the slave-labor bill, even William Green, J. Howard McGrath, and Maurice Tobin have publicly acknowledged the necessity for some sort of governmental authority to cope with labor-

management controversies that endanger the national welfare. In the light of his 1948 performance, Mr. Truman would be guilty of outright frivolity to permit an off-hand repeal of the emergency provisions. No longer can the public interest in the prevention of major strikes be legislatively ignored.[73] A new economic situation has called for the creation of new powers and governmental machinery, and although more democratic and effective methods could and may be evolved, there must be no complete retreat from this forward position. Just for the record, here are some of the additional solutions that have been proposed in the last few years: to institute a system of compulsory arbitration by Presidential emergency boards in all industries covered by the Taft-Hartley and Railway Labor Acts, a drastic step that neither labor nor management cares to contemplate, and with reason; [74] to grant the President the power of seizure in time of peace,[75] a direction in which the States are moving gingerly; [76] to strengthen the Taft-Hartley Act by empowering the President to seek permanent injunctions; [77] to forbid absolutely all strikes in basic industries, an ultra-conservative scheme justly countered by some of the labor unions with proposals for nationalization; and lastly, to permit strikes to take place in the normal course of events but grant the Government large emergency decree powers for purposes of rationing scarce goods and controlling their distribution. Such an act would be based on the British Emergency Powers Act of 1920.[78] Some of these proposals are thoughtful, some absurd, some downright dictatorial and not to be countenanced. The important thing to note is that each recognizes the exclusive responsibility of the President as protector of the peace. Any solution that ignores that fact is doomed to failure.

The President's position in labor disputes is as delicate as his powers are vast. As the final guardian of the public interest he must stand clear of partisanship and wield his weapons with discretion and economy. He must avoid using them in such a manner that one of the parties to a dispute will go out of its way to invite intervention. He must recognize that his powers in this field are emergency powers only, and that the regular processes of collective bargaining and of Government mediation and conciliation are not to be disturbed. He must resist the temptation to interpose his prestige in disputes that are being threshed out, however slowly, by regular statutory and administrative machinery or he will pull down the whole structure of governmental intervention about his ears. Equality for both and vigilance for the public welfare must be the President's high resolve.

And vast though his powers are, we are better off with them than without them. It is reassuring to know that in an economic system that invites and rewards the struggle for self-interest, there is in this direction a boundary beyond which the contestants will push at their peril—and a sheriff to patrol it.

[73] An admirable treatment of the public interest is Jesse Friedin's The Public Interest in Labor Dispute Settlements, Law and Contemporary Problems, vol. 12, p. 367 (1947).

Congressional Digest, vol. 26, p. 193 (1947); Millis and Montgomery, op. cit., pp. 792–829; Julia E. Johnsen, editor, Compulsory Federal Arbitration of Labor Disputes (New York, 1947); Ludwig Teller, Management Functions Under Collective Bargaining (New York, 1947), pp. 326–338.

[75] See the remarks of Representative JAVITS, CONGRESSIONAL RECORD, 80th Cong., 1st sess., vol. 93, p. 3637 (Apr. 17, 1947). The operating problems that face the Government after seizure are indicated by Vietheer, loc. cit., pp. 154–156; Teller, loc. cit., pp. 1056–1057; Executive Commandeering of Strike-Bound Plants, Yale Law Journal, vol. 51, pp. 282, 289–298 (1941).

[76] Teller, loc. cit., pp. 1044–1048.

[77] See the proposals of Representative John F. KENNEDY, Legislative History, vol. 1, pp. 406–407. He would have such injunctions strictly limited, and obtained in the Supreme Court. The present Court has gone a long way, but I doubt that it will go back on *Marbury* v. *Madison*.

[78] 10 and 11 Geo. V, ch. 55. See C. L. Rossiter, Constitutional Dictatorship (Princeton, 1948), pp. 172–177. The coal-conservation orders of the ODT in the 1946 coal strikes are an example of this sort of power.

To Keep Our Freedom Safe

EXTENSION OF REMARKS
OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Dave Beck, executive vice president, International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America at Minneapolis, Minn., on March 31, 1949:

TO KEEP OUR FREEDOM SAFE

President RUSSELL C. DUNCAN, of the Minneapolis Chamber of Commerce. Abraham Lincoln once said, "Capital is only the fruit of labor and could never have existed if labor had not first existed." We, here in Minneapolis, are not unmindful of the part which labor plays in today's commerce—locally, nationally, and internationally. As tonight's speaker, our program committee has selected a man who has played an important part in organized labor. Dave Beck is executive vice president of the Teamsters' International Union. His headquarters are in Seattle, Wash. Dave Beck left high school after 3 years to drive a laundry truck. Not being satisfied with his high-school education, he took university extension courses in economics, law, business administration, and English. His interest in American education is indicated further by the fact that he now serves as a member of the Board of Regents of the University of Washington.

Dave Beck has the reputation of being one interested in the advancement of the American free-enterprise system. He has played an important part in defending what America stands for. In World War I he joined the Navy as a machinist's mate and flew over the North Sea in Curtiss flying boats on anti-Zeppelin patrol.

Ladies and gentlemen, I take great pleasure in introducing Mr. Dave Beck. [Applause.]

Mr. DAVE BECK. Governor Youngdahl, Mayor Hoyer, President Duncan, of the Minneapolis Chamber of Commerce, distinguished guests, my associates in labor, members of the chamber of commerce, and friends, I appreciate this opportunity to come to Minneapolis and to contribute, if I can, for consideration by the people of this area, some of the thoughts which are in the minds of the men and women of labor.

Before saying what is on my mind, however, I wish to voice a definite and distinct protest. I know that there must have been some objections in the membership of the chamber of commerce to inviting a representative of labor to address this great organization. Yet, in all my experience in the trade-union movement, this is the first time they ever appealed to the Almighty to create a weather condition to keep me away. [Laughter and applause.] [It snowed heavily all night and day.]

COULD SETTLE DISPUTE

I want to say in answer to the challenge of my good friend, Governor Youngdahl, that if I were the Governor of the State of Minnesota I would settle the strike of local union No. 544, in which employers in the vicinity of Minneapolis are involved, not later than Sunday night. [Laughter.] I would do it by the following procedure: I would notify the company concerned that unless it reaches a settlement with the union by Sunday night, I would lock their representatives up in the room in the State Capitol with representatives of the union, let them take their lunches in with them, and make them stay there until they settled their dispute. [Applause.] As spokesman for the Teamsters' International Union, I authorize this course of action, and I hereby notify Vice President Sidney L. Brennan that, effective immediately upon the conclusion of this meeting, he is to concentrate all of his efforts and give all of his time to the settlement of this matter.

I would like to take the text for my extemporaneous talk here tonight from the remarks of a speaker earlier in the evening. It is not our aim to tear down, but rather to develop better relationships between labor and capital, through a greater recognition and understanding of the principles which underlie this great Government, so that we may continue the prosperity of this, the greatest Nation in all the world—the Nation which, under the free enterprise and profit motive system, is feeding the entire world; the Nation that under free enterprise is supplying the money for socialized England and other countries which have gone far to the left—and we are doing it through cooperation between capital and labor.

FREE ENTERPRISE BEST SYSTEM

Under free enterprise this country of ours has developed into the greatest nation on earth. The working people of no other country under the sun enjoy as fine conditions of employment, or as high a standard of living, as we enjoy who are members of labor in the United States. I say to my associates in labor, and to industry as well, and even to those who would tear our Government apart: We have made our tremendous progress in labor, and our great industrial development, under free enterprise.

I call upon all who lead labor, and also upon those who lead capital, to redouble their efforts to bring about greater cooperation, to meet across the conference table—with an honest and sincere desire to reach common grounds of agreement, and undertake to solve their problems—for none of their problems are unanswerable.

Unless we adopt such a policy and such a procedure, there will be no freemen, no free labor unions, and no free enterprise. We cannot have a free country unless we have freemen. We cannot remain free unless we merit that freedom by our own intelligent effort. We cannot have freemen unless we have a government based on freedom, which accords to all men and women the freedom of expression, freedom of the press, and freedom to conduct themselves in harmony with the dictates of their own consciences. All these rights to freedom must be recognized, unquestioned.

Above all else, we must respect and defend religion, for if we ever destroy religion, or permit it to be destroyed, we will have lost our safest guide toward progress. If we ever see the time when an oath taken in the presence of the Bible shall be disregarded, then indeed will our civilization come crashing down.

We have other responsibilities as well. We must increase the production of the men and women of labor. We must not stop or delay, we must help speed up the mechanization of industry. We must not interfere in the slightest degree with the developing processes that have made this Nation what it is today.

We cannot compete in the markets of the world, and maintain our American standard of living, and our conditions of employment, unless we are able to do so by greater production schedules and by using to the maximum the ingenuity of capital and the inventive genius of our people. Only by the constructive efforts of capital and labor, working together in unity, can we meet competition in world markets, where such competition is often the fruit of toilers not nearly so well rewarded as our own. [Applause.] We must never permit those in competitive industry to bottle up our inventive progress.

LABOR DEVELOPMENT IN ECONOMIC FIELD

The Governor, earlier in the evening, commented upon remarks which I made with respect to politics. Some of you may disagree with me, and I hope and pray that the time will never come in this country when you will lose your right to disagree; I hope the time will never come when an honest difference of opinion will be denied to the men and women of either labor or capital. I say to you that the American labor movement was developed on the economic field. I trust and hope that American labor will never become involved as an instrument of politics. But, let us, for a moment, appeal to the common sense of those who make up America's economic, social, and business structure. Let us now appeal to reason.

If those who rule political thought in this country impose restrictive legislation upon the working people of this country, which wipes out the gains made by labor upon the economic field, then they will plunge labor inevitably into action on the political field. Whether it be a Taft-Hartley Act, or a Hobbs Act, or any other type of legislation that takes away from the men and women of labor the things they have won through economic action, if such legislation remains long on the statute books, in my personal opinion, for whatever it may be worth, the leaders in this system of free enterprise of ours will be flirting with destiny. The spectre of socialism will indeed soon be hovering over us.

REVIEWS BRITISH EXPERIENCE

Let us in retrospect review the events in England which developed the pattern from which resulted the condition of today. It was a mining dispute, which developed into a general strike, in 1926, which caused those who opposed labor to inflame the public mind of Britain against the unions. As a result, the Parliament passed restrictive laws which set the British labor movement back 50 years. Labor in England has always been more political than economic. In this respect it has been the direct opposite of American labor. The enactment of repressive laws was the immediate cause of plunging the British labor movement more deeply into politics. With what result? British labor did not attain its goal of repealing that restrictive legislation in a year, or in 5 years, or in 10, or in 20. Yet, it continued to develop politically, and to grow, and to expand. At the end of World War II, when there was turmoil and confusion in the British Empire, British labor defeated the man who contributed more to the preservation of his homeland than any other man in history—Winston Churchill.

British labor then took over the machinery of government. It proceeded, as rapidly as possible, with a definite plan to socialize industry. It socialized the Bank of England, the transportation industry, and many others. It is still moving toward an even greater degree of socialism.

Let me ask you this: What man in American industry wants to pay such a price for whatever temporary advantages he might gain through oppressive labor laws?

I say to you: It can happen here. There are organized today in this country between 14 and 15 million working men and women. If, driven to unified action, they become 25 percent as effective in the field of politics, as they have been in the field of economics, they can and they will, in my judgment, rock the entire structure of our free-enterprise system.

OPPOSES SOCIALIZATION

I am one man in labor who does not believe in that philosophy. I am unalterably opposed to the socialization or the communizing of any part of our industry or business. Yet, I am not afraid to face the facts. I ask capital to face them, too, and to meet labor half way in reaching that common ground upon which we can best defend our American way of life.

My friends, we must solve our problems through the processes of evolution. We must call upon the brains and ingenuity and the honesty and integrity and character of men and women, regardless of whether they come from labor or from capital or from that great cross section of the public which is not identified with either side of industrial disputes. We must solve our problems across the conference table.

Lately, the international union which I have the honor to serve has set out upon a campaign across America that is known as an over-the-road checking drive. Newspapermen, radio commentators, magazine writers, and many others overnight have developed in their own minds some overt action on our part, in contradiction to the welfare of industry and the general public. Yet, what are the facts?

We are conducting this over-the-road checking campaign as much in the interest of the capital investment in the industry—the trucking industry of America—as for the welfare of the International Brotherhood of Teamsters. Why are we doing this? Because we sincerely believe in studying our industries, analyzing their problems, and helping to solve them.

I point out to you what we learned long ago: No one can take good wages, hours, and working conditions from a bankrupt concern.

MUST KNOW OUR INDUSTRIES

Therefore, we must know our industries, study them, analyze them. We must analyze the trucking industry, for instance, not only from the standpoint of the wage earner, but also from that of the manager and the stockholder, and from that of the public. We must study the competitive factors, such as the railroads, and unfair competitors, such as gypsy operators.

I say to you there must be honest, effective regulation of the competitive trucking industry, because if we do not regulate it fairly and effectively this great industry is headed for trouble—financial loss—and let us not forget for one instant that thousands of American towns and communities depend entirely upon the trucking industry for the necessities of life. I do not mean regulation by the present procedure of the Interstate Commerce Commission, for the ICC, and many of the State regulatory bodies, are failing to do their job of regulating this industry in the public interest and in the interest of those who are employed in it and those investors who put up the capital to finance it. If this lack of fair regulation continues, the trucking industry, and the railroads as well, will one day come very near the destruction of their capital investments.

Today we regulate all forms of competitive industry under our free-enterprise system when they reach the point of development that requires regulation to protect both the industries and the public welfare.

There is nothing new about regulation of business. We can find instances of regulation as far back in history as the reign of King John in England when the Government regulated a ferry-boat operation in the public interest.

REGULATION MUST BE EFFECTIVE

Today, in America, utility and transportation companies are regulated; rates are made, or established, or denied and vacated by State and Federal bodies. This regulation must be swift and certain; it must be honest and effective, or it is worthless. In our over-the-road check of truck drivers, we will develop many facts which relate to the honesty and effectiveness of both Federal and State regulation. The data we will collect may well prove of inestimable value to the industry from which so many of our members, directly or indirectly, derive their living.

Let me point out to you tonight another abuse that is giving our trucking industry a great deal of trouble, and is working to the disadvantage of the public as well. I refer to the practice of States in setting up artificial barriers which interfere with the free flow of interstate commerce over the highways. In some instances, States have created regulations limiting the weights, size, length and efficiency of trucks, to the great detriment of the industry and the public.

In many instances these regulations differ from State to State, with the result that operators who haul freight in interstate commerce, and who thereby serve the public interest, are often forced to unload their vehicles partially at certain state lines. All this adds to the expense of transportation which the consumer must bear in the end. It does not in any sense serve the public interest. Such regulation tends to destroy the industry, or to prevent it from rendering the type of service to which the public is entitled and which the public has a right to expect.

ABUSES NEED CORRECTING

That abuse must be corrected; that type of interference with interstate commerce must stop. We know full well that this business of erecting barriers at state boundaries to hamper the trucking industry has been influenced by the railroads and others. Such strategy by the competitors of the trucking industry is like using the technique of the Taft-Hartley Act or the Hobbs Act—unfair legislative action against the trucking industry to bring about its destruction through increased costs to the consuming public, both individuals and industries.

COMMON CARRIER IS TARGET

We know that there are thousands of farmers who own trucks and who haul their own merchandise to the market. We have no objection whatever to this. The farmers have a right to do this without the slightest interference from any man or organization. Yet, when the farmer has completed his haul to the city market, if he attempts to haul goods back to other farmers or merchants in his area, he is no longer engaged in the necessary work of running a farm. He becomes a common carrier by motortruck and, as such, he should be, and he must eventually be subject to just as strict and effective regulation as other common carriers who do not happen to operate farms. For, if the farmer is permitted thus to operate

as a common carrier, without regulation, he will injure the transportation system upon which millions depend. He must also be subject to the same safety regulations in the operation of his equipment to protect the public on the highways.

So, we are making an over-the-road check, from coast to coast, for the purpose of obtaining facts from which we can analyze our industry. In this way we will contribute to the solution of the problems of our industry—selfishly, if you will—so that we may receive from that industry a fair share of the prosperity which it earns. We cannot receive any return if our industry is bankrupt.

I do not have the slightest fear of contradiction when I say to you that, from this over-the-road checking campaign we will be able to point out accurately not one, but thousands of violations of the rules and regulations of the Interstate Commerce Commission and of the various State commissions, which have been set up so that our free-enterprise system can function in fairness to all concerned. These violations exist because inefficient, or insufficiently financed commissions, are not functioning at all.

INDUSTRY MUST PROSPER

Of course I am interested in the prosperity of industry. I know that it has often been said that Beck is in collusion with employers to pyramid prices in contradiction to the public interest. Let us analyze such statements and see their absolute fallacy. Let us take Minneapolis, as an instance. Would it be intelligent action on the part of the teamsters in Minneapolis to enter into collusive agreements for the purpose of pyramiding prices in the laundry industry, where we have perhaps 400 men employees, while we have 23,000 men and women in the teamster organization who must purchase the service rendered by the laundries? What a fallacy!

ALL NEED TO PROFIT

Yes, we are interested in the laundry industry making a profit. We are interested in the farmer making a profit, and in the dairymen earning profits, and in the manufacturers making a fair return on their invested capital, because if they do not make profits our system of free enterprise will crash. If we lend encouragement and vision and understanding to those who understand the inner workings of the industries which give us our employment, and if we sit down with management in an effort to find ways to make our industries more profitable; if our secretaries and business agents and shop stewards are trying honestly to increase their production schedules, we know that out of that increased production will flow greater prosperity. By reason of it there will be lower prices to the consumers, which will cause demand to increase and thereby bring about industrial expansion, greater consumption, and even greater employment. That is the kind of labor relations I wish to visualize in this country, and to give added impetus. [Applause.]

Some irresponsible columnists, men who have motives other than the development of our country and our industries by finding happy solutions for the problems of labor and capital, accuse the men of labor of being racketeers. I bow my head in humble and sincere apology to both industry and the general public: I admit there have been men of labor who forgot their trust, who were faithless, and who were weak.

SOME FORGET TRUSTS

Yet, others, too, have forgotten their trust. There was a man in labor a few years ago who went up the river in New York for racketeering, but right across the hall from his cell was the former president of the New York Stock Exchange, who also had forgotten his trust. There have even been men who wore the frock of the church, who had dedicated their lives to Christ, who were false to their sacred vows and who forgot the ideals which should actuate all honest men.

Let me say in concluding my remarks on this subject: It was my privilege to serve as a member of the Prisons and Paroles Board of the State of Washington for about 14 months. I had to go over to the city of Walla Walla and sit as a board member to pass upon the applications for paroles and to recommend clemency to the Governor in cases where our consciences dictated that certain men and women should again be given their freedom. I make this statement, and I have repeated it before Rotary Clubs and chambers of commerce in many cities: during the time I was on the prisons and paroles board we had more bankers in that institution than we ever had labor leaders in the entire history of the school on the hill. [Applause.]

I do not condemn all bankers, however, because there have been men of that profession who transgressed the law and who committed overt acts against the welfare of the public, and thereby ended up in the penitentiary at Walla Walla, Wash. Banking is an honorable profession whose members perform a useful and necessary task in the workings of our complicated economy. Many bankers are my warm friends. Nor should the public condemn all labor, and all labor leaders, because a few went wrong.

WAS INVESTMENT BANKER

I was much amused some time after I had related my experience as a member of the Washington State Prisons and Paroles Board when, as I was about to address the Northwest Progress Conference—I had been invited by the publisher of the Seattle Post-Intelligencer, who was serving as chairman that year—when a man who identified himself as the president of a Seattle bank, said to me:

"Mr. Beck, I am a little bit afraid that you are going to mention that Walla Walla incident again. If you do, I wish you would emphasize one thing. Please state that they were not commercial bankers; they were investment bankers." [Laughter.]

Therefore in my desire to be fair I said, when I related the incident, that they were investment bankers. I hope that my good friends in the banking profession, and I have many of them, will find some consolation in that charitable expression of mine—they were investment bankers. [Laughter.]

We in free America are today facing a serious problem. It is one that we must deal with directly and positively. We dare not temporize with it. We must not attempt appeasement. I speak of the infiltration of communism and of the acts of those who are not true Americans. We must eradicate them from our society before they find the means to destroy the freedom and the liberty which they now abuse. [Applause.] I do not care where we find them, whether it be in the labor unions or in the teaching faculties of our universities—we must throw them out. [Applause.] I had the privilege as a member of the board of regents of the University of Washington not long ago to help in doing just that. [Applause.]

NO ROOM FOR COMMUNISTS

I hope that our action will be emulated in every university and in every school in the Nation. I say to you that we did not interfere with academic freedom in the slightest degree. We are not, however, going to give those who teach doctrines contrary to true Americanism the right to enter our public forums, either in labor or in education, there to enunciate a philosophy that is being used as a tool to undermine our Government and its free institutions. If we fail to rid ourselves of these disloyal people, then we are not entitled to be recognized as sponsors of good citizenship. [Applause.]

I am in favor of taking the initiative and putting the Communists on the defensive. Let us turn the spotlight of publicity upon these people. Let us know who they are, and where they are spreading their poison, and let's stop coddling them.

SEEK TO UNDERMINE LABOR

Communists come into our labor organizations, and into other groups of our society, not to promote and obtain better wages, hours of toil, and conditions of employment. They are not honestly interested in improving American living standards. They come in to destroy, to breed dissension, to create turmoil, and misunderstanding. The philosophy which they advocate is not intended to build better relationships, or to advance the interests of labor and capital in our free enterprise system—their known objective—about which they boast openly in their Russian press, is to tear down the basic structure of our Government and our economy and to replace it with a communistic dictatorship. I say that is their known objective. There can be no possible room for doubt about it. Since we know this to be true, how, in the name of the Almighty, can we excuse ourselves as Americans if we sit supinely and tolerate them? We will not tolerate them inside the teamsters union. Where and when we find them, we throw them out, and if the door does not happen to be open at the time, they go through it anyway. [Applause.]

I would not deny to any man or woman the right to be a Democrat or a Republican or a member of any other political party, but the Communists do not constitute a political party in the meaning of that term in America, for they are not committed to serve the interests and welfare of our country; they are agents of an alien power which is the antithesis of America. They get their orders from that foreign power and they are traitors to the United States of America. [Applause.] They will destroy religion and the church, if they can, because they see in it a great enemy of communism.

WE ARE UNITED AGAINST TRAITORS

Many of us had to fight our way up. We came from poor families. A great many of you who are before me tonight, toiled and fought your way to the economic positions you now hold. If you did not, probably your fathers did it for you and you carried on. The men and women who founded this Nation suffered dire privations so that their children could build the great industrial structure of America. They hewed a nation out of the forests and the mines and plowed it out of the fertile plains. I may disagree with thousands of businessmen, and labor in America may disagree most heartily with many leaders of industry upon the field of economics, but we have one broad, common ground—we love our country and we will fight for it. We will join our hands and we will unite our forces to hurl back the Communists.

We will never tolerate the teaching to our children the falsehoods of communism, or the philosophy which finds no room for God and religion. So long as we live in the full confidence in the wisdom of the Supreme Being who guides our destinies, we will never accept the apostles of atheism. When we place our hand on the Holy Bible and swear to tell the truth, our consciences do not permit us to speak falsely. I repeat, when this very ideal is cast aside, our civilization will totter on its foundations.

The most important thing in our economic life is to protect and to preserve our free American way, and to build good relations between labor and capital.

Oh, yes; we will make mistakes along the way. The men and women of labor are not immune to error, nor are the men and women of capital. Nor are those who speak for us

and who lead us in matters of government in city, State, or Nation. We are, however, a people and a country experienced in the trial and error method; we admit our mistakes and we continue to go forward, up the hill ahead of us, to a better way of life than we have ever known.

FREE ENTERPRISE OUR BEST HOPE

The only hope for the preservation of our way of life, for the betterment of the conditions and standards of those who toil, lies in our system of free enterprise—a system that permits each man and woman to rise by reason of ability, to start new enterprises, to employ the people, to give them the benefits of progress. We must consecrate ourselves to the attainment of an even better free America; we must destroy all outside influences and interests that would interfere with our forward progress, and, by cooperative agreement between labor and capital, solve our problems together.

May our labor organizations in Minneapolis, and the labor movement of the entire United States, hold out the right hand of fellowship to capital. Let us set our feet firmly upon the one pathway which we can follow together and thereby protect and advance this great Nation of ours to finer attainments in the years to come, thus preserving for generations yet unborn the precious rights and liberties which so many generations, long since forgotten, struggled so courageously to win for us. I thank you. [Applause.]

The Canadian Portion of the Columbia River Basin

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. MITCHELL. Mr. Speaker, the Columbia River crosses international as well as State boundaries, and the Dominion of Canada will stand to benefit along with the United States from a full development of Columbia Basin resources. The CVA bill, H. R. 4268, which I have introduced recognizes the joint interest of the two neighboring Nations by declaring:

The cooperation of the Dominion of Canada and its Provinces and other political subdivisions shall be sought to the end that the development and conservation of the natural resources of the region and adjacent area in Canada may be properly integrated.

Recently I received a very kind letter from the Honorable H. W. Herridge, Member of the Canadian House of Commons for Kootenay West, enclosing a speech he made in the House of Commons on the Canadian Portion of the Columbia River Basin, Its Resources and Development. Because Mr. Herridge presents extremely important information which bears upon matters of interest to the Congress, I include his letter and portions of his speech as part of these remarks:

HOUSE OF COMMONS,
Ottawa, April 6, 1949.

HON. HUGH B. MITCHELL,
House of Representatives,
Washington, D. C.

DEAR MR. MITCHELL: As a Canadian Member of Parliament representing the constituency through which the main stem of the Columbia River flows and as a resident of the Arrow Lakes for 43 years, I am very interested in proposals for the development of the Columbia River Basin on both sides of the line.

I receive the CONGRESSIONAL RECORD daily and have noted with pleasure your interest in the development of the Columbia River Basin.

For your information, I enclose a few reprints of a speech I delivered in the House of Commons February 21 and 22 on the Canadian portion of the Columbia River Basin, its resources, and development. In view of our common interest and support for the development of the Columbia River Basin, I look forward to meeting you in the near future.

Sincerely yours,

H. W. HERRIDGE,
Member of Parliament for Kootenay West.

SPEECH OF H. W. HERRIDGE, MEMBER FOR KOOTENAY WEST, ON THE CANADIAN PORTION OF THE COLUMBIA RIVER BASIN, ITS RESOURCES AND DEVELOPMENT

(Delivered in the House of Commons on February 21 and 22, 1949)

Before proceeding to deal briefly with a review of the resources of the basin, I should like to describe the basin, and I will give the official description, which is as follows:

"The Columbia River Basin is situated in the cordillera on the Pacific slope of the North American Continent where its river system comprises one of the large international drainages shared by Canada and the United States. It includes approximately 259,000 square miles, between north latitudes 41 and 53 degrees and west longitudes 110 and 124 degrees. Of this vast area, some 39,700 square miles form the southeast portion of the province of British Columbia in Canada, while the 219,300 square miles in the United States include almost all of Idaho, the greater part of Oregon and Washington, western Montana and relatively small areas of western Wyoming, northwestern Utah and northeastern Nevada. The greatest width of the basin, from western Wyoming to the Pacific Ocean, is 728 miles, and its maximum length, from its most northerly limit in British Columbia, to its southern boundary in northern Nevada, is 818 miles."

This vast area is capable of great development. The Canadian section of this huge triangle, about which I am going to speak briefly this evening, can be best described as starting from the junction of the Alberta and British Columbia boundaries with the international boundary, proceeding northwest along the ridge of the Rocky Mountain slope to the watershed of the Canoe River which flows into the big bend of the Columbia. Then it turns southwest and follows the height of land between the Columbia Divide and the Thompson Divide for possibly some 30 miles on the west side of the Arrow Lakes, and then, roughly speaking, proceeds southwest toward the international boundary at a point south of Princeton.

There are four great tributaries of the Columbia River which are of major concern to Canadians. They are the Okanagan, the Kootenay, the Pend Oreille and the Kettle. The international character of the basin is exemplified by the course of the Columbia, Kootenay and Pend Oreille Rivers, and is further demonstrated by the Flat Head, Okanagan, Similkameen and numerous smaller streams which cross the international border once or more on their way to the Columbia and its tributaries.

In order to bring to the attention of the House the great resources of the basin I will review them very briefly. I may say that my figures are based on Federal Government reports, provincial government reports, and reports issued by various organizations and commissions. They are only approximate, but they are approximately correct. The Canadian portion of the Columbia River Basin has a population of approximately 125,000 people. Of that 125,000 people approximately 42,000 are urban dwellers and 83,000 are rural or country dwellers. The power resources of the Columbia River Basin in Canada amount to about 450,000 kilowatts installed at the present time. The major portion of this is the result of the developments of the West Kootenay Power & Light Co., and the Consolidated Mining & Smelting Co. on the lower portion of the Kootenay River where they have an installed capacity at the present time of 258,000 kilowatts. The difference between the 258,000 and 450,000 kilowatts is found in some installations on the Elk River and on various smaller streams throughout the basin. The estimated total that can be developed on the main stem of the Columbia beyond the big bend at Revelstoke and to the international boundary is 2,900,000 kilowatts. This amount can be developed with control and regulation. The estimated potential development of electrical energy in the whole of the Canadian portion of the Columbia River Basin is about 4,000,000 kilowatts. Therefore you can see the great possibilities for the development of power, and the opportunity to apply that power to vast and undeveloped natural resources.

At the present time the agricultural resources of the basin are extensive, although they are capable of immense development. There is a total of 305,400 acres under cultivation. Of that number 75,500 acres are irrigated. An additional 395,000 acres are in use as open grazing land. The value of the 8,000 farms in the basin, with the land, buildings and improvements, is over $60,000,000. The present annual production of fruit, dairy products, grain, livestock, poultry, seeds, hay, honey, and other farm produce, is about $35,000,000. There are still many thousands of acres to be irrigated, many thousands of acres to be cleared, and many thousands of acres to be drained.

Turning to forest resources, 13 percent of the productive forest land in British Columbia is in the Canadian portion of the Columbia River Basin. It is estimated there are 22,000,000,000 board feet of timber within the basin, of which amount 14,000,000,000 board feet are classified as accessible. That amount is being increased from year to year with the development of bigger logging equipment, and cheaper methods of building roads and developing communications. For some years the annual lumber cut has been over 300,000,000 board feet per year. In addition to that there is an enormous quantity of cedar poles, piling, ties, mine timber, mine props, shingle bolts, fuel wood, and Christmas trees shipped out of the basin annually.

At this point I have no hesitation in saying that one of the largest stands, and possibly the last large stand, of cedar poles on the North American Continent, is to be found in the Canadian portion of the Columbia River Basin. Tests by the forest products branch of the Department of Agriculture at Washington have proven that the cedar poles shipped out of the basin have the highest tensile strength of any poles shipped from Canada. That results from the fact that the trees grow in a higher climate with somewhat slower growth, and under mountainous conditions.

With respect to mineral resources, mining within the Columbia River Basin portion of British Columbia has been a major industry for the past 50 years until now the average annual production of gold, silver, copper, lead, zinc, antimony, bismuth, coal, and by-products of those minerals is well over $100,000,000 a year. The largest nonferrous smelter in the British Commonwealth is operated at Trail by the Consolidated Mining & Smelting Co., which also operates vast fertilizer and chemical plants.

The fish and wildlife resources of the basin are plentiful. Fish are found in the rivers, lakes, and streams throughout the whole of the Columbia River Basin, and these are replenished by artificial rearing and stocking operations carried on by the British Columbia game commission. Fur-bearing animals are plentiful in the district with an estimated raw fur value of about $100,000. There are some 500 fur farms at the present time in British Columbia with an annual production of $750,000 a year. A great number of these fur farms are located within this basin.

The basin supplies marvelous recreational resources and opportunities. Outdoor recreational facilities in the Columbia River Basin offer the largest range of sports to satisfy the most particular as to climate, scenery, altitude, transportation, and accommodations. There is no comparable region in Canada that offers such opportunities for aquatic sports, hunting, fishing, camping, mountain climbing, and skiing. With reference to skiing, I want to draw to the attention of the House to two particularly fine community developments within that basin. The first and oldest is the ski jump at Revelstoke on Revelstoke Mountain which is the result of many years of community effort on the part of the people of Revelstoke who were interested in the sport and interested in the young people of that district. Many of the world's champions have jumped on that hill, and many world records have been made as a result of the development of that hill in Revelstoke. Then we have a later development within the last 2 or 3 years on Red Mountain at Rossland where they have one of the finest ski lifts in Canada, constructed at a very considerable cost. There are excellent hills, an excellent lodge, and everything that goes to make for excellent skiing facilities, opportunities for international and intervarsity tournaments, and so on. The ski lift has been developed as a result of the community effort of the people of Rossland and the people of Trail, with excellent cooperation from the Consolidated Mining & Smelting Co.

With reference to navigation resources, we have the Columbia River, of which the Arrow Lakes are an extension. You can travel from Grand Coulee to Revelstoke, a distance of over 300 miles. Year by year increasing numbers of American sportsmen and American fishermen seek the pleasure of new scenes and come up from Grand Coulee in their launches. Last summer they stopped on our beach and on the beaches of neighbors of mine, and thoroughly enjoyed themselves. Increasing numbers are making the trip as far north as Revelstoke. Then we have the steamer service of the C. P. R. on the Arrow Lakes, passenger and freight, and the same on the Kootenay Lakes. We have barge service on the Okanagan by the C. N. R. and C. P. R., and service also on the Slocan Lakes.

We know this great basin extending into Canada from the United States can be developed to its fullest extent only through cooperation between these two countries. Before adjourning the debate for this evening I want to conclude my remarks at this point by quoting from a report of a committee of Congress on the Columbia River and its tributaries, appointed in 1943 and 1944, to study the possibility of developing the American portion of the Columbia River Basin. This is what the report had to say, in part:

"From the standpoint of resources the Columbia is the mightiest stream on the North American continent; its potential almost beyond comprehension, for nature in one of her philanthropic moods fashioned the land with such perfection as is nowhere else known."

Mr. Speaker, to continue my saga of the Canadian portion of the Columbia River Basin, may I point out that international problems respecting waters used within the Columbia River Basin are subject to the provisions of two treaties signed between the Governments of the United States and of Great Britain on behalf of Canada. These are dated 1846 and 1909. The treaty of Washington of 1846 established the international boundary between Canada and the United States west of the Rocky mountains. Article II contains a provision with respect to navigation of the main stream of the Columbia River below the boundary of British Columbia.

I had intended to deal with certain aspects of article II of the Washington treaty, but as my time is limited I shall have to leave that for another occasion. Article IX of the boundary waters treaty of 1909 provides for the founding of the international joint commission, to be composed of Canadian and American representatives. That treaty was signed, and the commission came into being under the sponsorship of the late Theodore Roosevelt, who was then President of the United States, and under the late Sir Wilfrid Laurier, who was then Prime Minister of Canada.

I believe most honorable members recognize the fact that the international joint commission is a venture that has borne good fruit, and has stood as a lesson to the world in common sense and good will between nations. The international joint commission established its procedure on February 2, 1912. As a result of that it is now composed of three Canadians and three Americans, with a chairman acting for each section. The respective chairmen take the chair when the commission sits in the United States or in Canada.

The Canadian members at the present time are the Honorable Allison Glen and the Honorable George Spence. There is at present one vacancy. The commission has conducted many investigations and I have read with great interest many of its findings. I attended several of its hearings and am much impressed with the work it has done.

In 1941 the United States authorities applied for approval of certain levels of water that were going to be occasioned by the building of the Grand Coulee Dam. That was after the dam was built, and I intend to have something more to say about that on a later occasion. The Government of the United States and the Government of Canada in 1944 agreed upon a reference to the commission with regard to the Columbia River. The Prime Minister of this country tabled that reference in this House on March 9, 1944. I should like to quote the first paragraph of the reference because it deals in brief with the instructions to the commission with respect to the Columbia Basin investigation. That paragraph reads:

"In order to determine whether a greater use than is now being made of the waters of the Columbia River system would be feasible and advantageous, the Governments of the United States and Canada have agreed to refer the matter to the International Joint Commission for investigation and report pursuant to article IX of the convention concerning boundary waters between the United States and Canada, signed January 11, 1909."

Later the same day the Prime Minister made a statement concerning this reference to the Commission, which was a most important reference insofar as the people of the southeastern interior of British Columbia are concerned. The Prime Minister said:

"The report of the International Joint Commission will not be binding on the Governments concerned, but it is likely that the investigations of the Commission will result in suggestions and recommendations which will be carried into effect by joint action of the two Governments."

Pursuant to that reference the international Columbia River Engineering Board was appointed, composed of four members, two of whom represent Canada. The Canadian members are V. Meek, controller Dominion water and power bureau, and F. G. Goodspeed, assistant chief engineer, public works of Canada. In addition to this board, the Columbia River engineering and the Okanagan engineering committees were appointed, the Canadian members being C. E. Webb, chief engineer, Dominion water power bureau, Vancouver, and M. K. Morton, district engineer of public works, Vancouver.

Immediately after the reference was tabled a full-scale investigation was ordered and is now proceeding. This includes aerial photography, geodetic surveys, topographical mapping, bathymetric surveys, reconnaissance surveys, geological and dam-site investigations, hydrological studies, climatology, soil surveys, survey of forest resources, mineral resources, fisheries problems and recreational resources.

I understand that the estimated cost of this survey to Canada will be approximately $700,000. The entire investigation will disclose the water-power resources which in that part of the country are not now being utilized because of a lack of effective control and agreement. After the investigation is completed it is hoped that public hearings will be held at various points throughout the area particularly concerned, so that the points of view of the people and of all interests can be heard. I may say for your information that public hearings were held in various parts of Canada prior to the actual commencement of the tehcnical investigation in connection with the St. Lawrence waterway. Recently I read in both the United States and Canadian press of proposals which had been made in the United States with regard to the building of a crib dam on the Arrow Lakes for the storage of water. We all know that these are only suggestions or proposals but many people in my constituency and in the adjoining constituency are confused because they think that something is going to develop immediately as a result of these suggestions. We all know that nothing will be done until the joint international commission has reported, and that anything done then will be the result of joint action between the United States and Canada. I have here a copy of the CONGRESSIONAL RECORD which contains a resolution presented to Congress on January 24 by Senator Mitchell. In view of the fact that my time is running out I should like to place this resolution on Hansard for the information of the House.

Mr. DEPUTY SPEAKER. Is that agreeable to the House?

Some HONORABLE MEMBERS. Agreed.

Mr. HERRIDGE. It is from the Columbia Basin Commission on the United States side of the line and reads:

"Resolved by the Columbia Basin Commission that it hereby requests the International Joint Commission to direct its international board of engineers to give priority to studies and report on the storage of water in Arrow Lakes, British Columbia, so that the commission may decide the amount of storage it will approve there, and if such report be favorable, that the Bonneville Power Administration and the United States, and the proper governmental agency of British Columbia and Canada, then proceed to negotiate for an agreement or agreements for building a storage dam at the outlet of Arrow Lakes to impound 5,000,000 to 7,000,000 acre-feet of water, whereby British Columbia will receive an estimated annual revenue of $2,500,000 to $3,500,000 and the power plants at Grand Coulee Dam and Bonneville will be enabled to produce an additional 500,000 to 700,000 kilowatts of prime power during the winter months, so that said dam may be built at as early a date as feasible, possibly by the winter of 1951–52; and be it further resolved, that the commission urge the State legislature, the Members of Congress from Washington, Oregon, Idaho, and Montana, the Governors of said States, and the President

of the United States, to join in the above request to the American members of the International Joint Commission and the Premier of British Columbia and the Prime Minister of Canada to join in the above request to the Canadian members of the International Joint Commission in the hope that the threatened electrical catastrophe to the Pacific Northwest during the next 5 years may be averted, and that, instead, both the United States and Canada may have increased development and prosperity and a stronger national defense."

This resolution indicates the interest taken by Americans in the proposed developments in Canada.

I have three or four suggestions to make before concluding what I have to say today. My first suggestion is in connection with the vacancy that exists on the international joint commission. In view of the fact that some of the major decisions of that commission will concern the Province of British Columbia, and particularly the Columbia River Basin within that Province, I suggest that the present vacancy be filled by the appointment of someone resident in British Columbia who is conversant with the opportunities that are presented in the development of this basin.

My second suggestion is that consideration should be given by this Government to the development of the water resources in the basin under public ownership in cooperation with the government of British Columbia. I am recommending the establishment of a Canadian Columbia River Basin authority, and in support of that proposal I should like to quote from the minutes of a committee of Congress which sat in 1933–34 to consider this question and which reported with respect to the United States portion of the Columbia River Basin as follows:

"We believe in private enterprise; in the expectancy of rewards for honest endeavor, labor, initiative, and daring; in the things that have made America great. But some things are too big for private enterprise, and the Columbia River is one of these."

I trust that this suggestion will receive serious consideration. A most favorable situation exists with regard to the public development of the main stem of the Columbia because there is little private interest investment to consider in connection with the development of the potential 2,900,000 horsepower.

Up to date all the proposals in connection with the development of water storage and power have come from the United States side of the line; nothing has happened so far as our government is concerned. The United States are leading us in this direction. I have in my hand the Christian Science Monitor for January 24, 1949, which contains this headline: "Truman orders Columbia Valley Authority plans."

That is in connection with the United States side of the line. Farmer organizations such as the Grange, trade unions, and cooperative societies are all backing the establishment of a Columbia River Authority, but on this side our government remains dormant. I should like to quote again from the Christian Science Monitor of February 14 which contains the following report:

"It would be extremely dogmatic to assert that a river could not be developed except by a valley authority modeled after TVA. But it is irrefutable that, despite the long years of effort by our other resource development and construction agencies, and the millions of dollars of expenditures, the Tennessee is the only river that has been completely harnessed and controlled in the interests of the people."

I am quite sure, Mr. Speaker, that members of all parties in the House would support public ownership and public development of power in an area such as this, if they appreciated the success of TVA.

My third suggestion is that, after this investigation is completed, the question of the development of the Columbia River Basin should be referred to the standing committee on mines, forests and waters to study and report on the use of power resources in the basin. A similar committee was established by Congress to study and report to Congress on the great possibilities in the United States portion of the Columbia River Basin. The people of the Columbia River Basin, which includes East Kootenay, West Kootenay, Yale, and a portion of the riding represented by the honorable member for Kamloops, Mr. Fulton, are greatly concerned in the development of the basin. They are anxious to see the establishment of the pulp and paper industry. They are concerned about secondary industries; they are concerned about the development of power for irrigation in the Okanagan district.

As a result of the interest of the people of these areas, and their understanding of the importance of the question, I have received a large number of letters suggesting that it is time for the people to hold a conference which will include representatives of all types of organizations. I suggest that farm organizations, cooperative organizations, trade unions, boards of trade, women's institutes, rod and gun clubs, municipal councils, irrigation associations, and tourist-camp operators should hold a conference in the near future in order to coordinate their ideas, and in order to be in a position to present them effectively to the commission and to the Government. I suggest that it would be wise for the cooperative organizations of the area to take the lead because they represent the larger number of people. The people do not want the policies for the development of this area determined by directors of companies who reside in Montreal and New York. They want them determined by the cooperation of the Federal Government, the Provincial Government, and the people of the area. In any development financiers and industrialists, naturally enough, must first consider profits; engineers must consider kilowatts, technical details, location, and structures. It is the primary duty of the Members of this House to be concerned about the welfare of the people as a whole, and to see that these developments are carried on for their greater benefit, and to their advantage.

My fourth suggestion, Mr. Speaker, is that the Columbia River Basin is rich in history and rich in possibilities for the taking of an excellent documentary film by the national film board. I believe if democracy is to function satisfactorily people must be involved in the administration of their own affairs. I believe further that governments of all kinds should do more to inform the people about the development of the country. Dry official reports and scanty newspaper articles are not sufficient. In my opinion all educational authorities should cooperate to present the facts concerning Canada in such a form as to stimulate interest, understanding, and pride in national, provincial, regional, and local developments. I think that the national film board could make a great contribution toward arousing the interest of the youth of our country by undertaking a documentary film covering the development of the Columbia River Basin. I offer that as a positive suggestion toward offsetting the forces of fascism and communism about which many people in Canada are concerned at this time, because I do not believe those forces can be overcome by verbal blasts or merely talking about them. I believe they are going to be overcome by interesting the people, and particularly the young people of the country, in the cooperative development of the resources of the Nation by Federal, Provincial, and municipal governments.

I have endeavored in the time available to present to the House some information concerning the Canadian portion of the Columbia River Basin, and I have endeavored to advance certain suggestions. I trust that many Members of the House, and the Government, will give serious considerations to my proposals. In my opinion a solution cannot be found to our problems by merely emphasizing our rights, but I do believe that we can achieve great things in the development of this basin if all the interests concerned, Federal, Provincial, municipal, corporate, cooperative, and private, are willing to accept their full share of responsibility. What an opportunity the development of the Columbia River Basin, almost unknown to the majority of the Canadian people, offers for the democratic meshing of all these interests.

The residents of the Columbia River Basin do not intend to be silent spectators in the coming drama of development but understanding and active members of the cast playing their parts with purpose, and in harmony, to the benefit of all, and to the benefit of Canada.

Druggists Are Divided

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following article which appeared in the New Republic in its issue of April 4, 1949.

The article is a comment upon the fact that although the big drug companies are among the heaviest contributors to the fight on President Truman's national health-insurance program, an increasing percentage of the druggists favors the plan.

DRUGGISTS ARE DIVIDED

President Truman's health program is a pill that the American drug industry doesn't intend to swallow. Diligently cooperating with the American Medical Association, the large drug firms are among the top donors to the anti-public-medicine campaign.

Contributions by 26 drug companies to the National Physicians Committee, AMA ally, totaled more than $122,000 last year. Upjohn, Park-Davis, and Eli Lilly each reported $15,000 donations as required under the Lobbying Act. Other heavy contributors included Hoffman-LaRoches, Inc., and American Cynamid, $10,000; Rexall, Mead-Johnson, Abbott Laboratories, Inc., $7,500 each; E. R. Squibb & Sons, Sharpe & Dohme, $5,000 each. Johnson & Johnson, Walgreen, and 14 other drug firms reported contributions of from $500 to $4,000 apiece.

This year even greater financial assistance from the industry is expected by the private medical lobby in view of the growing public approval of national health insurance. The drug interests were warned in the current issue of their conservative trade journal, the American Druggist, which published two opinion polls showing that when the facts of the Truman health program are known, the people favor the plan. The magazine's managing editor, Bernard Zerbe, polled 2,500 druggists throughout the country and found that as of February, 16.8 percent favored national health insurance, as compared with 9.4 percent last December. Editor Zerbe had to admit, "The more the retail duggist knows about the Truman proposal for national health insurance, the more likely he is to favor it."

Another poll, appearing in the same issue, reveals that two out of three opinion leaders in American communities favor the administration plan. Conducted by Maurice Mermey, public-relations expert for several large drug firms, the poll shows that of the 1,500 presidents of civil organizations, 67 percent favor national health insurance. Mermey remarked ominously that the 67 percent "is, indeed, a significant figure, for it foreshadows the possibility of broad grass-roots support for the Truman program. * * * Advocates can be satisfied with their score among citizens' organizations, while opponents have much work and soul-searching ahead as regards this large and important area of public interest."

The outcome of the polls was so alarming that the magazine printed a separate editorial calling on the neighborhood pharmacists to explain socialized medicine and its dangers to their customers and urging physicians and pharmacists to become political as well as professional brothers in arms in the battle to preserve private medical practice.

The profits of the drug interests reached an all-time high in 1948. According to the Department of Commerce, the dollar volume for retail drug stores was $3,693,000,000—an enormous gain over the $1,562,000,000 in 1939. The industry attributes the postwar increase to the widespread lay publicity given recent dramatic developments in modern therapeutics. Actually, the industry fears that the public will stop buying patent-medicine home remedies when good medical care by competent physicians is available. The health bill now pending in Congress would limit Government payments for medicines to prescribed drugs which are unusually expensive. The list of prescription drugs would be broadened as the insurance system expands and is able to pay for more drugs.

While most of the industry cries "free enterprise versus socialization," one drug-trade journal has managed to keep its perspective. The Oil, Paint, and Drug Reporter recently editorialized: "With respect to medical care, the drug industry has a unique position—a divided loyalty—and has been leaning somewhat too much toward what it has been told is the sentiment of the medical profession."

Inauguration Address by the Very Reverend Hunter Guthrie, S. J., President of Georgetown University

EXTENSION OF REMARKS
OF
HON. J. HOWARD McGRATH
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Monday, May 2 (legislative day of Monday, April 11), 1949

Mr. McGRATH. Mr. President, yesterday the Very Reverend Hunter Guthrie, S. J., was inaugurated as the thirty-fifth president of Georgetown University, the oldest Catholic institution of higher learning in the United States.

His masterful inaugural address is worthy of the attention of scholars throughout the world, and I am happy to offer it for publication in the Appendix of the RECORD, for which purpose I ask unanimous consent.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As we approach the halfway mark of the twentieth century, it is becoming fashionable for institutions of learning to issue a report on their raw material: man. Enjoying, as we do, the recent slide-rule computations of a sister institution in Cambridge, our task of yesterday and today has been appreciably lightened. Man, it has been discovered, travels faster and farther but sees less; he joins more organizations but discovers less ground for agreement with his fellow man; he has more means of communication but fewer words of common meaning for mutual understanding; he has more knowledge but less wisdom; more license but less liberty; more wealth but less happiness; in brief, he is a finer piece of mechanism but much less a man than his horse-and-buggy prototype.

Evidence for this summary of man's present status is abundant in current university reports. In the search for a solution to this unfortunate condition the fear has been expressed that man, under the increasing demands of advancing technology has overspecialized the individual and atrophied the social element of his nature. No longer the Protagoran measure of all things, he has become the sole measure of one fraction of one part of one thing and so finds himself reduced to the primeval hazards of the naked isolated caveman. In this contingency, the state is forced to step in for the protection of its individual members and impose a mechanized social structure from above, or from the underground, depending on whether the state operates from Olympus or the Stygian gopher-hole of the Politburo.

This hypothesis covers only part of the current situation and considers merely its secondary causes. Man is floundering today because he has lost his ultimate orientations. He is an individualist not because technological education has taught him this or that unique way of making a living; nor because economic necessity makes it imperative for him to be ruthless toward others and utterly selfish in his own interests. He is choosing bypaths and sideroads; he has run down a thousand blind alleys because his university training has conditioned him to live without God as a transcendant focal point for his thought and activities; has, on the contrary, persuaded him that all design, all purpose, all meaning, if any, are to be found in the squirrel cage of his own ego.

This indoctrination is effective for two reasons. First, man is naturally reluctant to work out any problem to its last decimal point. Hence, when the easy and particularly attractive solution of his own prideful person, apotheosized as destiny incarnate is offered him by a battery of professors properly brocaded with Ph. D.'s who is he to claim that he has been dealt a poor hand from a cold deck of cards? Secondly, no person, be he Einstein squared, can come up with the final answer, if he never learns all the elements of the problem. In this great land of free speech many schools by policy, others by law, are not permitted to disclose all the elements of the problem. This program of academic truncation has induced the prime intellectual heresy of our time; the habit of mistaking a part for the whole.

The three means by which man can attain full stature within the limits of his nature are the religious, moral, and intellectual virtues. I have listed these in the order of their essential importance. As long ago as the thirteenth century it was noted that a charwoman of that day knew more about the meaning of life than did Plato. This plenary knowledge was attributed not to her intellectual or even her moral superiority to Plato but simply to her elementary grasp of religious truths unknown to him. With equal right it can be said today that the lowliest child who has completed his penny catechism knows more about the full meaning of this atom-studded, jet-propelled, televised and UN-riddled universe than the assembled faculty of some of our universities. The reason is elementary and irrefutable. The child knows the first or ultimate causes of things; the faculty has a confused and at best inadequate grasp of secondary causes only. The difference in kind of knowledge is similar to that between the man who made the atomic bomb and the bombardier who releases it on its destructive mission.

Forced by unfortunate circumstances, all of our public and many of our private institutions of learning have abandoned the teaching of religion. It soon followed, as logically it should, that the teaching of the closely allied moral virtues was also discarded. This double default, as I said, has obliged our educational system to present to its students a truncated picture of reality. The consequences are disastrous and will grow increasingly disastrous as they pursue their logical course.

With the abandoning of Revelation in university circles, the acquisition of certain knowledge became an impossible task. Two courses were open to man. Either he was forced to fall back on his fallible reason—a tool which Moses Maimonides had long ago proved to be unequal to the problem—or, he had to resort to a fatuous liberalism, which ranges all the way from polite skepticism to the shoddy "science" (in quotes) of statistics. Preoccupation, the short span of human existence, the infinitude of the world object to be examined, as well as the finite limits of the examining faculty render man's reason inherently incapable of solving the problem. The social possibilities of liberalism, on the other hand, have always rendered this alternative attractive. Its glib versatility produces both on performer and spectator the same giddy effect as the spectacle of a tight-rope equilibrist. It is good theater, good politics, but utter irresponsibility in the face of a crisis. As things are today man must make a decision. The university often does little more than prepare him to sidestep it—gracefully. The Kremlin could ask for nothing more.

Paralleling the ouster of Revelation from our lecture halls is that of authority. Both branch from God in such a way that the rejection of one entails the rejection of the other. For authority without justice is tyranny; justice, however, is impossible without certain knowledge of rights and obligations; and certitude we have seen is lost with the abandonment of Revelation. With authority gone a specious form of liberty enters the scene. "Liberty" (again in quotes) is today's major plague. As practiced, it consists in man's right to do anything in accord with his opinion. That right, he is taught at the university, is his supreme prerogative as the citizen of a democracy. It is, in fact, indistinguishable from license. True liberty, properly defined, is man's potentiality to perform a good action. The full good, however, he cannot know for certain without the controlling assistance of Revelation. Hence, man himself and the world he lives in are at the mercy of opinion's whim.

Opinion, then, the pale image of truth, is the end product of university training today. Could Plato return, he would be astonished to find how modern educators are using his cave. The method he worked out for them in that famous parable of the seventh book of the Republic was quite different from present practice. Uneducated man, he wrote, was chained in a cave with his back to the light. All that he could see (or know) were the shadows cast by the fire against the wall in front of him. Reality—that is to say, the true and the good—chained man could not see. His world of knowledge was the shadow of reality, which is mere opinion. Plato's conception of the twofold purpose of education, therefore, was to free man from his chains and turn him from the shadowy twilight of opinion, first to the world of real

objects and finally to the sun, source of all light (or knowledge) and all reality. When we realize that for him the sun was a symbol of the divine principle, a more inspiring ideal for education is hard to conceive. A more cogent indictment of modern education cannot be imagined.

We live today and are trained to live in the shadow world of opinion. In religion, in philosophy, the arts, morality, politics, the social sciences, in all the areas dominated by man and his vital human interests, we move in the false, heady atmosphere of the race track. One man's guess is as good as another's. Secure in the "science" of his system, he is prepared to take his chance and place a bet. In short, education has trained man to make a game out of life in a way he would never try with a living.

This is laissez faire, nineteenth-century rugged individualism transplanted from the field of economics to the whole world of thought, morality, and life. It is not surprising, then, to note that states have found it necessary to control opinion exactly as they found it necessary to control economics. The state's thinking in this matter is much sounder than that of the resentful individual whose opinion is controlled. Despite the dramatic but puerile dictum of Helvetius there is nothing essentially sacred about an opinion. In fact, in the field of religion, where God has been merciful enough to reveal the truth to mankind, opinion can be blasphemous. At best, opinions are blind gropings for the truth; at worst, they are the stubborn vaporings of ignorance. Actually, an opinion is grounded on nothing but the limited experience and personal interests of the individual. It is not supported by a universal, eternal, immutable law as is truth. The state's opinion, then, is just as good, just as sacred, and just as accurate as the individual citizen's opinion or the majority opinion of all the citizens. (I need not point out how clearly Mr. Truman proved this in the last election.) With man's normal aspirations reduced by university training from a thirst for truth to the spawning of opinions, there is every reason to expect that the state for its own preservation will be forced to establish an opinion-control bureau. There are definite forewarnings of such necessity.

The universities themselves are reexamining their fabulous formula of academic freedom: That Protean pulpit whereon may mount atheist and Catholic; fellow traveler and capitalist; agnostic, liberal, dogmatist, and even an occasional teacher. It is fondly assumed that the untrained nostril of the student will unfailingly detect the sweet odor of truth from this miasma of conflicting opinion belched at him by his instructors. The formula, with all the good faith, tolerance, and urbanity in the world, is impossible. It is highballing toward self-destruction. No contradictory parts can ever add up to a whole. Truth is one, simple, and integral. Hegel's dialectical zig-zag of thesis, antithesis, and synthesis may appeal to a ballet master or the Radio City Rockettes, but it is so much philosophical balderdash to one who has seen the promised land of total reality.

Deprived of God, man will build himself an idol; shorn of revelation, he will cast a mystic aura over the dry fodder of rationalism; deprived of dogma, he will seek emotional refuge in the narcotic of epoch, that stoic suspension of judgment which renders man insensible to the petty clash of conflicting opinions; relieved of objective authority, man will have recourse to the petty might of his own finite judgment as the last court of appeal; if this fails to raise a clear voice or bring calm to confusion, he will then slide into the nirvana of license. At each descending step he has erected an idol to represent the fuller reality on the level above; he is content to accept a diminishing part as a substitute for the whole.

It is with no complacency that I turn from this scene of confusion to the formidable task confronting me. Despite the manifold involutions of most modern universities, their guiding principle is relatively simple. It is the monism of unregenerated but self-sufficient nature. Georgetown University rejects this oversimplification of education's chore, for she maintains with St. Paul that "natural wisdom brings only death, whereas the wisdom of the spirit brings life and peace" (Rom. 8:6). Hence, the goal of true education is dualistic: Both spirit and nature, in the Pauline sense, claim their just measure of attention. No academic system can pretend to be realistic if it fails to account for both factors in its training. Balance between the two and thoroughness in the approach to each must characterize the program.

Our method of training nature was first molded in Plato's Academy some four centuries before the birth of Christ. Homer and Hesiod, Pindar, Aeschylus, and Sophocles have graced the walks of Georgetown as once the groves of Greece. Aristotle has sharpened the wits of our students with his logic and metaphysical complexities. With Justin, Clement, Origen, and Basil, we believe that God prepared the intellect of the world for the advent of Christ by the genius of Greece. With Lactantius, Ambrose, Augustine, and Cassiodorus, we hold that Rome prepared for His coming by teaching the world a moral code of law and order in Caesar, Cicero, and Seneca.

Each individual in his growth to maturity undergoes in a microcosmic manner the intellectual development of the world. What prepared mankind for the coming Christ, now best prepares the individual man for the life of grace. This was Clement's theory of education, restated by Basil and codified by Ignatius when he founded the Jesuit schools. Thus, the patiently tooled truths of pagan antiquity, beautifully encased in the literature of Greece and Rome, were saved and used as a propedeutic for the student's maturing mind to fathom the mysteries of redemption.

If pre-Christian antiquity contributed its treasures and the Middle Ages their theology, the modern epoch, dating from the Renaissance, has introduced science as a new factor of universal knowledge. This element was rapidly and efficiently absorbed by the Jesuit code of education. The names of Sestini, Hagen, and Secchi, Georgetown scientists, indicate more than routine academic interest.

Founded as a college in 1789 by Archbishop Carroll of Baltimore, Georgetown first began offering graduate courses leading to the master's degree in 1820. The astronomical observatory which pioneered in the study of sun-spots and variable stars, was erected in 1841. Her medical school was opened in 1851, her law school in 1870. The Georgetown University Hospital began in 1898. Her famous school of foreign service was established in 1919.

The past is secure but what of the present and what of the future? What of the Greco-Roman classics and theology in this age of nuclear physics, ram-jets, plastics, plexiglass, and orange squeezers? When Moses went up to Mount Sinai to consult with Yahweh about the Ten Commandments, the children of Israel left behind in the wilderness grew impatient and enterprising. Following the disordered bent of man's nature, they erected an idol and worshipped it. That is very ancient history but very modern psychology. Man today after two World Wars is again impatient and enterprising. Where the Israelites had one idol, modern man has many. Idol worship, in the sense of pursuing shadows and deferring to opinions, is a modern disorder. Georgetown University has been iconoclastic in the past and with God's help will wield a heavier hammer in the future.

Throughout her long history she has never lost sight of the man she was training and the destiny freely assigned him by Almighty God. With the Psalmist she has wondered: "What is man that Thou are mindful of him? or the son of man that Thou visitest him?" With the Psalmist she has answered her own question: "Thou hast made him a little less than the angels, thou hast crowned him with glory and honor and hast set him over the works of Thy hands." (Psalms 8:5–6.) This is man's earthly destiny, the fruit, we believe of intelligence and moral self-discipline. Man's eternal destiny to be accomplished by the exercise of religious virtues we consider to be equally the concern of education. To this end we have channelled our educational efforts along the lines suggested to teachers by St. Paul: "They are to order the lives of the faithful, minister to their needs, build up the frame of Christ's body, until we all realize our common unity through faith in the Son of God, and fuller knowledge of him. So we shall reach perfect manhood, that maturity which is proportioned to the complete growth of Christ; we are no longer to be children, no longer to be like storm-tossed sailors, driven before the wind of each new doctrine that human subtlety, human skill in fabricating lies, may propound. We are to follow the truth, in a spirit of charity, and so grow up, in everything, into a due proportion with Christ, who is our head." (Ephesians 4:11–15.)

This is our program, this our academic faith to which we are consecrated with all hope in His divine promises, with all love for Him our Creator and Redeemer and with charity toward men of good will.

Address by Hon. Roland J. Steinle at Dedication of Monument to Father Stephen

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 2 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, I have in my hands a very significant address delivered by one of the outstanding jurists of my State, my good friend the Honorable Roland J. Steinle, judge of the Circuit Court of Milwaukee County. Judge Steinle delivered these comments on the occasion of the dedication of a monument to Father Stephen of St. Benedict the Moor Mission in Milwaukee in my State last Wednesday, April 27.

Within the few pages of that statement can be found a magnificent tribute to a great but humble Catholic priest, Father Stephen, whose life embodied the teachings of the Master—the Way Shower—to love our brothers as ourselves.

But not only is this statement a tribute to this immortal clergyman; it is a fervent appeal for human tolerance, for an eradication of the barriers which unfortunately still separate the men and women of different races, different creeds, different colors, different national origins.

It is a tribute, too, to the splendid progress made by America's colored citizens who have fought in war and strived in peace for this Nation, and who have given to us their devotion as Americans asking only that they be treated fairly and equally. I believe that my colleagues will be interested in reading Judge Steinle's splendid remarks, and I ask unanimous consent that they be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This celebration is indeed unique in the annals of our city—yes, of our Nation. We have come, some from nearby and others from afar, to participate in the dedication of this memorial—a magnificent likeness sculptured in stone of an humble Catholic priest, Father Stephen—a devoted follower of the rule of St. Francis, whose life and character and labors amongst us have gained the admiration, the respect, and commendation of thousands upon thousands of people in this land and abroad of every race, of every creed, and of every color.

Would, with all my heart, that one worthier than I had been selected to make this address. Too highly do I esteem the position in which I have been placed here today to feel aught but apprehension. I am thankful for this honor and for this great privilege. Times there are when even hardihood is a virtue; and to such virtue alone do I lay claim in venturing to be a spokesman here today.

Justice, truth, patience, charity, mercy, love of human kind, a burning zeal for the salvation of human souls, simplicity, courage, sacrifice, and confidence in God were Father Stephen's outstanding moral qualities. Strictly and obediently he walked in the footsteps of the founder of the great Franciscan Capuchin Order, never deviating from an exact exemplification of poverty, prayer, humility, and self-denial. His enthusiasm, his energy, his friendly personality, his fortitude as against all obstacles in his quest to save the souls of his brother man, were true reflections of the standards and examples given to the world by his illustrious model, St. Francis.

In his masterful exercise of vision, purpose, planning, building, preaching, perseverance, begging—yes, even contending, in order to correct a great social injustice prevalent amongst the people of our land—I refer to the existing attitude in his time of the white man toward the black man in this country—Father Stephen demonstrated American qualities akin to those of the beloved Abraham Lincoln—yes, and we can go on to say that he actually demonstrated heroic and saintly qualities like unto those of St. Francis himself.

What was Father Stephen's philosophy of life—the guiding start of all his success? I give to you words spoken from his own lips in order that there may be no misunderstanding. This is what he himself said: "Be unvaryingly kind toward all with whom you have to deal, getting rid of every sign of servility as well as of overbearing, arrogance, suspicion, sarcasm, anger, and threatening. Love your fellow men. Love the image they bear—love the blood of Christ with which they were redeemed." Simple words, these, my friends, but behind them is the power and energy and force upon which St. Benedict the Moor Mission for Negroes was developed under the guidance of Father Stephen—I refer to the very excellent boarding school, hospital, and church that stand before us today. Simple words, indeed, my friends, but such that characterized every appearance of Father Stephen in the cities, towns, and villages throughout the length and breadth of this land as he preached the doctrine of the equal rights of all human beings and the dignity of man under the law of God.

It is indeed fitting that this likeness in stone of Father Stephen be dedicated over his grave, for it will serve as a reminder to generations still unborn of his physical being—of the very manner of the man himself. It is to be hoped, too, that these buildings which make up the mission will be kept up, yes, expanded and developed, for in that way his physical deeds shall never be forgotten. But even if all these were to perish, let us thank God that the mighty influence wrought upon the hearts and minds of all Americans by Father Stephen's teaching and preaching regarding the white man's responsibility toward his black brother can never be eradicated, and that through and by the word and deed of Father Stephen, America will ultimately and completely rectify a great wrong that has existed in the past.

As we honor Father Stephen's memory here today, let us not be unmindful of the magnificent work of those who assisted him in this cause and who since his death have carried on in developing St. Benedict's Mission to an even greater level than Father Stephen knew. The Capuchin priests and brothers who have labored here—the self-sacrificing and venerable sisters of the Dominican Order who have so proficiently educated and cared for their charges—the Franciscan Sisters who have given efficient and tender care to the sick and disabled—the teachers and nurses and all others who have performed so nobly, together with the benefactors, the generous men and women who opened up their hearts and their purses to provide the brick and the mortar, the bread and the butter, the books, and the clothes, as well as the equipment for this school and hospital and church, and who today, whether in Heaven or still upon the earth, are thrilled with the knowledge and satisfaction that this is indeed a great work for God and country; all these we remember and salute as we pay our tribute of love and respect to the memory of Father Stephen.

We, the citizens of Milwaukee, take great pride in the fame that Father Stephen's noble efforts have brought to our fair city.

My friends, prejudice and bigotry against the peoples of any race or creed or color are definitely un-American. Father Stephen has taught us that prejudice against our Negro brother is not only un-American, but un-Christian as well.

All American citizens are equal before the law. Our people do not say that he of the darker skin is not equal—nor do they believe that, and yet there are many who practice it. There was a time in the history of this country when people believed that the inferiority of the Negro was supported by science and morality. We have come a long way since a Chief Justice of the United States Supreme Court determined that a Negro slave had no rights which a white man was bound to respect. Today, any person who still wants to support the inferiority of the Negro must fall back entirely on his own prejudice. Today, every fair-thinking American wants the Negro to believe in what the Negro has been taught—that is, the doctrine of the equality of man in the sight of God—in the right to live, to work, to travel, to learn, to climb up the ladder of success in a democratic fashion. Every fair-minded American will assist the Negro in attaining such objectives. In our own time we find a Justice of the United States Supreme Court, Hon. Frank Murphy, saying: "We must become alert to the symptoms of moral decay. We must recognize as centers of infection those who espouse the attitudes of the exaltation of any race or nationality as superior to all others; and the denial of the right of minority groups to compete in any way with the privileged groups; and the denial of the dignity of the human being, and the oneness and solidarity of humanity."

There are some prejudiced minds who declare that the Negro is irresponsible and of low intelligence. Such statement is not based on fact. The Negro first came to America in 1619. He was kept in slavery until 1865. Previous to the Civil War, despite the fact that he had helped to build up the wealth of the South, he was given no opportunity for schooling, no encouragement to think and act for himself. He was freed by the emancipation proclamation and the twelfth amendment of the Constitution. The fourteenth amendment made him a citizen. The fifteenth amendment gave him the right to vote. As a free man in America, the Negro has existed for only 84 years. Authorities are obliged to agree that the rapidity of his progress is one of the marvels of history. Dr. FRANK GRAHAM, president of the University of North Carolina, not long ago said: "It is the acknowledged fact that in spite of all the handicaps of slavery and discrimination, the Negro in America has made more progress in the shortest time than any race in human history."

"Not intelligent," some warped white minds will say of the Negro. The answer to that may be found in going to the halls of the United States Congress and listening to the brilliant expression of mind that falls from the lips of the black man there. Look in upon the metropolitan cities of America and observe the masterful technique of Negro lawyers, doctors, engineers, preachers, educators, scientists, men and women in public service, businessmen, scholars, sociologists, artists, writers, and athletes. The Negro population of America is about one-tenth of the whole. Proportionately, today, the leadership of Negroes compares favorably with that of the whites. In our country's latest military effort the accomplishment of our Negro soldier stands out with great glory.

We must face the facts and bestir the conscience of America, as did Father Stephen. The Negro has not had a fair deal. He has been exploited and held down. He has been lynched and beaten and despised. The weight of this injustice is the fruit of white cruelty. He is entitled to an ending forever of all prejudice and discrimination against him. These can be wiped out entirely if every interested person puts his shoulder to the wheel. Action, rather than words, will do that job.

Let us teach our children to respect all races and religions. Let us in our own lives demonstrate the spirit of good will and understanding; let us challenge the philosophy of racial superiority by whomsoever it is proclaimed; let us support the civil rights and liberties of all citizens and groups—and in the words of a distinguished American writer of our time, Harry Schlacht, resolve always "to cherish the thought that we are Americans; that we will do our best to eradicate from our hearts rancor and hate and prejudice; for if we build in clay our determination will be subject to the storms of time and the winds of the ages; if we build in brick it is destined to crumble under the atmospheric pressure of the heavens; if we build in iron and steel it is destined to flow as water before the smelting processes of the universe; if we build in marble it will not last forever; but if we build in human spirit by means of a righteous example of a common brotherhood, we build for eternity."

It was in that kind of human spirit, with eyes cast upward, that Father Stephen wrought his accomplishments here. Let us do likewise. May the achievements and example of Father Stephen long continue and endure. That is our fondest hope; that is our most earnest prayer today.

Small Corporations Must Pay Prohibitive Expenses to Issue New Securities

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. PATMAN. Mr. Speaker, there are two chief sources of capital for small corporations. One source is from revenue derived from investments in larger corporations; the other source is from the issuance of new securities on the market. The first source is gradually drying up as large corporations retain an increasingly larger percentage of their profits. As I have stated many times, this retention of excess profits by large corporations is one of the greatest economic evils in this country.

The second source of capital for small corporations (that is, the issuance of new securities on the market) is hindered by the prohibitive expenses incurred by small corporations when they endeavor to float a new issue. The cost of flotation to large corporations is relatively small and decreases as the asset value of the corporation increases. But the discounts and commissions which small corporations are forced to pay to investment bankers in order to issue new securities are so high that small corporations are practically forced to find other ways to obtain capital.

Some significant figures for the period 1945–47 have been prepared by the Securities and Exchange Commission which show the comparative flotation costs for large and small corporations. Small corporations floating securities of less than $500,000 paid 21.91 percent of their total proceeds for expenses. Of that 21.91 percent, 17.71 percent of the expenses were for commissions and discounts and 4.21 percent for other expenses; such as, S. E. C. fee, legal fees, accounting fees, and printing fees. Contrast this 21.91 percent with the neglible 1.15 percent paid by corporations floating issues of $50,000,000 or over. Of that 1.15 percent expense of proceeds, 0.76 percent was for commissions and discounts and 0.39 percent for other expenses. It is clearly apparent that the payments of commissions and discounts to investment bankers is the part of the cost which soared for small corporations and shrank to a minimum percent for large corporations. The cost of other type expenses remained stable irrespective of the size of flotation.

The Securities and Exchange Commission has prepared some illuminating figures showing the cost of floating new issues according to the asset size of the company. For the 3-year period 1945–47 small corporations with assets of less than one million paid approximately seventeen times more to float new issues than corporations with assets of 500 million and over. You will note in the table which is given below that as the asset size of the company increases the percent of commission and discount per $100 proceeds decreases.

Cost of flotation of new issues as a percent of gross proceeds, by asset size of company, 1945–47

Asset size of company (millions of dollars)	Number of flotations	Average size of flotation	Cost of flotation	Commission and discount	Other expenses
		Millions of dollars	*Percent*	*Percent*	*Percent*
Under 1	71	1.1	16.94	14.95	1.99
1 to 5	160	1.3	12.44	10.31	2.13
5 to 10	108	2.7	7.77	6.46	1.31
10 to 20	105	3.9	5.09	4.02	1.08
20 to 50	98	8.5	3.09	2.33	.76
50 to 100	65	10.9	2.17	1.56	.61
100 to 200	46	27.8	1.89	1.39	.50
200 to 500	30	53.7	1.46	1.04	.41
500 and over	21	111.6	1.01	.63	.39
Unknown [1]	11	20.7	2.09	1.74	.35
All asset sizes	715	12.0	2.48	1.88	.60

[1] This group includes issues of foreign governments, and companies for which balance sheets were not included in registration statements.

Some provision must be made to provide capital for small corporations if our system of private enterprise and initiative is not to be crushed under the weight and power of a few concerns. That help to small corporations could be furnished in several ways: (1) In the form of further regulation of the expense incurred by small corporations in issuing new securities; (2) from stricter enforcement of section 102 of the Bureau of Internal Revenue Code which requires distribution of 70 percent of the earnings of corporations be paid to stockholder; (3) perhaps from the organization of a capital bank within the Federal Reserve System to make long-term capital loans; and (4) through the RFC. The members should consider this serious problem and develop an immediate source of capital for small businesses and corporations.

President Truman and Senator Taft

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 2 (legislative day of Monday, April 11), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article under the caption "It seems to me," written by M. M. Oppegard and published in the Grand Forks (N. Dak.) Herald of April 24, 1949. The article speaks well of the senior Senator from Ohio [Mr. TAFT].

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT SEEMS TO ME

WASHINGTON.—Deficit financing rather than an increased income-tax schedule likely will be resorted to in event the congressional appropriations exceed the tax income for the Federal Government.

This seems to be the consensus of those close observers in Washington who look behind the public pronouncements of the tax authorities in Congress, some of whom have indicated there may be need for tax increases.

No one knows better than the members of our national law-making body and other politicians that raising taxes is not popular, even if it is done under the broad principle of soaking the rich.

Therefore, the boys who keep their fingers on the pulse of the voters are looking for some means other than direct taxes to take up any slack that might be necessary between income and outgo. The answer, of course, is deficit financing—in other words, just borrowing more money.

Approximately 300 persons were guests of the Treasury Department last Tuesday night at a dinner preliminary to the Government savings bond drive set for May 15 to June 30, when $1,040,000 in bond sales is the goal.

President Truman made a 5-minute address to the industry leaders invited to the dinner, but his style in that delivery was far more stilted than a brief off the cuff talk he made after going off the air.

In his informal remarks, Truman said nothing that could not be repeated, but the manner of its saying was far different than his formal style.

While reading his brief formal address, he kept his eyes glued to the manuscript much as a person does who is reading something for the first time. This was approximately true, for naturally he does not write his own speeches.

When he spoke informally, he talked rather slowly, selecting his words quite easily as he went along, talking much as any ordinary man rather accustomed to public speaking might say a few well selected words at his luncheon club meeting.

President Truman appeared to those who heard him about the same as he has always seemed in off the record instances—just a small city business man trying to do a job quite obviously a bit too large for his natural capacity.

Many have said the Truman give 'em hell technique of the last presidential campaign was an act, put on in desperation in a dying bid for reelection after he thought, along with the rest of the country, that all was lost.

But that is not quite an accurate appraisal, for Mr. Truman, according to those who have watched him closely day in and in day out as reporters covering the Washington scene, is not an easy-going opponent in any respect.

The President, I am told, is a man of extremes. He will go all the way for someone he likes and who has shown a liking for him, while those who oppose him or arouse his animosity, are faced by a bitter opponent.

It has long been apparent that Truman carries a grudge, in its fullest sense, once it has been established. His bitterness toward Drew Pearson is an instance, for nothing Pearson could do, newspapermen here say, would appease the President's attitude toward him.

In another sphere, the bitterness Mr. Truman feels toward Senator ROBERT TAFT is reportedly the principal opposition TAFT will face next year in Ohio when he seeks reelection.

There is no opposition within the Republican Party to TAFT'S reelection—in fact, quite the contrary is true, and he will have the fullest support of his party colleagues.

As a matter of fact, the opposition to his reelection does not stem so much from the Democratic Party, although it will, of course, put on a big show against him.

TAFT'S real opposition is President Truman, who wants very much to see him defeated in his bid for reelection. Truman blames TAFT, and rightly, too, for much of the opposition to the Truman program and for the barriers it has hit in Congress.

TAFT generally is conceded to be the smartest man in the Republican Party in Congress, and that designation would hold, too, if the Democratic Party were included.

He is the key to the Republican opposition to much of the administration's program, and it is on him that the Truman blame largely falls in complaining about Republican obstructionists defeating the Fair Deal program of the administration.

The administration, apparently, feels there should be no Republican opposition to its program, and yet the program contains so much that the Republican Party always has opposed.

Truman continues to threaten to "go to the country" on a train swing around the Nation and point out that the Fair Deal program is being thwarted by the Republicans.

Of course, it is being opposed by the Republicans. It is what should be expected in the cases wherein the Republicans are giving it the toughest opposition.

The backbone of the Republican Party of the United States—call them reactionaries or whatever you will—has never been content to follow Governor Dewey's "me, too" position, and it is one of the salient reasons why Dewey stumbled at the polls last November.

It is sound, intelligent opposition in Congress to the more fanciful Administration program that the Republicans, and many Democrats, are looking for, and it is around TAFT that this opposition is centered.

My guess is that when all the flying fur has settled in the Ohio senatorial scrap next year, the name of ROBERT A. TAFT still will be on the roster of United States Senators. Certainly no one has proven a greater right to the place.

M. M. OPPEGARD.

Middle Border Day

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, May 2 (legislative day of Monday, April 11), 1949

Mr. MUNDT. Mr. President, Gov. George Mickelson, of South Dakota, has issued a proclamation designating the second Monday in May as Middle Border Pioneer Day. It is the hope of the citizens of our great middle border area of America that other governors in this region will emulate the splendid example set by Governor Mickelson in providing an occasion on which to honor the pioneers whose contributions have meant so much to our Republic.

I ask unanimous consent to have this proclamation printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION

Whereas all that America is and will be, derives from the ideas, ideals, and deeds of its men and women who have dared to pioneer new paths; and

Whereas we who live in the upper Missouri River Valley are twice blessed with a heritage from pioneers who surged westward on a tide of flatboats and covered wagons until here on our Republic's middle border they met and mingled with kindred who had trailed eastward from the mines of the Rocky Mountains and the ranches of the old Spanish Southwest; and

Whereas to this land of the middle border have come people of all lands seeking the boon of freedom and the opportunity to attain a better life; and

Whereas the democratic ideals of self-reliance and self-development are enshrined in the granite of our mountains and in the hearts of our people, it therefore becomes appropriate that the citizens of South Dakota should take the lead among those who dwell on the middle border in recognition of the great truth that "what is past is prologue."

Now, therefore, I George T. Mickelson, Governor of the State of South Dakota, do hereby proclaim and establish the second Monday of the month of May as Middle Border Pioneer Day, and request my fellow citizens to unite with the society of Friends of the Middle Border in giving special honor to our early settlers and pioneers through public meetings and family gatherings, as well as to review the achievements of such illustrious personalities as the Verendrye Brothers, Captains Lewis and Clark, Jedediah Strong Smith, Father Pierre DeSmet, Struck-by-the-Ree, George Catlin, Henry Weston Smith, Hamlin Garland, O. E. Rolvaag, Gutzon Borglum, James Earle Fraser, Harvey Dunn, and the thousands of our early pioneers and settlers who through exploration, self-sacrificing devotion, and contributions to the settlement and building of this great area, and to our social and cultural patterns, have enriched our lives and will inspire present and future generations to further advances in that finest of all arts, dwelling together in good will and in peace.

In witness whereof I have hereunto set my hand and caused the great seal of the State of South Dakota to be affixed this 20th day of April 1949.

[SEAL] GEORGE T. MICKELSON,
Governor of South Dakota.
Attest: ANNAMAE RIIFF,
Secretary of State.

The Greek People's Fight for Freedom

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Monday, May 2 (legislative day of Monday, April 11), 1949

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Soterios Nicholson regarding the fight of the Greek people for freedom, which appeared in the Washington Evening Star on April 18, 1949.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WANTS THE UNITED NATIONS TO HELP GREECE LICK THE COMMUNISTS

To the EDITOR of the STAR:

Perhaps no other country in the world has faced such bitter disillusion as the Greek people in their fight for freedom.

Occupied by a brutal despot for several years, milked bone dry of food, natural resources, and all their material wealth, the Greeks had every reason to believe when the war ended and the Nazis were finally beaten that they could proceed at once with the immense job of reconstruction in their own way, without being harried by other oppressors on their northern borders.

The Soviet Union and Communists in Albania, Bulgaria, and Yugoslavia, however, had other ideas and plans. They marked Greece for their own and immediately set in motion the age-old doctrine of divide and conquer. They fostered a rebellion against the regime in power and furnished arms and supplies to the insurgents. The loyal Greeks rallied to the support of their Government and with the aid of material assistance from the United States, they have succeeded in beating back the unceasing attacks of the guerrilla forces.

It has been an unending struggle for the loyal Greeks. With supplies received from America, they have routed the enemy and pushed them back into Albania, Bulgaria, or Yugoslavia. Each time would mean final victory, they hoped. But what has happened?

The guerrillas, driven from free Greek soil, have found protection in the countries bordering on Greece to the north and there they hole up until the Red sympathizers bring in more recruits and use Communist funds to again equip and supply them so that all too soon they are strong enough to venture into Greek territory for another fray with troops of loyal Greece. Again and again they have been forced to retreat to the northern borders, where they are assured sanctuary, particularly in Albania.

In an effort to abide by the concepts and ideals of the United Nations, the Greek Government brought the controversy to the UN Security Council many times.

After listening to all parties of the dispute, the United Nations appointed a committee to watch operations along the Greek border and to report their findings. The committee has submitted a recommendation to the UN.

Greece has offered determined resistance to the Communists single handed. Now it is time for the United Nations to act to prevent complete infiltration of Greece by the Balkan Reds. Sufficient evidence is at hand to support a determination of the United Nations to seal the northern borders of Greece and prevent the Communists from achieving their purpose of overthrowing the Greek Government and turning Greece into another satellite of Soviet Russia.

The Greeks have never wavered in their opposition to a form of government which would take from them the priceless gifts of freedom, yet they cannot help but become discouraged and bitter in the knowledge that the fight is never-ending and in a large sense one which they appear destined to bear alone and unaided.

At least those nations close enough to feel the hot breath of the Russian bear on their necks have some feeling of security and are offered the aid of other nations in the event an aggressor moves against them. Greece, however, has no such assurance and apparently must continue to bear the heavy burden until such time as they can resist no more.

It is time for the United Nations to act. The United States, Great Britain, and the

other important powers of the UN should insist upon immediate action by the United Nations now.

SOTERIOS NICHOLSON.

Profit-Sharing Plan for Better Labor-Management Relations

REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. BENNETT of Florida. Mr. Speaker, I want to call to the attention of the Members this morning an amendment which I expect to offer to the pending labor legislation. I hope the amendment, which I will offer, will be a salutary one. It is along the lines of a bill that I have already introduced and will provide for a tax incentive for the establishment of profit-sharing plans. If I get the opportunity to do so and am recognized at the proper time, I hope to offer this amendment and hope that it will be approved.

I am calling this to the attention of the Members at this time in order to inform them that my proposed amendment will be set out in the CONGRESSIONAL RECORD in an extension of my remarks.

The amendment is as follows:

Page 45, after line 16, insert the following:

"TITLE II—PROFIT SHARING AS INDUCEMENT TO BETTER LABOR-MANAGEMENT RELATIONS

"SEC. 201. (a) Section 23 of the Internal Revenue Code (relating to deductions from gross income) is hereby amended by adding at the end thereof the following new subsection:

"'(bb) Amounts paid by corporations to employees as a share of profits:

"'(1) In general: If a corporation, prior to the beginning of any taxable year, adopts a plan legally obligating itself to pay to its employees a percentage of its profits for such year, 150 percent of the amount of the profits paid for such year under such plan to any employee shall be deductible under this subsection for the taxable year in which paid, and no part of such amount payable to such employee shall be deductible for any taxable year under any other subsection of this section.

"'(2) Special rules: The provisions of paragraph (1) shall apply—

"'(A) Only if every employee who is employed by the taxpayer for more than 150 days during the taxable year for which the plan is adopted is entitled to share in the profits for such year; and

"'(B) Only if the amounts payable under the plan do not discriminate in favor of employees who are officers, shareholders, persons whose principal duties consist in supervising the work of other employees, or highly compensated employees; and

"'(C) Only to amounts paid to an employee before the 15th day of the third month following the close of the taxable year of the corporation for which such amounts are paid, and only to so much of such amounts paid as does not exceed 25 percent of the compensation otherwise paid or accrued during such taxable year to such employee. In the case of a corporation on the accrual basis, amounts paid after the close of the taxable year of the accrual of such amounts and before the 15th day of the third month following the close of such year shall, for the purposes of paragraph (1), be considered as paid in the year of accrual.'

"(b) The amendment made by this section shall be applicable only with respect to taxable years beginning after December 31, 1948."

And renumber the remaining titles and sections of the bill accordingly.

If the amendment is offered to the Lesinski bill (H. R. 2032) it will be at page 20, after line 14, under section 403, instead of section 201 of the Wood substitute.

The Administration's Farm Program

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. KEATING. Mr. Speaker, the penetrating news analyst, Mr. Roscoe Drummond, chief of the Washington Bureau of the Christian Science Monitor, has stated very simply the nub of the objection to Secretary of Agriculture Brannan's method of pleasing both farmers and consumers. He says:

There is simply no gimmick by which farm producers' prices can be kept high and food consumer prices can be allowed to drop, unless somebody pays.

Under leave to extend my remarks, I include his editorial comment, together with an editorial from the Washington Post entitled "Guaranteed Farming" and one from the New York Times entitled "A Farm Leader Speaks."

It is heartening to observe that the farmers of this country, speaking through that fine farm organization, the American Farm Bureau Federation, have branded the Brannan scheme for just what it is—not a farm program at all, but a statement of political-economic philosophy. The federation president, Mr. Allan B. Kline, recognizes that the program necessarily involves Government control of all the land and livestock of every farmer in the country. The farmers of my community want no ceiling on opportunity in agriculture. They want no penalty on efficiency.

Such is the attitude of the farmers.

It is, of course, even more objectionable, if possible, to the workingman or the businessman, be he large or small, whose income is to enjoy no comparable benefit.

[From the Christian Science Monitor, Boston, Mass.]

STATE OF THE NATION—FARM PROGRAM: LET'S TAKE ANOTHER LOOK

(By Roscoe Drummond)

WASHINGTON.—If the administration's new farm program can do all its advocates say it will, it is hard to escape the conclusion that Secretary of Agriculture Charles F. Brannan has turned up with a sure-fire formula for perpetual motion.

Mr. Brannan, testifying before the Senate and House Agricultural Committees during the past week, is saying:

That American farmers can be continuously guaranteed high prices.

That American consumers can be assured lower prices.

That all this is not going to cost any more, perhaps less, than the Government has been paying out in its support program during the war years.

Well, that's something. In fact, it is more than something. It is nothing less than political paradise and economic utopia all wrapped in one lovely package.

All we have to ask is whether it is done with mirrors or is there a concealed panel in the magician's box?

With an entirely straight face, Secretary Brannan avers he has nothing up his sleeve; that there is no sleight of hand in his argument when he calmly tells Congress—what many Congressmen like to hear—that at last here is a way of guaranteeing more food at lower prices to the consumer and at high prices to the producer.

And who holds the bag? If the farmer is to gain and if the consumer is to gain, who, exactly, pays the difference?

Mr. Brannan doesn't exactly bear down on this point. In fact, it can be said that he touches it very gingerly. But from all that Mr. Brannan has said of his new program thus far, this is the way it would work:

First, the Government no longer would try to keep up the market prices of major farm commodities. They would be allowed to decline to a normal level dictated by supply and demand. This is just what the consumers would welcome—and there are 140,000,000 consumers. Certainly the consumer wouldn't lose there.

Next, the farmers would continue to get, not the lower consumer-market prices for their major commodities, but high parity prices. These would be guaranteed by the Government and, when the market prices were lower than the guaranteed parity prices, the Treasury would make up the difference. This is just what the farmers would welcome—and there are millions of farmers. Certainly the farmer couldn't lose there.

Finally, and here Mr. Brannan slips quietly into generalities, the Secretary of Agriculture gives the impression that it would be economical to the extent that it may cost less than the price-support program now in operation.

Congress will, perhaps, want to look that statement over a little more closely.

Perhaps it is right here that the mirror is being turned a little bit at an angle; that right here there may be at least a tiny, little concealed panel in the magician's box.

Somebody is going to have to pay, and we might as well face that inescapable fact at the outset. In fact, nearly everybody is going to have to pay, and the country will appraise this program more realistically if that fact is also recognized at the very beginning.

There would, of course, be controls over production, but if they are used to hold production down very considerably, they will be more than the farmers have been willing to accept in the past, and if the controls are not substantial, the amount which the Treasury will have to pay to maintain the subsidy will be greater and greater.

There is simply no gimmick by which farm producers' prices can be kept high and food consumer prices can be allowed to drop, unless somebody pays. The Treasury will pay, and that means that the taxpayer will pay, and that means that nearly everybody will pay.

Then why is Mr. Brannan's plan such sweet politics? For, if it isn't sweet politics—and I wouldn't say it wasn't—it is just about the most palatable method of spending the taxpayers' money yet devised.

There are several reasons why this proposal has been called the most wondrous pill ever compounded in the pharmacy of politics. The benefits to the farmers and the

consumers are immediate and clearly visible. The extent to which the farmers and consumers will have to pay for these benefits themselves out of their own increased taxes are deferred and invisible. There will be no item on the income-tax return which will show the farmer and the consumer exactly how much of his tax he is paying to underwrite the farm subsidy.

Furthermore, the proposed farm subsidy offers a new device for the redistribution of wealth. It works out in two ways. The subsidy goes to the few, relatively, but is paid for by the many, by all who pay taxes. This makes the share which the farmer pays for his subsidy proportionately lower than the rest. Secondly, the benefits which go to the consumer are not paid for uniformly by the consumer in the form of taxes since the income tax, being graduated, does not fall uniformly upon all consumers.

Most farmers seem to welcome the Brannan program, but if the farmer thinks he can get a guaranteed annual income from the Government without heading into Government control of his farming, he is very likely indulging in wishful thinking. And Senator AIKEN, the liberal Republican from the old-fashioned State of Vermont, asks: "If the Government is going to guarantee high prices to agriculture, shouldn't the Government reasonably guarantee high prices to industry?"

[From the Washington (D. C.) Post]

GUARANTEED FARMING

In the pressure for space following intermittent suspension of this newspaper, the prize exhibit of the Fair Deal has not yet had our comment. We refer to Secretary Brannan's plan for perpetual prosperity for agriculture. This is a scheme, a most ambitious scheme, that looks like a magical effort to give something to everybody. To farmers he promises subsidy payments designed to equate them with other economic groups. To consumers he promises lower prices by allowing agricultural commodities to find their own market level. To the public he holds out the assurance that this program would cost no more than the present system of price supports by which the Government keeps agricultural prices up artificially.

The hitch, of course, is the two-price system that would be created by the Brannan plan. Mr. Brannan uses as a lure the prospect of buying milk at 15 cents a quart. This might be all the consumer would pay directly. But the Government would then make up to the milk producer the difference between the market price and what, under the Brannan formula, was considered necessary to bring a fair income. The consumer would pay for this, too, through taxes, and to that extent the 15-cent price tag on milk would be deceptive.

There is, to be sure, a superficial plausibility about the Brannan program. For one thing, it would recast the farm parity formula in terms of present-day prices instead of as a percentage of 1909–14 prices. Furthermore, theoretically it would end the squeeze in which the consumer pays high prices and then pays taxes to keep prices high. However, it would substitute for price supports a thorough regimentation of agriculture. Far-reaching production and marketing controls would be necessary over virtually every crop, and if estimates proved faulty the system could become a terrific millstone. The consequences of tampering with the delicate ratios in livestock feeding, for example, could be disastrous. Nor does the plan give any assurance that overproduction would be effectively checked; indeed, subsidies unrelated to supply might encourage gluts.

The Brannan approach would scuttle the long-range Aiken farm program before that program has ever been tried. The Aiken law is the first real effort to relate price supports to supply. Beginning in 1950, Government supports will range from 90 percent down to 60 percent of parity, depending on supply. These flexible support provisions have been under constant attack from groups seeking to peg supports of specific commodities at 90 or even 100 percent of parity. In this respect the Brannan program looks like a political sop, for its effect would be to fix most support prices rigidly at above 90 percent of parity.

Farm income has a direct relation to the health of the remainder of the economy, and no one can wish for a return of the days of nonprotection of farm prices. Agricultural price supports are accepted as a necessary compensation for the fact that the farmer, alone of all producers, cannot reduce his production when prices fall. The question is not whether there should be price supports, but whether farmers should be singled out for guaranteed income. The theory behind the Aiken law is to provide a variable floor against depression. If this is to be jettisoned in favor of a rigid system to subsidize farm incomes, how long will it be before other economic groups also demand an income subsidy?

[From the New York Times]

A FARM LEADER SPEAKS

The American Farm Bureau Federation, with a membership of 1,325,000 farm families, is the largest organization of its kind in the Nation. What its leaders have to say on any proposed legislation is always interesting and important; what they have to say on controversial issues affecting agriculture is doubly so. This is not just because the bureau is large numerically and must be reckoned with politically in shaping national legislative policy. It stems, as well, from the fact that the bureau's leadership, over the years, has demonstrated a capacity to evaluate such proposals in their long-term aspects and in their relation to the whole national economy.

Last January a minority headed by certain southern members sought to put the federation on record as favoring a continuance of fixed, high-level supports for farm prices—the policy which is already pointing us toward a revival of the surplus problem from which it took a major war to deliver us only a few short years ago. With the chairmen of the two agricultural committees in Congress backing such a program and with the administration studiously refraining from opposing it, less conscientious leaders might have confined themselves to putting up a perfunctory rear-guard fight on the issue. Not so the leaders of the federation, who fought and crushed the rebellion of this opportunist minority. The Bureau put itself clearly on record as favoring the policy of flexible price supports, the heart of the Hope-Aiken law, whose long-term provisions go into effect in 1950.

The man who led the fight on that occasion for the principle of flexible price supports—a system designed to stimulate production when supplies are low and to operate in reverse when unmanageable surpluses threaten—was Allan B. Kline, the federation's president. Mr. Kline has now let it be known how he feels about the new farm program proposed a few days ago by Secretary of Agriculture Brannan. "When someone promises cheap prices for consumers and high prices for farmers on the same items" he told a representative of the United Press at Chicago this week, "it sounds to me like a vote-getting appeal." And he added: "At first glance it looks good for everybody. But farmers had better take a good look at the regimentation and controls involved * * * [This] looks like an agricultural approach to statism." Or, one might add, statism followed by boom and bust.

Who Represents Whom?

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. HÉBERT. Mr. Speaker, since the recent colloquy on the floor of this House between the very energetic and most aggressive gentleman from Massachusetts [Mr. MCCORMACK], the majority leader, and myself, I have received innumerable newspaper editorials from all sections of the Nation in connection with the matter which we discussed only too briefly.

Of course I have found great satisfaction in the fact that each and everyone of these editorials takes the same position which I have maintained. This naturally comes as no surprise because I have always recognized that I was on the most solid of ground in resenting any attempt to influence my actions as a Member of the House of Representatives.

I would liked to have pursued the discussion further when it originated on the floor of the House but was prevented from doing so on account of the situation which was beyond my control.

The fact that the press of the Nation has taken such widespread cognizance of the issue and the principle involved, has fully justified my action in bringing the matter to the attention of the House. The gentleman from Massachusettes contributed immeasurably to the discussion through his very frank, though I must admit somewhat bizarre statement, relative to his appreciation of what constitutes a Member's responsibility.

Of the many editorials which have come to my attention on the subject I have selected one written by Hermann B. Deutsch, associate editor of the New Orleans Item, which says, in effect, but more poignantly, what all the other editorials have said.

In his usual fluent style and most understandable language, Mr. Deutsch has placed his finger right on the button of the real issue involved in the philosophy of so-called party loyalty as expressed by the President in the White House and enunciated by his floor leader in the well of this House. He goes right to the bottom of the position taken publicly by these two gentlemen and meets the question head-on with a direct answer which cannot be misunderstood or misconstrued.

I was elected as a Democrat by the voters of the First Congressional District of the sovereign State of Louisiana and I sit in this body on the Democratic side of the aisle through their tolerance and through their sufferance and not at the hands or the whim of anybody else except those to whom I am responsible and alone responsible.

My certificate of election filed with the Clerk of the House signed by the Governor of the State of Louisiana, by the secretary of the State of Louisiana, and by the attorney general of Louisiana sets forth under the great seal of the State

of Louisiana that I was elected on November 2, 1948, to the Eighty-first Congress as a Democrat to the House of Representatives by a vote of 36,748. I am officially and formally designated as a Democrat under the laws of the State and the Nation and I sit here as such by that right.

But back to the editorial which is typical of the hundreds of editorials which have appeared throughout the Nation since this matter was brought to your attention.

Here it is and it says eloquently what so many of us are thinking:

WHO REPRESENTS WHOM?

By his astonishing public declaration that congressional votes constitute a test of party loyalty President Truman appears to have reduced his philosophy of government to the level of a precinct squabble. The issue was raised at the week end, when it appeared that outright repeal of the Taft-Hartley law had encountered major opposition.

Party disloyalty is punished by party discipline. In Russia that involves exile, possibly forced labor, or in extreme cases, what is euphemistically described as liquidation. In a democracy, it involves loss of prestige, of desirable committee assignments, and of any voice in patronage distribution.

What the President really said, therefore, was: "Vote as I say, or I'll swing the patronage club on you." If there had been any doubt about what he meant, his whip in the lower House, Representative JOHN W. MCCORMACK, of Massachusetts, swiftly dispelled it, by saying in so many words that it was "Only through tolerance that (anyone who opposed the President) is sitting here (on the Democratic side of the Chamber)."

This seems to reduce representative government at best to the plane of trivial machine politics. At worst, it implies that Members of Congress have a higher duty to their party organization than to their constituencies or their convictions. Let us take the case of Representative HÉBERT, since the McCormack attack was directed specifically at him.

The people of his district have five times elected him to Congress. An overwhelming majority was accorded him last year—after he had voted for the Taft-Hartley bill in the first instance, and to override President Truman's veto of that measure in the second. That stand therefore expressed the majority will of the constituents whom Mr. HÉBERT represents in Washington.

If free government means what it says, the voters of any given congressional district do not send a representative to Congress merely to jump whenever the President or his party whip says "frog." Every President is obviously the candidate of a majority party when he is elected, whoever he is. But if it thereafter becomes the duty—the test of loyalty, in fact—of all Congressmen elected by that majority party to vote unquestioningly as the President directs, why bother to send them to Washington at all? Why not simply let the President say without further ado what should or should not be done?

Our party conventions write party platforms as declarations reflecting the wishes of the majority on each of the individual policies or issues proposed for endorsement. Delegates from the agricultural Midwest, for example, may favor high-price support programs for grain and oppose the labor-union dictatorships which sprang into being under the Wagner Act. Delegates from strongly industrialized communities—Detroit or Hartford—may favor the abolition of all statutory restraints on labor and oppose the price supports which necessarily increase the cost of foodstuffs. Party platforms represent compromises between such ideological conflicts. They are not laws of the party and certainly not the law of the land.

As a practical matter, every President favors his supporters and turns his opponents out to grass. But there is a difference between this sort of give and take and the rough and tumble of a Tammany or Choctaw brawl. In the natural disappointment over his failure to bring a sweeping congressional majority into line with his views, Mr. Truman occasionally seems to forget that he is the country's Chief Executive, not its ruler.

Government Confiscation of Private Property a Moral Debacle

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 29, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Human Events for this week—April 27—has an article, Our Confiscation of Private Property, which levels an indictment against the United States that calls for a congressional investigation. In the handling of private property of German citizens during the war we have violated international law by confiscatory private property invested in neutral territory. If this is true it is a shocking situation. A very skinny excuse is used to justify the confiscation by saying that the Allies were merely exercising the functions of a German government. Where is our sense of decency? What has become of the ordinary principles of fair play?

And now, Mr. Speaker, what will be our position when the Soviet ascertains the truth of this shameful conduct?

Under leave to extend my remarks I am including the article referred to:

OUR CONFISCATION OF PRIVATE PROPERTY

(By an international lawyer)

The Truman administration, as a part of what the President in his inaugural address called a bold new program, is seeking to encourage foreign investment by American citizens. In the current ECA authorization, as passed by Congress, a large sum is actually earmarked to guarantee private American capital which ventures overseas.

Before Americans put any trust in these assurances they should familiarize themselves with the policy of confiscation of foreign private property which the United States has adopted since the close of World War II. Any American who proposes to invest money in France, for instance, should recognize in advance that if Soviet Russia takes over in that country, his entire investment could be confiscated in accordance with principles now formally endorsed by the United States.

Reversing its historic position with regard to property rights, the United States now apparently maintains that mere military victory justifies any form of confiscation which seems appropriate to the victorious government. Having thus sanctified the primitive principle of force majeure, it is easy to understand why the administration must offer guaranties if it is to lure American capital abroad. But no guaranty approved by Congress is likely to balance the outright sanction for confiscation which our own Government has now established.

The reversal of traditional principle is the work of President Truman's administration. This particular policy of confiscation was not advocated by the New Deal. On the contrary, Secretary Hull, on the eve of World War II, opposed confiscation in the following strong language:

"It is important * * * that the United States should not depart in any degree from its traditional attitude with respect to the sanctity of private property within our territory whether such property belongs to nationals of former enemy powers or to those of friendly powers. A * * * taking over of such property, except for a public purpose and coupled with the assumption of liability to make just compensation, would be fraught with disastrous results."

Everybody knows that since the close of the war we have officially confiscated much in the conquered nations themselves. But the story of our seizure of private German property invested in neutral Switzerland is little known over here. It may profitably be considered by anybody who thinks that he can safely invest his savings in Latin America, or any other part of the world which might be neutral in another war.

II

An agreement that violated international law, by confiscating private property invested in neutral territory, was forced upon Switzerland 3 years ago. The strongest sort of pressure had to be applied to the Swiss before they would succumb to the hectoring demands of the Governments of the United States, Great Britain and France, acting in concert, but under American leadership.

The leverage exerted on the Swiss approximated blackmail. Swiss assets in the United States were "blocked" and Swiss traders were black listed by our Government until the "Accord and Annex" was signed in Washington by Swiss Foreign Minister Walter Stucki, on May 25, 1946. Our Government gave little publicity to this disgraceful business. But Americans who visit Switzerland soon learn that this "accord" planted a new and unflattering conception of American morality over there.

"The agreement as achieved," to quote the Department of State Bulletin of June 30, 1946 (p. 1101), "attained the Allied objective of immobilizing and liquidating German property in Switzerland owned by Germans in Germany. * * * Thus, German assets which at some future date could have been employed as a threat to world peace will be removed from a potential safe haven." Communist governments, also at some future date, may have a lot of fun with that official statement of United States policy. Certainly it pays the Communist practice of expropriation the most sincere form of flattery.

In the forced liquidation of German private property in Switzerland, only persons of non-German nationality have been allowed to acquire new ownership. The annex to the agreement further says that "all possible measures will be taken to prevent resale to German persons." No time limit is placed on this penalization of Germans as such—another helpful precedent if the Kremlin wants to liquidate evidences of "Anglo-American imperialism" in China or other Communist territory.

It should be clearly understood that the Truman policy of confiscation in Switzerland applies to all Germans, those who were executed because they fought the Nazis as well as those who actually served the Nazi government. A statement prepared deep within the labyrinth of our Federal bureaucracy makes this plain.

According to "the Division of Economic Security Controls of the Office of Economic Security Policy of the Department of State" the confiscation does not include property looted by the Nazis, "since the Government of Switzerland had long prior to this under-

standing offered to aid in restoring such property to rightful owners." Nor does this particular confiscation apply to German Government property in Switzerland. It was purely private personal property, like summer cottages, bank accounts and investments of German nationals in Swiss industry, that the Governments of the United States, Great Britain and France confiscated.

III

A lot of pressure was needed to force the reluctant Swiss into this particular application of Mr. Truman's Fair Deal. As our Department of State itself admits: "The Swiss argued against recognition of the Allied legal claim to such (personal, private) property."

The Swiss Government properly insisted that if German private property were confiscated on Swiss soil, indemnification would have to be made to the owners by Switzerland. The agreement of May 25, 1946, eventually recognized the justice of this argument—in theory. Half of the proceeds of the forced liquidation of German private property in Switzerland was allotted to the Swiss Government, partly to cover the administrative costs of the sorry undertaking and partly to give the German owners some indemnification.

That this indemnification has in fact been satirical is clear on the face of the evidence. Less than half of the funds available from forced sales was even allocated for purposes of compensation. And the agreement further provided that any compensation should be paid by the Swiss Government under Allied supervision, in German money.

This mockery of civilized practice is one of the most distasteful parts of the whole agreement. In order to conceal the raw outrage of confiscation the Swiss Government was allowed to pay some compensation—provided that it did so in worthless currency.

The legal case for this confiscation of private German assets in Switzerland was based on the exercise of supreme authority within Germany by the Allied governments, following the German capitulation. Dr. F. A. Mann, writing in the British Year Book of International Law (1946), detects the flaw in the argument that the Allies were merely exercising the functions of a German government. He says:

"There cannot be any doubt that German municipal legislation confiscating German property in Switzerland would have been held by Swiss courts to be opposed to Swiss public order and would, consequently, not have been recognized. Nor can there be any doubt that no established rule of international law would have justified Germany in demanding recognition for her confiscatory legislation. The principle of the territorial character of confiscation was, until recently, too firmly established to be questioned."

In the opinion of Swiss jurists, the illegal agreement forced upon that country was a clear violation of Swiss neutrality. The American argument was that the question of neutrality did not arise, because the war with Germany had been over for more than a year when the agreement was signed on May 25, 1946.

IV

Nevertheless, steps incident to a war, like this confiscation of private German property in a neutral country, must be regarded as a part of the war activity. And that view was adopted by the Supreme Court of the United States, in the case of *Ludecke* v. *Watkins*, on June 21, 1948, more than 2 years after the Truman administration acted on a contrary assumption in regard to Switzerland. The plain fact is that the administration has been playing both ends against the middle, acting as though this country were either at war or at peace, according to which viewpoint seems momentarily advantageous to our officials.

We can scarcely have it both ways. If we were at war with Germany when German assets in Switzerland were confiscated, then Swiss neutrality was violated by our pressure to achieve that end. If we were at peace with Germany, then this enforced confiscation of private assets was sheer robbery, as disgraceful as any similar action by Soviet Russia.

The passage of time is serving only to strengthen the misgivings of American lawyers who realize that the agreement forced upon Switzerland, and the subsequent War Claims Act of 1948, are inimical to every long-range American interest, to say nothing of their incompatibility with international law as traditionally preached by American jurists.

In the Virginia Law Review, for last November, Vernon L. Bounds points out that the foreign investments of our nationals total into the billions. Since that was written President Truman has begun to argue that private, as well as state, investment overseas should be fostered, with governmental guaranties.

How can there be either respect for or confidence in a government which at one moment acts to confiscate private property in neutral countries, yet immediately thereafter speaks of guaranties to those who invest their savings overseas?

It is no wonder that the Soviet leaders find us difficult, when we simultaneously practice and revile communistic theory. As the Virginia Law Review sums it up, with admirable restraint: "There is something anomalous in a public policy which at one and the same time attempts to champion capitalism and confiscation.

(The author, thinking that this article should speak for itself, desires to remain anonymous.)

Fascism in Action Now Available Free Through Members of Congress—Fascist Trends in United States

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. PATMAN. Mr. Speaker, Members of the House have just received an announcement from the Superintendent of the House Folding Room to the effect that each Member has been credited with 190 books on Fascism in Action. These books can be distributed free to constituents desiring them.

In our country today, we have many signs indicating a definite Fascist trend among certain groups. The first thing that a Fascist dictatorship attempts is the destruction of labor unions, farm organizations, cooperatives, and all movements where there is the least evidence of majority rule by the people.

Anyone examining the book, Fascism in Action, will quickly discover some of the same trends in this country at this time that existed in Germany, Italy, Spain, and Japan before they became Fascist countries.

We must continue to fight communism with every weapon at our command, but, at the same time, we should not overlook an equally devastating enemy approaching us from another direction.

Exports and Imports of Lumber

REMARKS

OF

HON. LOWELL STOCKMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. STOCKMAN. Mr. Speaker, after checking the statistics on the exports and imports of lumber, issued by the Office of International Trade, I am convinced that in its attempt to provide aid to the Marshall-plan countries of Europe, the ECA has mismanaged the situation and is strangling the export of American lumber.

Prior to last July, our domestic lumber supply situation was less than satisfactory. While there was no over-all shortage, the supply of many grades and sizes was inadequate. But during the last 10 months, production has exceeded orders and shipments by more than 10 percent. The inevitable result was an increase in mill stocks of nearly 2,000,000,000 feet during the calendar year 1948. Thousands of small mills closed during the fall and winter because they could not find a market for their product; and their employees were thrown out of work. According to the Bureau of Labor Statistics, prices of lumber have dropped about 3 points a month since last August.

In the meantime, imports of logs and lumber from Canada have increased steadily. In 1947 the United States imported 93,000,000 feet of logs from Canada; in 1948, 165,000,000 feet. Imports of lumber from Canada have increased from 1,126,000,000 feet in 1947 to 1,672,000,000 feet in 1948. In other words, now that lumber is plentiful, imports of foreign lumber are flooding the American market. Indeed, 1948 imports from Canada are the largest in more than 20 years, and closely approached an all-time record high.

A comparison of exports and imports of lumber during the last 2 years makes a sad picture. Imports in the third quarter alone of 1948 were greater than exports in the first three quarters.

Up to 1939 we exported substantially more lumber than we bought. In some years our exports amounted to 8 percent of our total production. Lumbermen depended upon this source of revenue, and our country showed a favorable balance of lumber trade. What was probably more important than the quantity of lumber exported was the balancing effect of exports on the lumber economy. We exported grades and species which would have become a surplus in our domestic consumption. But gradually our imports overtook our exports, and since 1939 the gap between our Nation's purchases of lumber and our sales has widened. Now the situation is critical. In 1948, our total exports of lumber were only 646,000,000 feet as compared with imports of 1,880,000,000 feet.

Congress has appropriated billions of dollars to rehabilitate the Marshall-plan

countries—and it is even now appropriating additional billions. We would therefore expect to find these countries the heaviest importers of American lumber. On the contrary, we find the greatest decrease in imports by the United Kingdom and the other European countries. All this, in spite of the fact that housing is one of the most urgent needs of these countries.

Exports of both softwoods and hardwoods have been strangled. Even during some of the depression years we exported more than a billion feet of softwoods a year; but in 1948 our total exports of softwoods were only 462,000,000 feet, less than half of our 1947 exports. And OIT statistics prove that the decrease was greatest for the United Kingdom and the other European countries. Exports of softwood lumber to the United Kingdom in 1948 were 27 percent of those for 1947. Exports to other European countries in 1948 were 19 percent. For hardwoods, our exports to United Kingdom in 1948 were 42 percent of the 1947 record, and to other European countries 47 percent.

Take Douglas fir, for example. The species constitutes our heaviest lumber export item. In 1947 we exported 294,000,000 board feet of Douglas fir to the United Kingdom; three and one-half times as much as in 1948, when we shipped them 86,000,000 feet. But that tells only half the story. Early in 1947 the British Government sent a purchasing commission to this country to buy up lumber to help take care of the much-needed construction and rebuilding in the United Kingdom. Some of that lumber was shipped the second quarter of 1947, but the greater part of the shipments were made the last half of that year. Although the entire purchase was intended to reach England during 1947, certain orders were still left over, and consequently a large part of the imports credited to the first half of 1948 were actually a part of the 1947 purchase orders. To make a fair comparison, therefore, let us take the last half of each of the 2 years. During the last 6 months of 1947 we exported 234,000,000 feet of lumber to the United Kingdom as compared with 39,000,000 feet the last 6 months of 1948.

A comparison of exports of southern pine to the United Kingdom during the 2 years would be pitiful. In 1947 we exported 38,000,000 feet of yellow pine to United Kingdom as compared to 35,000 in 1948—one eleven-hundredth of the previous year's exports. Exports of southern pine to all countries in 1948 were about 55 percent of that of 1947, but in United Kingdom and the other countries receiving ECA funds our exports became a mere trickle.

Let us look at hardwoods. In the period from 1935–39—and those were depression years—we exported an average total of 310,000,000 feet of hardwoods per year to all countries of the world. Of this total we averaged 207,000,000 feet to United Kingdom and 38,000,000 feet to the other European countries. Europe was our best customer; 79 percent of our shipments of hardwoods went to Europe. By 1947 our exports of hardwoods had decreased to 186,000,000 feet, and by 1948 to 87,000,000 feet. And what about the Marshall-plan countries? In 1948 our exports to the United Kingdom were 15 percent of the depression year averages, and the other European countries 38 percent. Our exports to the United Kingdom in 1948 were less than 40 percent of 1947, and to the other European countries about 45 percent.

Again the annual figures tell only half the story. The last half of 1948 our exports of hardwood to the United Kingdom were 12,000,000 feet as compared with 46,000,000 feet during the corresponding 6 months of 1947. A corresponding drop was shown in exports to other European countries.

In other words, the United Kingdom and Europe, the countries that have received the most assistance through the Marshall plan, have shown the greatest decreases in their imports of lumber from the United States.

But these countries are still importing lumber—not from the United States, but from other exporting countries. In 1948 United Kingdom imported 239,000,000 feet of lumber, of which only 15 percent came from the United States. Thirty percent came from the British possessions, the remainder from Yugoslavia, Finland, and other countries. And these imports are being paid for by funds appropriated by our Congress, or by foreign funds released by ECA appropriations.

The outlook for exporting lumber to the United Kingdom and other European countries is no brighter for the future than during the past year. Less than a month ago, England entered into a trade agreement with Soviet Russia which included the importation by the United Kingdom of substantial quantities of lumber from Russia.

And in the meantime, in spite of our Nation's surplus of lumber, we continue to import logs and lumber from Canada and other countries in far greater quantities than our total exports.

Congress by its recent action has approved the basic principle of financial aid to Europe. I do not take any exception to this principle. I merely wish to point out how policies and directives of Government agencies can at times distort historical trade patterns which American industry, resourcefulness and initiative have developed. I sincerely believe that Mr. Hoffman and his associates are endeavoring to do a good job, and this is not in the nature of a criticism, but merely to point out to him that administrative procedures must be changed in order to afford the American lumber industry an equitable opportunity to compete for the business which is made possible by ECA dollars. After all, it is American industry that is paying for this bill. I have appealed to Mr. Hoffman to correct this entire situation, and I have been assured that something will be done immediately. I hope his action is not too little or too late.

Socialism—Stop It Now

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the time has come for the people of this country to understand that our whole economy is about to be swamped by socialism.

Mr. James McGraw, Jr., has been making a valuable contribution to thinking on this most important subject, the latest article appearing in the daily press in the form of an advertisement. I commend it to every Member of this House and under leave to extend my remarks I am inserting it at this point in the RECORD:

THE EIGHTY-FIRST CONGRESS CAN HALT THE ADMINISTRATION'S SOCIALIST PROGRAM

In his speech at Massachusetts Institute of Technology, Winston Churchill said that America's possession of the atomic bomb is all that has kept Soviet Russia from overrunning Europe and bombing London.

Our State Department knows that there has been another deterrent to aggressive warfare by Russia and a deciding one. That deterrent is the superior industrial strength of the United States. But once Russia approaches our industrial strength, then watch out. For Stalin or no Stalin, there will be trouble. Therefore, the simple table below is worth every American's careful reading. It shows in percentages what Russia did with her national income in 1948 and what we did with ours:

	U. S. S. R.	U. S. A.
	Percent	*Percent*
Civilian use	60	79
New capital equipment and public works	21	12
Foreign aid		2
Defense	13	5
Building of inventories and war stock piling	6	2

These figures for Russia come from The (London) Economist, Britain's influential economic journal.

These figures are estimates based on information from behind the iron curtain, and so cannot be checked directly. But they fit with what is known of Russian development.

The table shows that Russia is straining every resource to build up its industrial strength. When Russia's effort is measured in dollars, and compared to ours, the figures show:

Where we spent $20,000,000,000 to $21,000,000,000 for new industrial plants and equipment last year, the Russians spent $12,000,000,000 to $14,000,000,000.

But while we used about $9,000,000,000 of this to replace old equipment, the Russians spent no more than $2,000,000,000 for replacing old equipment. The Russians had much less worn-out and obsolete equipment to replace. They could concentrate their efforts on expanding their industries and buying new equipment.

So—we used only $11,000,000,000 to $12,000,000,000 to expand our industries.

And the Russians used almost as much to expand theirs—$10,000,000,000 to $12,000,000,000.

Russia is gaining industrial strength as fast as we are—and may soon be gaining

faster. The more she gains and the faster she gains on us, the greater is the danger of war.

American industry is pushing modernization and expansion hard. It is doing an heroic job. McGraw-Hill's recent survey shows that industry already has in hand plans to build plants and buy equipment in the next 5 years adding up to $55,000,000,000. Industry plans that investment—and much more—if it can get the money.

On those plans of industry depend our national security.

If these plans of ours are cut back, the Russians will be years closer to their goal of industrial equality—the strength that they need to wage aggressive war successfully.

But more and more our industry's plans are being menaced by socialist policies in Washington. The President continues to urge a further increase in the tax on corporate profits, even though Federal taxes alone now take 38 cents of every dollar of profit. He wants $3,000,000,000 more in taxes on corporate profits now, plus added personal taxes.

Last year corporations spent almost two-thirds of their profits—about $13,000,000,000—for new plant and equipment. This year corporation profits will be lower than last year's $21,000,000,000, perhaps by 20 percent. Subtract a fifth or more from last year's profits. Then adopt the President's proposal and take $3,000,000,000 more in corporate taxes and you raise havoc with planned expenditures for new plant and equipment.

Approval by Congress of the President's tax program would cut industry's program of plant and equipment development by a third or more. That means a major blow to our prosperity as well as our national security. For as capital investment goes, so goes general prosperity.

Further serious damage would be done by congressional approval of the President's industry-control bill. The so-called Stability Act of 1949 (the Spence bill) would severely check industrial progress. That bill would put the Federal Government in the business of providing the added industrial capacity which the tax program would prevent private industry from doing for itself. It would be hard to conceive a better and surer way to dry up private investment in new plant and equipment. For every dollar of Government investment will scare away many times more dollars of private investment. People will not want to risk their money in businesses competing with the United States Treasury. At the same time it will attack private investment in another way. It means that Government would spend your income for you instead of allowing you to spend or invest for yourself. That is the high and quick road to socialism.

American industry needs right now great courage and incentives if it is to carry out its tremendous building program. It needs also a release from the program of a socialist administration in Washington with its systematic discouragement of enterprise and risk taking.

Above all, industry needs assurance by the actions of the Eighty-first Congress itself that there is a future in this country for a system of dynamic capitalism, functioning in a free society. By acting now to strengthen the American people's faith in their industrial system, by providing needed incentives for management and investors, by protecting industry's capacity to buy new equipment, the Eighty-first Congress can sustain American industrial progress and keep us united and strong.

But if we kill freedom of industrial planning and action by unneeded taxes and Government controls we put ourselves—and our friends all over the world—in dire peril.

Nothing would please the Communists more.

JAMES H. MCGRAW, JR.,
President, McGraw-Hill Publishing Co., Inc.

Basing-Point System in New Jersey—New Jersey Paid Phantom Freight Charged From Points Outside New Jersey—New Jersey Mills Nonbase Mills—Moratorium Will Perpetuate the System

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. PATMAN. Mr. Speaker, under the basing-point pricing system, the cement industry had basing-point mills, nonbasing-point mills, arbitrary basing-point mills, and for big construction jobs ofttimes special basing-point mills. These points were moved around like pawns in a chess game for the purpose of checkmating any semblance of competition, or to procure the last extractable dollar on the sale and distribution of cement. If perchance a cement producer dared show independence by quoting prices off base, the Cement Trust would rapidly marshall its basing point forces for a punitive expedition which either wrecked or brought to brook the recalcitrant mill.

The State of New Jersey had within its borders in years past cement mills which were non-basing-point mills. That meant that every barrel of cement shipped by the New Jersey mills was priced on the basis of some mill or mills outside of New Jersey. That meant also that the State of New Jersey and its citizens paid freight charges which, by appropriate designation, is now known as phantom freight, phantom in the sense that the destination price for cement in New Jersey included more than the actual rail or water freight charge.

New Jersey in those years had no basing-point mills. I have found no indication that New Jersey ever had a basing-point mill. If the Cement Trust can show me that New Jersey and its citizens ever had the privilege of buying cement based on the mills within the boundaries of New Jersey, I shall be glad to have the information.

The situation with respect to New Jersey points up the problem of the sale and distribution of cement and other basing-point commodities. Granted the raw materials, the manpower, and the capital, any State or any subdivision of a State should enjoy its natural advantages and its citizens should not be deprived of such advantages by unnatural, monopolistic pricing systems.

Whole States, and parts of States having the necessary natural resources for the manufacture of cement, steel, and many other commodities, have been precluded from sharing in these industries because monopolies have used the basing-point system to control markets and prices.

ANTITRUST LAWS SHOULD NOT BE WEAKENED

If the citizens of New Jersey and the citizens of our other States and Territories could but calculate the cost of weakened antitrust laws, the attempt to pass moratorium legislation would come to an abrupt ending. In reality, I do not think calculation is necessary, but simply an awareness and a realization of the need for strengthening rather than weakening our antitrust laws.

Barbiturates

REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, Thrill Pills Can Ruin You, from Collier's for April 23, 1949. In this article Dr. Paul Dunbar, the Food and Drug Administrator, who is in one of the best positions to have an authoritative grasp of the situation, sums it up this way when asked what can be done to solve the pressing barbiturate problem:

We have always recognized that the Food, Drug, and Cosmetic Act is not well suited to the control of a traffic which lends itself so well to an undercover, bootleg type of operation. There are two approaches to the solution of the problem. One is the enactment of a Federal statute comparable to the Federal Narcotic Act. The other is the passage of uniform State and local legislation. We think, however, that it is unrealistic to expect uniform legislation and support of vigorous enforcement in 48 separate States. The alternative, then, it seems to me, is some form of Federal enactment similar to the Federal Narcotic Act.

Mr. Speaker, I have introduced a bill, H. R. 922, which would federally control the sale of barbiturates, which are just as damaging to the human being as other narcotic drugs. It is a cumulative poison. I hope the bill will pass the House promptly.

The article from Collier's to which I refer above, follows:

THRILL PILLS CAN RUIN YOU

(By Norman and Madelyn Carlisle)

As seemingly isolated events began to be revealed, it was plain to civic leaders in Dallas, Tex., that something strange and terrifying was taking place in one of the city's neighborhoods. High-school teachers reported odd conduct on the part of some of their students. One boy, who had always been quiet and responsible, came to school apparently intoxicated and had to be ejected from class. Others seemed to be in a drunken stupor.

The proprietor of a nearby restaurant protested that his place was being overrun by

patrons who insulted other customers, smashed dishes, and caused such trouble that they were ruining his business. The driver of an automobile seemed to go berserk and rammed his car into another one. In a hotel room that was a shambles, a woman was found dead.

However, these violent events were no mystery to the local police nor to the inspectors of the Federal Food and Drug Administration who were called in. The explanation was frightening, but simple. Someone in the neighborhood was indiscriminately selling barbiturates, the drugs that millions know as sleeping pills. The trail of destruction led them to a pharmacy, where they made a shocking discovery. The files of the pharmacist showed that in 2 months he had sold 126,000 capsules without prescriptions.

But what happened in Dallas was no isolated event.

In Cleveland a hysterical woman telephoned the police to come to her home immediately. When they arrived she was sobbing over her husband, who lay on the floor amid a litter of wrecked furniture. The rug was covered with blood. During a violent spell brought on by long and excessive use of barbiturates, the man had not only smashed the furniture but had cut off two of his fingers on a piece of broken mirror. When he came to in a hospital, he had no recollection of his mad spree.

In Providence, R. I., a murder suspect coolly admitted, that he could have killed somebody during one of his frequent barbiturate black-outs.

All over the country, in urban and rural communities alike, billions of these evil capsules are being sold through bootleg channels or by callous individuals who possess them legally. They are leaving behind them a terrifying trail of human wreckage because laws controlling their sale are either lax or nonexistent. In the last decade, the annual sales of barbiturates have increased 300 percent, reaching an all-time high in 1947. The death toll from barbiturates has jumped 600 percent in the same period, making them the Nation's No. 1 poison killer.

Of course, the history of barbiturates is not completely black. Since their discovery in 1903 they have become one of medicine's most valuable tools. Yet all doctors know that the drugs are frightfully dangerous when misused.

More than a decade ago the American Medical Association warned: "The evils of these drugs include habit formation, toxic cumulative action, [and] their substitution for alcoholic beverages for drunken episodes. Their improper use is a recognized causative factor in many motor accidents and in some criminal assaults."

AGONIZING MENTAL EXPERIENCE

When medical men describe the barbiturates as habit-forming rather than addicting, they do not mean that the habit is not hard to break. They are merely referring to the fact that the barbiturate user can stop taking the pills without suffering the great physical discomfort felt by the narcotic addict. But the mental torment in breaking the barbiturate habit is an agonizing experience.

Nevertheless, under the pressure of modern living, thousands are turning to barbiturates in search of escape. All the warnings in the world won't stop them as long as helter-skelter law enforcement makes it possible to obtain the drugs. The term "sleeping pill" has become a misnomer for substances which are increasingly being used as thrill drugs known as goof balls, yellow jackets, red devils, and red birds.

Just exactly what is the effect of these drugs that are causing both individual and national tragedy? The barbiturates are hypnotics, drugs which depress the central nervous system. They create a sort of twilight zone in which the brain is only partially inhibited. Certain parts of the brain are put out of action, other parts remain active, and the resultant effect is one of chaos similar to that which would take place in an engine if some of the parts were to move forward while others were in reverse.

In 1946 a Collier's article warned that the barbiturate drugs constituted a serious national menace. Since then there has been some legislative action aimed at curbing their illegal distribution. New York City, where the problem was particularly bad, set up its own enforcement agency. Pennsylvania put new teeth into its drug statutes. Illinois passed a model law.

While it would be pleasant to report that the situation is improving, the brutal truth is that day by day it is getting not better but worse—much worse. Typical of the cases still confronting authorities was that in Harlan County, Ky., where a miner went into a rage and tried to kill one of his fellow workers. He was found to possess a quantity of "yellow jackets." A few days later another worker collapsed and died after emerging from the mines. His death was diagnosed as barbiturate poisoning. It was then that the facts came to light. Peddlers were working the coal fields, persuading the workers to buy the capsules at prices of from 25 cents to $1 each.

To get an idea of the immensity of the problem, look at the deadly, upward march of barbiturate production as revealed by the United States Tariff Commission, which keeps a complete record of drug manufacture. A decade ago it was 250,000 pounds a year. In 1947, the last year for which final figures are available, it was 900,100 pounds.

Estimates place 1948 production at over 1,000,000 pounds. Translate that into terms of one-grain capsules and you can get some idea of what such a figure means. There are 7,000 grains in a pound—that means more than 50 one-grain capsules for every man, woman, and child in the United States.

Has there been any great medical advance calling for this startling increase in the use of barbiturates? Definitely no, says the American Medical Association. The AMA believes, furthermore, that vigorous editorials in its journal have helped to educate doctors to the need for greater caution in the prescription of the barbiturate drugs. Substantiation of this is found in a statement made in January of this year by the American Pharmaceutical Association, the organization which represents the Nation's pharmacies. It indicated that barbiturate prescriptions had actually dropped rather than increased.

Officials of the Food and Drug Administration, faced with the colossal task of stemming the rising tide of misused barbiturates, have a grim interpretation of where the vastly increased amount of drugs is going. They believe that a substantial part of the increase is pouring into illegitimate channels, which get the yellow and red capsules into the hands of people who should not be allowed to have sleeping pills at all.

The only Federal law to keep the barbiturates in legitimate channels is the Food, Drug and Cosmetic Act of 1938, which was never designed to cope with such a problem as this. Its shortcomings are made worse by the fact that there are only 230 harassed and overworked field agents in the Food and Drug Administration.

State backing for the hard-pressed Federal inspectors varies. Ten States have absolutely no laws against the indiscriminate sale of the drugs. They are Arizona, New Mexico, Texas, Wyoming, Kansas, Missouri, Iowa, Indiana, Kentucky, and Ohio. Other States have laws on the books, but back them up like one Eastern State which has one part-time official, a drugstore proprietor. There are only a few States, like New Jersey and Minnesota, where there are adequate laws and sufficient numbers of enforcement officers.

A DRUG-DRINK DISASTER

A further complication of the barbiturate problem is illustrated in a case described by Dr. Austin Smith, famed toxicologist of the American Medical Association. Dr. Smith tells of a college professor's wife who had never cared for alcoholic beverages, but was persuaded to try them with a barbiturate. In a few months she had become not only a habitual user of sleeping pills but also a confirmed alcoholic. This combination of alcoholism and the barbiturate habit is relatively common, but while alcoholism has received vast publicity, the related use of the drug has gone almost unnoticed.

The combination of the two brings on an effect that is explosive. Simultaneously, the user gets a drug that tries to put his system to sleep and alcohol which tries to stimulate it. The resultant tug of war for control can bring about a wallop that makes any strictly alcoholic concoction seem like an ice-cream soda.

The files of the Food and Drug Administration, the United States Public Health Service and the records of hospitals bulge with horrifying cases like that of a woman picked up on the streets of a southern city. Under the influence of the drugs, she had gone on a rampage, ending in a fall which broke both her jaws and knocked out several teeth. Investigators were shocked to discover that a few years earlier, the battered and haggard woman had been a famous beauty, a model for a department store. Now she was operating as a prostitute in a shabby hotel. She testified in court that her downfall resulted from her inability to escape the barbiturate habit.

Anyone who habitually uses the drugs to excess is engaging in a courtship with death. Figures released by the United States Public Health Service reveal that 436 people died of accidental barbiturate poisoning in 1946, the last year for which such statistics are available. On top of this were 538 sleeping-pill suicides. In addition, many deaths officially attributed to other causes may have resulted from barbiturate poisoning.

The confirmed user of barbiturates has plenty of chances to kill himself. He may die from slow poisoning. His weakened system may succumb to illnesses or injuries which he might otherwise have survived. He may be killed in an accident resulting from a barbiturate black-out. He may commit suicide by taking an overdose.

Where do people get these dangerous hypnotics? The answer to that question involves the whole process of barbiturate manufacture and distribution. Because the Federal law and most State laws do not require careful records of their distribution, manufacturers and wholesalers do not find it necessary to exercise great care in the sale of their product. The result is that large quantities of the barbiturates are falling into the hands of unscrupulous distributors.

In Baltimore, police noticed that a certain neighborhood had an outbreak of crime. Men picked up in the area were found to possess barbiturate capsules. The crime wave was traced to a tavern, whose bartender was selling "red devils" as a profitable side line.

When most of the Nation's 55,000 pharmacies abide by high standards of ethics, a few callous pharmacists are enough to release a flood of illicit barbiturates. A drug store in a small Middle Western town was found to have sold 9,268 capsules without prescriptions in 4 months. A California drug store had prescriptions for just 28 capsules in its files; for the period they covered it had sold 10,853 without prescriptions.

What can be done to solve the pressing barbiturate problem? Dr. Paul Dunbar, the Food and Drug Administrator, who is in one of the best positions to have an authoritative grasp of the situation, sums it up this way:

"We have always recognized that the Food, Drug, and Cosmetic Act is not well suited to the control of a traffic which lends itself so well to an undercover, bootleg type of operation. There are two approaches to the solution of the problem. One is the enactment of a Federal statute comparable to the Federal Narcotic Act. The other is the passage of uniform State and local legislation. * * * We think, however, that it is unrealistic to expect uniform legislation and support of vigorous enforcements in 48 separate States. The alternative, then, it seems to us, is some form of Federal enactment similar to the Federal Narcotic Act."

Just such a bill was proposed to the Seventy-ninth Congress by Congresswoman EDITH NOURSE ROGERS of Massachusetts. The bill was killed in committee. It met a similar fate in the Eightieth Congress. Undaunted, Mrs. ROGERS plans to reintroduce the bill to the new Congress. The measure would:

Restrict sales to prescriptions.

Forbid the refilling of prescriptions, except those designated by a doctor.

Limit delivery of barbiturates to pharmacists and physicians.

Place tight controls on manufacturers.

Provide stiff penalties for violations.

While the Federal measure waits its turn in the full hoppers of Eight-first Congress legislation, legislators in such States as Ohio, California, and New York are fighting hard to get action on the State front. Whatever the method chosen for regulation, no one can deny that the time has come to do something to stop the kind of murder by capsule that occurred in a recent case cracked by Food and Drug inspectors.

GRIM PICTURE OF DISASTER

In a squalid apartment in Kansas City, police found the body of a woman. The evidence in that one-room hell showed that before she died, alone and haunted in the dim half world of the sleeping-pill addict, she had become an animal, crawling about on all fours, eating food off the floor, tearing at the furnishings of the room.

Amid the debris, inspectors found a little white box containing a few red capsules. After a search, they located the woman's husband. Head buried in his hands, he told them a story of despair. For years his wife had taken increasing quantities of the capsules that had transformed her from a decent housewife into a half-demented shadow of herself. He had pleaded with her to go to a sanatorium, but she had always refused. Eventually they had separated.

Where had she obtained the capsules? They had come by mail from a druggist in California, a man named Harry Skepner. The man knew this much because his wife had repeatedly received c. o. d. packages that cost her from $20 to $78, for bottles of from 500 to 1,000 tablets. The inspectors asked him to join them in an experiment. The man signed his wife's name to a note addressed to Skepner, asking for another order. In due course of time a box came, addressed to the dead woman. The inspectors went to work to round up other cases, and found that this single Hollywood druggist was selling tens of thousands of the capsules to people all over the country.

Harry Skepner was found guilty, fined $2,000, and put on probation for 3 years. But every American may well ponder the question: How many like him are going to go right on doing business unless strong laws, strongly enforced, stop their traffic in misery and death?

Repeal of Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 27, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include a newspaper article from the Roanoke World News of April 28, 1949, concerning the recommendation of the City Council of Roanoke for the outright repeal of the Taft-Hartley Labor Act:

CITY COUNCIL ASKS REPEAL OF T-H LAW—HUNTER, EDWARDS OPPOSE ACTION TO NO AVAIL

City council was on record today, by a narrow 3 to 2 vote, as favoring the outright repeal of the Taft-Hartley Labor Act.

A resolution calling on the Virginia delegation in Congress to work for repeal of the controversial labor legislation was adopted by the one-vote margin last night.

It urges the Virginia Congressmen to work for enactment of a fair national labor law as advocated by the President.

Offered by Councilman Dan Cronin near the end of a 2-hour special meeting, the resolution, written in Mr. Cronin's handwriting, brought strong protest from Councilman Richard T. Edwards and Mayor W. P. Hunter.

Vice Mayor Benton O. Dillard seconded the resolution, which states flatly that "the best interest of the majority of Roanokers will be served by repeal of the Taft-Hartley Act."

On a showdown vote, Councilman A. R. Minton joined Mr. Cronin and Mr. Dillard and the resolution was adopted. Mr. Edwards and Mayor Hunter dissenting.

Vice Mayor Dillard insisted that his colleagues, as Democrats, should vote for the resolution since repeal of the T-H law had been recommended by President Truman and the National Democratic Committee.

Mayor Hunter and Mr. Edwards reasoned that members of council, as individuals, were free to write their Congressman and express their own wishes but as a body council should take no official action.

In adopting such a resolution, they argued, council was in effect telling the Virginia delegation that Roanoke wants the act repealed, whereas in reality no petitions or requests for repeal have been submitted to the governing body.

Mr. Cronin's resolution reads as follows:

"Whereas the city of Roanoke is largely an industrial area and the prosperity and general welfare of the city and its citizens are best served when its citizens in industry are employed under favorable conditions and with adequate compensation; and

"Whereas any strife between management and labor in the city of Roanoke would result in losses to both sides and the public as well; and

"Whereas any labor legislation that puts either management or labor at a disadvantage in free collective bargaining is a constant threat to good relations between employers and employees in the city of Roanoke; and

"Whereas the general economic trend appears to be downward and such conditions tend to bring about differences between management and labor; and

"Whereas the so-called Taft-Hartley labor law places a large part of our population in an inferior category and denies to labor the same speedy processes as are granted to management in matters of unfair practices; and

"Whereas labor is fearful lest the machinery of the so-called Taft-Hartley Act break down the solidarity of its ranks and result in regression in the field of working conditions and wages; and

"Whereas any wage reductions in Roanoke industry would result in having a serious adverse effect upon the business interest in Roanoke as well as upon the standards of living of our citizens and the general prosperity of the city:

"Be it resolved by the Council of the City of Roanoke, Va., That the best interests of the majority of the citizens of Roanoke will be served by the outright repeal of the so-called Taft-Hartley Act by the Congress of the United States and the enactment of a fair and equitable national labor law as advocated by the President; and be it further

"Resolved, That the Honorable CLARENCE BURTON and Members of the Virginia delegation in Congress be apprised of this action and urged to work toward the repeal of the so-called Taft-Hartley Act and the enactment of a fair national labor law as advovocated by the President."

Must We Use Our Money To Buy Things From One Part of the British Empire To Give These Things to Another Part of the British Empire?

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Friday, April 29, 1949

Mr. WHITE of Idaho. Mr. Speaker, our generosity is boundless—when it comes to dealing with foreigners. We are buying from Canada to give to England. For the information of my colleagues there is inserted herewith a reprint clipped from the Pathfinder magazine of April 6, 1949:

CANADA TRIMS TAXES

Stan Clarke lives with his wife and five young daughters in a modest Toronto home, earns $51.50 a week as a milk-route supervisor. His 1948 income tax equaled 2 weeks' pay.

Clarke generally retires early because he has to start work at 4:30 a. m. But one night last week he stayed up to hear good news from Douglas Abbott, Minister of Finance in the St. Laurent Cabinet.

The good news came from the Abbott budget for the fiscal year beginning April 1. The budget was presented at a night session of the House of Commons. It dropped one out of every four taxpayers, 750,000 in all, including Stan Clarke, from the income-tax rolls. It also passed out income-tax reductions to 2,000,000 others, ranging from healthy slices in the lower brackets to cuts of 5 percent for the select with incomes of $75,000 and up.

POP AND PIPES

Off, too, went the taxes on soft drinks, candy, gum, railway and plane tickets, pullman berths, parlor-car seats, long-distance telephone calls and telegrams. Down went the taxes on jewelry, cosmetics, luggage, pens and pencils, cigarette lighters and pipes.

So far as the government was concerned, the reductions were simply good business.

Besides cutting taxes, the government in March refunded $230,000,000 on the forced-savings program which was in effect during the war. And an extra $370,000,000 will be paid to farmers for wheat sold above the price advanced by the government. All this money will be in the people's hands. It will increase Canada's purchasing power by $1,000,000,000. Most of this will be spent at home and will reduce the amount of goods Canada must sell abroad to keep on an even economic keel.

Canada, chiefly an exporting country, is enjoying unprecedented prosperity because the United States has allotted it a good share of Marshall-plan orders.

Frederic C. Walcott

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bridgeport (Conn.) Post of May 1, 1949:

FREDERIC C. WALCOTT

Sportsmen, conservationists, and all lovers of the out-of-doors who want to see America's great heritage enhanced, protected, and improved will mourn the passing of former United States Senator Frederic C. Walcott, who died a few days ago at the age of 79.

In his death, the cause of conservation lost a great and effective champion.

As we review the life of Frederic Walcott, we cannot help but be impressed with his versatility and the extraordinary nature and extent of his public services. He had made a great success as a banker and industrialist before he began to take increasing part in public affairs both on a State and National basis.

Herbert Hoover who knew a good man when he saw one, drafted Mr. Walcott at the conclusion of World War I to help in the rehabilitation of starving Europe. His acquaintance with Mr. Hoover actually began in 1915, when Mr. Walcott was abroad helping to arrange war loans for France and Italy. While there he was asked by the Rockefeller Foundation to join Herbert Hoover in London to investigate food conditions in Belgium and Poland. The result was a flood of aid for both countries, and Mr. Walcott personally supervised the relief work in Poland, gaining the everlasting gratitude of the Poles.

He served as United States Senator from Connecticut from 1928 to 1934, and while in the Senate helped to write the Reconstruction Finance Corporation bill—a measure which proved of such indispensable service to the Nation during the depression.

During all of these public services, he had kept up an unremitting fight for national conservation and had become recognized by all interested in that subject as one of its great students and champions. In our State, he served as fish and game commissioner from 1921 to 1929, and after his term in the Senate, served as State public welfare commissioner, during which period he personally sponsored and brought into being the old-age assistance bureau, the department of aid to the blind, and other State departments engaged in welfare and humanitarian work. He approached every problem from the most public-spirited viewpoint, and his active vigorous mind never ceased seeking new achievements.

In the course of his career, Mr. Walcott made a multitude of friends, was loaded with honors, both by our own and foreign governments, was the recipient of honorary degrees from many universities, and became eventually almost a legendary figure of public service. With all of that he was a modest, unassuming gentleman, a loyal and unwavering friend, and a tower of strength to every enterprise with which he was associated.

Socialized Medicine Explored

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. O'HARA of Minnesota. Mr. Speaker, outstanding young editors in our State are Larry Paulson, editor of the Sherburn Advance-Standard, and D. R. Peterson and Martha Peterson, co-editors of the Truman Tribune. An excellent editorial by Larry Paulson and the comments thereon by the editors Peterson are timely and appropriate. The editorial follows:

Larry Paulson, editor of the Sherburn Advance-Standard, brings to mind the following question confronting the American people and the medical profession:

"SOCIALIZED MEDICINE EXPLORED

"Let this editorial not be an endorsement of socialized medicine for we do feel that it is not a solution of today's problem. This is proven in the experiment carried out in England.

"But if some plan cannot be devised to give everyone the right of having good medical care we believe the Government will take the job out of the hands of the medical profession and try doing the chore themselves. How they will succeed is questionable.

"Too few doctors are willing to go out into the country and set up general practices. In the larger centers doctors are specialists and enjoy wonderful office hours with good incomes. Here in the small town every doctor is literally worked long hours with twice the patients he should have to treat. An hour's wait when there is no emergency is the rule, sometimes it is longer.

"The public is not too concerned about the cost as money is still plentiful but the time is soon at hand when those suffering from chronic illnesses of long standing will be unable to pay their way."

We do not believe socialized medicine or compulsory health insurance are the answer to the rural people's medical problems. The niche in American freedom would be too deep. The politics involved could easily be the worst type our country has ever witnessed. However, if Uncle Sam would offer to finance the education of young men who desired to enter the medical profession, and in turn have the graduates practice for a fixed period of time in needy rural communities, the problem might be minimized. The cost of such a program would be but a fraction of that involved socializing medicine, and there would be no infringement on American freedom. No doubt a certain percentage of the graduates would grow fond of the small communities, and establish permanent practices where there is now such a demand for doctors. The replacements from the various States' medical schools might easily be heavy enough to take care of the needy communities, where graduates decided not to establish permanent practice. Such a plan would be strictly optional for the medic-to-be, and would involve a minimum amount of regimentation.

Farm Program

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. LECOMPTE. Mr. Speaker, in connection with the proposal of Secretary Brannan with respect to a new farm bill on the subject of price controls, benefit payments, and so forth, I desire to present a statement from Mr. E. Howard Hill, president of the Iowa Farm Bureau Federation, the largest organization of farmers in the State of Iowa. Since Iowa is the No. 1 agriculture State, the views of Mr. Hill and the position of his organization certainly must command attention in the consideration of this legislation. Mr. Hill's letter reads as follows:

IOWA FARM BUREAU FEDERATION,
Des Moines, Iowa, April 28, 1949.

Hon. KARL M. LECOMPTE,
House Office Building,
Washington, D. C.

DEAR KARL: I thought you might be interested in the statement issued by the Iowa Farm Bureau board of directors today concerning the farm program. The statement is as follows:

"We reiterate our faith in the Agricultural Act of 1948 as a long-time farm program. We see no particular advantages in the more recent suggestions for agricultural programs over this act. If compensatory payments are necessary and advisable to support the price of perishable commodities, they are already authorized in the act of 1948 to be used at the discretion of the Secretary of Agriculture.

"In this act the parity formula has been modernized to bring into proper relationship the various crop and livestock commodity prices and to encourage livestock production. The Secretary of Agriculture is authorized to proclaim acreage allotments and to submit marketing quotas to a referendum. When either of these is in effect, the minimum support on basics is 72 percent of parity and in more practical application, 78 percent of parity. The Secretary has discretionary authority to support practically all products up to 90 percent of parity if he deems it advisable and may go even higher in the interests of national security.

"The 1948 act contains incentives to shift production to commodities in short supply with a minimum of controls and of cost to the taxpayer. It provides for forward pricing as an aid to intelligent farm production planning.

"We believe reasonable supports or floors are vital to the agricultural economy. However, farmers prefer to obtain parity prices through regular trade channels if and when possible. Sound monetary and fiscal policy, high industrial production, full employment, world trade and a healthy economy are extremely important to long-time agricultural prosperity."

In other words, it is our belief that the present Agricultural Act includes adequate provisions for the support of farm prices and at the same time enough flexibility and discretionary authority for the Secretary of Agriculture to prevent some of the mistakes

in administering the farm program that might otherwise occur.

With kindest personal regards, I am

Sincerely yours,

E. HOWARD HILL, *President.*

Our Economic Missionaries in Europe

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Anne O'Hare McCormick from the New York Times of May 2, 1949:

ABROAD—OUR ECONOMIC MISSIONARIES IN EUROPE

(By Anne O'Hare McCormick)

The influence of the American administrators of ECA on the changing pattern of Europe is one aspect of the Marshall plan that has not been sufficiently noted. They are at work in every country receiving American aid, advising, inspecting, passing on projects, allocating funds. Nothing quite like these economic missionaries has ever been let loose on the world. Certainly no group has ever had such power in the economic affairs of other countries as the teams of specialists, technicians and businessmen who implement the ERP on the local level. They are pioneers in a novel enterprise, learning more than any foreigners ever knew of other peoples' business and bringing to these other people American ideals, methods, know-how, and the enthusiasm for organizing that distinguishes the American executive.

These ECA missions are among the most striking phenomena on the European scene. They have a peculiar relationship with governments that only embassies have hitherto enjoyed. In some respects it is more intimate. Government ledgers are open to them, and so are other balance sheets. Bankers and industrialists are as keen to show them as they are eager to show producers how to step up production. The observer who watches them in operation wonders if the impact of the advisers that go with American aid will not have a more lasting effect than the funds they help to distribute.

NOT ALL SUCCESS

The ECA has many functions. Sometimes it seems more than a little brash in tackling problems Europeans have been struggling with for centuries as if nobody had ever dealt with them before. To barge in on another nation's economy with proposals for reform requires enormous tact and a pretty definite assurance that the new plans will work. Occasionally they don't; very often they go against the grain. In economics as in politics we are inclined to take things out of their local context and put them into the American framework. This is unrealistic in both fields.

Take the case of Italy as an example. The Italians are perhaps more eager than most people to cooperate with us. In their desire to reestablish their place in the democratic community, they are anxious to cooperate with all the Western Powers, and have succeeded so well with France that French-Italian ties are closer today than at any time in the history of the two countries. Though France is rich and Italy is poor, their internal and external problems are somewhat the same, and French concern in averting Communist rule in Italy by strengthening the present Government is one reason why France favors putting the former colonies under Italian administration.

It is rather paradoxical that American policy is to take away all the colonies except Somaliland with one hand while working with the other to help finance a scheme to find outlets for Italy's excess population. The interrelated problems that cast dark shadows over the bright picture of recovery in Italy are overpopulation and unemployment. Last week the De Gasperi government announced a double attack on these evils. It came out with a 4-year plan of emigration to relocate nearly a million citizens in other countries and a program of land distribution to divide 3,000,000 acres—government lands and large estates—among the poor peasants.

In both schemes the government has the technical advice as well as the financial help of ECA. American experts have already made plans to develop one district as a kind of pilot project combining land reclamation, road-building, and housing. They know that there is not enough ground on the rocky peninsula to make any distribution scheme more than a palliative, but they desire to show the possibilities of opening up and making better use of every acre of available land.

TWO POINTS OF VIEW

This is an illustration of the kind of work the ECA advisers are engaged in. It is easy to see how influential they can be in shaping the policy as well as the economy of the countries they serve. Most of them are hand-picked men, keen on the job. The agricultural experts in Italy are fervently interested in solving the land problem. They work long hours on it. In their approach to conditions without parallel in the United States they are unusually free from preconceived ideas.

Yet on many points they run into differences which emphasize how delicate their mission is. For instance, they claim good rural dwellings can be built for much less money than the Italians spend on constructing houses with walls three times thicker than they need to be. Italian engineers do an excellent job, they say, in road-building and public works, but they are perfectionsist.

The writer discussed the subject with a landowner in Tuscany who runs a big estate on the mezzadri, or 50–50, system. He admitted that the solid two-family houses he provides for his tenants cannot be built for less than $12,000. "We expect our houses to last for 200 years," he explained. "The same families occupy them for generations even when they do not own the land. Ours is a different way of life from yours, not geared to change, and while, of course, your methods are modern and efficient, and do us a lot of good, perhaps they are better suited to a place where people are on the move than to an old land where we have to stay put and can't replace things easily."

Federal Credit Unions—Federal Credit Union Act Sponsored by Late United States Senator Morris Sheppard, of Texas—Progress of Credit Unions

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. PATMAN. Mr. Speaker, the Two-States Press, of Texarkana, United States of America, for April 28, 1949, carried the following article concerning the local credit union. It is as follows:

LOCAL CREDIT UNION TO BE HONORED

The Morris Sheppard Texarkana Federal Credit Union will be honored for its distinction of holding Federal charter No. 1 during the May 13–15 meeting of Credit Union National Association and the Texas Credit Union League in Houston, it was made known here Monday.

Miss Jean Coopwood, secretary-treasurer of the credit union, has received a letter from James M. Barry, managing director of the TCUL, of Dallas, requesting that the local union furnish a large picture of the late Senator Morris Sheppard for public and prominent display. Barry's letter also requested a history of the local union officers and a history of the organization.

His letter said, in part:

"In connection with the forthcoming meeting of the Texas Credit Union in Houston next month and the once-in-a-lifetime meeting in Houston of the Credit Union National Association, we are desirous of honoring your credit union as Federal Credit Union No. 1. We are proud and always have been proud that the late Senator Sheppard sponsored the Federal Credit Union Act and that we in Texas have been honored by having charter No. 1 with his name in the title of your credit union."

Miss Coopwood said she was currently engaged in compiling a history of the union and would send the pictures as requested. Miss Coopwood said Mrs. Richard Arnold had made available to the union a large picture of her father, the late Senator Sheppard.

It is not known at this time whether an official of the union will attend the Houston meetings to represent the local organization.

Joe C. Dixon is president and H. J. Schlink vice president of the credit union.

In 1934 the Honorable Morris Sheppard, who, incidentally, was one of the greatest humanitarians I ever knew, was sponsoring the Federal Credit Union Act. I appreciate the efforts being made by my home town credit union to honor the late Senator Morris Sheppard. Instead of introducing a bill myself, I joined in the effort to get his bill passed. It was S. 1639. The bill passed the Senate May 4, 1934, and it passed the House June 16, 1934, just 2 days before the end of that session of Congress. When the bill was before the House I made the following statement concerning it, which appears on page 12225 of the CONGRESSIONAL RECORD for June 16, 1934:

Mr. Speaker, this bill comes before the House with the unanimous support of the Committee on Banking and Currency. I wish to commend the Committee on Banking and Currency for bringing this bill out. It is sponsored by Senator Sheppard, of Texas, in the Senate. This is his bill. I think it one of the most important and most meritorious bills we have had before us for consideration at this session of Congress. There are 2,200 credit unions in the Nation today. There are not so many credit unions in this country as there are in other countries. There are literally thousands of them in other countries. These are what are known as baby banks. They serve a great need. Between two and three billion dollars' purchasing power each year is destroyed by reason of excessive interest rates that are paid. This bill is sponsored by public-spirited citizens in the interest of the poorest people of our Nation, one of whom not so long ago borrowed $30 from a loan office and actually paid back $1,080, and was then sued for the original $30.

This bill is opposed by loan sharks and shotgun loan offices. It serves a great need, as I said. Although we have 2,200 of them

in the United States, I think the greatest tribute I can pay to the services of those in charge of these baby banks is that during the depression not a one of them failed. I again want to commend the Committee on Banking and Currency for bringing this very meritorious measure before us for consideration and passage.

The bill was lost in the confusion at the end of the session the night of the 18th of June, and it was only after much trouble and investigation that the bill was finally located and signed by both the Speaker of the House and the Vice President of the United States. It was my pleasure to do the footwork which led to the location of the bill. It was later approved by President Franklin D. Roosevelt, June 26, 1934.

I have always been a strong advocate of Federal credit unions, and I have been the author of several bills to strengthen the act. The following statement discloses the status of the Federal credit unions in Texas, and also compares their growth with the State-chartered credit unions. It is as follows:

Development of Federal credit unions in the State of Texas 1940–48, inclusive

Year ending Dec. 31—	Number operating	Members	Assets	Loans outstanding
1940	267	63,568	$5,120,200	$4,200,571
1941	298	74,409	6,646,239	5,071,474
1942	289	65,263	6,262,855	2,641,010
1943	264	60,914	6,557,266	2,018,192
1944	244	56,937	7,030,295	1,901,739
1945	235	55,065	7,793,201	2,023,970
1946	237	60,671	9,587,329	3,636,512
1947	245	73,200	12,419,841	6,401,042
1948	268	90,460	16,665,069	11,246,325

Development of State-chartered credit unions in the State of Texas, 1940–48, inclusive

Year ending Dec. 31—	Number operating	Members	Assets	Loans outstanding
1940	89	32,910	$3,176,277	$2,724,237
1941	90	23,985	3,500,000	3,100,000
1942	102	24,233	3,478,502	1,666,151
1943	88	19,859	3,617,758	1,296,617
1944	84	21,015	3,603,765	1,161,873
1945	84	21,152	4,001,991	1,205,926
1946	83	21,407	4,592,643	1,801,190
1947	84	26,204	5,612,468	2,981,042
1948	85	31,204	7,346,460	4,963,053

WHAT IS A CREDIT UNION?

The American Federation of Labor, 901 Massachusetts Avenue, NW., Washington, D. C., has prepared an interesting leaflet on credit unions. I have taken the liberty of making a few changes to bring the folder up to date, and I am inserting it herewith. It is as follows:

CREDIT UNIONS

1. What is a credit union? A credit union is an association of persons, united by some common bond or community of interest, joined together in a cooperative endeavor for the following purposes:

(a) To encourage thrift by providing a safe, convenient, and attractive medium for the investment of the savings of its members.

(b) To eliminate usury and increase the purchasing power of its members by enabling them to borrow for productive and other beneficial purposes at a reasonable cost.

(c) To train its members in business methods and self-government and bring them to a full realization of the value of cooperation.

(d) The credit union operates through a board of directors, a credit committee and a supervisory committee elected by and from the members.

2. When was the first credit union organized? Frederick William Raiffeisen organized the first credit union in Germany in 1848. Today, they are operating in almost every country of the world. The first credit union charter in the United States of America was granted in Massachusetts in 1909. There are 12,000 credit unions operating throughout the United States, Canada, Hawaii, Jamaica, and Panama Canal Zone.

3. How does a credit union differ from an ordinary bank?

(a) It promotes systematic thrift by encouraging its members to save small sums at regular intervals.

(b) A credit union can be of service to all—such as a community organization, church parish, school officers' organization, labor unions, factory workers, lodge members, etc.

(c) No elaborate offices, furniture or, in most cases at least, no salaried officials except a treasurer.

(d) Loans are made only to members and for provident and productive purposes.

(e) Character, honesty, and industry are required for membership and on this basis loans are made.

(f) Control is vested in the members on the cooperative principle of one member, one vote.

(g) All profits revert to the members after expenses of operation are deducted.

4. What classes of people do credit unions serve? Groups bound together by a common bond of interest, e. g., the members of a parish, of a labor union, the workers in a factory, groups in which personal acquaintance will serve as an impetus to the work. The size does not really matter. Credit unions have been found to work well in groups of from 50 to 5,000, as long as some bond of interest exists.

5. Why should I become a shareholder?

(a) Every person should cultivate the habit of thrift.

(b) An accident, illness, unusual family condition, or other provident reasons may at some future time, necessitate your needing more money than you have readily available.

(c) Every person should grasp the opportunity to render an unselfish service to his or her fellow workers.

6. How may I become a shareholder? By paying an entrance fee of 25 cents and subscribing and paying either 25 cents, 50 cents, $1 or any possible amount on a $5 share of stock. Only one entrance fee is required.

7. What liability does the shareholder assume? There is no liability to the shareholder, other than obligations agreed upon when subscribing to shares, or when making a loan.

8. What protection is offered shareholders?

(a) The treasurer is bonded.

(b) Payments and withdrawals are made by check and all checks must be signed by the treasurer and countersigned by the president of the board of directors.

(c) All cash receipts must be deposited regularly in a bank the accounts of which are federally insured.

(d) All record books are examined monthly or quarterly by the supervisory committee of the credit union as decided upon by them, as well as once a year by the Bureau of Federal Credit Unions or State government authorities.

9. May a member withdraw at will? Yes, a member may withdraw his shares and deposits on any day the credit union is open for business. Should the withdrawal be of a large amount, a specified period of time may be required. All withdrawals must be made at the office. No member may withdraw shares or deposits who owes the credit union money or is the guarantor of any loan.

10. What constitutes the capital of a credit union? The capital of a credit union consists of the pooled savings paid in on shares and deposits by members.

11. How is the capital used?

(a) Loans are made to members for productive and provident purposes, thereby helping the member to help himself. For instance: To pay dental bills, for auto financing, to buy clothing, to buy furniture, to buy other necessities, to pay bills, to pay taxes, to pay insurance, for medical purposes, for educational purposes, for vacation purposes, for business purposes, for building purposes, to cooperatives.

(b) According to the Federal credit union report of 1947 outstanding loans amounted to $91,372,197. During the entire period of Federal credit union operation over 8,000,000 loans have been made to members. These loans total more than $1,000,000,000.

12. Your credit union has loan protection insurance. Loan protection is a plan whereby your credit union is insured against loss due to the death or total and permanent disability of borrowers.

In other words, if an insured borrower becomes totally and permanently disabled before attaining age 60, or becomes deceased before attaining age 70, the balance of the loan is paid in full and the security offered by the borrower is released from any liability.

This service is helpful to the credit union members because the officers will not be obliged to collect further payments from the widow and cosigners, or take over chattels or shares that may have been given as security. It is helpful to the borrower, for he does not have to worry over who will pay the loan if he dies or becomes totally and permanently disabled.

13. What interest rate is charged on loans? The interest rate on loans is never more than 1 percent per month on the unpaid balance or 1 percent per month on each dollar not repaid.

14. How does a member apply for a loan? By filling out an application form, giving full information as to the amount required, purpose of the loan, duration of loan, security offered, and so forth.

15. What constitutes the income of a credit union?

(a) The interest paid on loans by borrowing members.

(b) Interest, if any, on bank balance, including in many credit unions deposits in savings banks.

(c) Dividends on any investments which may have been made.

16. What is done with the yearly earnings of a credit union? After operating costs are deducted and 20 percent set aside in the reserve account for bad loans, the dividend to be paid to members on their shares is decided at an annual general membership meeting.

17. How should a group proceed to organize a credit union?

BILL TO STRENGTHEN CREDIT UNION ACT

At this session of Congress, March 3, 1949, I introduced a bill (H. R. 3201) concerning credit unions, which is as follows:

A bill to amend the Federal Credit Union Act

Be it enacted, etc., That paragraph (5) of section 7 of the Federal Credit Union Act (12 U. S. C., secs. 1751–72) is hereby amended by striking out in the first sentence thereof the following: "with maturities not exceeding 2 years."

SEC. 2. Paragraph (7) of section 7 of the Federal Credit Union Act is hereby amended by striking out "and" after "(d)" and by inserting before the period at the end of such paragraph (7) a semicolon and the following: "and (e) in shares of central credit unions."

SEC. 3. The second sentence of section 10 of the Federal Credit Union Act is hereby amended to read as follows: "The annual

meeting of each Federal credit union shall be held at such time during the following January, February, or March, and at such place as its bylaws shall prescribe."

SEC. 4. The fourth sentence of subsection (d) of section 11 of the Federal Credit Union Act is hereby amended to read as follows: "No loan in excess of $500 shall be made without adequate security, and no loan shall be made to any member which shall cause such member to become indebted to the Federal credit union in the aggregate, upon loans made to such member, in excess of $200 or 10 percent of the Federal credit union's paid-in and unimpaired capital and surplus, whichever is greater."

SEC. 5. Section 12 of the Federal Credit Union Act is hereby amended to read as follows:

"SEC. 12. All entrance fees and fines provided by the bylaws and 20 percent of the net earnings of each year, before the declaration of any dividend, shall be set aside, subject to terms and conditions specified in the bylaws, as a reserve fund: *Provided, however,* That when the reserve fund thus established shall equal 10 percent of the total amount of members' shares on deposit, no further transfer to the reserve fund from net earnings shall be required except as needed to maintain this 10 percent ratio: *And provided further,* That no transfer to the reserve fund in excess of fees and fines and 20 percent of net earnings shall be required in any one year.

OBJECTIVES OF BILL H. R. 3201

The object of this bill is to make certain amendments to the Federal Credit Union Act, as follows:

First. Section 7 of the Federal Credit Union Act reads, in part, as follows:

Powers: A Federal credit union shall have succession in its corporate name during its existence and shall have power—

* * * * *

(5) To make loans with maturities not exceeding 2 years to its members for provident or productive purposes upon such terms and conditions as this chapter and the bylaws provide and as the credit committee may approve, at rates of interest not exceeding 1 percent per month on unpaid balances (inclusive of all charges incident to making the loan): *Provided,* That no loans to a director, officer, or member of a committee shall exceed the amount of his holdings in the Federal credit union as represented by shares thereof.

It is proposed to amend paragraph (5) of section 7 by striking out the words: "with maturities not exceeding 2 years."

This would empower a Federal credit union to extend its loans over a period greater than 2 years. It would leave the terms of repayment of loans in the hands of the board of directors and credit committee. This is permissible now under practically all State credit-union laws.

Second. Section 7 of the Federal Credit Union Act reads, in part, as follows:

Powers: A Federal credit union shall have succession in its corporate name during its existence and shall have power—

* * * * *

(7) To invest its funds (a) in loans exclusively to members; (b) in obligations of the United States of America, or securities fully guaranteed as to principal and interest thereby; (c) in accordance with rules and regulations prescribed by the Governor, in loans to other credit unions in the total amount not exceeding 25 percent of its paid-in and unimpaired capital and surplus; (d) and in shares or accounts of Federal savings and loan associations.

It is proposed to amend paragraph (7) of section 7 by striking out the word "and" appearing as the first word in subsection (d) thereof and by striking out the period at the end of subsection (d) thereof and by substituting for such period a semicolon and by adding after such semicolon "and (e) in shares of central credit unions."

Federal credit unions now have the power to invest their savings in Federal savings and loan associations. This change would make it possible for them to deposit their funds in their own central organizations. Many States do now have central credit unions in which other credit unions may deposit funds and from which other credit unions may borrow. For example, there is an excellent central credit union of this type in North Dakota, one in Minnesota, one in Rhode Island, and several other States. It seems just as reasonable for Federal credit unions to be able to invest their funds in central credit unions as it is for them to invest funds in Federal savings and loan associations.

Third. Section 10 of the Federal Credit Union Act reads, in part, as follows:

Members' meetings: The fiscal year of all Federal credit unions shall end December 31. The annual meeting of each Federal credit union shall be held at such time during the month of the following January and at such place as its bylaws shall prescribe.

It is proposed to change the second sentence of section 10 to read as follows:

The annual meeting of each Federal credit union shall be held at such time during the following January, February, or March, and at such place as its bylaws shall prescribe.

This would permit Federal credit unions to hold their annual meetings at any time during January, February or March, which in many cases would be a great convenience. The members of Federal credit unions are in most cases employees of large corporations and are oftentimes unusually busy during the month of January, which is frequently the close of the corporation's year. It is believed that larger attendance could be obtained at the annual meeting in many cases if the meeting could be held in some month other than January.

Fourth. Section 11, subsection (d), of the Federal Credit Union Act reads in part as follows:

No loan shall be made to any member which shall cause such member to become indebted to the Federal credit union in the aggregate, upon loans made to such member, in excess of $200 or 10 percent of the Federal credit union's paid-in and unimpaired capital and surplus, whichever is greater, or in excess of $300 unless such excess over $300 is adequately secured.

It is proposed to amend the fourth sentence of subsection (d) of section 11 to read as follows:

No loan in excess of $500 shall be made without adequate security and no loan shall be made to any member which shall cause such member to become indebted to the Federal credit union in the aggregate, upon loans made to such member, in excess of $200 or 10 percent of the Federal credit union's paid-in and unimpaired capital and surplus, whichever is greater.

This change increases the amount which may be loaned without security. Several years ago the Federal Credit Union Act was amended to increase the amount which may be loaned without security to $300. It is felt that in view of present monetary conditions $500 is a reasonable limit. The management of any one Federal credit union of course has the right to set a smaller limit based on conditions within the particular group.

Fifth. Section 12 of the Federal Credit Union Act now reads as follows:

Reserves: All entrance fees and fines provided by the bylaws and 20 percent of the net earnings of each year, before the declaration of any dividends, shall be set aside, subject to terms and conditions specified in the bylaws, as a reserve fund against possible bad loans.

It is proposed to amend section 12 so it will read as follows:

SEC. 12. All entrance fees and fines provided by the bylaws and 20 percent of the net earnings of each year, before the declaration of any dividend, shall be set aside, subject to terms and conditions specified in the bylaws, as a reserve fund: *Provided, however,* That when the reserve fund thus established shall equal 10 percent of the total amount of members' shares on deposit, no further transfer to the reserve fund from net earnings shall be required except as needed to maintain this 10 percent ratio: *And provided further,* That no transfer to the reserve fund in excess of fees and fines and 20 percent of net earnings shall be required in any one year.

At present the Federal credit unions must set aside fees and fines and 20 percent of net earnings each year in a reserve fund. This change would make it unnecessary for the Federal credit union to set aside anything in the reserve fund after the reserve fund is equal to 10 percent of the total amount of the members' shares on deposit. It would protect the credit union against the possibility of being compelled to transfer more than fees and fines and 20 percent of its net earnings to the reserve fund during any one year. This is a standard provision contained in many State laws. A reserve fund equal to 10 percent of the shares on deposit in the credit union has been found to be ample. At present the reserve fund may be used only to offset those losses which are brought about through bad loans. This amendment provides that the reserve fund may be used to cover any type of loss sustained by the Federal credit union, such as depreciation of securities, and so forth.

Big Muddy

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Monday, May 2 (legislative day of Monday, April 11), 1949

Mr. MURRAY. Mr. President, I request unanimous consent to have printed in the CONGRESSIONAL RECORD a most important article entitled "Big Muddy," appearing in the April 1949 quarterly issue of Farm Policy Forum, the nationally known farm journal published at Iowa

State College. This article says in substance what some of us have long contended, namely, that too many cooks spoil the soup—that is the trouble with the Missouri River project today.

The Iowa State farm journal summarizes the intensely interesting and informative study made recently by the Public Affairs Institute, published under the heading, "The Big Missouri: Hope of our West," which has received high commendation from people in all walks of life as the most forthright and thorough appraisal we have had of the Missouri Basin situation. In fact, it was quoted frequently in the recent Hoover Commission task force report which advocated a careful reappraisal of the Missouri Basin flood control, irrigation, and other public works. We would be well advised to consider its findings before making what may turn out to be more wasteful expenditures through appropriations to the Army Engineers' Corps.

For these reasons, I am sure that this carefully written article will prove interesting to the Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG MUDDY

Every farmer knows that where there's one farm, there must be one boss. He can't expect to make a go of it if he has 10 hired men all telling him and each other what to do.

It's that way on the big river—only more so. More jobs have to be done, and in the right order.

There are 2 big bureaus and more than 10 separate smaller Federal agencies in the Missouri project. All are getting into each other's hair. All are racing to get their feet into the river first and stake out claims that will keep them there forever—whether it is good for the valley's people or not.

The Missouri Valley can be a growing, prosperous region. It can have rich farms, and lots of them. It can have cheap power, and industries. There can be enough jobs in industry to maintain a healthy balance between agriculture and industries.

But it takes foresight, sound budgeting and planning ahead to make such hopes come true. There must be single-minded leadership.

There is nothing approaching this in the Missouri Valley today.

There are still two plans, not one. And the job of working out a single over-all plan hasn't even been tackled.

IMPORTANT NEEDS

There are some 10 great needs in the valley. They have to be worked out as well as men can work them out—not casually, not jealously or compromisingly.

These are the Missouri Valley's fundamental needs: (1) adequate flood control; (2) irrigation at reasonable costs to farmers; (3) low-cost electric power; (4) adequate transportation, lower freight rates, dependable navigation; (5) industrialization, mineral and phosphate development; (6) soil conservation; (7) abundant industrial and household water supplies; (8) recreational facilities; (9) reforestation and reseeding of forest areas; (10) wild-life conservation and management.

These unfinished tasks cannot be separated out into independent problems. They all overlap. This in itself is good evidence that they cannot be handled by separate agencies.

Yet so far the Big Missouri's problems have been dealt with separately. There is no over-all plan. The various unfinished tasks have been glossed over, patched up, or forgotten. Never has a major river development in this country been undertaken on such a pile of shaky, unplumbed and unsquared foundations.

Already the estimates for developing the Missouri Valley run toward $4,000,000,000. The complete project probably will cost much more. Yet all of this money can be frittered away with only a little accomplished.

The way things stand now, farmers don't know what they will have to pay for irrigation water. They don't even know how much water they may get. Navigation interests don't know where they'll come out. And the victims of floods probably will not be protected for some time. The chances for low-cost electric power in the valley are growing slimmer and dimmer every day.

WHO GETS THE WATER?

This question is basic. The two main uses for the Missouri's water are irrigation and navigation. Both need lots of it. And there isn't nearly enough in dry years to give both uses the amount needed.

In a wet year, the flow is far greater of course. So a large part of that extra flow in wet years can be stored up in dams to be used during the dry cycle.

Congress has authorized a 9-foot channel between Sioux City and the mouth of the Missouri. But can the reservoirs supply enough water for both navigation and irrigation during a dry cycle?

Counting the yearly demand of stored water, waste and evaporation losses, water stored during wet years would probably not last more than 7 years in a dry cycle. Our last dry cycle lasted 12 years—1929 to 1940. Whether the present storage plan will do the job depends upon the severity and length of dry spells to come.

If irrigation manages to hold its claim on the water, then navigation may suffer. If the navigation interests get first claim to the water, there may not be enough water for irrigation during dry cycles—when farmers need it most.

Electric power is expected to pay some of the irrigation investment. But in order to pay its share it has to be operating all the year round. The unsettled question of scarce water in dry cycles will make power a weak partner for farms and industry.

OTHER CHANNELS

There are other suggestions in the navigation-irrigation dilemma. Construction costs for a dug channel (with locks like a canal) would be higher. But it would use less water. It might pay out in the long run.

Another suggestion has been to build a 12-foot channel from the mouth of the Missouri to Sioux City. This would take even more water than the 9-foot channel now authorized. But there are sound arguments for it. Whatever the decision, it must be made now—so necessary planning and building can get underway.

The channel must be reliable every year and for the full season every year. Otherwise it will be of little value.

NAVIGATION VERSUS FLOOD CONTROL

The levees and other navigation works that now hold the river within a narrow channel are actually causing floods with less water than before.

It all starts with the topsoil of the Missouri Valley. First, we let it go downstream to rest on the bottom of the Gulf of Mexico. Then we narrowed the river channels and let it rest on the bottom of those channels. Now we're going to have big reservoirs where the silt will all come to rest, gradually filling them up.

A new over-all plan for the Missouri Valley would start with the idea of keeping that topsoil where it belongs—on the land. Only there, in place, can it produce crops for farmers.

And keeping both topsoil and water on the land is the first and most important step in flood control.

DUBIOUS PROJECTS

The dams and reservoirs now planned as part of the Missouri Valley project will irrigate millions of acres of land, and produce millions of kilowatts of electric power.

And the projects themselves will cost untold millions of dollars. Yet there has been no coordinated planning of who will get these benefits or who will pay their costs.

The Bureau of Reclamation's Missouri-Souris water diversion would pump water from near Fort Peck, Mont., across the watershed to the north and let it run down along the United States boundary into North and South Dakota. This would use for irrigation practically all of the run-off of the Missouri River above Fort Peck. It will also raise the level of Devil's Lake, once a pleasure resort.

An alternative to this plan is to irrigate the upper Cheyenne area in eastern Montana. Another project would irrigate the James River area in South Dakota.

All of these projects would give large-scale irrigation to areas which now practice dryland farming. These lands are only semi-arid. In about 4 years out of 10 they get enough rainfall to grow a normal crop. Some of the other 6 years will have low crop yields due to limited moisture; some years will have crop failures.

Irrigation would be needed only during drought and semidrought years. It would be limited to 160 acres on each farm. Obviously if irrigation is not used every year, costs will be much higher for the use that is made of it. Farmers in this region would have to make major changes in their farming practices. No organized survey has been made to find out how many farmers in each area want irrigation and are willing to pay for it.

On the other hand the Garrison Dam project suggested by the Army engineers was thoroughly opposed by the Bureau of Reclamation. It was reported to have "foundation conditions that are inadequate to insure the successful construction and permanent safety of the completed dam." This was the judgment of Warren J. Mead, specialist from Massachusetts Institute of Technology called in by the Army engineers. But the Bureau swallowed its objections to the Garrison Dam in a trade which approved Fort Peck and let the Army go ahead with the Garrison. This trade was part of the "Omaha Compromise of 1944."

At Canyon Ferry, Mont., the Bureau of Reclamation proposes a 2,000,000 acre-foot reservoir and dam. This is above the main power plants of the Montana Power Co. near Great Falls, Mont. (The study leading to this recommendation was financed by the Montana Power Co. to the extent of $50,000, roughly half its cost.)

This Canyon Ferry Dam would greatly increase the amount of firm power that the Montana Power Co. could produce. It would hold back floodwaters in the spring, release them later on when there is less water flow available.

This extra power would be worth many million dollars to the Montana Power Co. over the life of the dam.

What part of these millions in extra profits from the Canyon Ferry Dam should the power company properly pay? No adequate payment has yet been discussed. If the problem is ignored and left as it now stands, the Bureau of Reclamation will simply build the dam with Government funds, and the power company will make millions out of it. None of the revenues thus gained will go toward helping farmers of the State.

Farmers would get very little water for irrigation because the Montana Power Co. already claims all water rights to the upper Missouri.

Still the dam is being started before the amount the Montana Power Co. must pay has been decided. Farmers have little guaranty that they will get any more water for irrigation than they are now getting—and that is very little indeed.

WHO PAYS HOW MUCH

How much will farmers pay for irrigation? How much will electric power cost? As now planned, the river is going to be run mostly for irrigation and navigation. Neither of these allow much for good electric power—firm power all the year around. It never has been decided how much those who benefit from the project will pay toward supporting its costs.

Originally the Bureau of Reclamation hoped that sale of electric power would help pay the costs of irrigation. Returns from electric power sales would pay much of the interest charges on the investments in dams and reservoirs. This would ease the interest burden of the irrigation users.

But this plan too has been blocked. This extra help from the sale of electric power has been limited to one-fifth of the aid that it could give.

The main fact to remember here is that under the present divided management nobody knows for sure how much we will have to pay. There is no strong single agency that can really represent all interests in the valley.

The Army engineers are under no obligation to aid water users with the power revenues their dams earn. In the reclamation law there is such an obligation. But the Army engineers have practically all of the big power dams. They do not have to help out the irrigation work at all.

The original Bureau plans called for writing off some of the construction expense against the benefits from flood control and navigation. But now the Army engineers have 42,000,000 acre-feet of storage above Sioux City alone for flood control and navigation, and for power. They may want to make all these write-offs against their own dams. The Bureau's dams do not add much to navigation or flood control. So more of their costs may have to be paid by water users.

THINGS UNDONE

These are just a few unsettled issues of the present compromise plan for the development of the Missouri Valley. Such major questions cannot be left dangling and undecided. Their solution is vital to the success of the over-all project.

The job of building up industries in the valley—and of getting new ones—has been entirely neglected. It ought to be done well. The hopes of the valley people are tied to industrial development within the area.

Soil conservation, reforestation, recreation—all these and others have to be integrated into the complete over-all plan.

The many important unsettled problems mean simply one thing: The whole job must be reviewed again. It is not too late. Only a single, integrated plan carried out by a single, unified authority can work for the over-all welfare of the valley, its people, and the Nation.

Union-Shop and Strike-Vote Elections—A Legislative Fallacy

EXTENSION OF REMARKS

OF

HON. JAMES E. NOLAND

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. NOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following article by Fred Witney, of Indiana University School of Business, which is a very fine analysis of the experience under the union-shop and strike-vote election requirement

UNION SHOP AND STRIKE-VOTE ELECTIONS—A LEGISLATIVE FALLACY

Experience with compulsory government union shop and strike-vote elections serves to shed light on the problem of the relationship between union members, on the one hand, and labor organizations and union leadership, on the other hand. An analysis of the results of these elections may also prove to be of value in shaping the appropriate Government approach to labor-management relations. Union shop and strike-vote elections are required under the terms of the Labor-Management Relations Act of 1947 and by the provisions of several State labor laws.

Management and labor organizations under the Labor-Management Relations Act may not take action against an employee under a union-shop or maintenance-of-membership provision until a majority or more of those workers eligible to vote in a bargaining unit cast ballots in favor of requiring union membership as a condition of employment.[1] The same law forbids strikes for a period of 80 days whenever in the opinion of the President and the Federal courts a strike would imperil the health and safety of the Nation.[2] After 60 days have elapsed from the date upon which such a strike is enjoined and before the seventy-fifth day, the National Labor Relations Board must poll the workers who would be involved in such a strike on the question of whether they wish to accept the final offer of settlement made by their employer. The States of Michigan, Missouri, Delaware, and Alabama outlaw all strikes unless a majority of workers in a bargaining unit vote in favor of striking.[3] Fines and imprisonment may be imposed upon persons violating the strike-vote statutes of these States.

Requirements for union-shop and strike-vote elections rest upon the underlying assumption that a cleavage of interest separates the union member from his organization and that the rank and file need legal protection from union leadership. One Senator expressed this viewpoint in advocating the strike-vote procedure: "I want to protect the worker. It seems to me he is the forgotten man. The individual worker is the man in trouble."[4] Another lawmaker speaking in support of legislation aimed to curtail the opportunity for labor organizations to obtain union security contended that, unless regulated, the requirement of union membership as a condition of employment gives the union leaders such tremendous power over the members that they are apt to use it arbitrarily. * * *[5] Hence the compulsory Government election serves the rank and file as a first line of defense against arbitrary and irresponsible union leadership.

The results of union-shop elections contradict this point of view. From August 22, 1947, the date on which the Labor-Management Relations Act became effective, through August 31, 1948, the National Labor Relations Board conducted 23,752 union-shop elections. Of these polls 23,214 resulted in the authorization of the union-shop provision in the agreements. In these elections 2,599,471 workers were entitled to vote, and 2,248,501 voted. Of the workers voting, 2,120,971 voted in favor of the union shop.[6]

These elections indicate that the rank and file understood the need for union security and collective action. Instead of using the Government-sponsored, and incidentally secret, election as a means to free themselves from union membership, workers overwhelmingly have underscored their desire for the fashioning of strong unions through the requirement that employment rest upon the condition of union membership. The voters have also made it clear that the obligations and responsibilities of union membership should be the prerequisite to the enjoyment of the benefits of collective bargaining. What conclusion is there to be drawn from the experience with the union-shop elections other than that union members are not the reluctant victims of autocratic and irresponsible labor organizations and union leaders, but are rather the willing supporters of their organizations and zealous advocates of effective collective action in the area of industrial relations?

Compulsory Government strike-vote election returns support the proposition that strikes are not called by an arbitrary union leadership in defiance of the will of the rank and file. In a strike poll conducted under the Labor-Management Relations Act by the NLRB, the workers at the Oak Ridge National Laboratory, an atomic-energy plant, voted 771 to 26 to support the recommendations of their union representatives and refused to accept the last offer of their employer, the Carbide & Carbon Chemical Corp.[7]

The strike-vote election experience in the November 1948 west coast maritime controversy also bears on this issue.[8] The NLRB reports that of the 26,965 shoreside employees, members of the International Longshoremen's and Warehousemen's Union, not a single employee appeared to cast a ballot. In the strike-vote elections involving the offshore and coastwise employees,[9] the following results are reported:

Number of eligible voters: 8,812.

[2] *Ibid.*, sec. 206.

[3] Michigan Labor Mediation Act, Act No. 176 of the Public Acts of 1939 as amended by Act No. 318 of the Public Acts of 1947, sec. 17.454 (1). On September 7, 1949, the Michigan State Supreme Court held the Michigan Labor Mediation Act wholly unconstitutional. A short time later the Michigan high court reversed its position and held that only the arbitration features of the law violated constitutional rights. Accordingly the strike-vote requirements of the Michigan law remain in force. Commerce Clearing House, Labor Law Reports, weekly summary, October 7, 1948, p. 8 Missouri S. B. 79, L. 1947, approved July 22, 1947, effective September 10, 1947, sec. 3; Delaware H. B. 212, laws of 1947, approved and effective April 5, 1947; Alabama Act No. 298 (Bradford act), act of 1943, sec. 13. However, the feature of the Alabama law requiring a majority vote in a bargaining unit before a strike can be legal was declared unconstitutional by the Alabama Supreme Court on the ground that the election provision constitutes an unreasonable and arbitrary restraint upon the right of the individual employee to strike. *Alabama State Federation of Labor* v. *McAdory*, Alabama Supreme Court, 6th division, No. 234, October term, 1943–44, May 25, 1944.

[4] Hearings before the Committee on Labor and Public Welfare, United States Senate, 80th Cong., 1st sess., on S. 55 and S. J. Res. 22, pt. I, p. 73.

[5] *Ibid.*, pt. 3, p. 1177.

[6] From a letter of Mr. Louis G. Silverberg, Director of Information, National Labor Relations Board, dated October 26, 1948.

[7] Labor Relations Reporter, XXII (June 7, 1948), 90.

[8] The information pertaining to the strike-vote experience in the west coast maritime controversy has been obtained from the source indicated in footnote 6, above.

[9] The offshore and coastwise employees are represented by the National Marine Engineers' Beneficial Association; Pacific Coast Marine Firemen, Oilers, Water Tenders, and Wipers Association; and the National Union of Marine Cooks and Stewards.

Number voting to accept final offer of employer: 296.

Number voting to refuse final offer of employer: 651.

Void ballots: 56.

Workers refusing to vote: 7,809.

These results indicate that employees have either boycotted the strike-vote election procedure of the Labor-Management Relations Act or have voted to sustain union leadership in the west coast shipping dispute. Of equal importance is the conclusion drawn from this experience that compulsory strike-vote elections do not eliminate industrial conflict. The west coast maritime strike continues unabated despite the strike polls. The solution for industrial conflict must be sought in approaches other than the mere polling of workers in strike-vote elections.

National and State lawmakers would have profited from a study of the strike-vote experience under the War Labor Disputes Act.[10] A careful analysis of these results would save much energy and expense in the attempt to eliminate strikes through compulsory Government strike-vote elections.

Under the terms of the War Labor Disputes Act, the NLRB was required to poll war workers on the issue of interrupting war production on the thirtieth day after the receipt of a strike notice. No strike could lawfully take place in a privately operated war plant until the Board had conducted such a strike vote. During the period from June 25, 1943, through June 25, 1944, the first full year of the operation of the War Labor Disputes Act, a majority of the workers polled voted to strike in 203 elections out of the 230 which the Board conducted. However, only 64 strikes actually took place subsequent to the strike polls.[11] In 1945 the Board administered 1,445 strike polls, and a majority of the workers cast ballots in favor of striking in 1,249 of these cases, although only 213 strikes were actually carried out.[12] In view of this experience, it appears that the requirement of strike elections had little influence on the number of work stoppages carried out. Despite the large number of favorable strike votes, workers actually interrupted war production in a comparatively small number of cases after the ballots were taken. Most of these work stoppages probably would have occurred had strike polls not been required. However, since a favorable strike vote provided a basis for apparent Government approval for a work stoppage, one might have expected more strikes than actually occurred.

The results of strike-vote elections under the War Labor Disputes Act invalidate further the assumption of conflict of interest between the union member and his union. These elections have not resulted in the repudiation of union leadership by the rank and file, but serve to highlight the mutuality of their objectives and methodology. The experience with the strike-vote elections required by the War Labor Disputes Act clearly indicates what results to expect from the present labor laws, State and Federal, compelling strike polls as a prerequisite to a lawful strike.

Proper legislation aimed at the objective of improving industrial relations is highly desirable. When labor legislation rests upon invalid assumptions, however, such laws result in more rather than less labor strife, needless public expenditure, and wasted energy. The experience with compulsory Government-sponsored union-shop and strike-vote elections discloses that the assumption of a cleavage of interest between union member, labor organization, and union leadership does not square with reality. This assumption should no longer serve as a frame of reference for lawmakers who would improve labor-management relations through legislation.

Colorado River Water

EXTENSION OF REMARKS
OF
HON. THOMAS H. WERDEL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. WERDEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bakersfield (Calif.) Californian of March 12, 1949:

COLORADO RIVER WATER

It will be well for everyone concerned to take a deep interest in the controversy now proceeding in Congress and elsewhere over the waters of the Colorado river.

There is a difference of opinion between California and Arizona over the use of this water. Arizona is implementing its opinion with two bills which have been introduced in Congress, H. R. 934 and S. 75, which call for an appropriation of $738,000,000 for a new and large irrigation project; of this total, it is reported, $420,000,000 is for irrigation operations which would benefit only 4,000 farms. The students of this question point out that this would average around $105,000 per farm.

California spokesmen have also pointed out that the Arizona project will take away water which has already been allocated to California by long-standing Government contracts. This is an important item for consideration.

There is no denying the fact that southern California, along with other parts of the west coast, has had a tremendous increase in population during the past 10 years, and that the demand for water has increased proportionately.

The future healthy and prosperous development of the southern California area depends to a large extent upon the supply of Colorado River water, to which this State is entitled. Strictly speaking, the future development of southern California will have a great bearing on the prosperity of the entire State, and therefore all sections have a direct interest in the solution of this problem.

Because of the location and geographical features of the southern portion of the State, it is difficult economically to secure water, and the possibility of further encroachments upon the water supply of the San Joaquin Valley and other regions cannot be viewed with a casual eye.

Southern California's future water supply increases will have to come from the Colorado River, and it is not illogical to assume that more economical use of the water will thus be made than is done now, since much of the river's flow goes into the Gulf of California and is wasted.

The entire California delegation in Congress has supported a joint House resolution which would authorize the United States Supreme Court to adjudicate the points in this highly important controversy and this should be done before the passage, if possible, of the legislation which would approve the costly irrigation project proposed by the Arizona legislators.

It is therefore a deep concern to everyone in California that the House and Senate joint resolutions be passed and the two bills, H. R. 934 and S. 75, be defeated. In this manner, consideration of all points will be secured from the United States Supreme Court and the purely partisan attempt to collect the waters of the Colorado for use in Arizona alone will be avoided.

California is entitled to consideration on the basis of need and from the standpoint of the number of persons involved. The entire State should stand behind this movement.

Medical Care In Maryland

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the Washington Post of Sunday, May 1, 1949, entitled "Maryland Is Proving State Can Solve Health Problems Without Federal Aid." This is the first of a series of articles by Agnes E. Meyer and will appear daily in the Post until completed.

MARYLAND IS PROVING STATE CAN SOLVE HEALTH PROBLEMS WITHOUT FEDERAL AID

(By Agnes E. Meyer)

(This is the first of five articles on the Maryland State and the Baltimore City medical-care programs.)

Maryland is giving the Nation convincing proof that a State can solve its own health problems without Federal aid. It is demonstrating in every county and city that local initiative, voluntary cooperation, and citizen participation are the most powerful elements for constructive and efficient action upon which our democracy can count to solve its acute social problems.

Moreover, this State health plan proves that our medical leaders are in a better position than anyone else to mobilize and coordinate the forces involved in the achievement of a practical health program responsive to our ever-varying social and economic conditions. This decentralized program has in fact achieved more than an improvement in health conditions. It has brought about an education in the understanding of community organization and in the use of cooperative endeavor for the common good.

The Maryland plan, in existence 3½ years, is past the stage of blueprints, theory, and planning. It is a smoothly functioning, constantly expanding State-wide organization which has been thought out on such sound principles that they can be adapted to the conditions that exist in a majority of our States. I chose the experiments being made in Maryland because they are adapted to varied rural and semirural conditions as well as those of a large city that happens to have two outstanding medical centers, which have contributed their knowledge, talents, and prestige to the origin and evolution of the program.

My report will describe the organization and the results achieved for the counties by the Bureau of Medical Services, established by legislative enactment under the State department of health in 1945, and a somewhat different plan established in 1947 for complete medical care of relief clients with the medical-care section of the Health Department of the City of Baltimore.

SUGGESTED BY DOCTORS

The State-wide plan, now in operation for 3½ years, was initiated in 1939 by the Medical and Chirurgical Faculty of Maryland (the State medical society), which proposed in an open letter that a new section or standing committee of the State planning commission be constituted, whose function it shall be to keep under constant survey the problems of medical care for the citizens of this State and to formulate from time to time recommendations for better utilization and for extension of existing facilities, and for the institution of such new facilities as are required. In other words, the doctors of Maryland not only suggested the State health plan, but accepted full responsibility for its organization, its efficiency, the quality of its services and its continuous improvement.

How did this come about? The cooperation of Maryland's medical profession with the public health department is a long-standing tradition. Dr. Robert H. Riley, State health commissioner, has used great wisdom over many years in his relationship with the medical profession. And the traditional interest of the doctors in public health is exemplified by such noteworthy achievements as the purification of Baltimore's water system under the leadership of Johns Hopkins' famous Dr. William Welch some 50 years ago.

It was this sense of responsibility for the general health of the people which prompted Dr. Harry E. Sigerist, professor of history of medicine at Johns Hopkins University to call a meeting in May 1939 of an all-Maryland health conference. More than 100 civic, labor, rural, education, religious and other voluntary groups were represented.

The learned doctor did not foresee what explosive materials he was mixing in this social test tube. The conference practically blew up. The labor leaders shook their fists under the noses of the medical dignitaries who were present and declared they would never again pay a medical bill. The Government would have to do it. The fiery meeting proved conclusively that the people were seething with rage over the medical care they were getting, and that a bitter antagonism to the medical profession was very widespread.

BEGAN WITH INDIGENT

The medical leaders were shocked into immediate action. As Maryland has a State planning commission which is authorized to study any civic problem, they requested the chairman, Abel Wolman, professor af sanitary engineering at Johns Hopkins, to appoint a standing committee on medical care, with Dr. Maurice C. Pinkoffs, professor of medicine at the Maryland University School of Medicine, as chairman, to study the health situation throughout the State.

After 3 years of the most painstaking research into the health conditions prevailing in the counties of Maryland, the committee decided that a State program should begin by serving the most helpless segment of the population. It therefore outlined a clearly defined medical-care program for the State's indigent and medically indigent throughout the 23 counties, to be financed by State funds. In presenting the report, the committee stated:

"We are using the term 'medical care' in an inclusive sense to cover all the agencies available in safeguarding and improving the health of the people and in the treatment of disease. It may be interpreted, therefore, as comprising lay and professional medical education, sanitation, preventive medicine, curative medicine, dental and nursing care, and pharmacy. It is evident that there exist today, and, in view of the rapid advances in medical science, that there will always exist difficulties in making available to all the highest standard of medical care. It would be the function of such a committee as we propose to be constantly comparing what is available in the way of medical care in our State with what is known to be valuable and to plan systematically to repair the deficiencies in our present system."

The committee also stressed as "vital that the program for such State-supported improvements in our present system of medical care be devised so as to conserve all of the valuable assets we now possess and not be planned in a manner which would set one form of medical service in competition with another to their mutual disadvantage."

The whole program, indorsed by the State medical society, was passed by the State legislature in 1945. As the problems of medical care in the city of Baltimore were far more complex, the committee members, hard pressed by the advent of war, did not make their report on that situation until 1947. Thus the State program has been in operation 3½ years and that of Baltimore City about 6 months.

FLEXIBILITY ESSENTIAL

In thinking out the administration, it is evident to anyone studying its results that two major objectives were kept in mind that seem fundamental to any national health program. Since the treatment of disease involves not only physical but powerful emotional disturbances, no system of health protection can be effective which imposes a rigid, universal pattern of procedure and ignores the individuality and the varying needs of the people. And, secondly, an administrative system that fails to provide for the professional development of the practicing physician, for consultation services and clinics, for freedom of research and ready access to the latest achievements of research, will defeat its own ends because it would freeze our medical progress at its present state of evolution.

Therefore we must try to understand the skeletal structure of Maryland's new health program before we try to evaluate its spirit and ultimate value.

The State department of health was asked to formulate and administer the program for the counties, as this department seemed the logical organization to integrate the State's whole facilities for health protection. The department of welfare was given the responsibility of certifying its relief clients. The more difficult certification of the medically indigent was assigned to the department of health. Services include not only complete coverage of free medical and dental care but essential supplies, drugs, and biologicals.

To implement the program, the State board of health was authorized to establish an advisory council on medical care, constituted as follows: Two members from the medical and chirurgical faculty, the State board of health and the two medical schools; one hospital administrator, one dentist, and one nurse appointed by their official organizations; director of the State department of welfare, the commissioner of mental hygiene, and the superintendent of the tuberculosis sanitoria, and one member appointed by the Maryland Medical Association. Thus the advisory council has State-wide representation of the highest type and experience. Its special function was to integrate the many agencies on the State level concerned with health.

To administer the program, a bureau of medical care was established under the State department of health, whose chief executive must be a doctor, experienced in the organization and distribution of medical care on a full-time basis.

COUNCIL IS CORNERSTONE

How has the State department of health approached its problem of providing medical care to those citizens of the State whose own financial resources are inadequate? It has recognized from the outset that the services must be efficient if the clients were to be satisfied, and economical, if it was not to meet opposition from the taxpaying public. At the same time, it had to gain the voluntary cooperation of the local physicians, dentists, nurses, pharmacists, and hospitals upon whom the whole operation depended.

Dr. Dean Roberts, who was appointed chief of the bureau of medical services, traveled the length and breadth of the State to stimulate the interest in the program of these various groups. He is the link between the county health officers and the State authorities. It is also his duty to review the scope and course of the program for the advisory council, which he sees as the very cornerstone of the whole administrative system.

Composed of 14 top-flight representatives of the public and private professional groups from all parts of the State, the council has no actual authority, but its recommendations have always been made on the basis of such intensive study of the many problems involved that they have, on the whole, been adopted without modification. The council meets every month to review the program and hear Dr. Roberts' reports. He brings to its attention every major operating problem and reports upon ideas for expansion that are frequently suggested by the county health officers and their local advisory councils. Every significant policy, eligibility criteria, method of application, scope of services offered, rates of payment to doctors, dentists and druggists, method of payment, and other important administrative details are thrashed out at these council meetings.

Since the inception of the program, both the State department of health and its advisory council have felt that the medical care program is in constant evolution. Thus all policies are continually under review and changes are made whenever necessary. Both make a conscious effort to keep the program from crystallizing too rapidly, and it is precisely this ability to adjust the program to new needs that has been the secret of its success.

INTIMATE RELATIONSHIP

This flexibility is attained by decentralization and placing authority in the hands of the county health officers, all of whom in Maryland are physicians and full-time employees, intimately acquainted with the local population and its medical problems. In county after county the doctors told me that, from their point of view, the success of the program rests upon the respect of the private practitioners for the local health officer. Moreover, they feel that the program is their program, since they are represented on the local advisory council, which guides the development of all new policies and keeps them within the area of agreement.

The fact that the whole program originated with the State medical society is an important factor in the psychology of the local practitioners. But they were frank to confess that their willingness to cooperate in a State program was accelerated by the hope of avoiding compulsory national health insurance. Some still have fears that the program may get out of their control and encroach upon their private practice unless they keep a careful eye upon all major decisions. But many agree that the contact through the local advisory councils with the Grange, the county agent, the white and colored superintendents of schools, with the welfare departments and the voluntary health organizations has made them more conscious of the social organization of their counties and of the social responsibilities of the medical profession.

"Politics can be kept out of the program," said several others "only because this decentralization permits local supervision by nonpolitical people. It also keeps the program flexible and responsive to local needs. The whole-hearted cooperation of local professional people can only be preserved by this local control and guidance."

Partly, therefore, out of fear, but predominantly out of the growing interest of

the county medical societies, these local advisory councils have developed into highly significant groups which concern themselves not only with the curative program but with the causes of illness, with the cause of poverty, ignorance of proper diet, bad housing, and bad sanitary conditions that prevail in many of the rural counties. The advisory councils bring to bear upon these problems many public and private agencies which had previously functioned without knowledge of each other's activities.

ATTITUDE HAS CHANGED

These articles will attempt to describe not only the impact of this humane medical experiment upon the people who benefit directly by its provisions, but the many unforeseen effects upon the standards of medical practice, the changing attitude of the private practitioners toward the public health officials, and the sense of pride the medical men feel in the efficiency and economy of this State program for the systematic care of people who were formerly dependent upon their charity. The responsibility of government to provide care for the indigent and medically indigent has become generally accepted. And a voluntary, working partnership has been created between the medical profession and the health representatives of the State.

The importance of this step—given the hostility between these two groups in most other States—cannot be overemphasized. It demonstrates that the impasse between government and medicine can be overcome and agreement achieved of far-reaching implications, when a step-by-step approach is made to the larger need for complete health coverage in the States and the Nation.

It was this sense of the far-reaching implications of the Maryland State health program that led the chairman of the committee in medical care to say in his letter of transmission of his initial report to the State Planning Commission:

"While we propose the use of Government funds only for the care of the indigent and medically indigent, we believe this use, in the manner suggested in the body of this report, will encourage more effective integration of all the State's medical resources, private, voluntary, and governmental, and assure more and better health services to all our citizens."

A Timely Subject

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. RABAUT. Mr. Speaker, with devotion to industry, manpower, and the success of our country, I take pleasure in placing in the RECORD a statement released to the press by Mr. Walter C. Ayres stressing the importance of salesmanship both for the profit of the industry concerned, as well as to the progress of the Nation. The release of this timely subject is as follows:

STATEMENT BY WALTER C. AYERS, EXECUTIVE VICE PRESIDENT, BROOKE, SMITH, FRENCH & DORRANCE, INC., DIRECTOR, DETROIT SALES EXECUTIVES CLUB

What this country needs is more salesmen.

Consider these facts: In 1940, there were about 46,000,000 people employed in the United States. Included in this 46,000,000 were some 3,200,000 salesmen—one salesman to 14 workers in all other fields.

In 1948—in a seller's market due to shortages—60,000,000 people were employed in the United States, but only 3,700,000 were salesmen. The increase in employment from 1940 to 1948 was 14,000,000 people; but, of these, only one in every 28 workers was a salesman.

So today, there is a big deficit in America's sales force and the brutal truth is that the 3,700,000 salesmen presently employed aren't nearly enough to keep our factories, farms, mines and forests producing at a prosperity level. If we are going to have the prosperity to keep 60,000,000 people working, we've got to have more than 3,700,000 salesmen. Probably at least 6,000,000 salesmen will be required to do the job in a buyer's market and we have only about 60 percent of that number now.

That means that more than 2,000,000 sales jobs need to be filled with the greatest possible speed.

Thousands of high school and college graduates just coming out of school, as well as hundreds of thousands of men in other types of jobs, will be able to find profitable employment in the selling end of business. Generally speaking, almost every industry and every type wholesale and retail establishment must have additional sales people if they are to maintain or increase their volume.

Manufacturers, wholesalers and retailers should start now to hire and train the additional salesmen they must have. America cannot remain prosperous without a fully manned sales force.

Federal Social Security Legislation

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. ELLIOTT. Mr. Speaker, on Monday, April 11, 1949, Miss Loula Dunn, commissioner, Alabama State Department of Public Welfare, made a very able and informative statement before the Committee on Ways and Means of this House with reference to pending Federal social security legislation. I include her statement as a part of my remarks at this time.

STATEMENT ON PENDING FEDERAL SOCIAL SECURITY LEGISLATION BY LOULA DUNN, COMMISSIONER, ALABAMA STATE DEPARTMENT OF PUBLIC WELFARE

I am glad to have this opportunity to present to you some of the reasons Alabama is concerned about the subject now under consideration—extension of the social insurances. We are a State where about 70 percent of our 3,000,000 population live in rural areas, and where well over half of our farmers are tenants. Our per capita income in 1947 was only $837, compared with $1,323 for the Nation and $1,842 for Nevada, the State with the highest income. Whereas we ranked eighteenth in population, we were fourth from the bottom in per capita income.

In spite of these facts, Alabama's record is one of a progressive State. This is illustrated concretely by the proportion of the State's revenues that are directed toward human well-being. For example, State-local expenditures in Alabama in 1947 for health, education, and welfare represented 2.21 percent of our income payments for the preceding year. This compares favorably with the national average of 2.27 percent, particularly in the light of existing needs in Alabama. We have had a public program for human welfare since 1919, we provide our children throughout the State with 9-month schools, and we have long been a leading State in providing local health services. In other words, Alabama is a State that cares about the welfare of its people.

Alabama, therefore, is concerned about human security. We recognize that the first step in such security obviously is a job for everyone who can work, including the handicapped. At the same time, we believe that full employment needs to be underpinned with a social-security program that is adequate in all respects for all people. In my capacity as State Commissioner of Public Welfare in Alabama, I see at first hand the causes and effects of insecurity. The responsibilities of a public-welfare administrator encompass both prevention and relief of need. When measures to prevent need are inadequate, it follows that the amount of need will be greater.

You are today considering proposals to extend and strengthen the Federal social-security program through broadening of its social insurance provisions. While I should like immediately to disqualify myself as an expert in the field of social insurance, I come before you today because the two aspects of social security, namely, insurance and assistance, are interdependent and interrelated. They are two faces of a single coin.

Just how closely the functioning of the one program—the insurances—influences the other public assistance is apparent to many of us in Alabama. I should like, therefore, to present to you some of the problems in our own State which we believe are greatly augmented by the present incomplete social-insurance program.

In addition, it is my purpose to indicate some of the relationships of the insurances to other titles of the Social Security Act, and particularly to the administration of public welfare. The urgency of action to broaden the insurance program has been recognized in official resolutions adopted by the Alabama State Board of Public Welfare and the Alabama Association of County Officials. Recently the governor issued a proclamation on the effects of inadequate coverage of old age and survivors insurance, and at its last session the Alabama State Legislature memorialized the Congress on this subject. Thus, in presenting some of the difficulties we face in Alabama because of gaps in the present social-insurance program, I am speaking of problems that are widely recognized not only by various official bodies, but also by individuals throughout the State. By this I mean both the people who now lack and need protection and a cross-section of our citizens who consider social insurance as basic in a well-rounded security structure. Obviously, too, those of us who administer public-aid programs see, daily, problems that adequate insurance could well have prevented.

This perhaps is one of the forceful reasons that public welfare officials throughout the country have indicated their belief that the essential first step in bringing about a balance in the over-all security program is a broadening of the social insurances. The American Public Welfare Association has incorporated this tenet in its official platform, and, as this committee well knows, other State welfare administrators have indicated such a belief in earlier testimony at these hearings.

As I present to you, therefore, some of Alabama's experiences that are closely related to the gaps in the present social insurance structure, it is my belief that I am describing conditions and problems that are national in scope, and, consequently, require remedial action by the Congress.

WEAKNESSES IN THE PRESENT INSURANCE PROGRAM

The Nation-wide security structure set-up in 1935 included both public assistance and social insurance. Provision had to be made through assistance for persons then in need and for those who would not have an opportunity to earn insurance protection. It was anticipated, however, that the social insurances would be the basic program—that full-scale operation of OASI would relieve need by preventing it. Thus, it was expected that welfare loads would diminish as people earned OASI protection, and that the number of beneficiaries under insurance would be greater than the number of assistance recipients.

Experience has shown, however, that the operation of the law, due to its limitations, has not been in accordance with this concept. Though the idea is sound, the law as it now stands does not effectuate it. Instead of insurance offering a basic security for the many, with assistance providing for the residual few, the number receiving OASI benefits is relatively small and the number dependent on assistance is increasing constantly. The insurance program has been unable to perform the role assigned to it for three principal reasons: (1) Not all people are covered; (2) the protection offered is far from adequate, with benefit payments too low; and (3) not all predictable risks are included, chiefly disability.

Alabama figures substantiate this statement forcibly. The first monthly payments under OASI were made in December 1940. At that time there were 3,774 beneficiaries—adults and children—and average payments were $15.25. Recent figures (September 1948) report 31,965 beneficiaries with an average benefit of only $15.42.

Yet, during this same period the number of public-assistance recipients in Alabama rose from 29,066 to 84,048. Average payments rose from $10.15 to $21.28—an increase of over 100 percent in contrast to the slightly more than 1-percent rise in average OASI payments. While more people receive insurance benefits than did 8 years ago, the number in September was less than half the number receiving aid through the welfare program.

One of the reasons it has been possible to raise assistance grants is because the Congress in 1946 and again in 1948 liberalized the assistance aspects of the Federal social-security law. Though payments are too low in the light of present living costs, substantial increases have been possible. In contrast, there has been practically no increase—a mere 17 cents—in average OASI benefit payments. Thus, the Congress has modified a part of the security structure without considering it as a whole. Such action tends to increase the existing unbalance and to relieve the immediate problem without getting at its roots. And while I am aware that amendments affecting assistance have been of positive value in assuring more nearly adequate aid to those already in need, they represent but one side of the whole social-security program. Again this is clear from a review of the present assistance program in Alabama.

THE AGED

More than three-fourths of the applicants for, and recipients of, aid through the welfare offices are aged people, most of whom have had no opportunity to earn even the inadequate protection offered by the present old age and survivors insurance program. In fact, there are nearly five times as many aged assistance recipients in Alabama today as there are aged beneficiaries of old age and survivors insurance, about 71,000 people receiving old age assistance as compared with about 15,000 aged people receiving old age and survivors insurance benefits. Thus, old people receiving public assistance in Alabama number 463 in each 1,000, those receiving old age and survivors insurance benefits only 102 per 1,000. It seems obvious that this unbalanced picture will become even more lopsided if the present OASI program obtains. Only 44 percent of our working population in Alabama in 1945 had protection through social insurance. Employment now is below that wartime peak and coverage is presently estimated at less than 40 percent. Our aged population is increasing rapidly, at 10 times the rate of our total population in the past 8 years. Yet, at present, and until OASI coverage is extended, for many people reaching the sunset of life the only security they can expect will be public assistance based on need rather than social insurance to which they have contributed.

LOW INCOME

A part of this situation stems from factors inherent in Alamaba's total economy. First, we are largely a farming State. The 1940 census showed that 69.8 percent of our population was rural, a figure that compares with only 43.5 percent in the Nation. And our farmers have no old age and survivors insurance protection. Over half of our farmers are tenants.

In addition, Alabama is a State where per capita income consistently has been low. Few people earn a sufficient amount to lay something aside for the proverbial "rainy day." In contrast, many of the Nation's high income States have low recipient rates for public assistance and relatively higher recipient rates for the social insurances. We, therefore, face a double disadvantage: few people earn above marginal subsistence in their working years and few workers have insurance coverage.

When the income level is low, there obviously is the greatest need for the kind of protection social insurance affords. Yet we find the converse to be true. Many States where assistance case loads are small are both high-income States and States with a large portion of their working population protected by insurance. I should like to emphasize here, therefore, that there is a direct relationship throughout the country in the number of old-age assistance recipients and the number of people covered under OASI. Recent figures for Alabama illustrate this point. Our average per capita income for 1947 was $837 and the average for the Nation was $1,323. Similarly, the number of old-age and survivor insurance recipients per 1,000 in Alabama is less than the national average and less than half that of the State with the highest coverage. On the other hand, the number of aged persons per 1,000 in Alabama receiving old-age assistance is more than double the number in the Nation as a whole.

INCOMPLETE COVERAGE

Thus, the incomplete coverage of the insurance program has thrown the whole social-security structure out of balance. This makes more persons dependent on welfare or in danger of becoming dependent and applies not only to old people but also to our younger population. Every child has a right to basic security. Yet, next to the aged, needy children comprise the largest group of assistance recipients in Alabama. Thus, it is in this area, too, that the insurances, meant to guard against the deprivation of parental support, have failed. Our Alabama figures show that there are about 12,500 payments made for over 34,000 child beneficiaries of aid to dependent children through our welfare department. In contrast, there are only 3,200 widows' and 13,400 individual child payments made under the OASI program. The lack of balance is plain. Had the insurances been adequate for the total working population, it seems probable that the numbers would be reversed.

It is not just to the benefit of Alabama that I speak. Our children are the Nation's children. Just as our economic pattern affects the economy of the Nation, so the opportunities afforded Alabama affect the entire Nation. Our child population is about 41 percent, whereas that of the Nation as a whole is only about 31 percent. We have a high birth rate and a high proportion of children in our total population, yet we are experiencing little growth in total population and a large growth in aged population. This means we are supplying young adults to other parts of the Nation. Is it not to the advantage of these other areas that Alabama youngsters have a fair opportunity in life?

Is it not American to give an equal chance to everyone? And is it not part of Government's democratic tradition to help its people guard against want, against circumstances they cannot control? Along with the right to earn his way, therefore, each citizen should have the basic guaranty of security if he is kept from earning by such unpreventable hazards as untimely death, old age, or disability. Likewise, the rugged individualism which is fundamental to the American character creates a preference for security through insurance benefits in which people have participated, rather than for assistance payments based on need. Insurance is impersonal, it is paid in accordance with earnings. Americans, therefore, would rather receive an insurance check than an assistance or public welfare check. Theirs should be the opportunity to earn insurance protection.

Another consideration here that is equally important is the dollars and cents values in the whole program. Is it not a cheaper and sounder investment of public funds to support a participating insurance program than to finance, in whole, an assistance program?

INADEQUATE BENEFITS

The inadequacy of benefit payments (already cited) represents another factor as important as the incomplete coverage of the insurance program. The amounts paid are not compatible with living costs. Recent Alabama figures showed aged OASI beneficiaries receiving about $19 a month, on the average, and children receiving about $12. Obviously, these sums alone represent an insufficient income. Their inadequacy has proved a startling weakness in the total insurance structure.

Besides the inadequacy of coverage and benefits, however, there is a third gap which is of major significance. I refer to the absence of disability insurance. In Alabama more than half of our public-welfare cases are attributable to the disability of the breadwinner. People who long have earned their way find, when physically unable to work, that they have no recourse but public assistance. This is especially true of persons with marginal or subsistence incomes who could never afford to be sick. Neither do they have resources to keep them going through a long period of illness or to finance medical care that may prove costly. Furthermore, when disability makes them permanently dependent, there is a vast waste to society. Oftentimes these people might be able to return to the labor market as producers if they had disability insurance to tide them over. Is it not costly and uneconomical, therefore, for Government to have to provide long-time financial aid for them? Adequate contributory social insurance to provide against disability undoubtedly would be a more practical and economical solution.

EXTENSION OF INSURANCE

It seems clear, therefore, that a choice must be made as to the way we go, both in the kind of protection we offer our people and in how we propose to pay the bill. Two questions immediately are posed. Do we plan to continue our patch-work quilt of

piece by piece amendments to the public assistance titles of the Social Security Act with no counterbalancing action on the social insurances? Do we believe it fiscally sound and socially desirable to provide a large program of public assistance and a limited pay-as-you-go insurance system? It seems, out of the experiences since 1935, that we are now at the crossroads insofar as how and in which direction the social-security system of this country moves.

I, therefore, would urge this committee to give favorable attention to the critical need for extending the insurances. I speak as a public-welfare official in a position to see the problems arising from our failure in the area of prevention of need. At the same time, I do not mean to imply that there is not, and that there will not be, need for some public assistance and welfare services. For those who are prevented from earning their security there must be protection through assistance. The numbers prevented from so earning protection, however, should be held to a minimum. Instead of increasing numbers of needy people, we believe that there should be increasing numbers protected by insurance. Immediate extension of the insurance program, therefore, seems to be the sound approach. It is neither logical nor practicable to approach the subject of greater human need by merely upping appropriations to meet that need. Evidence is all too clear as to what happens when you increase welfare expenditures, on the one hand, and fail to reduce the cause of need on the other. Consequently, it is apparent that public welfare can perform its accepted role only when the social-security pattern is balanced by bringing the social insurances into their appropriate position.

ADEQUATE WELFARE PROGRAMS

In addition to the insurances, another element in preventing need is extended social services. Our experiences have demonstrated that friendly counsel often may prevent need just as an insurance check may prevent want. Again, the welfare program and the insurance program are two component parts of an over-all security structure. For the assistance phases of this structure to be adequate, Federal grants-in-aid to States should be distributed on a variable basis so that there may be equity of treatment of people regardless of where they live. All needy groups likewise should be included just as all working people should have the benefit of insurance protection, and payments should be commensurate with need.

Alabama has gone a long way within its available resources to provide adequate assistance. In fact, annual State and local welfare appropriations in Alabama have risen from a little under $1,000,000 in the fiscal year 1935–36 to nearly $10,000,000 for the current fiscal year. Each successive State legislature since 1935 has increased welfare appropriations. Even so, funds are still insufficient to meet existing need either for the aged, the blind, and dependent children who can receive Federal money or for the handicapped and others excluded from Federal benefits. Both the constant formula for allocating Federal grants-in-aid to States and the discrimination against those ineligible for present categories work a hardship on Alabama's disadvantaged people.

SUMMARY

In conclusion, therefore, it is my conviction that the American social-security structure should be implemented with a fuller social-insurance program. I mean fuller as to coverage, benefits, and risks included. Likewise, the assistance aspects of the program should be strengthened to insure adequate and equitable aid to all who fall in the residual group lacking insurance protection. As we move in this direction, prevention will be real and the cost of assistance will be reduced. This, I believe, is inherent in the American tradition which embodies governmental guaranties of equal opportunities for every citizen.

Postal Salaries

EXTENSION OF REMARKS
OF
HON. CHRISTOPHER C. McGRATH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. McGRATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I gave over Station WMCA, April 22, 1949:

Since becoming a Congressman I have maintained active interest in the postal service and, in particular, its employees. It has been a pleasure to associate with them and their leaders to discuss the improvement of conditions affecting their employment. Hardly a week passes when I am not personally contacted by Pat Fitzgerald, president of the New York Federation of Post Office Clerks; Henry Berman, legislative representative; and Frank Handman, their national vice president, either in New York City or in the office in Washington.

Many factors have contributed to the growth of our Nation. We have impressed the world, this little struggling Nation of a century and a half ago, the men who laid the rails, who drove the first steam engines across the continent—all of these have helped to make America great and strong.

And yet, very often it is the silent worker whose contributions have not been heralded in song or in book that has been the mainspring in this development. America became great because of the men and women who worked in their jobs for America. Our skyscrapers in New York, our factories in the West, our plantations in the South have all been served by the postal men and women. It was their carrying the message that brought trades and industry to its present state of efficiency.

So tonight we pause to pay tribute to them and in turn to ask you, the American audience, to do justice to their cause. The postal employees appeal to each and every American to write to their Congressmen and Senators urging their support of the legislation I am about to discuss.

The starting salary of today for the new postal worker is $2,250. Based on 1939 purchasing power, such a salary is worth approximately $1,500. Obviously, the cost of living has increased so greatly that present salaries will not maintain a decent standard of living. There has been a slight lowering of prices in certain foods, but the amount of help to the worker is negligible. One can easily imagine the type of life to be led by a single person on such income, but it becomes increasingly difficult to picture the married man with a family groping about to make ends meet. It seems inconceivable that such a task would be required of the men who handle the vast amount of mail that circulates daily throughout the United States. Yes; it seems inconceivable, but such is the case. Thousands of postal workers are in such a position. We cannot allow such conditions to continue.

Not only has this situation forced immeasurable hardships on the family life of the postal worker, but it has seriously threatened the high quality of worker that is found in the Post Office Department. We simply need to remember the high rating of the postal service of the United States. It is the men who run this service who maintain its efficiency. There are very few who will deny praise to our postal system. Why then deny them a living wage? To the intelligent man who finds appeal in the work of the postal worker, where is the incentive to apply for such work with such a salary offer? The answer is quite obvious. Instead of the usual high quality of the worker of the past, the post office will be subjected to employment of less desirable personnel. The implication rests, naturally, in the lowering of standards of our post office system.

Many of my colleagues in Washington have also seen the necessity for action. They have not lain dormant, but have introduced many bills that now await action. I would like to point out a few of the more salient features of the entire pending postal legislation.

We have now before Congress a bill (H. R. 2496) to raise the salary of all postal workers by $650. If passed, this bill will fill a large share of the existing need. I am determined to fight for its passage when it comes to the floor of the House. The Bureau of the Budget yesterday disapproved the increase of $650. Please write and urge your Representatives in Congress to disregard this recommendation.

There is also legislation pending to come to the aid of the veterans who have taken positions with the post office for the first time in the postwar period. They were not employed by the post office prior to their time well spent in the service of our country, but chances are that many of them would have worked for the post office during that time had the war not occurred. In such a case, they would now be in a higher grade, receiving a more substantial income. Bill H. R. 87 feels we owe recognition of the above fact. It makes a reasonable claim for the veterans in that they should be allowed credit in the post-office grade system for the time spent in the war. Up to the present time the post office has been most cognizant of the debt we all owe to the servicemen. The passage of this bill would further pay such a debt, and, in the process, raise a standard of living that has proved so disappointing to the returned servicemen.

We have also an important bill that hopes to erase the present discrimination against postal workers insofar as sick leave and annual leave is concerned, H. R. 1304. At the present time postal workers receive only 10 days of sick leave per year and 15 days annual leave, whereas other Federal workers get 15 days of sick leave and 26 days of annual leave per year. This is one of the more obvious injustices levelled on the faithful postal workers. It must be rectified.

I have just given a few of the many sound pieces of legislation that are being directed to the ears and the conscience of our Congressmen. Soon these bills are due for hearings. They will be firm voices—those voices that go before the committees and plead for justice. Add your encouragement by your letter to your Congressmen and Senators. They will fight for what they know to be fair and worthy. As they plead the deserved praise of the postal worker, they will demand more than praise in return.

Earlier we referred to the postal workers as the silent group that has helped to bind America together, to increase its commerce and its industry. That voice, though silent, will now be heard. It will be heard by the ears of America who will answer tonight the plea of our postal employees.

How many times in your daily life have you, my friends, silently praised the work of these men? I plead with you tonight to lift your voices in their behalf, to fill the halls of Congress with your messages in their behalf. If you do that your elected representatives will follow your thoughts and

then these men who are serving you now and have grown old in the service of the postal ranks will say, "Yes, we have helped make America grow and the American people have shown their gratitude."

An Example Worthy of Emulation

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I take pleasure in placing in the RECORD the invitation of the Michigan State Employment Service to the June graduate, wherein the services and the ability of the agency is made known to the youth of the State emerging from their studies to the field of American opportunity. In presenting this invitation, I do so with a hope that other States will seek to adopt this idea which should prove very beneficial to the school graduates. The invitation follows:

THE JUNE GRADUATE

Too often the potential abilities of the high-school and college-trained individual are overlooked in the search for people with a background of actual work experience to do a specific job.

While the graduate of today will be a large segment of the labor force of tomorrow, the major contribution to progressive thinking and expanding know-how in the future, will come from this group.

This office deals in employment opportunities for the so-called white-collar worker—people with aptitudes and attitudes for work in the commercial, professional, technical, and clerical occupations.

We can make a worth-while contribution to your endeavor if you list your needs with this office and let us assist in your selection of the June graduate with potential possibilities. Call Trinity 2-4900.

The Late George Gordon Battle

EXTENSION OF REMARKS
OF
HON. WILLIAM T. BYRNE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. BYRNE of New York. Mr. Speaker, friends of George Gordon Battle, noted attorney, have received the news of his sudden death this week end with great sadness. He was a truly great American, one of the kindest men of our time, and he practiced those principles which have made America great.

Born in 1868 in Edgecombe County, N. C., where his father's family had lived for four generations, he was one of 11 brothers and sisters. After his graduation from the University of North Carolina, the University of Virginia, and Columbia University Law School, he began to practice law in New York City in 1891, and there he remained as a distinguished leader in civic enterprises. At the time o his passing he was the active senior partner of the firm of Battle, Fowler, Neaman, Stokes, and Kheel.

George Gordon Battle threw himself with ardor and sincerity into work for human liberty. At one time he headed the Council Against Intolerance in America and, in 1940, he received the medal for the promotion of better understanding between those of different religious faiths.

George Gordon Battle, with his warmhearted, generous nature, was ever a man to champion principles. He was one of the finest champions the movement for equal rights for men and women ever had, and as a great constitutional lawyer went before the platform committee of the Democratic Party in Chicago to personally urge the adoption of a plank on the equal-rights amendment now before Congress.

Under the late Gov. Alfred E. Smith, he directed a study of labor conditions in the cloak-and-suit industry. Politically, Mr. Battle was a Democrat, and always a leader in our party councils. He served as chairman of campaigns for a large variety of civic and charitable enterprises and of governmental commissions. He was chairman of the Triborough Bridge and Tunnel Authority in 1933.

As a citizen and a lawyer he will be missed.

Acceptance of Patronage From Republican Administration by Illinois Editors Violated Freedom of the Press

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith excerpts from a Mutual network broadcast of April 30, 1949, by Joseph F. McCaffrey from Washington:

The thoughtful in Washington this week are mulling over what they believe to be one of the most shameless violations of American freedom of the press in recent years.

It concerns the story of 33 Illinois editors who allowed themselves to be placed on the State pay roll during the regime of Republican Governor Dwight H. Green. Green was defeated last November.

These 33 editors and publishers, mostly from down-State Illinois weeklies were carried on the State's compensation for personal service pay roll for a total of $305,682.

Charged Illinois Congressman MELVIN PRICE, "Is it any wonder that readers of Illinois newspapers saw so many editorials praising the Illinois Republican administration and booming Dwight H. Green for the Republican nomination for President."

But the story isn't so much about the scandal in Illinois. Rather it's in the way the wire services and newspapers outside the State ignored the whole expose. Ignored it with a conspiracy of silence.

The story about the Illinois editors was broken by Roy Harris of the St. Louis Post-Dispatch and George Thiem, of the Chicago Daily News.

The Post-Dispatch and the Daily News printed their stories on April 14. No other paper outside the Illinois region—to the best of our knowledge—mentioned the matter during the next few days.

On April 25 the national weekly magazine Newsweek published three-quarters of a column on the Illinois editors.

But not until Monday, April 25—11 days after the story broke—did a Washington newspaper carry it. The Washington Post published a detailed story, crediting it to a special correspondent.

But this 11-day lag was not the Washington Post's fault.

Up to that time not one of the major wire services relayed to Washington a word about the Illinois scandal. In fact, the first wire story to hit the ticker in Washington concerning the scandal came through on April 28—two long weeks after the Post-Dispatch and News first published the story.

So the Washington Post must be credited with enterprising journalism. Unable to get the story from the wire services it subscribes to, the Post went out and got it on its own.

Later, commenting editorially on this conspiracy of silence, the Post said: "At best this (whole thing) looks like crass indifference to a particularly juicy bit of news. At worst it looks like a cover-up of scandal within the family. We cannot approve of either."

So speaks the courageous Washington Post.

With journalistic freedom being hampered throughout the world, every effort should be made here in the United States to keep the press free and vigilant.

No public scandal should be immune from the honest, searching spotlight of an alert free press.

Fred Schilplin

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. MARSHALL. Mr. Speaker, it was with real sorrow that I learned of the death of Fred Schilplin last Friday morning. A pioneer newspaperman and a community leader during most of his 80 years made him one of great men in recent Minnesota history. Fred Schilplin was not content with being a mere reporter of the news; he helped make the kind of news worth recording.

From all over the United States men who knew Fred Schilplin have sent messages of condolences to his family. There is nothing I can add to these messages of sorrow and high praise. I would only like to present an editorial by Mr. Harold Schoelkopf, managing editor of the St. Cloud Daily Times, printed on the day of Mr. Schilplin's death:

FRED SCHILPLIN

The city of St. Cloud and the central Minnesota community suffered a far-reaching loss Thursday in the death of Fred Schilplin.

An orphan boy who won his first job with this newspaper at $1 a week, his rise to its ownership is the saga of American opportunity for those who are not afraid of honest toil.

From the day he began his newspaper career as an apprentice for the late C. F. Macdonald, Fred Schilplin set his sights on the goal he wanted to reach, and throughout the intervening years devoted to that task his energies, business acumen, and administrative abilities.

It was not an easy goal to attain. The Times was still uncertain of its future in

those early days, and barriers confronted Fred Schilplin that might have turned aside a weaker man. But he was endowed with a stalwart heart and a determination that brooked no failures.

In the process of his growth, he found time to serve the community, the State and the Nation. The people of Stearns County elected him sheriff and he became St. Cloud's postmaster.

After the election of President Roosevelt in 1932, Fred Schilplin was singled out to serve on the Public Works Administration Commission for Minnesota, and later was State director of the Federal Housing Administration for a number of years. He was honored by his fellow Midwest publishers by being elected president of the Inland Daily Press Association, and sat high in the councils of the Associated Press and the National Association of Newspaper Publishers.

But Fred Schilplin's great interest was in his home town and in the adjoining community which came to be known as Central Minnesota. Years ago he recognized this inland empire as one of tremendous business and agricultural possibilities. He was aware that St. Cloud as a city would grow and prosper in direct proportion to the development of the Central Minnesota farmlands, and agriculture never had a better friend.

His advocacy of diversified farming and dairying brought results. Stearns County for years has been the greatest single butter-producing county in the United States, and as this golden tide found the markets wealth returned here one thousandfold.

Mr. Schilplin acquired farms of his own to test his theories, and his Farm Beautiful, located near Pleasant Lake, became one of the State's real showplaces.

He was an enduring friend also of the other great industries here. His influence, exerted in high places, won St. Cloud granite shops many a lucrative contract. His close friendship with officials of the Great Northern made that industry one of the community's real assets.

Like other builders, Fred Schilplin's real worth to us will not be measured in a day or a year or 50 years. What he has created has been done step by step and piece by piece. It is still too early to put all these pieces together, but so strongly have the foundations been built that we are assured the completed structure will be an imposing monument to his life's work.

H. L. S.

Vets Ask Repeal of Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. MADDEN. Mr. Speaker, I have received a great number of letters, postal cards and resolutions from veterans and veterans' organizations, asking for the repeal of the Taft-Hartley law.

I am herewith submitting the resolution adopted by the Chicago Union Labor Post, No. 1277, Veterans of Foreign Wars of the United States. The same speaks for itself.

CHICAGO UNION
LABOR POST, NO. 1277,
VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Chicago, Ill.

DEAR COMRADE: At a regular meeting of this post on April 21, 1949, the officers were instructed, by unanimous action, to write each and every ex-serviceman in Congress, asking him, as a veteran of Uncle Sam's fighting forces, to vote for repeal of the un-American, Hitlerlike Taft-Hartley Act.

We ask you to cast your vote for the Thomas-Lesinski bill (S. 249, H. 2032). That bill will make it possible for free trade-unions to survive in America. If free trade-unions don't survive, America will cease to be the America for which you and we fought.

There is no greater indictment of the Taft-Hartley Act, and no better reason for preserving free trade-unionism, than this: In the armed forces of Hitler, Tojo, and Mussolini there was not one man with a union card—while in the Army and Navy of the United States the union members numbered millions.

The dictators, in each instance, smashed the trade union of their respective countries as their very first step toward enslaving the peoples of those countries. The country that had the Wagner Act was able to outproduce the countries that depended on nonunion slave labor.

The officers of this post can say emphatically that in discussing the Taft-Hartley bill with veterans they have yet to find one who is even remotely familiar with the law's provisions and favors its continuance. In its abridgement of free speech, free press and free association, and in its injunction provisions which deny to Americans the right of trial by jury, the Taft-Hartley law is a nearer approach to totalitarian tyranny than even Hitler himself dared to make before he actually seized the reins of government.

We sincerely trust, Mr. Congressman, that you will vote to free the American people from the Taft-Hartley yoke. We are sure that by so doing you will deserve well of your constituents in the next election and will deserve well of history.

With our sincere respect and best wishes, we are

Yours in comradeship,
JOHN S. SOMOGY,
Commander.

Israel Refuses To Permit Arab Refugees To Return to Their Homes

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am inserting in my remarks an article that appeared in the New York Times of April 29 by Michael L. Hoffman regarding the refusal of the Israeli Government to permit Arab refugees to return to their former homes.

David Ben-Gurion has so informed the United Nations Conciliation Commission for Palestine at a meeting held in Lausanne, Switzerland.

The article follows:

REFUGEES' RETURN BARRED BY ISRAEL—LAUSANNE MEETING HEARS TEL AVIV WILL NOT PERMIT ARABS TO COME BACK TO HOMES

(By Michael L. Hoffman)

LAUSANNE, SWITZERLAND, April 28.—The Israeli Government has told the United Nations Conciliation Commission for Palestine that it will not permit the return of Arab refugees to its territory.

This position, it was learned here today, was made known by David Ben-Gurion, Israeli Premier, during the commission's recent visit to Jerusalem to prepare ground for the Arab-Israeli peace talks that opened here yesterday.

While the Israeli authorities have stated that they would prefer to see the refugees resettled outside Israel, they have never publicly rejected the resolution of the United Nations General Assembly that calls for reestablishment in their former homes those refugees wishing to return to Israel.

It is the opinion of many who have followed the conciliation work closely that unless Israel modifies her attitude on the refugees, she is due for some sharp setbacks in her struggle for stability and world recognition.

This has been made plain informally to the Israelis by high United States spokesmen. It is considered probable here that it will be made even plainer by President Truman or the State Deparment prior to the opening of debate on Israel's admission to the United Nation's. The Israelis have been warned that as matters stand, the coalition against their admission is strong enough almost to nullify the United States best efforts on their behalf.

ATTITUDE ONE OF CONFIDENCE

Up to the present, the attitude of Israel has been one of confidence that her membership application would be approved regardless of what progress was made toward the political settlement with her neighbors.

According to Commission sources, France and probably a number of the Latin-American countries will oppose Israel's application because of dissatisfaction with her resistance to the internationalization of Jerusalem. The Scandinavian countries have examined the draft of Israel's report to the General Assembly on the assassination of Count Folke Bernadotte and found it wholly unsatisfactory. They are expected to vote against Israel as a bloc.

As the Lausanne talks move slowly through their preliminary stages it seems to some observers that for the first time Israel is on the "wrong" side of almost every point at issue in the eyes of world opinion, as exexpressed through the United Nations resolutions on Palestine. These observers reason as follows:

Israel is occupying territory, notably western Galilee, that has been repeatedly assigned to the Arabs in various partition plans. Israel is acting as if Jerusalem were to be incorporated fully into the new state. Israel is encouraging further immigration of Jewish settlers while rejecting responsibility for the reestablishment of 600,000 to 1,000,000 Palestine Arabs displaced from their former homes.

These are the factors cited in commission circles as reasons why Israel's position has weakened. Of these factors the refugee problem is by far the most important as Mark F. Ethridge, United States member of the commission, underlined in a press conference yesterday. Commission experts who have recently been on the spot consider Israel's refusal to accept the return of at least part of the refugees not only as bad psychology but bad administration.

It is stated that infiltration of the Arab refugees is already taking place. Given the nature of the population, these experts doubt whether any form of policing could effectively keep out refugees determined to return to their homes. This opinion is informally expressed by Arab representatives also.

MOSLEMS SEEK JERUSALEM

DAMASCUS, Syria, April 28.—Deputy Premier Emir Adel Araslan said today that the Moslem world wanted all of Jerusalem and not merely part of the city included by any internationalization plan.

Proposals for the internationalization of Palestine's holy places constitute one of the major issues in the Israeli-Arab peace talks now in progress in Lausanne.

Commenting on the Lausanne conference, Mr. Araslan said:

"It is generally agreed by the Arab states that Israel has not executed any United Nations decisions, especially as regards repatriation of refugees and their compensation, and our policy must be inspired from this fact."

Congress Will Do Its Job for the Nation

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Trainman News, the official weekly publication of the Brotherhood of Railroad Trainmen of April 30, 1949, written by A. F. Whitney:

CONGRESS WILL DO ITS JOB FOR NATION

If Members of Congress were as gullible as the pollsters imply when they spread their misleading propaganda in the press and on the radio, alleging that the Eighty-first Congress will not repeal the Taft-Hartley slave-labor law, it would be most pleasing to them. But the Members of Congress are not gullible, and they do not relish the cheap propaganda that is calculated to lure them in the wrong direction.

These pollsters who were wrong and completely discredited in November 1948 are at it again. Their activity represents pure, unadulterated paid-for propaganda, designed to influence Members of Congress. It will fall flat and boomerang against them as it should, because they assume that Members of Congress are gullible and will fall for canned letters, canned broadcasts, and canned predictions.

These vocalists of propaganda have lost the respect of the American people. They have discredited the press, and are presently attempting to discredit the Congress of the United States.

The administration's new labor legislation has reached the floor of Congress and is being studied, reviewed, and debated. It is being carefully examined and contrasted with the Labor Relations Act of 1947, which crucified labor and discredited its authors. As a matter of fact, the Taft-Hartley Act is so impracticable and discriminatory that many Members of Congress who reluctantly voted to give it a trial are now looking for an opportunity to correct that error.

The situation today is vastly different than it was in 1947, because experience has taught the country that the blunders of 1947 have been costly to industry, have discriminated against labor and have placed many of the Members of the Eightieth Congress in a very bad light.

People who labored under the delusion that all of the Members of Congress who voted for the Taft-Hartley slave-labor bill in the Eightieth Congress will vote to retain it in the Eighty-first Congress are riding for a fall, because Members of Congress are not stupid. They know what happened to approximately 115 of their number on November 2, 1948. They know that not a single Member of Congress who supported the Taft-Hartley bill has been able to successfully defend his vote for it, and the slogan today is, "Brother, I do not plan to go out with TAFT in 1950."

Most Members of Congress are hard-working, honest, respectable gentlemen, who have a desire to be faithful to their trust. They wish to deal fairly with labor, with the farmer, with industry, and to vote for what they believe to be best for all people. They are wholly unlike that discredited Joe Ball, who was defeated by the young mayor of Minneapolis by more than 207,000 votes; or Fred Hartley who did not have the guts to run for reelection because he saw the handwriting on the wall; or EUGENE COX, of Georgia whose record stinks to high heaven. Members of the Eighty-first Congress generally do not dislike labor; they do not oppose labor's right to organize and they are not out to smear labor nor to serve the NAM.

They would blush were they accused of playing ball with biased men like Denham of the Labor Board, or with Fulton Lewis, Jr., or his kind.

The Brotherhood of Railroad Trainmen prides itself in knowing something about human nature, and its representatives will not participate in a campaign of high pressure or false propaganda in an attempt to deceive or mislead any Member of Congress. The membership of the brotherhood enjoys the respect and confidence of most Members of Congress, and it proposes to retain this confidence and respect by treating the Members of Congress with dignity and by furnishing such information as will be helpful to them in determining matters placed before them.

The Taft-Hartley law will be repealed because as leprosy destroys the growth and vigor of human beings, the Taft-Hartley law destroys that fine relationship which should exist between management and employee, and it is more dangerous to the welfare of the Nation than any law that was ever perpetrated upon the American people.

Congress will have the support of labor in the administration's program; the repeal of the Taft-Hartley Slave Labor Act, the reinstatement of the Wagner Act with a few respectable amendments, because this program is designed to promote industrial peace, to preserve free and fair collective bargaining; to provide full employment for the people; to make America productive, progressive and secure; to protect democracy, and to applaud those men of future generations who guarantee liberty to every citizen in our great country.

The Hulbert Flag

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. MACY. Mr. Speaker, under leave to revise and extend my remarks made on the floor this morning regarding the Hulbert flag, and also include in the Appendix certain records and documents from the New York State and Suffolk County Historical Association, I include the following:

CONTRIBUTION OF RESIDENT OF SUFFOLK COUNTY, LONG ISLAND, TO OLD GLORY, 1775

In this nebulous time when no one of us can but think long and often of the future and what it will hold for ourselves and our children, the flag symbolizes our conviction and embodies our hope. The anxiety of Francis Scott Key who cried out off Fort McHenry, "Does the Star-Spangled Banner still wave?" must eternally alert each of us equally through these days of troublous peace, as it does in war, if America is to remain the land of the free.

Signifying for us the abstract entity that is America—the collection of peoples who have gained nationhood through mutually seeking a balance of rights and freedom, maintaining one to make possible the other, the flag is a beautiful and comforting thing. It is beautiful to us as no other flag is beautiful, not for its color, design or fair field of stars; it is beautiful because it is our land's ranges and valleys, its oceaned shores. It is comforting because it is home and defense, our forefathers' promise of brotherhood and prideful, unshackled security.

Emblems have had followers since the days the Egyptians carried their animal-headed spears and the Roman legions went into battle bearing tassled standards, but few of the flags that have waved in history's wind have had a nickname comparable to that of "Old Glory." It concentrates into colloquial love the affection and reverence we bestow upon the Star-Spangled Banner. It makes the symbolic sign of the Nation peculiarly and intimately one's own, and since dying is ever an individual thing for every soldier in every land, this strengthens and sustains.

My home county of Suffolk, one of the 12 colonial counties of old New York, had a part, I believe, in the creation of the Stars and Stripes as we know it today, for at Riverhead, our county seat, in the historical society's brick building there may be seen a tattered red, white, and blue, star-spangled relic. It is 42 by 29 inches with a field 14 by 18¼ inches and is known as the Hulbert flag, since it was carried by the Bridgehampton, N. Y., company of Capt. John Hulbert in the Revolutionary War and taken by him to Philadelphia just prior to the date when Betsy Ross at the request of General Washington made our first emblem.

Many are familiar with the famous Pine Tree flag, the Count Pulaski flag, and that fierce banner with the coiled rattlesnake and the warning, "Do not tread on me." But the Hulbert flag is little known. It was found between the walls of an old house on Brickiln Road, north of Scuttle Hole Road, Sag Harbor, along with a number of Hulbert letters, now in the possession of Morton Pennypacker, Suffolk County historian, and author of an article entitled, "The Hulbert Flag," which was read before the New York State Historical Association in Southampton, N. Y., in 1932, and reprinted in New York State History, volumn XIV, No. 4, October 1933.

I had the pleasure some time ago of reading Mr. Pennypacker's scholarly bit of research, and recently my recollection of it was refreshed by Judge Murray Hulbert, a descendant of the Capt. John Hulbert and a former Member of this House of Representatives.

According to the Pennypacker account:

The first American flag with stars in a blue field was designed in 1775 by Capt. John Hulbert's company of the Third New York regiment, commanded by Col. James Clinton. It was probably made while they were at Fort Ticonderoga, preparing to escort to Philadelphia the first prisoners of war to be exhibited before the Continental Congress.

Weighty matters before the Congress had given little time for the discussion of a design for a flag, although in letters the need of one had been urged. But when Captain Hulbert arrived and reported the successes to the northward it is more than probable that the Members of Congress were so well pleased with the design of the flag of his company that someone asked Francis Hopkinson, who was an expert with his pencil, to make a sketch of it. In fact at a later date Hopkinson included among the items on his bill to the Congress one for sketching the flag of the United States of America.

Captain Hulbert's company was one of a number of organizations to use a flag in 1775 each with distinctive devices: Red and white stripes, a pine tree, an animal, a snake, a crescent. The 28 men composing the Philadelphia Light Horse Troop, when they escorted Washington to New York on his way to Cambridge in June 1775, carried a flag in which 13 stripes were used in one corner, with elaborate painting in the center. It was most natural that Captain Hulbert's Long Island men, familiar with the sea, should adopt the stripes, but copy the sky for their field, and place thereon a star for every State.

Undoubtedly William Richards, a Government contractor, to whom probably Hopkinson showed his sketch of the Hulbert flag, had a flag made and showed it to Members of the Congress.

If the country needed a flag and if a satisfactory design had been found months before, why the delay in adopting it? None can surmise what they were waiting for, or what strong influence may have opposed our having a national flag. We know that on June 14, 1777, the resolution was passed and our flag adopted, and then are perplexed to understand why there was no official proclamation of this resolution until the following September; this was an unaccountable delay. The same causes may have been responsible for the delay before the passage of the resolution.

Letters still exist showing that Richards urged action for the flag resolution without result. Probably he wished the adoption of the flag made with the cooperation of Hopkinson, and questioned the further use of the striped flag with the painted rattlesnake, for he writes under date of October 15, 1776, "It is not in my power to get [flags] until there is a design fixed on to make the colors by."

When Congress adopted the flag resolution its passage had been anticipated, at least by the Pennsylvania Legislature, for on May 29, 1777, this body authorized the payment to Elizabeth Ross of £14 12s. 2d. for making ships' colors which were then stored in William Richards' place.

In the writer's opinion, the discovery of the Hulbert flag solves the problem of a pattern for the Stars and Stripes. Francis Hopkinson sketched it; Betsy Ross deserves some credit, though not so much as her family supposed.

The history of Captain Hulbert's company is necessarily fragmentary but so much of it as the documents reveal follows. The company began its military existence on July 2, 1775, at Bridgehampton, in front of the little church which served the community until 1842. The service on that memorable July day was conducted by Deacon David Hedges. That he fired his hearers with the patriotism of the hour is evident, for at the close John Hulbert gathered the men of the congregation about him at the door, and then and there enlisted 21 for one of the first companies organized in the colony for the defense of national liberty. On the following day they recorded their names and thereupon started after others. Twenty-seven more were added on the 5th, and on the 27th Captain Hulbert advised the Provincial Congress that he had 68 and expected the full enrollment before the end of the month.

Alarmed for their livestock on Montauk the people of Southampton, as soon as they heard that a local company was forming, petitioned to have it assigned to that service, and Burnet Miller, chairman of the committee of Southampton, addressed the Congress as follows:

"SOUTHAMPTON, *July 5, 1775.*

"GENTLEMEN: The committee of East- and South-Hampton, taking into their serious consideration the remote situation from the headquarters at New York, and much exposed to the ravages of our unnatural enemy at this day with regard to our stock in our common field at the Point of Montauk, it being remote from the inhabitants, where any number may land and at pleasure take away our stock which is large, not less than 2,000 neat cattle and three or four thousand sheep, which if taken away would greatly distress us and give them support, which we would by no means do.

"Now considering our situation we request your honorable House to petition General Schuyler that a number of troops be stationed at Montauck and that the company now raising here may be a part until a matter of more importance shall call them away.

* * * * *

"BURNET MILLER,
"Chairman."

The reply to the above letter, 1 week later, merely noted that it was forwarded to General Schuyler.

Then followed a letter to the Committee of Correspondence for East Hampton and Southold, dated "In Provincial Congress, New York, 31st July 1775":

"Gentlemen: By the enclosed copy of a letter from General Washington to General Wooster, we think not unlikely the designs of these ships may be to take provisions from different parts; as Montauck, and other parts of the east end of Long Island are much exposed, we judge it proper to give this intelligence that you might take such methods for securing the stock there, as you shall judge necessary. Hulbert and Griffing's companies can be employed for that purpose till otherwise ordered. I am, etc."

On August 6 an express arrived from Suffolk County, on Long Island, with information that a number of transports, with a considerable body of troops, from Boston, under convoy of five ships of war, had appeared off Montauk Point; that an officer landed, and requested to purchase a number of cattle and sheep, which was refused. The particulars of the proceedings in consequence of this demand must be deferred, till more authentic accounts are received. We hear that the officers of the county militia marched a large body of men to the place of their landing; and on Tuesday last Major General Wooster, with the Connecticut forces, left the encampment at Harlaem, crossed the East River, at Hoorn's Hook, and marched with expedition to act in concert with the militia.

Hulbert's activity is shown in the diary kept by John Lion Gardiner, a paragraph in which reads:

"John Hulbert sent his lieutenant, John Davis from the Fire Place with about 40 men, who landed at Great Pond, marched up by the bay to the swamp and so to the southeast side of the garden. Davis came to the window of the little room where Mr. Miller, [overseer of the property] was abed but did not hear him. He had orders not to come into the house by Hulbert, and well he did, for there were 20 or 30 Tories, and so forth, up chambers and garret abed and asleep."

That they were anticipating long marches is shown by the following letter, dated Southampton, August 16, 1775:

"Captain Holburt. Sir: Whereas I am lame and unable to serve I should be glad if you would take Mr. John Henny in my room he will take my place from the twelfth of this instant and I shall expect my wages till then and I should be glad if you would leave at your house or send a discharge to me George Harris, Jr. (P. S.) I had one pound and one quarter of powder and five pounds and one-half of ball delivered to Sargiant Sayr by order of Lieutenant Havens, and 16 cartridges which I shall expect to be returned."

The next letter indicates that the officers were in uniform for it is a tailor who presents his bill. It is dated Southampton, September 11, 1775.

"Captain Holburt, Sir: John Gould came to me to make him some clothes he said by your order though he brought me no writing one and as he is a stranger to me I thought it not amiss to inform you sir of it and would be glad if you would send me a line by Abraham Jagger to know where I am to get my pay. Sir your humble servant, Silas Cooper."

The bill is for 10 shillings and 6 pence.

The first order to Captain Hulbert is missing but we find when he left Montauk by his letter dated Southampton, September 9, 1775, which follows:

"Gentn.: I should inform you that I marched with my company from Montauk the 7th instant; am preparing to march, and shall set off by the middle of next week. My company will want a number of guns, &c. as the inhabitants that supplied them will not let them go away, pleading the want of them themselves. I give you this timely notice that the company may not be detained long when we come to New York, &c. I am, gentn, your humble servt. John Hulbert. To P. V. B. Livingston, esq."

A list of those who had guns were found among the papers, and is as follows: Jeremiah Gardiner, Jeremiah Sherrell, John Gann, Amos Loper, Isaac Peirson, Samuel Ranger, Zebulon Jessup, Daniel Topping, George Case, Jacob Hick, Cornelius Bassett, Robert Moore, Abraham Leek, Philip Gildersleeve, Jeremiah Bennet, Benjamin Hunt, John Hudson, Abraham Sherrill, James Field, David Smith, Henry Hopping, William R. Hallsey, William Goldsmith, Abraham Loper, Stephen Ludlam, Lieut. John Davis, Lieut. William Havens, James Sayre, John Gould, Samuel Brown, Josiah Osborn, Nathan Hand, Sylvanus Conkling (Serj.), Daniel Hand, George Ludlom, George Henry, Capt. John Hulbert, Jonathan Cook, Cornelius Osborn, John How, Lewis Chatfield, Jacob Miller, William Willie, David Loper, Jonathan Pain, Thomas Baker, Benjamin Sandford, Elnathan Jenning, William Brewster, Edward Howell, Joseph Baley, Nathan Miller, Thomas Jones, Mathew Davis, Daniel Foster, Abraham Jagger, Burnet Cook, Stephen Howel, Silas Hedges, Joshua Sayer, Thomas Rumbelow, Joseph Hoppin, Isaac Smith, Benjamin Chapel, John Henny.

The next document is the letter following:

"NEW YORK, *September 28, 1775.*

"SIR: Your men are to embark at Greenwich, when your baggage is on board, and you are to proceed with the first wind and tide that offers, to Haverstraw Landing, and there enquire whether there be any deserters belonging to Captain Johnston's Company, of your regiment. If there are, you are to take them with you to their company; but if you have a fair wind, you are not to stay there longer than 3 or 4 nor at any rate above 6 hours. Upon your arrival at Albany, apply to the commanding officer there, for orders what route you are to take to Ticonderoga, in order to join your regiment. But if there should not be any there, take the advice of the committee on this matter, and observe it as the rule of your conduct. If your company is not complete, you should draft as many of Captain Greenwel's as have arms to fill yours. I wish you a pleasant passage and march, and am sir,

"Your very humble servant,
"ALEXANDER MCDOUGALL,
"Colonel."

The above letter is addressed to "Captain John Hulbert, of the Third Regiment, now at the upper Barracks, New York." These barracks, a relic of the French and Indian War, were so-called to distinguish them from the lower barracks which were located near the present Battery Park. They were a collection of low structures built of logs, stretching along the upper end of the Common, as the City Hall Park was then called, and reaching from Broadway along Chambers Street to what is now Centre Street.

Another document mentions that at Albany on October 8, they discharged Jeremiah Sherrill, William Miller, Henry Hopping, and Josiah Osborn. They had no deserters and no deaths. The next, dated Albany October 9, 1775, is as follows:

"SIR: You are immediately to draw provisions so as to complete your company for 6 days and apply to Walter Livingston, D. C. General, or his deputy, for the necessary carriages and march your company to Ticonderoga without delay. You are to begin your march early tomorrow morning. Good order among your men is at all times to be enforced, and care taken that the inhabitants whom we are going to protect do not suffer in their persons or property.

"GOOSSE VAN SCHAICK,
"Coll. York Forces."

There is not a hint as to how they reached Lake George, but Aaron Barlow, a brother of Joel the poet, who started 6 weeks ahead of them, kept a diary which probably records their route and similar experiences:

"I went up, he says, to take a view of the Indians, about 500, encamped on Albany Hill. I found them to be a very likely, spry, lustey fellows, dressed very nicely for Indians; the larger part of them had on ruffled shirts, Indian stockings and shoes, and blankets richly trimmed with silver and wampum. August 26, about one of the clock we set out on our journey. It being a cold, wet, uncomfortable day I got a very bad cold. We traveled to Half Moon, there we put up. August 27, very cold for the season. The caravan got up their teams and we went off very early. We went this day about 7 miles above Still Water. August 28, went this day 2 miles below Fort Edward. August 29, being wet we tarried till 1 o'clock before we set out. We went within 5 miles of Fort George. August 30, we set out very early for Lake George were we arrived about 9 o'clock."

Captain Hulbert signed a muster roll which is dated "In Camp at Lake George the 15th of October 1775." If from there they went by boat to Ticonderoga it probably took 2 days more. Barlow's diary reads:

"About 9 o'clock we went on board the Battow for Ticonderoga, it being 35 miles. The wind being ahead we went only to Saberday Point which is 24 miles from Fort George and lodged on green feathers (Hemlock boughs). The next morning we embarked very early. The wind being ahead we came to the landing about 9 o'clock, it being 3 miles from the Fort (Ticonderoga)."

Meanwhile General Montgomery was besieging St. John's on the Sorel River without much success owing to lack of ammunition and heavy guns. Learning that Carleton, supposing the fort at Chambly, twelve miles northward, to be safe while St. John's held out, was neglecting to keep it properly garrisoned, Montgomery sent a detachment under Colonel Bedell of New Hampshire, Maj. John Brown of Massachusetts, and Major Livingston of New York, who on October 19 succeeded in bringing the garrison to an unconditional surrender. The prisoners consisted of 1 major, 2 captains, 3 lieutenants, captain of a schooner, a commissary and surgeon, 83 privates, and 81 women and children. The colors of the seventh regiment of British regulars were also taken.

It is certain that Major Brown returned with the flag. Marinus Willett's Narrative says that Willett escorted the prisoners to Ticonderoga; and Barlow says:

"ST. JOHN'S, October 21st—This day we sent a flag of truce to see if they would give liberty to bring the prisoners and baggage by the Fort at the Lake. They were immediately granted liberty and they were brought this day aboard of our sloop and schooner."

Several days, at least, Hulbert's men had been waiting at Ticonderoga before he was formally notified by General Schuyler to march the prisoners to the Continental Congress, then in Philadelphia. General Schuyler's order is dated November 1, 1775. It is probable that they improved this opportunity to fashion, while there, a flag for their company which would rival the captured trophy.

The next document is an account of the expenses of conducting the prisoners from Chambly to Philadelphia. The first entry is November 2, 1775. This being £3 10s. paid to Samuel Adams may have been a debt contracted while at Ticonderoga. Likewise the second entry of £7 14s. 6d. paid to John Jones on November 4, but by November 5 they were well on their way, for Platt Smith's bill for £3 7s. 6d is then entered. Expenses at Wings, Stephen Tuthill, Ezekial Consign, John Vernon, Elizabeth People and Richard Merifie are all entered before reaching Martha Vernon's at Albany on the 10th. Several bills were contracted at Haverstraw Landing on the 12th and 13th and on the 14th Richard Campbell's bill at Hackensack is entered. Josiah Pierson at Newark follows; William Graham at Elizabethtown has an entry on the 15th, as has Henry Dawson, at Woodbridge; Brunswick has several entries on the 16th, including ferriage. The largest single item of expense was £39 paid for five four-horse wagons from Haverstraw to Trenton. Three two-horse wagons cost £14 8s. and two Philadelphia wagons have another entry. Smaller items mention stage from Hackensack to Trenton and passage from Trenton to Philadelphia and chair and several other wagons for sundry sums. This document shows that they received £248 for the expenses of this trip and expended £214 leaving a balance of £34.

Before their arrival in Philadelphia the Congress has received a letter from General Washington, dated November 8, in which he says:

"Our prisoners, by the reduction of Fort Chambly (on which happy event I most sincerely congratulate the Congress) being considerably augmented, and likely to be increased, I submit it to the wisdom of Congress, whether some convenient inland towns, remote from the post roads, ought not to be assigned them; the manner of their treatment, subsistence, etc., defined."

Congress at once made necessary arrangements but was obliged to change its plans upon receipt of a letter from General Schuyler. The Journals of Congress, under date of November 17, read:

"On motion made, Resolved, That the commissioned officers, taken in the forts of Chambly and St. John's be put on their parole of honour, that they will not go into or near any seaport town, nor further than 6 miles distant from the respective places of their residence, without leave of the Continental Congress, and that they will carry on no political correspondence whatever, on the subject of the dispute between Great Britain and these Colonies, so long as they remain prisoners.

"Whereas the officers taken at Fort Chambly, have been permitted by General Schuyler, to make choice of, and to reside in Trenton, in New Jersey, and the disposition of the prisoners by him made, has been approved by Congress, Ordered, That a copy of the foregoing resolution be sent to the committee of Trenton, and that the Committee be desired to get the same signed by the officers there."

The Journals of Congress for Monday, November 20, 1775, read:

"Capt. John Hulbert, who was sent by General Schuyler to conduct the officers, who were taken prisoners at Fort Chambly, to Trenton, attended and made report of his proceedings and the disposal of the prisoners."

The Pennsylvania Evening Post, November 23, mentions the arrival of Hulbert with the prisoners as follows:

"On Friday last Major Stopford and other officers, with their band of music, taken at Chambly, arrived at Trenton in New Jersey, where they are to remain prisoners of war till exchanged."

A carefully prepared statement among the Hulbert papers shows that 51 of the prisoners were left at Trenton, 6 at Fort George, 3 at Saratoga, 5 at Albany, 1 at Tie Condaroga, and 107 were sent to Connecticut.

Hulbert was probably still in Philadelphia on November 23, for on that day the Journals of Congress record that:

"On motion made, ordered, that $120 be paid to Captain [John] Hulbert, and charged to account of General Schuyler, and that the said Hulbert, after stationing his men at the fortresses on Hudson's River, have leave to be absent 10 days."

It would be interesting to know what induced Congress to grant this 10 days leave. Undoubtedly it gave Hulbert the opportunity to converse with many and it is perhaps significant that his Brookhaven neighbors, within a few days of his visit, applied to the Provincial Congress for "powder, balls, guns, drums, colours and other necessaries," thus being the first company to request flags of the Provincial Congress. Had Hulbert told them that his company had a flag this early request can be readily understood.

The date of Hulbert's arrival at Fort Constitution is not positively known. The island upon which it is situated was the first spot along the river to be recommended for fortification as early as June 13, 1775, and work was started on August 29 of the same year. It had therefore been under way for more than three months when Hulbert's men arrived. About this time it was discovered that unless West Point was also fortified an enemy would have little trouble in capturing Fort Constitution.

Benjamin Franklin who with a committee examined the works three months after Hulbert's men had left, reported "on the bastion, thirteen six pounders and one nine-pounder were mounted; the east bastion mounted seven nine-pounders and one six-pounder; the block house contained eight double fortified four-pound guns, mounted."

Captain Hulbert and the men of his company spent Christmas Day, 1775, at Fort Constitution, as the following letter found among his papers shows. It is addressed to "Captain John Hulbert, Commanding Officer at the Fort on Hudson's River":

"SIR: Your favor of the 20th current was handed to me, and have duly considered its contents. The Congress of our Colony has adjourned till the first of February next. And least the Committee of Safety should not make a board, I have wrote to Mr. Bedlow one of the Commissioners on the subject of the extra pay of the minutemen, and the necessity of calling them in before your troops depart. You should see them posted in the Garrison, and settle the command, before you quit the Fort; and I wish to prevent any accident, you should continue there till a commander of the fort is appointed, which I expect momentarily from the Continental Congress. At all events, the Troops should not leave the Fort, till they are relieved, by as many of the minute Companies as can be accommodated there. You will be particular in seeing the Arms, and accoutrements of the Colony, in the hands of your and Captain Grenell's Companies, secured in Arm chests and take receipts for them at the foot of the Roll of the men's names, who shall deliver them up,

to the end, that neither you nor they be chargeable with them, and that those arms be secured and in readiness to be put in the hands of the Troops, or our fellow Country men as the case may require, for the defense of our bleeding Country.

"Captain Grenell is gone to Philadelphia with a committee of the Congress, on public business. I wish you the compliments of the season, and am with great truth and regard, sir,

"Your humble servant,

"ALEXANDER MCDOUGALL."

It was time for Captain Hulbert and his men to return to their homes and fireside, but they waited until other men came to the fort to fill their places; then, as shown by a bill of expenses found among the other documents, they left Fort Constitution on January 8, 1776. They went to White Plains, to Rye, and were ferried across to Huntington Harbor. They marched to the town of Huntington, where wagons were procured which took them to Smithtown. Other conveyances took them to Benjamin Havens, and then to Southampton, where on January 18, 1776, Captain Hulbert obtained the signatures of every member of the company, after which they were discharged. But they were not long out of service. Most of them enlisted in other companies as soon as opportunity afforded. However, so few of the records of that trying year have survived and so frequent were the changes, that it is difficult to follow the records with any degree of certainty. Captain Hulbert appears to have become colonel on February 20, 1776. He was then second in command of the minutemen under Josiah Smith, but on June 10, he is credited with becoming lieutenant colonel of Colonel Drake's regiment in General Scott's provisional brigade. Records are missing that might show where he was during the Battle of Long Island.

On August 29, 1776, the Provincial Convention resolved "That it be recommended to the inhabitants of Long Island to remove as many of their women, children, and slaves, and as much of their livestock and grain, to the main, as they can; and that this convention will pay the expense of removing the same"; agreeably thereto, Col. John Hulbert 4 days later started moving his effects. Receipted bills show that he sent to Saybrook 6½ loads of household goods, 4 passengers, 1 horse, 1 riding chair, 4 loads of hay, 1 load of wheat, 2 of corn, 4 barrels, and some iron.

Before the end of the month he was selected by General Washington to assist Gen. George Clinton, General Lincoln, John S. Hobart, and H. B. Livingston, in planning an expedition to Long Island. Washington directed them to meet at Fairfield and from there to plan to attack the British forces at Huntington. Hulbert's bills show that he had expenses at Stanford, Norwalk, Milford, New Haven, Durham, and Fairfield, besides expresses from Middletown and to Governor Trumbull. Every detail had been arranged before the middle of October, but the day before they were to start they received orders from General Washington to abandon the enterprise as the troops were needed elsewhere. Hobart in a letter to George Clinton dated Fairfield, October 17, 1776, thus expresses their disappointment:

"MY DEAR GENERAL: Are we to be disappointed in our favorite expedition? Are the good people of Suffolk to suffer without any hope of redemption? Why are the troops ordered from hence just as our expedition is on the point of execution? Surely the army is strong enough without them. I fancy somebody wants to see the Suffolk regiments about him, that he may brag of the Boston folks, for I assure you that they make a very respectable figure on the parade and I dare say will do well in the field; let me entreat you to interpose and prevent this plan from being blasted. Colonel McIntosh will inform you of the state of matters here; all of Smith's regiment that are on this side are ordered to rendezvous at New Haven next Monday."

A few days later, from Peekskill, November 24, 1776, Henry B. Livingston writes:

"GENTLEMEN: I am just informed that Lieutenant Colonel Hulbert is gone to Long Island, and it is very improbable that he will accept his commission. Should this be the case I must beg leave to recommend Major Fish as the most eligible person I can think of as major of my regiment; he is a young man of spirit and ability."

Captain Hulbert's letter to the Committee of Arrangements dated Fish Kill, December 9, 1776, indicates that he had received an appointment, but all details are lacking. It reads:

"GENTLEMEN: I have not the opportunity of returning you my thanks for the honor done me in my appointment by waiting upon your committee, but take this method to acknowledge the favor, at the same time am under the necessity of informing you that it is not in my power to serve, consistent with other affairs that interfere, not from any dislike to the service. Gentlemen, I would presume to recommend Benjamin Marvin as an officer of merit, if any vacancy for an officer of his rank should offer. He has served as a first lieutenant in Captain Griffin's company, the last two campaigns one of which I was with him, and well acquainted with his conduct. I am, gentlemen,

"Your humble servant,

"JOHN HULBERT."

Perhaps few besides General Washington ever knew what were those "other affairs that interfere" which he refers to above. Documents show that shortly thereafter he was engaged in promoting privateering in the sound. He was responsible for many vessels, among them being the brigs *Middletown, Defiance, America,* and *Martial,* the ship *Revenge* and sloop *Mehitable,* with the prize schooners *Adventure, Hudson,* and *Industry.* Then on June 27, 1777, the Council of Safety for the State of New York by vote resolved that "* * * Obediah Jones, John Hulbert, and Thomas Dearing, or any two of them, be and they are hereby authorized and directed to remove, at the expense of this State, to the county of Dutchess, within the same, all such of the refugees from Long Island, now in Connecticut, as are unable to maintain themselves, and are willing so to be removed."

A few days later, on July 3, the council confirmed the appointment and by prohibiting any others from granting permits made their power absolute and their permit necessary for all who crossed the Sound to or from Long Island. This work, with the outfitting of the privateers, occupied his time to the end of the war or at least until April 5, 1782, when he returned to Long Island.

Capt. John Hulbert kept a journal and was careful to preserve letters and other papers which almost 70 years after the above date mysteriously disappeared. Mather in his Refugees of 1776 from Long Island to Connecticut, page 27, says:

"Hon. Henry P. Hedges stated that about the year 1850 he had the Correspondence and Journal of Capt. John Hulbert from Samuel L'Hommedieu; and read and returned them to him. Mr. L'Hommedieu loaned the papers to his nephew, Samuel L. Gardiner; and, in New York City, they were taken from Mr. Gardner's hat and disappeared, perhaps forever."

An advertisement of household premises and saddler's shop is signed: John Hulbert, Sag Harbor, April 10, 1807 tf. Two months later he mortgaged property in Sag Harbor for $200. Nothing that can be relied upon has been found about Capt. John Hulbert after the above date.

It is a matter for regret that among the many books once owned by John Hulbert, but a single copy remains that can be identified. This was recently purchased for the Long Island Collection, and is inscribed in his characteristic script: "John Hulbert, his book, 1774." It is A Treatise Concerning Religious Affections by Jonathan Edwards, published in 1746. Pinned to a fly leaf are leaves from an elm tree planted by President Edwards in front of the house where he lived in Northampton. The bulk of the books from his library formed the nucleus of Bridgehampton's first public library, which was among the early institutions of the kind of this country.

The original flag is owned by William D. Halsey, president of the Sag Harbor Savings Bank, and is in the building of the Long Island Historical Society at Riverhead. Its size is 42 by 29 inches, the field being 14 by 18¼ inches. Miss Gertrude T. Leverich, of Bridgehampton, with infinite care assisted in preparing it for the framing between plate glass. The original documents are owned by the writer and may be examined or studied at any time.

Mr. Pennypacker says much of the Hulbert Company's record is fragmentary, but documents in his possession, and in the public record as well, show that Captain Hulbert took prisoners from Fort Chambly, near St. Johns, to Philadelphia, where the part played by Betsy Ross, one of America's great ladies, is well known. Her humble home, wherein tradition tells us she received Washington, Col. George Ross, a member of the Continental Congress, and the Honorable Robert Morris, is now something of a national shrine.

Old Glory as it flies today has five pointed stars. The stars on the Hulbert flag have six points. That lends credence to the belief that the Hulbert flag was the inspiration for the Star-Spangled Banner, for the famous Ross story tells us the pretty Philadelphia seamstress prevailed upon Washington to use the five-pointed star which he had been reluctant to do since that same star is used in the Washington coat of arms.

The Hoover Commission

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. TEAGUE. Mr. Speaker, most of the Members of Congress and many persons throughout the United States have given considerable thought and study to the various Hoover Commission reports on the organization of the executive branch of our Government. My main concern about these studies and investigations is that we now have an opportunity to make real savings in the operation of our Government and at the same time improve the services rendered by the Federal Government. We can do this by eliminating the duplication of services of the various agencies and departments and materially reduce the red tape

that confronts all citizens dealing with their Government.

Radio station WTAW at College Station, Tex., has a regularly scheduled program known as The College Speaks and recently Dr. Milton Nance, of the history department at Texas A. & M. College, made a major contribution to these campus discussions by giving an address on the Hoover Commission.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the radio address by Dr. Milton Nance entitled "The Hoover Commission":

THE HOOVER COMMISSION

As our Nation has grown and society has become more complex, our concept of the nature and functions of government has changed from the individualistic to the paternalistic theory, wherein the state intervenes to promote the general welfare, happiness, and prosperity of all the people—establishing national minimum standards and developing a mythical average man. As a result, our Federal Government is the most stupendous, colossal, gigantic business undertaking in the world today. Records tell us that the Government started off in 1789 with only some 300 civil officers and employees, and that when, 11 years later, the new Capitol on the Potomac was occupied, the total force of office clerks transported thither from Philadelphia numbered exactly 54. Today its 1,816 separate departments, bureaus, agencies, services, administrations, commissions, corporations, and other subdivisions employ over 2,000,000 civilian workers (greater than the population of Philadelphia, our third largest city) with an annual pay roll of over $6,500,000,000. These workers occupy 46,865 separate offices whose combined area is equivalent to 170 buildings like the Empire State. It requires 1,353 pages of fine print in a book weighing 6 pounds, 5 ounces, to present the budget estimates for the Government's operations for the fiscal year of 1949.

Our Government is threatening to outgrow us and become the master rather than the servant. In 20 years it has grown rapidly in size and cost. Some of its agencies are bigger than the whole Government was 20 years ago. Expenditures have advanced from $3,000,000 per year in 1789 to more than $40,000,000,000 in recent years. The per capita cost has increased from $1 in Washington's time to 6 in Lincoln's, 28 in Wilson's and 300 in our own. In 1932 the Federal Government spent 22 percent of every tax dollar—Federal, State, and local—collected in the United States. In 1948 it spent 74 percent of all taxes collected in this country. Federal taxes have increased 19-fold since 1932, and only for 1 year (1947) during the last two decades have receipts exceeded expenditures. The per capital national income between 1914 and 1945 increased 405 percent, whereas the per capita tax burden increased 4,560 percent, and the per capita public debt gained 16,637 percent. The cost of operating our Federal Government today is 20 percent or one-fifth of the total national income, and the cost of all government may take as much as a third of our total national income. A part of this is returned to us in increased services of various types.

The interest bearing debt of the United States increased from $800,000,000 in 1910 to $252,000,000,000 in 1948. Today it is $1,722 per man, woman, and child in the country, or $7,500 per average family. The interest on that debt alone exceeds $5,000,000,000 a year. That is more than the annual cost of operating the entire Federal Government in the years before 1934, except for the war budgets of 1918–21.

The greatest single cause of inflation in the last few years has been excessive government expenditures in proportion of the production of goods and services. But, we might ask, is the increasing cost of government an assurance of our continued prosperity in the future. Only recently have I heard several persons—mind you, hard-work'ng citizens with modest incomes—ask, "What is the use of working when government taxation takes so much of one's earnings?" Those who advocate the so-called welfare state may ponder well what Capt. John Smith said about the common store in the early settlement of the colony of Virginia. Writing about 1617, Captain Smith declared: "When our people were fed out of the common store, and labored jointly together, glad was he (who) could slip from his labor or slumber over his task he cared not how; nay, the most honest among them would hardly take so much true pains in a week, as now for themselves they will do in a day; neither cared they for the increase, presuming that howsoever the harvest prospered, the general store must maintain them, so that we reaped not so much corn from the labor of 30, as now 3 or 4 do provide for themselves."

As the cost has gone up, the people have become more interested in greater efficiency, economy, and responsibility from an organization loosely thrown together over many years by Congress and the President. The cost may be cut either by reducing the service now rendered by our Government, or by reducing the cost of the service, or both. With this end in view, Congress by unanimous vote in July 1947, created the Commission on Organization of the Executive Branch of the Government—better known as the Hoover Commission. The Commission was conceived on a high plane. It was set up on a bipartisan basis with 6 of its 12 members from each major party. Four members each were chosen by the President of the Senate, the Speaker of the House, and the President of the United States. President Truman chose ex-President Herbert C. Hoover, who, in turn, was promptly named chairman by the group. The names alone of the members inspire confidence, and Mr. Hoover, as chairman, understands the problems of Government, having carried the crushing administrative burden, which every President must bear, and completed a long record of unselfish public service, which has won for him the trust and admiration of millions throughout this and other countries. Twenty-four research task forces were set up under the Commission to dig deeply into the facts about our Government. Each studied some special topic, such as the post office, the armed services, the State Department, agriculture, and the like. The members of the task forces were eminent experts in their field, including 2 ex-Cabinet officers, 13 former under secretaries and assistant secretaries of Government departments, 3 former United States Senators, 5 former governors of States, 10 major university presidents, and many executives with special experience in business. They studied the Government with a view to: Limiting expenditures to the lowest possible amount consistent with efficient performance; eliminating duplication and overlapping; consolidating similar activities; abolishing unnecessary activities; and defining and limiting executive functions.

President Truman directed al. the officials in the Government to give the Commission their full cooperation and to refrain from criticizing the task forces' reports. Both orders have been obeyed. The Commission's report has been completed and submitted to Congress in 18 installments—the last on April 1. An over-all report is to be submitted later. These preliminary reports comprise the most comprehensive study of Government in all history, hammering out a broad pattern for an orderly effective, well-run Government.

The report discloses that aside from a multiplicity and overlapping of many agencies, their officials are enmeshed by thousands of strands of red tape, accumulated by legislative and executive action over half a century, which paralyzes the efforts of the best of them. For example, the paper work involved in processing a Government purchase order costs more than $10 per order, yet half of the 3,000,000 purchase orders which the civilian branches of the Government execute are for items costing less than $10; 38 different Government agencies lend money; 16 different agencies are engaged in wildlife preservation, 34 agencies are engaged in obtaining land, 10 in Government construction, 9 in credit and finance, 4 in bank examinations; 65 in gathering statistics, 14 in forestry matters, 28 in welfare matters, 12 in home and community planning, 25 deal with the Nation's mineral resources, the three branches of the armed services maintain separate recruiting offices in communities when one would suffice, and so on almost endlessly. For every 32 Indians under the jurisdiction and care of the Bureau of Indian Affairs there is one Federal employee, making a total of over 12,000 persons administering the program. It takes the Veterans' Administration an average of 73 days to pay death claims on Government life insurance, whereas private life insurance companies pay 80 percent of their death claims within 15 days. The Commission found that one private company with insurance activities much like the Veterans' Administration has an average work load per employee of four times the Veterans' Administration average. The Commission accused the Veterans' Administration of having an excess of voluminous written instructions on internal methods and procedure which handicaps intelligent execution of its program. It cited 88 different manuals, 665 varieties of technical bulletins, and over 400 circulars. Toll rates on the Panama Canal in 1948 were the same as 10 years earlier, despite the fact that expenses were up 79 percent. The Army dismantled a $16,000,000 camp in Alaska and shipped the lumber to Seattle, Wash., only to have it returned to Alaska by the Interior Department and used 10 miles from the site of the dismantled camp. A farmer wrote the Department of Agriculture seeking advice on the best type of fertilizer to use on his soil. He got answers from five separate offices. All answers were different. The Commission found "a confused Federal supply system where agencies compete with one another for scarce commodities, (and) maintain duplicating storage facilities in the same locality.

During the fiscal year 1949 the Government will spend more than $6,000,000,000 for supplies, matériel, and equipment, but nowhere is there an over-all listing on hand to show whether or not new matériel ordered might possibly be included in more than $27,000,000,000 of goods already paid for in Government warehouses and storage depots. Some Federal agencies were estimated to have sufficient office supplies to last 50 years. The Government owns 850,000 typewriters, or 3.6 typewriters for every employee who uses one full-time or part-time. The Commission found startling waste in the armed forces and padding of their budget requests, which, if eliminated, would save $1,500,000,000 a year—an amount which would have been sufficient to operate the Government any normal year before 1900. The per capita cost of maintaining our Army, Navy, and Air Force in 1949 will be $100, whereas just before World War II, in 1938, it was $8, and just before World War I it was $2.25 a head. The various armed services were found to have asked for $1,100,000,000 for research, but the research experts admitted that they could not spend more than $600,000,000. At present there is one officer in the Army for each

eight men. The Army has 150 major generals. A major general traditionally commands a division, but today there are only 11 divisions.

The Postoffice Department was found to be one of the most inefficient agencies of Government. Its operations are hamstrung by an obsolete and overcentralized administrative set-up and by a maze of outmoded laws, regulations, and traditions which freeze progress and stifle proper administration. It takes 20 percent more money to operate the mail trucks than it does to operate large-scale private transport fleets. Machinery is available for sorting mail twice as fast as by hand, but the Post Office Department has none of this machinery. Many classes of mail service are non-self-supporting. The Commission has recommended that this Department be taken out of politics.

The Army engineers and the Bureau of Reclamation on the same day recently made public separate reports favoring the construction of a high dam in Hell's Canyon of the Snake River. The Army engineers intended to build their dam 102 miles below Weiser, Idaho; the Bureau of Reclamation 104 miles below Weiser; both dams would be of practically the same height and construction, and would generate approximately the same amount of electricity, but the Army's dam would cost $75,260,000 less than the Department of the Interior's. It cost both agencies $25,000 each to draw up the plans for these dams.

In its survey the commission found waste of money and waste of human effort. "The Nation," it said, "is paying heavily for a lack of order, a lack of clear lines of authority and responsibility, and a lack of effective organization in the executive branch. It has found that great improvements can be made in the effectiveness with which the Government can serve the people, if its organization and administration is overhauled."

It will be impossible to go into all of the commission's recommendations, but a few might be mentioned to illustrate some of its proposals. The Hoover commission has been interested in both centralizing and decentralizing controls. The Civil Service Commission, it said, cannot control the selection of persons in all departments as originally intended. It should fix general standards, but the departments should have more authority in hiring and firing. It often costs more today to fire an inefficient or surplus person than to retain him. The commission stressed the need of grouping agencies according to their major purposes, and its recommendations have been specific. Mr. Hoover told a Senate committee recently that the necessary first step in reorganization was the passage of a bill to give the President a free hand in reshaping the agencies under his direction, and that he should be given full control of the independent boards and commissions, even though experience has taught that when the President is given control over an agency or commission, its independence will be guided to the extent he desires. But this is as it should be. The framers of our Constitution intended that all powers of government should be distributed among three great branches—Congress (legislative), the executive (President), and the courts (judicial). There was to be only one administrative head—i. e., the President. There should be a clear-cut chain of command and responsibility through the whole administrative structure of government, starting with the President at the top, down to the last charwoman. As things now stand, the President has approximately 65 major departments and agencies reporting directly to him. If he gave 1 hour of his time per week to each of these agencies he would have no time left for the broad responsibilities of his office. Mr. Hoover has requested that the President be given authority to regroup these agencies into 20 or 22 operating heads reporting directly to him, and making direct claims on his time. This seems to be a very sound and sensible plan. It would reduce what is called in business the span of authority, so that the responsible executive can maintain a line of authority and responsibility, and at the same time have time for matters of broad policy.

By the centralization of records management under a single Records Management Administration the current cost of storage and keeping could be cut thirty to fifty million dollars by more "birth control" in record making, microfilming, and less expensive storage. The cost of maintaining a single filing cabinet could be cut $29 a year to $2.50 a year simply by moving the records to cheaper containers in a less expensive storage space. The Commission found 3,080,000 4-drawer filing cases costing $154,000,000 at present prices, occupying 18,000,000 square feet of valuable floor space—the equivalent of 6 Pentagon Buildings. It found approximately one-third of the records either outdated, valueless, or duplicated, and, therefore, could be burned without impairing the operations of Government.

The Commission urged an overhaul of taxing methods so as to eliminate the overlapping of national, State, and local taxes; it recommended coordination of the various Government research programs; a revamping of the grants-in-aid system to the States; revision, improvement, and extension of the budget and accounting system; and greater coordination and efficiency in the Federal medical facilities. To clean up the medical muddle the Commission suggested integrating all Federal medical service under two systems—military and nonmilitary.

Already the proposals are running into trouble. On April 1 the Senate Executive Expenditures Committee voted to let either House of Congress kill a reorganization plan proposed by the President by a simple majority vote. The House of Representatives had previously approved the President's request that any shake-up would go into effect unless rejected by both Chambers. The Senate committee, however, agreed unanimously that no executive agency should be exempt from the reorganization authority. In the past, Congress or the President have usually allowed numerous exemptions, and that is one of the main reasons the executive branch is disorganized today. Ever jealous of its prerogatives, and by nature suspicious of any moves that may affect its patronage and influence in administration, Congress has in the past balked at giving Presidents blanket authority to reorganize the administrative branch of the Government. Even when it has yielded, it has imposed numerous stringent reservations. A strenuous fight is ahead. A good reorganization would probably cut the executive pay roll in half. "The vital fact remains," said Senator CHARLES W. TOBEY, of New Hampshire, "that resistance to change is the very thing we have got to overcome. * * * As Mr. Hoover said in the hearings, the whole effectiveness of the reorganization bill can be destroyed by little grasshopper bites of exemptions here and exemptions there. Many agencies and bureaus have already begun to work to get exemptions concerning them written into the reorganization bill. Some are putting a great deal of pressure on our legislators now. One hesitates to say that any Government agency is maintaining a lobby, for that is supposed to be against the law. The fact remains, however," continued Mr. TOBEY, "that some of these agencies have a suspiciously large number of very active friends working in their behalf."

Something must be done to prevent democracy from strangling itself in the coils of bureaucracy. Administrative reorganization, therefore, is vital to our future freedom and prosperity, and the American taxpayer and voter should speak up in their own interest, by writing their Congressman, said Mr. TOBEY, and demonstrate anew that government of the people, by the people, and for the people has not perished from the earth.

The Sentimental Approach

EXTENSION OF REMARKS
OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Boston Herald recently adjudged the best editorial printed in a United States newspaper of over 50,000 circulation on foreign economic policy. This coveted distinction carried with it an award of $500 to editor John H. Crider and a commemorative plaque to the Herald. The competition was sponsored by the United States Council of the International Chamber of Commerce.

THE SENTIMENTAL APPROACH

One of our very good friends, who seems to agree with us in other respects, says we are just silly and sentimental about foreign economic policy. We're just do-gooders. In his view UNRRA was sheer waste—operation extravaganza. The World Bank, the International Fund, loans to Britain and France, Italy and the rest were simply misguided altruism. And, to top it all, the Marshall plan, which he calls operation rathole, will prove the finishing touch which will break the American bank while supporting the efforts of foreign powers to train troops which, ultimately, will be fighting our young men. Whew!

Moreover, says this elderly and well-informed gentleman, we are repeating on a grander scale every mistake which was made after World War I. As a matter of fact, this critic was an American delegate to one of the post World War I financial conferences.

The only thing we like about this view is its simplicity. It would be wonderful if everything was that simple. It's not. To tell the whole story of it is to talk mostly of background, of past errors, of changed attitudes of peoples and governments, of different standards, new time-space considerations and a realinement of power in the world. It is too long.

We will attempt to say only enough about it to justify our belief that our critic's view is the sentimental one, ours practical and realistic almost to the point of cynicism. Since our critic talks in broad generalities, indeed, even in absolutes when he says the policies we have supported sapped the vitality of America, we will turn the tables and assume, for purposes of argument, that the absolute reverse had occurred. We did none of the things he objects to. We won the war, closed the doors, and let the rest of the world stew in the blood, muck, and wreckage of war. We spent all the money on ourselves, on developing new weapons, improving the atomic bomb, making our country a virtual fortress. We really enjoyed our postwar boom. It was a happy, madly indulgent orgy.

Suppose that had happened. What about the balance of power situation in the world today? What about our own economic future?

In the first place, imperialistic Soviet Russia would by now have dominated most of the rest of the globe—certainly all but the Americas, and possibly even some parts of the

American continents. For the rest of the world was either too weak, poor, or weary to resist the evangelical ardor of Soviet missionaries backed by the bayonets of the Red Army. If we had friends in the world outside of the Americas, and it is exceedinly unlikely that we would have, they would be unable to help us.

In short our strategic situation in an air-war era would be tragic beyond description. It would have been a grandiose application of the Maginot Line theory of defense behind a fixed line. We might still have a few islands here and there, but there would be no friendly governments which could facilitate the establishment of American bases at points where they would be most useful. Any such bases would have to be fought for and won. Ultimately, the great war might, under such circumstances, have to be fought on American soil. What might have happened militarily had we followed our friend's advice leaves us shuddering at the very thought.

But what about our economic future? What would we have done with all this money we didn't spend on foreign assistance and in support of international financial institutions? Could we have cut our tax rate? Not at all. On the contrary, such a friendless great power, menaced from almost every point of the compass, would have to arm far beyond any point now contemplated. But, again, what about our business, our factories and farms? To whom would we sell once their gigantic output had met the accumulated domestic needs?

It would hardly seem necessary to go on. As for us, the only thing that makes us really happy about the current nervous situation is to contemplate what it would be like if we had followed our friend's advice.

GOP "Grass Roots" Again

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks I include the following timely editorial from the April 30, 1949, issue of Trainman News, official weekly publication of the Brotherhood of Railroad Trainmen:

GOP "GRASS ROOTS" AGAIN

The Republicans have named a strategy committee and announced plans for more "grass roots" conferences to find out again what the people are thinking and what they expect from government.

Somehow or other we don't have much faith in these conferences. We recall that prior to the last campaign and before previous campaigns, the GOP also did some talking over with the citizenry.

Each time the leaders have come back from the "grass roots," reporting that the people have affirmed the Republican viewpoint, want less social planning, more free enterprise, less labor power and in general a return to the good old days of Coolidge and Hoover, etc.

The peculiar aspect of all this is that although the GOP finds the people in agreement with its aims and ideals, they don't vote for GOP candidates. Is this because the voters think the Democrats can carry out Republican objectives better, or because they agree with Democratic objectives?

Fact is, the Republican Party is in control of a small group of rich die-hards who simply will not permit the rank and file to have a voice in the organization's policy. They pay lip service to some liberal ideas before and after elections, but in between when Congress is voting on issues the GOP conveniently forgets all about it.

If the GOP will consult the election results and Democratic platforms of the past 16 years, they will find out what most Americans want. And if they break away from the moss-backed leadership which blocks giving Americans what they want, there may be a chance for them to win some elections. These phony "grass roots" are just a waste of time and may be charged off as merely Old Guard propaganda.

Socialism on the Defensive

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of April 18, 1949:

SOCIALISM ON THE DEFENSIVE

The point has frequently been made that there can be no turning back from national socialism, that once a nation has emerged upon a program of nationalization it feeds upon itself until finally it is all-embracing.

The trend of events in England, since the present Government came in, tends to support this dismal conclusion. Certainly spokesmen for the Government in the last week or two, in announcing plans for taking over half a dozen more industries, including industrial insurance, are proceeding on the theory that the nationalization program in due time will be complete.

Fortunately from the point of view of those of us who are convinced that socialism and democracy are incompatible, the trend in France, where nationalization has proceeded about as far as in Britain, is away from socialism. An Associated Press dispatch from Paris last Saturday reported that the Government had decided that seven publicly owned airplane plants would either be closed or returned to private ownership, that the deficits they have been running were a threat to the budget reforms which are the No. 1 concern of Premier Queuille and his Cabinet.

It is probably not a coincidence that the deficit of the French Government in 1948 was almost precisely the combined deficits of the nation's nationalized industries. Thus the conclusion seems justified that much of the violent inflation that has plagued the French since liberation, and the recurring budgetary crises, which until recently have made both economic and political stability appear remote, have been due in large measure to the incompetence of state-operated industries and the losses they have incurred.

While France proposes to meet the budgetary problem created through the losses from state industries by turning away from it, in some respects at least, the British, it appears from the recent budget message of Sir Stafford Cripps, propose to do so by higher taxes and ever more severe austerities.

Possibly a British public which accepted the present government, and the socialization it promised on the representation that it would improve the nation's standard of living, is becoming skeptical, and a little impatient. The results of the county council elections certainly cannot be regarded as a vote of confidence in the Government. If they do not reflect a mass judgment that the Labor government has failed, at least, they record a measure of displeasure with the dividends it has paid, even with the generous assistance that it has received from this country.

Whatever the future holds both for England and France it is fairly apparent that the testing time for national socialism is at hand. In neither country is it taken as a cure-all or an answer to all the problems of this difficult readjustment period. At the moment in both nations nationalization seems to be on the defenseive. To this newspaper it seems that our government in its foreign-aid policy has been too tolerant of it and its certain significance for our European objective.

Remarks by the Vice President at Seventy-fifth Anniversary of the Ninety-second Street YM-YWHA

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 3 (legislative day of Monday, April 11), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks by Vice President BARKLEY on the occasion of the presentation of distinguished service awards to outstanding Jewish citizens during the celebration of the seventy-fifth anniversary of the Ninety-second Street YM-YWHA and also a news article written by Jack Nadel in connection therewith. I have secured an estimate of cost of printing, which is $206.25.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, ladies and gentlemen, the Ninety-second Street Young Men's and Young Women's Hebrew Association is celebrating its diamond jubilee, the seventy-fifth anniversary of its organization, and I deeply appreciate the compliment involved in the invitation extended to me to participate in this significant event.

It was very thoughtful of you to remember me in the extension of your gracious invitation to attend, with all that this invitation involves in the way of friendship and good will. To all of you here, I offer my warmest greetings.

We are gathered here this evening on the occasion to which I have alluded as being significant. Lest you should think that the tribute of that word is a facile and inexpensive compliment, I hasten to give you my earnest reasons for so characterizing this occasion.

First, I should like to quote that revered American and masterful phrase-maker, the late Franklin Delano Roosevelt, who, little more than a decade ago, observed that the Jewish community-center movement has "created the potent influence of good citizenship, wholesome character, and loyalty to all those forces upon which depend the preservation and development of our democratic institutions."

The Ninety-second Street Y, as it is called, as the Jewish center in the United States with the oldest continuous history, can properly claim credit for leadership and widespread influence in the development of that movement.

Radiating a spirit of high loyalty to the ideals associated with the American way of life, the Ninety-second Street Y has played, and continues to play, a valuable role in the country's life, offering opportunities for physical recreation and for cultural growth and experiences. These are functions which obviously enrich not only the Jewish community, but the very performance and accomplishments of democracy itself. The connection which I have in mind, and which you no doubt visualize, is a direct connection.

The Ninety-second Street Y, like all the other Jewish community centers throughout this country, does not limit the scope of its interests, activities, and program to any particular segment of the Jewish community, but consciously attempts to reach and serve all elements in that community. This organization is the product of a devoted—almost a consecrated—interest taken in it by such historic American Jewish leaders as Oscar S. Straus, Felix M. Warburg, and Jacob H. Schiff. As a maker also of leaders, as well as followers, this organization, known as the Ninety-second Street Y, has a magnificent record, as is witnessed by the names of the 12 distinguished American personages, all identified with this association, who have been cited here this evening for their important contributions to the welfare and progress of our country. But beyond even that unique record, there stands a past, present, and continuing reach of service which—in the satisfactions which it has rendered and is rendering individual's recreational, social, cultural, and adult-educational needs—is simply incalculable. These services are superb and magnificent in their origin and in their effect, and they are inseparable from the collective and individual lives of those who have come under their influence.

It seems to me to be appropriate at this point to make mention of the fact that the Ninety-second Street Y is one of more than 300 Jewish community centers and Young Men's and Young Women's Hebrew Associations throughout the United States which are affiliated with the National Jewish Welfare Board. This is known as the JWB—and it is known not only to the Jewish community, but it is also known to that great host of American men and women who served their country during the late war, and to whom the initials JWB spell home and friendly and sympathetic consideration, comfort, and hospitality, morale, and all-around helpfulness. The Jewish Welfare Board, the centers, and the Young Men's and Young Women's Hebrew Associations are again participating wholeheartedly in the program of the reactivated united service centers, assuming new responsibilities, taking on new obligations, in behalf of the national security program.

The Ninety-second Street Y is an American institution. Undoubtedly, the outstanding element in the character of the Y is the utter wholesomeness of its aims and its program. It is part of a movement which has been characterized by President Truman as "a people's movement—a sacred expression of the finest aspirations of men."

The President of our country has called this movement "a magnificent symbol of service—service in the realms of recreation, culture, and morale to the half million young people and adults who find the Jewish community center an attractive and helpful institution, and of continued service as well to the men and women wearing the uniform of the United States and to the hospitalized veterans."

Perhaps the most dramatic measure of the Ninety-second Street Y's accomplishments is the fact that in a city celebrated throughout the world for the achievements and opportunities of its cultural enterprises, the Y stands out as one of the foremost cultural agencies in that great city. It is, therefore, with confidence and assurance that I assert that this organization, the Ninety-second Street Young Men's and Young Women's Hebrew Association, will never falter in the valued work and the special concept of service to which it has dedicated itself. It will not only be a great service to those who are associated with it, and those who are the beneficiaries of it, but it will offer a stimulating example to all other similar organizations devoted to the welfare of the vast number of young people, in the building of character, and the promotion of hopes that may be fulfilled.

May this great organization, and all of you who are associated with it, realize many additional milestones of happy and constructive gains in this inexhaustible field.

DIAMOND JUBILEE FOR THE NINETY-SECOND STREET Y—BROUGHT INTO BEING IN 1874, THE AGENCY HAS RENDERED HIGH-LEVEL, HISTORIC SERVICE TO NEW YORK JEWRY

(By Jack Nadel, executive director, Ninety-second Street YMHA)

"We, the undersigned, desiring to promote harmony and good fellowship among Hebrew young men and to unite them in an organization tending to improve their social, moral, and mental condition, do form an association under the name and style of the 'Young Men's Hebrew Association.'"

With these words, set down on March 22, 1874, the YMHA was brought into being by a group of persons prominent in the professional and business life of New York. Among them was the Honorable Oscar S. Straus, who, in the course of his public service career, served in the Cabinets of four Presidents of the United States. It was Mr. Straus' view that it would be a useful undertaking to organize a Young Men's Hebrew Association for the cultural and intellectual advancement of Jewish young men.

The first president of the Y, elected on May 3 of that year, was Lewis May, and the first permanent quarters of the Y, opened half a year later, were at 112 West Twenty-first Street. Here the Y's first program of education and recreation was inaugurated.

In less than 2 years, the association was ready for larger quarters and in April 1876 a long lease was taken on a building at 110 West Forty-second Street, which contained a gymnasium, bowling alleys, reading room, club and classrooms and other facilities. These quarters were retained for 10 years, during which time the institution grew and developed. Then the trend of population shifted toward the eastern part of the city and it was deemed advisable to move.

TO LEXINGTON AVENUE

In 1886, a small building was rented at 721 Lexington Avenue near Fifty-eighth Street. Here the activities of the association were carried on for 9 years. For most of the period, prior to this time, the program in addition to the social, recreational and club activities, stressed Jewish interests, giving prestige and support to the institution. From year to year it conducted competitive Hebrew examinations for the city of New York, offered public lectures and courses in Jewish subjects and celebrated Jewish holidays, particularly Purim and Hanukah, on such a large scale that it attracted considerable notice. These events were held in large places like the Metropolitan Opera House, Chickering Hall, and Terrace Garden.

Most of these Jewish activities were conducted in cooperation with the Hebrew Free School Association, which was the recognized agency of Jewish education at that time.

Among the men who were thrown constantly together and who, through the experience gained, were thus able to take up the communal burdens which were thrust upon the Jewish community were: I. S. Isaacs, Daniel P. Hays, Samuel Greenbaum, Morris S. Wise, Sol B. Solomon, M. Warley Platzek, Uriah Hermann, Samuel B. Hamburger, Mark Ash, Henry W. Unger, David Leventritt, Meyer S. Isaacs, Henry Leipziger, and Marcus M. Marks. These men were destined later to occupy high places in judicial, professional, and business life.

THE Y UNDERTAKES

The problem of the Jewish community arising from the influx of Russian refugees in the early eighties became intense because of the lack of existing societies capable of coping with the situation. The downtown sections became crowded with large numbers of these immigrants. The community was confronted with the task of providing for the welfare of these people, a task which increased with every ship that arrived. There was no organized society either uptown or downtown which was prepared to handle the situation and the YMHA thereupon undertook some of this work.

In 1882 the association established a downtown branch, the first Jewish neighborhood center for immigrant groups. The rooms were located at 244 East Broadway, but within a year moved to 206 East Broadway, where a new building had been erected for the Hebrew Free School Association. The activities conducted in the downtown branch included Americanization classes, English for foreigners, an employment bureau, a library, rooms for lectures, forums, entertainments, etc. Here Emma Lazarus, the famous poetess whose immortal words are inscribed on the base of the Statue of Liberty, taught classes. The work conducted for the immigrants inspired the late Jacob H. Schiff to refer in 1884 to the noble missionary work among the Russians conducted by the YMHA.

The active interest of the YMHA in Jewish education and its cooperation with the Hebrew Free School Association brought about in 1886 a merger of their two libraries into the Aguilar Free Public Library. This library is today a branch of the New York City Public Library system.

In 1889 the YMHA, the Hebrew Free School Association, and the Aguilar Free Public Library combined to establish the Educational Alliance on the lower East Side. Two years later a new organization was formed, making the Educational Alliance an independent institution.

MENKEN IMPRESSES SCHIFF

For the next 2 years the Y experienced financial difficulties and its services diminished. Smaller quarters were taken at 111 East Fifty-ninth Street, in the rooms occupied by the Aguilar Free Public Library. Up to this time the organization had been led by the following presidents:

1874–76, Lewis May.
1876–79, Isaac S. Isaacs.
1879–80, Daniel P. Hays.
1880–81, Adolph L. Sanger.
1881–83, Samuel Greenbaum.
1883–87, M. Warley Platzek.
1887–90, M. A. Kursheedt.
1890–93, Joseph Blumenthal.
1893–94, Edward C. Stone.
1894–95, Julius Levy.

The next epoch in the history of the association began when Percival S. Menken became president of the association in 1895. He devoted himself to reviving the influence of the association by bringing to the attention of the public the desirability of continuing the splendid program which had been developed by the YMHA during the past 20 years.

Among those to whom his appeal made a great impression was the late Jacob H. Schiff, who agreed to help the organization to start anew. In 1898 he presented the YMHA with its first permanent home at 861 Lexington Avenue, near Sixty-fifth Street.

This small brownstone building was equipped with a gymnasium, a library, club, and classrooms. The response on the part of the young people who came to this building was so great that it was soon overcrowded. The satisfaction which came to the directors of the association and to Mr. Schiff was such that the latter agreed to erect a building commensurate with the services the association was rendering the Jewish community. The site selected was at Lexington Avenue and Ninety-second Street, at which corner the Young Men's Hebrew Association has been situated for almost 50 years.

A NEW ERA OPENS

The opening of the new building presented an opportunity for enlarging the scope of the association's usefulness and a new era began in the history of Jewish community service. As the new building was equipped with every type of community-center facility and with accommodations for thousands of young people, it was possible to conduct a full program of religious, recreational, and educational activity.

Percival S. Menken, who labored ardently to make the Y a great institution, died after a short illness, in 1908. The position and prestige of the association were such that a strong and distinguished personality, it was felt, was needed to succeed him.

The Y was fortunate in obtaining the consent of Felix M. Warburg to assume the presidency of the association. Mr. Warburg had been actively identified with the Educational Alliance and other organizations and had taken a lively interest in the Y for some time. He followed his predecessor's energetic devotion to its work and sought to develop its usefulness to an even greater degree. He felt that the Y should spread its influence to other communities in and out of New York, and assistance was given to those which indicated the need of cooperation. Specifically, he recommended to the board that a YMHA be established in the Bronx, where so many young Jews lived. The interest he created resulted in the organization in 1909 of the present Bronx association.

In 1911 Mr. Warburg purchased and presented to the Y two small houses which adjoined the building on the Ninety-second Street side. These were renovated and added to the main building, thus making possible the first swimming pool. It also provided the first residence quarters in a Y building. The accommodations, however, were limited to 10 boys. Other areas, including a billiard room, dining room, and lounges were provided.

NATIONAL ORGANIZATION FORMED

In 1912 Mr. Warburg conferred with leaders of the other YMHA's and centers to stimulate the formation of a national organization. On October 13 a conference was held in the Ninety-second Street building at which 26 organizations were represented. The idea of a national organization was approved, and a committee of 10 was appointed to outline the plan and scope of the national body. The plan was consummated on November 2, 1913, when, in the same auditorium in which the first meeting took place, 96 representatives from 70 institutions the country over formally approved it and adopted the name of National Council of Young Men's Hebrew and Kindred Associations.

In 1912, also, the local organizations, at the initiation of the Ninety-second Street Y, formed a YMHA Athletic League to encourage inter-Y competition. On July 28 of that year the first athletic field day was held at Pelham Bay Park, and 10 organizations participated. The athletic league continued to conduct competitive sports for 2 years under that name until March 3, 1914, when the Metropolitan League of the Council of Young Men's Hebrew and Kindred Associations was formed. The first executive director was Falk Younker, who had been general secretary of the Ninety-second Street Y from 1895 to 1911. The Metropolitan League encompassed all the phases of activity which constituted the program of the YMHA movement.

Both the national and metropolitan organizations carried on their services until the close of World War I, when they were merged with the Jewish Welfare Board, which had been organized during the war in the interest of the Jewish boys in the armed forces. Since that time the National Jewish Welfare Board and the metropolitan section of the JWB have served the YMHA's and Jewish centers throughout the city and country.

Mr. Warburg continued to seek new enterprises for the benefit of the Jewish community. In 1916 he proposed the formation of a Federation of Charities which would become the fiscal agency for the Jewish philanthropic organizations in New York. It would be the central fountainhead to which all contributions for Jewish institutions would be sent and by which all distribution would be made.

After many months of meetings and conferences 21 agencies in New York City approved the proposal, and, on January 1, 1917, the Federation of Jewish Charities came into being. In anticipation of his election as the first president of the federation, he had resigned from the Ninety-second Street board some months before. Dr. I. E. Goldwasser, who had been an active member of the board of directors, was chosen to be the first executive director of the federation.

Thus came to an end one of the most progressive periods in the history of the association.

Good fortune continued to follow the YMHA. Following Felix M. Warburg's resignation as president, the association elected Justice Irving Lehman to that post. Under his guidance, the association expanded and widened the sphere of its influence. Judge Lehman continued the program and policy which had proven so successful under the leadership of his predecessors.

In 1921, an opportunity was presented to extend the services of the association to the young people of the lower West Side. The Boys Club had been operating a building at Thirty-fifth Street between Seventh and Eighth Avenues and was seeking quarters elsewhere. Judge Lehman obtained the support of Felix M. Warburg, Joseph L. Buttenwieser, and other Jewish leaders, and the building was purchased. After the necessary alterations, a branch of the Ninety-second Street YMHA was established. Its first president was Harry L. Glucksman, a member of the Y board and executive director of the Jewish Welfare Board.

For 2 years, a full program of activity was conducted for the large number of Jewish boys and girls in the neighborhood. However, the garment center was spreading out, gradually encompassing one structure after the other until it seemed there would remain only office and factory buildings. It was obvious that the Y would soon have no clientele from the immediate neighborhood. In 1923, the building was sold to business interests and the membership was invited to continue their activities at Ninety-second Street.

THE GOLDEN ANNIVERSARY

In 1924, the association celebrated its fiftieth anniversary. A series of events took place, culminating with a dinner at the Hotel Astor on March 23, attended by 1,500 members and their friends.

That year Judge Lehman was elected to the Court of Appeals of the State of New York which required him to serve in Albany most of the time. His resignation as president of the Y was accepted with great regret. Happily, he consented to remain on the board of directors, serving until his death in 1945.

The program and prestige of the Y were greatly enhanced during Judge Lehman's administration and he inspired the confidence and support of many prominent citizens, among them Sol M. Stroock, noted attorney and president of the Jewish Theological Seminary.

Mr. Stroock in 1924 succeeded Judge Lehman as president of the YMHA and served only 2 years, when the Federation of Jewish Philanthropies invited him to become its president. Thus the Y gave its second president to the federation.

In 1926, at the annual meeting of the metropolitan section of the Jewish welfare board, the executive director of the YMHA presented a plan for centralizing the employment and guidance services of the agencies in federation, which were conducting separate bureaus. The board of directors supported the proposal, even though it meant the abandonment of a service it had maintained for 30 years, and presented it to federation for consideration. While no action was taken for a number of years, the plan was offered repeatedly until, in 1934, the federation approved the project and the Federation Employment Service came into being. The Y executive director aided the formation of the new organization and, together with several board members of the Ninety-second Street association, has served on the FES board of directors since that time. This was the latest of a long list of extension activities initiated by the Ninety-second Street Y for the benefit of the community.

PROSKAUER BECOMES PRESIDENT

Upon the resignation of Mr. Stroock, the association fortunately obtained another distinguished president. Joseph M. Proskauer, then a justice of the New York State Supreme Court, was elected in 1926. His dynamic personality and keen understanding of communal needs manifested themselves immediately after assuming his office. He recognized the inadequacy of the Y building in meeting the requirements of the many boys, who were seeking not only recreational and cultural facilities, but housing.

Within 1 year after Judge Proskauer became president, he had inaugurated a campaign for a new building to replace the structure which had been donated by Jacob H. Schiff more than 27 years before. The drive for funds began in May 1927 for $1,500,000. The force and energy of Judge Proskauer inspired the board of directors and their friends to convince the community of the justice of their cause. Within a few weeks, $2,100,000 was raised, half of which Judge Proskauer obtained by his own efforts. The old building was demolished in 1928 at which time the membership of the association was retained through the kindness of the Young Women's Hebrew Association, which made arrangements for the use of its building on One Hundred and Tenth Street. Here, for 2 years, the YMHA and the YWHA shared the facilities together. The good fellowship which was developed between the members of both organizations was responsible in large measure for the ultimate merger of interests which took place many years later.

The new building was opened in 1930 as the largest and best equipped Jewish center in the country. Before the doors were opened, applications were received from thousands of young men, seeking to enjoy the extensive program which the wonderful facilities made possible. In addition to the opportunities for Jewish, educational, cultural, recreational, and athletic activities, the building provided, for the first time in any Jewish center, dormitory facilities for young men. Two hundred rooms accommodating 278 persons were made available.

SHIENTAG SUCCEEDS PROSKAUER

The present building is a monument to the services of Judge Proskauer in behalf of

the young people of New York. His devotion to the Y and its aims continued during the 5 years of his presidency and is carried over to the present time—18 years later. It was with the greatest regret that, in 1931, soon after the new building was opened, he was drafted, like two of his predecessors, to become president of federation.

Justice Bernard L. Shientag, who had been a member of the board of directors for a number of years, succeeded Judge Proskauer as president. He was devoted to the work of the association, particularly the Jewish cultural aspects of the program. However, the stress of judicial duties compelled him to resign in 1932, about 18 months after taking office.

Frank L. Weil assumed the office in 1932 and retained it for 8 years. Mr. Weil had come to the board of directors in 1926 with a history of voluntary service which dated back to 1913.

Mr. Weil devoted himself to the development of a creative program, the impact of which is still felt on the cultural life of our city. It was during his administration that the arts, music, dramatics, dance, classes, forums, and clubs advanced beyond the expectations of the most desirable center program, and to this day the association stands high among the important institutions of learning in the community.

In 1938 Mr. Weil saw an opportunity to help the Young Women's Hebrew Association secure more adequate quarters than it occupied on One Hundred and Tenth Street at Fifth Avenue. This resulted from the fact that there was available for purchase the land adjoining the building to Ninety-first Street and east for 120 feet. After consultation with the YWHA, the land was purchased and a new building for the girls was envisaged. Unfortunately, the war necessitated a complete change in the plans.

Mr. Weil resigned his office in 1940 to become president of the National Jewish Welfare Board, succeeding Judge Lehman, who had held the position for many years. As one of the founding agencies of the JWB the Ninety-second Street YMHA was, and still is, a close and active affiliate of the national organization, and its selection for the second time of a Ninety-second Street Y president to head the JWB was received with gratification. Despite the high office which Mr. Weil holds and the many duties which devolve upon him, his first love—the Ninety-second Street YMHA, of which he is an honorary director, still retains his wholehearted support.

YOUNG WARBURG TAKES POST

In 1940, Frederick M. Warburg succeeded to the presidency of the Y, 32 years after his father, the late Felix M. Warburg, was elected to the same office. Frederick was steeped in the services rendered by youth organizations because of his father's association with the YMHA and his mother's attachment to the YWHA, which she served later as president. He came to the Ninety-second Street Y with a strong feeling of loyalty and interest which, unfortunately, he was unable to satisfy fully. In 1942, he joined the armed forces of the United States. Throughout the period of his war service, he followed the work of the association.

From 1942 to 1945, while Mr. Warburg was in the Army, the affairs of the YMHA were in the hands of the vice president and acting president, Louis M. Loeb. To him came the responsibility of directing the war program of the association. This he did with great conscientiousness and he inspired the board, staff, and membership to devote themselves to serving the needs of the community in wartime as well as the Y boys and girls who were part of every branch of the armed services of the United States. Two thousand three hundred Y members wore the uniform of their country; 48 died and 258 were decorated. Committees of members and directors served every need of the young men and women in all parts of the world. Correspondence, gifts, and personal services of all kinds were rendered throughout the war. A canteen was maintained in the building for those on furlough. Space and services were offered to and accepted by local and Federal agencies for many purposes, including enlistments, draft board, air wardens, blood donations, Red Cross instruction, bond sales, and a host of activities which aided the war effort.

One effect of the war was of such importance as to change the character and philosophy of the Ninety-second Street YMHA. In 1942, our sister institution, the Young Women's Hebrew Association, located at One Hundred and Tenth Street and Fifth Avenue, was requested by the Department of War to give up its building for use by soldiers, who needed quarters in that area. The YWHA complied without hesitating even though it meant the withdrawal from the building it had occupied for 28 years. The Ninety-second Street YMHA, recalling the period of 1928–30, when the YWHA housed the boys of the YMHA while its new edifice was being constructed, promptly offered to take the girls into its building for the duration of the war. No restriction was placed upon the activities for the girls and all facilities were opened to them. Two floors or dormitories were turned over to their residents, and physical changes were made in the athletic department so that girls could use the gymnasium and swimming pool.

MERGED IN 1945

This coeducational arrangement proved so successful that, in 1945, when the war ended, it was unanimously agreed that the recreational and residence activities of both organizations be merged into one institution to be known as the Young Men's and Young Women's Hebrew Association.

The effect of this change, with all the opportunities for serving the cultural, religious, and recreational needs of young people of both sexes and all ages produced a program of such significance that the numbers and activities increased beyond the physical capacity of the building. The membership rose to 12,000 boys and girls with a waiting list of thousands. Clubs were turned away and classes were limited in number. The cultural activities taxed every area in the building and the Theresa Kaufmann Auditorium and Buttenwieser Hall were used several times a day.

This condition prevails today and once more, as in 1926, the need for another building is obvious.

During this full period of change and progress in the Y, Louis M. Loeb was at the helm. In 1945 he was elected president of the association to carry on the work he had been doing as acting president for 3 years.

The former Young Women's Hebrew Association deserves a place in this recital. It was founded February 6, 1902, by public-spirited women who recognized the need for a center for Jewish working girls and students. The moving spirit in this effort was the late Mrs. Israel Unterberg, in whose home meetings were held at regular intervals. She was elected first president of the association. By the end of the year a building at 1584 Lexington Avenue was rented and it was dedicated to communal service on February 1, 1903. Here classes, clubs, religious services, and recreational activities attracted a large number of members and in 2 years it was necessary to increase its space.

In 1905 the two adjoining buildings were purchased and combined with the first structure. The dedication of the remodeled and enlarged quarters took place on December 16, 1905. In addition to the regular activities conducted up to this time it was now possible to accept girls for residence, and 18 girls were now able to live in the building.

SERVED FOR 26 YEARS

For 8 years the Young Women's Hebrew Association flourished and developed in this building. Its usefulness had long since been established and its need for expansion had been proven. A campaign for funds was conducted in 1911 and, as in the case of the Young Men's Hebrew Association some years before, Jacob H. Schiff made a substantial gift to the institution. This support inspired many others to contribute and led to the erection of a large and commodious building at 31 West One Hundred and Tenth Street, facing Central Park. The new edifice was dedicated on November 22, 1914, and contained a synagogue, gymnasium, swimming pool, class and club rooms, dining room, and residence quarters for 172 girls.

During all this time, Mrs. Israel Unterberg assumed responsibility for the association as its president. She continued to serve for 26 years (1902–1928), although, because of illness, she transferred her duties during the last 4 years to the vice president, Mrs. Felix M. Warburg. In 1929 Mrs. Warburg assumed the presidency and retained the office for 12 years.

Upon the resignation of Mrs. Warburg as president, Mrs. Jerome J. Hanauer, who had been vice president for many years, became acting president until the following year, when Mrs. Richard J. Bernhard became president. Shortly after her election, on July 1, 1942, the building was leased to the United States Army, as related above.

A DISTINGUISHED SERVICE

From 1902 to 1942, the Young Women's Hebrew Association served the spiritual, educational, recreational, and housing needs of Jewish girls in New York City, and the withdrawal from the building on One Hundred and Tenth Street marked the end of an era of distinguished communal service.

The YWHA retained its identity within the YMHA building from 1942 to 1945. As most of the activities for girls were merged with those of the boys, it gave the women's board of directors an opportunity to consider new services in other parts of the city. There were many areas of large Jewish population which were unserved through lack of community centers or neighborhood houses. Rooms were obtained in synagogue buildings, public schools, and other places which were converted for recreational purposes and staffed by professional social workers. The value of these services was promptly recognized and community support was obtained.

In 1945, when the residence and recreational activities of the YMHA and the YWHA were merged into the YM and YWHA, a new organization was formed by the former YWHA board of directors under the name of the Jewish Association of Neighborhood Centers—an active, growing, and valuable addition to the communal services of our city.

And so 75 years have passed since a handful of men with broad vision and devotion to Jewish and American ideals took the first step in a new field of social service. They created an instrument for helping ordinary people do things for themselves—to use their leisure time to satisfy their spiritual, cultural, and social needs; to grow and develop in all directions they showed promise in; to give thought and expression to their own problems and to those of their fellowmen; and to become leaders in the community for the fulfillment of Jewish life and the advancement of society as a whole.

Globalists Run United States, Says Senator Malone

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 3 (legislative day of Monday, April 11), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Globalists Run United States, Says Senator MALONE," written by Walter Trohan, and published in the Chicago Tribune of April 25, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GLOBALISTS RUN UNITED STATES, SAYS SENATOR MALONE—BLOOD AND MONEY TIES BARED

(By Walter Trohan)

WASHINGTON, April 24.—Over cocktails at a recent Washington dinner party, Supreme Court Justice Felix Frankfurter was asked by a German Rhodes scholar who really runs the United States.

Sipping on his second old fashioned, the Vienna-born jurist, who has been acknowledged as the outstanding power behind the New Deal throne for 16 years, smiled knowingly and answered sententiously:

"The real rulers of a nation are undiscoverable."

A SENATOR'S VIEW

Senator MALONE, (Republican, Nevada) disagrees with the former Harvard law professor, who has probably a thousand protégés in legal posts in the Government. MALONE holds that the rulers of the country are an active group of internationalists, rooted in Wall Street with common financial and blood ties in the counting houses of London.

The Nevada Senator believes the internationalists entered into a war alliance with the New Deal under which labor and agriculture were promised control of domestic policy in return for voting support and cooperation with the New Deal's foreign policy.

MALONE has repeatedly warned on the floor of the Senate that the New Dealers and the internationalists are selling out labor while pretending to be the friend of the workingman through the international trade organization and the international labor organization. These organizations, in promoting a world-wide New Deal, would flood the United States with cheap goods and cheap labor.

BRITISH LABOR COURTED

The Senator noted that the financial interests of Britain are similarly courting labor in Britain to the extent of promoting socialism in that country in return for support of an imperial foreign policy in alliance with American internationalists.

New Dealers began by despising Wall Street, MALONE recalled. In the second term of Franklin D. Roosevelt, it got a foot in the door of the White House and with the coming of the war became the most powerful force in the Government, both in positions occupied and influence exerted.

For many years Mr. Roosevelt was regarded as the fountainhead of American policy. Since his death the uninterrupted continuance of the policy of international meddling has brought a shift in opinion.

GAIN SINCE LAMONT DEATH

Others believed that the late Thomas Lamont, head of J. P. Morgan & Co., was the most potent behind-the-scenes operator of policy. Since his death there has been an increase rather than a weakening of global meddling.

The New York financial interests and various elements profiting in foreign trade, including many persons who held high Government posts, are now considered as having shaped American policy for the last dozen years.

MALONE noted that these interests have fused groups of widely divergent interests, society figures, New Dealers, labor leaders, and various organizations to pump for international programs. During the war Wall Street had an alliance with the Communists of Union Square on foreign policy.

FIVE MAJOR GROUPS

Behind the policy are five potent propaganda groups which have a criss cross of directorates in banks, insurance companies, and industries, all with heavy interests and even blood ties abroad. Also in this interlocking mesh are Wall Street law firms, the internationalist wing of the press, and internationally minded college presidents.

The five organizations are the English Speaking Union, the Foreign Policy Association, the Rockefeller Foundation, the Carnegie Endowment for International Peace, and the Foreign Relations Council. Some 100 directors of these organizations hold 35 major bank directorships, 33 in major industries, and hundreds in lesser corporations.

More than 50 held posts in the Government at one time or another. These included Alger Hiss, president of the $11,000,000 Carnegie Foundation, now facing trial for perjury in conection with an investigation of Communist conections. Hiss was a leader of the pro-Soviet block in the State Department.

PLUG FOR ALLIANCE

A round dozen of the directors had a hand in forming United Nations policy in the San Francisco founding conference. Others were heavy promoters of the multibillion dollar Marshall plan and are now plugging for the multibillion dollar North Atlantic alliance.

Many of these are now reaping profits from the American spendings. Winthrop W. Aldrich, director of the Rockefeller Foundation is head of the Chase National Bank. Two other officials of the bank lap over into the Carnegie Foundation and the English Speaking Union.

Figures of the economic cooperation administration for last November disclosed that the New York bank had issued letters of credit for Marshall plan business totaling $108,000,000, 22 millions in 5 weeks. Aldrich was a member of the executive council for Marshall plan recovery.

PROFITS FOR OTHERS

Other banks whose directors were tied in to the do-good organizations profited similarly from plan spending. Corporation directors represented in the internationalist organizations also made large profits.

Many Capital observers are convinced that the nomination of Wendell Willkie and the two nominations of Governor Dewey were projected from internationalist imperialist circles. Dewey was a nationalist in 1940 and lost the nomination bid. When he shifted to the internationalist front he received two chances at the Presidency. Some observers believe the internationalists are grooming him for a third nomination to perpetuate GOP "me tooism."

CITE DULLES PROPOSAL

As evidence of the influence of internationalist imperialists behind Dewey, observers cite the recent proposal before the United Nations Assembly of United States Representative John Foster Dulles. He proposed UN trusteeships over Cyrenaica for Britain and hinted British trusteeships for Tripolitania and Fezan.

Dulles was Dewey's foreign affairs adviser and was expected to be State Secretary if Dewey had won the election. He is chairman of the board of the Carnegie Foundation and as such is credited with having made Hiss its president.

Dulles, a Wall Street lawyer is a director of the Rockefeller Foundation. His brother, Allen, is president of the Council on Foreign Relations. Eustace Seligman, a copartner in Dulles' firm of Sullivan & Cromwell, is a director of the Foreign Policy Association.

PLUNGED TO DEATH

Laurence Duggan, another director of the Foreign Policy Association and an associate of Hiss in the State Department, mysteriously plunged to his death from his 16-story office in New York last December. His name was linked to the Hiss investigation.

Many high Government officials and former Government officials are linked in the do-gooder organizations. Former State Secretary Edward R. Stettinius, a son of a J. P. Morgan & Co. partner, is a director of the English Speaking Union.

Since leaving the State Department, Stettinius has interested himself in exploitation deals. In one of these he is associated with a New York banking syndicate in the development of Venezuela and in another he and a group of associates have staked out Liberia almost as a private development corporation. The group has formed a chain of companies to profit out of timber, transportation, gold, diamonds, and other resources in the African nation.

IN EPISCOPALIAN CHURCH

Stettinius is an Episcopalian like four of the last five State Secretaries. The fifth, Cordell Hull, has not disclosed his church affiliation. The Episcopal Church has strong sentimental ties with the parent Church of England.

Acheson, the present State Secretary, is the son of an Episcopal bishop, born and ordained in England, and a Canadian mother. Out of State Department service he was a member of a law firm with Wall Street clients.

Other Episcopal Secretaries of State are James F. Byrnes, who was born and reared a Roman Catholic and joined the Episcopal Church in young manhood, and George C. Marshall, wartime Chief of Staff. Marshall is a graduate of Virginia Military Institute, which has sentimental associations with Britain because of English support of the slave-holding southerners in the Civil War.

DIED A CANADIAN

Lewis Douglas, Ambassador to Britain, is a director of the Foreign Policy Association, the Rockefeller Foundation, and the English Speaking Union. His father was born a Canadian, went to the Southwest to make his fortune and became an American citizen. The elder Douglas returned to Canada, renounced his American citizenship and died a Canadian. The son was vice chancelor of Canada's McGill University and a New York Life Insurance Co. executive.

W. Averell Harriman, the ECA roving ambassador, is profiting from global spending. His family banking firm of Brown Bros., Harriman & Co. had patronage of more than $21,000,000, according to an ECA report of last November. This has increased in the last 6 months.

William L. Clayton, former State Under Secretary for economic affairs, was one of the leading supporters of the $3,750,000,000 British gift loan and the Marshall plan. ECA records showed that his cotton brokerage firm reaped $28,000,000 in ECA business in the month of August alone. His family has been taking from $5,000,000 to $10,000,000 in firm profits in recent years.

SPENT SIX BILLIONS

Nelson Rockefeller, grandson of the founder of the do-gooder corporation, spent $6,000,000,000 as wartime coordinator of inter-American affairs, when other Americans of

his age were in uniform. Rockefeller has formed a corporation for development of South American nations and has launched a series of projects in Brazil from which he and his associates expect handsome profits.

Within the week Arthur H. Vandenberg, Jr., son of the loudest and longest-speaking Republican supporter of internationalist policy, became associated with Rockefeller in his Brazilian enterprises. Vandenberg, who like Rockefeller, is 41 years old, served through the war in a bombproof public-relations job in the Air Force.

For many years, with one exception, American ambassadors to Britain have been of English descent and largely of the Episcopalian faith. The one exception was Joseph P. Kennedy, Roman Catholic of Irish descent, who sought unsuccessfully to influence President Roosevelt against entry into the war.

JOHN W. DAVIS' ROLE

John W. Davis, onetime Ambassador to England, and unsuccessful Democratic candidate for President in 1924, is a director of the English Speaking Union, the Foreign Policy Association, and the Carnegie Endowment.

Myron C. Taylor, an Episcopalian and former head of the powerful United States Steel Corp. and personal White House envoy for Presidents Roosevelt and Truman to the Vatican, is a director of the English Speaking Union.

Among the prominent Wall Streeters now in or recently in the Government and high in administration councils are James V. Forrestal, William H. Draper, Ferdinand Eberstadt, John Nicholas Brown, Paul Felix Warburg, Bernard Baruch, James Bruce, Cornelius Vanderbilt Whitney, Lewis Straus, Davis K. E. Bruce, John J. McCloy, Robert Gardner, Archibald M. Wiggins, Wayne Chatfield Taylor, Charles Saltzman, and William McChesney Martin.

HELPED SET UP ECA

The ECA was set up under Paul G. Hoffman, with the advice and counsel of Maurice T. Moore, Wall Street lawyer, who had reorganized Hoffman's Studebaker corporation.

During the presidential campaign, Mr. Truman charged that the Republican Party was dominated by Wall Street and soft pedaled the Wall Streeters in his own official family. At the same time he discounted the military influence in his administration.

The internationalists formed an alliance with brass hats in the war period. Many leading military figures have received high posts in private industry or institutions, like Columbia University, where Wall Street and internationalists have heavy representation. General Eisenhower, war-time allied commander in western Europe, was named president of Columbia. Gen. Brehon B. Somervell, former WPA officer who rose to be head of the war procurement machinery, is director of Koppers Co., Inc.

GOT MAJOR POSTS

Other brass hats received administrative or diplomatic posts. General Marshall headed these with his appointment as State Secretary. Lt. Gen. Walter Bedell Smith was Ambassador to Russia. He was succeeded by Admiral Alan G. Kirk, who has served in Belgium. Admiral William D. Leahy was Ambassador to the French at Vichy. Admiral William Standley was Ambassador to Russia during the war.

Many military men held lesser official and diplomatic posts. Their presence brought criticism of the administration as under influence of militarism from various quarters.

Senator MALONE said investigation of internationalist groups and internationally minded individuals might uncover the real rulers of the country.

FRANKFURTER AND LASKI

In this investigation he would not neglect Justice Frankfurter and the latter's association with Harold J. Laski, who occupies a position in the British labor movement similar to that of the jurist to the New Deal. Laski is a frequent visitor to the United States and invariably confers with Frankfurter, who is regarded as the source of many New Deal policies.

Laski has lectured under CIO auspices. He has connections in Wall Street and in Union Square. In Hollywood, where he has been a frequent visitor, he is usually the guest of Charles Chaplin, comedian, who brightens his private life by flirting with radicalism. English born, Chaplin has never taken American citizenship although he has amassed a fortune in this country.

Many observers believe Laski's movements in this country would offer a clew as to its true rulers.

FRANKFURTER AND ACHESON

Frankfurter for many years has taken daily walks with State Secretary Acheson. They are neighbors in Georgetown, oldest section of the capital. In these morning walks, each insists that there is no discussion of foreign or judicial policy, but Washington is skeptical. The two embraced with warmth at a party welcoming in the new year and word of the embrace was all over Washington almost within 24 hours.

It has been estimated that there are as many as 1,500 former Harvard law students of the Justice now in Government posts. Thousands more were in Government during 16 years of the New Deal and left to sell their governmental know-how to Wall Street or industry. Notable among these was Thomas G. (Tommy the Cork) Corcoran, who reputedly built White House and departmental associations into a million-dollar-a-year law practice.

The Harvard influence in Government was felt before the war in promotion of the pre-war draft in 1940. A group, which met in the Harvard Club in New York City, promoted the peacetime draft. Later the group sought to promote a universal draft of men and women.

RECALL PACIFIC NEGLECT

Malone said the tie of the internationalists with London is demonstrated by the fact that during the war the Pacific theater was neglected for the conflict in Europe. Since the war, he said, the internationalists have abandoned China to the Soviets while pumping billions into England and western Europe.

It has been rumored in the Capitol that the Administration is about to make another secret deal with the Soviets under which the Red hand would be recognized in return for lifting the Berlin blockade. This has been denounced as absolutely false by State Department and White House spokesmen.

Previous secret deals with the Soviets which gave the Reds a large sphere of influence in Europe and Asia were supported by Wall Street internationalists. They deluded themselves with the belief that post-war Russia would welcome foreign capital.

Paul Robeson

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3 (legislative day of Monday, April 11), 1949

Mr. O'CONOR. Mr. President, I recommend at all times the opportunity to give public expression to a firm belief in the patriotism of the Negro people. Over a period of years my close observations of their loyalty to America have enabled me to certify to their devotion to the institutions of this country.

Therefore, it is with much pleasure that I inform the Members of the United States Senate that Dr. Martin D. Jenkins, outstanding educator and president of Morgan State College of Maryland, has repudiated the assertions of Paul Robeson, who at the Paris rally of Communists and fellow travelers had the brazen effrontery to assert that Negroes would not defend the United States if it were engaged in armed conflict with Russia.

Our citizens are proud of Dr. Jenkins and we intend to support him and his associates in their commendable efforts to improve the conditions under which members of the colored race are living. They are our fellow citizens and we owe them an obligation to afford equal opportunities so that they can continue to demonstrate their abilities and readiness to advance themselves for the betterment of our Nation.

I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the newspaper account of the statement of Dr. Jenkins concerning the Robeson incident.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Baltimore Sunday Sun of May 2, 1949]

EDUCATOR DECRIES VIEWS OF ROBESON—MORGAN HEAD SAYS SINGER DOES NOT REPRESENT NEGROES

Dr. Martin D. Jenkins, president of Morgan State College, said yesterday that Paul Robeson "is not privileged to state the views of any appreciable part of the Negro people."

Referring to remarks by the Negro singer and actor at the recent Paris peace rally to the effect that American Negroes would never fight Russia, Dr. Jenkins said:

"Mr. Robeson does not express the views of the Negro people.

"NO QUESTION OF LOYALTY

"So long as Negroes feel that their conditions are improving, so long as the privilege of striving for their rights within the framework of our present governmental organization is maintained, there will be no question of the utter loyalty of America's 15,000,000 Negro citizens."

Since Robeson's statement, there has been a storm of protest from American Negroes denying that the singer is entitled to speak for the race as a group.

DRAWS REBUKE FROM O'CONOR

Robeson, whose accomplishments include selection as an all-American football player in 1915, a Phi Beta Kappa degree from Rutgers University and a 30-year career in movies, stage and concert shows, announced his intention to abandon the theater in 1947 and talk up and down the Nation against race hatred and prejudice for 6 years.

His latest statement drew a rebuke from Senator O'CONOR and the reply that the proper thing to do would be for Robeson to establish citizenship in Russia.

Dr. Jenkins, in his statement, spoke of his own pride in being an American citizen, and said he believed he spoke for the majority of American Negroes when he said that the United States Government "affords a better framework than any other for the optimum good * * * of the general population."

The text of Dr. Jenkins' statement follows:

"I often state, in my own public addresses, that my proudest boast is that I am an American citizen with all the rights and responsibilities which this statement im-

plies. I believe this represents the view of practically all Negroes.

"CITES ADVANTAGES

"We believe that our form of government affords a better framework than any other for the optimum good not only of minority groups but of the general population. We recognize, as do all other thoughtful Americans, that Negroes are unjustifiably denied many citizenship rights.

"But we appreciate the fact that our country is rapidly moving toward the goal of granting full citizenship rights to all its citizens and that our democratic form of government makes this progress possible.

"Negroes are a peace-loving people, but whenever our Nation's security has been threatened they have been among its most eager defenders. Their record in all past wars, beginning with the American Revolution, has been outstanding. They are the only group in our Nation which has used legal and political action to gain the right to join the armed forces of their country."

Loyalty Tests

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of May 3, 1949:

NINE THOUSAND LOSE JOBS IN LOYALTY TESTS—OLD POLICE RECORDS CAUSE FIRINGS

(By Tony Smith)

Soviet spies, ex-burglars, thieves, and sex offenders have been unearthed by the Federal Government's employee loyalty investigation program, it was learned today.

The search for subversives in the Government and among those seeking jobs with Uncle Sam yielded 141,400 sets of fingerprints that matched those kept in the FBI files.

FBI Director J. Edgar Hoover reported to Congress that 5.5 percent of the 2,537,843 persons checked had previous police records. As a result, 8,881 persons have been dismissed from the Government service by the Civil Service Commission, Mr. Hoover said.

MANY IN STATE DEPARTMENT

The program turned up 21 live Soviet espionage suspects, 45 Communists, and 108 suspected subversives in the State Department alone, it was reported. All of those subjected to spy investigations have resigned or been dismissed, it was said. The same is true of those known to be members of the Communist Party. Some of them moved on to jobs in the American agencies of the United Nations, Government records show.

Many of the former law violators brought to light by the loyalty check were minor offenders who had served their sentences. Others, convicted of major crimes, were found to be loyal. Some had been rehabilitated, the records showed. A few were still at their old tricks. These were reported to the heads of the departments in which they worked. Some were fired.

EMPHASIS ON ESPIONAGE

Throughout the check the emphasis was on employees and officials of the Government suspected of espionage activities. Here are excerpts from reports on some State Department workers:

"Mr. ———'s file reflected that he is a close associate of suspected Soviet agents. Most of the derogatory information on him was developed in late 1946. There is nothing in the file to indicate he has discontinued working for the Department."

GREATEST SECURITY RISK

"Mr. ———. This former employee's file is the largest in the Civil Service Commission. It reflects that he furnished material to known Soviet espionage agents and that he has had consistent contact with a long list of Communists and suspected Soviet agents. This subject was in all probability the greatest security risk the Department of State has had. He was first recommended for dismissal July 24, 1946. He finally resigned voluntarily December 13, 1946."

Miss ———. Her file shows that she signed Communist Party election petitions on a number of occasions. The Security Committee of the State Department decided she was not a security risk on April 15, 1947. It later decided she should be dismissed on grounds of being an undesirable employee. The subject resigned April 25, 1947. This case shows that the Security Committee is inclined to accept a 'change of heart.'"

THIS FELLOW WAS BUSY

"Mr. ———. Confidential informant reported him to be a member of the Communist Party; a sponsor of the Washington Chapter of the American Peace Mobilization Committee; an attendant at the Communist Youth Internationale in Russia in 1934; an active member of American Civil Liberties Union; a member of a central Communist group spearheading an attack on J. Edgar Hoover; an associate of four known members of the Communist Party."

Chinese Red "Invitation"

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 3 (legislative day of Monday, April 11), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Chinese Red 'Invitation,'" dealing with the Chinese situation, published in the New York Times of May 2, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHINESE RED INVITATION

Those wishful thinkers who have suggested that we could (and should) go about doing business as usual with the Chinese Communists may get their eyes opened if there are a few more statements in the vein of the most recent Communist invitation for the West to cooperate. The Chinese Communists are doing their best to make us understand what they mean by cooperation. They invite us to cooperate if we cooperate solely on their terms, and the terms are becoming more and more explicit.

The latest demand is threefold. France, Britain, and the United States must withdraw all semblance of military force from the vicinity of China. The Western powers must sever all conections with the present Government of China. The powers must conclude treaties to "insure the sovereignty, integrity, and independence of the Chinese Republic." (This presumably refers to the Communist regime.)

The effrontery of the Communist accusation against Britain after the Communist assault on British ships on a peaceful mission is well matched by the arrogance of these terms. In respect to the first, it has long been established that the Western powers would be only too glad to withdraw any armed forces from the Chinese area if there were assurance that the safety of their nationals lawfully in that area could be preserved and their normal rights respected. If the behavior of the Communists gave any such assurance there would be reason at once to accede on that point.

On the second score, the Communists are merely demanding that we withdraw our recognition of the legally constituted Government of China, while that government is still in existence, and establish diplomatic relations with a regime that has not yet taken shape. We have already gone far in that direction by withdrawing our moral support from a friendly Chinese Government and even by leaving public officials, helpless as they are, in territory that the Communists have overrun. Now the Communists go beyond the policy of suspended judgment that seems to have influenced Washington. They ask for our outright prejudgment in their favor.

On the third point the Communists seem to have forgotten that we are already signatories to a number of treaties pledging our recognition of the sovereignty, integrity, and independence of China. They have ignored also their prior demand that those selfsame treaties be abrogated by us, since they were concluded with the Government of China and not with the Communist regime.

When General Chennault appears this week before two Congressional committees, those groups will be well advised to ask him for the actual truth about American aid to the Government of China. That truth has not been frankly told in Washington, and many Americans still believe that this country has given $2,000,000,000 in military aid to China since VJ-day, in spite of Secretary Acheson's explanation that that was not what he had meant to imply.

The Communists are doing some clarifying for us in China. We need some clarifying at this end.

Whither Are We Drifting?

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 3 (legislative day of Monday, April 11), 1949

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Whither Are We Drifting" by George L. Hodges, of the St. Paul Journal, St. Paul, Kans.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHITHER ARE WE DRIFTING?

After being editor of a Democratic paper for more than half a century, it seems impossible for the editor of the Journal to harmonize his views with the present administration at Washington. In fact, he is so disgusted that he cannot even give the devil his dues. Outside of the foreign policy, which has been wobbly at times, the administration has gone crazy about spending the people's money. If people in business life conducted their affairs on the same basis as the Government,

the bankruptcy courts would be overcrowded in a few months. The socialized-medicine proposition sounds crazy to us and will prove to be one of the most expensive affairs ever introduced. It savors of Russian methods. People who believe it means medical care will wake up to the fact they are taxed double for a service to be dictated by the Government. One percent of the cost, used to provide more good local physicians will do the people much more good at a very moderate cost. Probably they will be wanting to socialize the practice of law next.

The move now to spend $7,000,000,000 to erect houses in $10,000, or higher, class means mighty expensive houses to those who occupy them. The proposed plan might apply to the cities, but a $10,000 dwelling in a small town is almost an absurdity. The people who can afford that price house, just do not live in the smaller communities. And there are a lot of these smaller communities. Make the materials available and the people will build their own houses according to their needs. The slums of the cities cannot be cleared with $10,000 houses.

The waste in the duplication of bureaus in Washington is costing the people millions of dollars for which they get no benefit. Hoover is right in his recommendations but his politics are wrong to get his ideas adopted. Party success is evidently placed above national success.

The dubbing of the red hearing as red herrings is an effort to discredit an organization that has done more to alert the people to pending dangers than all the rest of the bunch combined. When this is followed by appointments to high places of men with pinkish tints, and the advocacy of measures with red tendencies, one is set to wondering just where are we heading, anyway?

The Washington bunch does not seem to know there are any people worthy of consideration residing outside of the cities. That bill now being considered making $1 per hour the minimum wage of laborers may be well for men with trades, or even others in the cities, but when it becomes compulsory for people out in the smaller localities to pay common laborers $8 per day, it just won't work. A lot of jobs will go undone, a lot of men who want work will find little, and the aged and those who are physically disqualified to do a full day's work will find themselves clear out.

We freely admit our Democratic partisanship is getting mighty thin.

Editorial Comment by the Wenatchee (Wash.) World on Address by James A. Farley

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 3 (legislative day of Monday, April 11), 1949

Mr. MAGNUSON Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the Wenatchee World, based upon a speech delivered by the Honorable James A. Farley before the Advertising Club of New York.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CORNERSTONE OF OUR STANDARD OF LIVING

"Advertising cannot make a permanent success of any product that is not fit for success on its own."

That is the view of former Postmaster General James A. Farley, speaking recently at a luncheon of the Advertising Club of New York. Farley, quite a salesman in politics and for a large soft-drink concern, goes on to give us some additional wisdom on the subject.

"It is customary to say that advertising sells goods. I think it is more accurate to say that advertising speeds the sale of goods. In the long run, no product sells because of advertising that would have sold in a lesser degree without it. For if the product is not worthy, advertising simply hastens the day when the whole market has sampled the product and rejected it. Advertising cannot make a permanent success of any product that is not fit for success on its own."

Farley then goes on to describe how much a part of our daily life and standard of living advertising has really become. "Advertising is thus part of a complex system—a routine, a know-how—that includes inventiveness, organization, machine tools and skilled workmanship, and that has resulted in the more universal distribution of more goods at lower cost than the world has ever known."

"When we realize this," Farley concluded, "no one needs worry about the future of advertising. It is with us to stay, because it is one of the cornerstones of our standard of living."

These words of Farley carry added significance as we find our economy leveling off from inflation and bringing in a buyers' market. The manufacturer and retail outlet are now cognizant that good advertising demands first a quality product.

The North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. McDONOUGH. Mr. Speaker, the proposed North Atlantic treaty is a radical departure from the foreign policy of the United States which has been followed since our Nation sprang from the union created by the ratification of the Constitution by the Original Thirteen States.

Ratification of this treaty and appropriation of the necessary funds to fulfill our obligations under its terms will set us upon an unchartered course the final outcome of which we are unable to foresee.

The North Atlantic Alliance rests on the assumption that in addition to the very large sums already provided or about to be provided for the economic recovery of the 16 Marshall-plan nations, other large sums, or their equivalent in material goods, will be supplied to the alliance members in the hope of averting another major war in which the United States could not hope to escape involvement. The alliance is also expected to curb the further spread of Communist aggression.

Whether the United States can maintain its present standard of living and make provision for its domestic needs and hemispheric obligations, and at the same time give an adequate measure of support and assurance to the strategic areas of defense in western Europe, the Mediterranean, and north Africa, is a question yet to be answered.

But once committed to this course of action, there will be no retreat regardless of what effect this program may ultimately have upon our domestic problems.

The events leading up to the signing of the North Atlantic Treaty by the United States have in a sense been part of our departure from traditional policy, and any evaluation of the new pact and its possible consequences must be made with these steps in mind as well as the specific commitments we have made to other nations in these steps such as:

First. The Marshall plan: The United States is committed to assist 16 western European countries rebuild their economics. The entire cost of the ERP over the period of 4 years now is estimated at $17,000,000,000.

Second. European occupation areas: The United States is committed by various agreements to maintain occupation troops in Germany, Austria, and Trieste until free governments can be established.

Third. Far Eastern occupation areas: The United States is bound to maintain occupation forces in Japan until a free and representative government is established.

Fourth. Truman doctrine: The United States is committed to the support of Turkey and to the maintaining of Greece against external aggression.

The cost of the North Atlantic alliance must be considered, and to date neither the text of the treaty nor official commentary on it has made any effort to define its cost in money terms or its relationship, from that point of view to the cost of the Defense Establishment of the United States.

The best approach to the North Atlantic Treaty must certainly be a thoroughly realistic one. We must recognize the probable contribution this treaty will make toward world peace and to our own national security as well as to the security of the other nations joining in the alliance. We must also admit at the outset that nothing contained in any of the statements officially issued suggest that from any point of view the treaty is ideal or that it would not be accompanied by many and serious problems or that it would not involve numerous and severe hardships for the American taxpayer.

If we favor the alliance, we must be willing to make the necessary sacrifice to provide the materials and funds to make the pact effective.

Study of the North Atlantic Treaty and a résumé of the steps which have led the United States to the desertion of traditional policy in favor of international alliances is important in any consideration of the merits of the pact, and the text of the treaty, the events leading

to it, and the nations which have now signed it are included in the following:

CHRONOLOGICAL TABLE RELATING TO THE ATLANTIC PACT (MARCH 1, 1945, TO MARCH 25, 1949)

1945

March 6: The American Republics approve the Act of Chapultepec at the Inter-American Conference on Problems of War and Peace at Mexico City. In the act the Governments declare "that every attack of a state against the integrity or the inviolability of the territory, or against the sovereignty or political independence of an American state, shall * * * be considered as an act of aggression against the other states which sign this act * * *."

April 25: Fifty nations meet for the United Nations Conference on International Organization at San Francisco, Calif.

June 26: The Charter of the United Nations is signed by 50 countries which participated in the San Francisco Conference.

July 28: The United States Senate consents to the ratification of the Charter of the United Nations and the Statute of the International Court of Justice.

October 24: The Charter of the United Nations enters into effect as twenty-ninth nation deposits instrument of ratification with the United States.

December 24: Secretary of State Byrnes proposes a four-power agreement among the United States, Great Britain, France, and the Soviet Union for the purpose of keeping Germany disarmed.

1946

March 5: Winston Churchill recommends in a speech at Fulton, Mo., that the United States and Great Britain form a military alliance for mutual defense.

March 19: Iran files official charge with United Nations against U. S. S. R.

May 6: President Truman proposes that the United States arm the Americas for defense.

May 17: The United States proposes joint defense plans with Canada, particularly for the Arctic frontier.

August 21: Seven United States warships are ordered to pay "courtesy" visit to Greece.

1947

March 12: The Truman doctrine is outlined in the President's message to Congress urging United States support of free peoples who are resisting attempted subjugation" and appropriation of $400,000,000 in direct aid to Greece and Turkey.

May 15: Congress gives final approval to Greek-Turkish aid bill to implement the Truman doctrine.

June 5: Secretary of State Marshall makes a speech at Harvard advocating agreement on over-all needs as basis for United States economic aid to European nations.

June 17: Foreign Ministers Bevin of Great Britain and Bidault of France initiate conversations in Paris on Secretary Marshall's proposal.

July 12: Representatives of 16 nations which accepted the invitation of Foreign Ministers Bevin and Bidault meet in Paris.

September 2: The Inter-American Treaty of Reciprocal Assistance, known as the Rio Pact, is signed by the American Republics (19) represented at the Rio Conference.

October 6: The Cominform, new version of the Comintern, organized at Warsaw, is composed of representatives of the U. S. S. R., Yugoslavia, France, Italy, Poland, Bulgaria, Czechoslovakia, Hungary and Rumania.

October 22: General Zdhanov, speaking for the Cominform, asks that Communists everywhere oppose the Marshall plan as an instrument of American imperialism.

October 24: Benelux countries exchange ratifications on their customs union agreement.

1948

February 23: The Community party in Czechoslovakia gains control of the government through a coup d'état.

March 17: The Conference of representatives of Great Britain, France, Belgium, the Netherlands and Luxemburg on Western Union ends with the signature of a 50-year treaty of collective military aid and economic and social cooperation.

March 17: In an address to Congress President Truman states: "I am sure that the determination of the free countries of Europe to protect themselves will be matched by an equal determination on our part to help them do so."

April 2: Congress passes the Foreign Assistance Act of 1948.

April 30: Defense Ministers and Chiefs of Staff of France, Great Britain and the Benelux nations meet in London and initiate joint military discussions.

May 19: The report issued by the Senate Foreign Relations Committee on the Vandenberg Resolution states that "the committee is convinced that, until the United Nations has been strengthened sufficiently to assure universal security, the best means of reinforcing the security of individual members lies in progressive development of such regional and other collective defense arrangements."

June 11: The United States Senate passes Senate Resolution 239, the so-called Vandenberg resolution, which proposes "association of the United States, by constitutional process, with such regional and other collective arrangements as are based on continuous and effective self-help and mutual aid, and as affect its national security."

July 6: Ambassadors to the United States from Canada, Great Britain, France, and the Benelux countries meet with Under Secretary of State Lovett for an exchange of views on European defense requirements.

July 20: It is stated in London that United States and Canadian military experts will join as nonmembers in the consultations of the permanent military committee of the Brussels powers.

September 27: Foreign Secretary Bevin, in a speech before the UN Security Council, states: "If we cannot proceed on a world basis * * * we must proceed on a regional basis."

September 27, 28: The defense ministers of western union in conference at Paris announce agreement on common defense policy and formation of an organization to carry out that policy.

October 4: A military staff is appointed by Brussels treaty powers.

October: Western union forwards estimates of equipment needs to Washington.

October 26: The consultative council of the western union is holding its third meeting in Paris and agrees to seek a North Atlantic security pact.

October 28: Canadian Minister of External Affairs Lester B. Pearson announces that Canada has informed members of the western European union that Canada is prepared to enter into negotiations for a regional treaty of collective security.

November 11: Senator VANDENBERG promises again that the United States will "aid other friendly, independent nations to stand on their own feet in defense of their own freedom."

November 19: Premier Salazar, of Portugal, in an interview, declares: "The salvation of Portugal, western Europe, and the occidental world lies in the formation of a true Atlantic bloc."

November 27: The British Foreign Office announces completion of the draft of a North Atlantic defense pact by delegates of the five western powers.

December 2: U. S. S. R. warns Scandinavian countries against "plans for a Scandinavian military bloc."

December 6: Secretary of Defense Forrestal declares that military equipment must be given generously to Western Europe to give meaning to the Brussels Treaty.

December 10: Negotiations for the North Atlantic Pact open between Acting Secretary of State Lovett, the Minister of Luxemburg, and the Ambassadors of Canada, Great Britain, France, Belgium, and the Netherlands.

1949

January 10: President Truman, in his Budget Message, indicates that the principal measure of economic and military aid will go to the nations sharing our international objectives.

January 14: A policy statement issued by the State Department cites Soviet opposition to majority policies in the United Nations, Communist obstruction to the Marshall plan, the Communist coup in Czechoslovakia, and the Russian blockade of Berlin as leading to the Atlantic Pact.

January 14: The State Department announces that the United States will send arms only "to countries associated with us in collective defense arrangements."

January 20: In his Inaugural Address President Truman recommends that the United States associate itself by treaty in a "collective defense arrangement" with free European countries.

January 28: The Western Union powers announce the creation of a Council of Europe composed of a Council of Ministers, an executive body, and a legislative assembly, representing the national parliaments, with advisory powers.

January 29: The Soviet Union issues in Moscow a white paper asserting that the North Atlantic Pact is intended to establish United States and British domination of the world by force.

January 29: The U. S. S. R. asks the Norwegian Government to clarify its stand on the Atlantic Pact.

January 29: The Swedish Foreign Minister submits to the Scandinavian ministers meeting at Oslo a draft for a three-nation defense treaty outside of the proposed North Atlantic defense pact.

January 30: Plans for a defensive alliance between Norway, Sweden, and Denmark, which had been under discussion for several months, are shelved.

February 1: In answer to the U. S. S. R.'s request of January 29, the Norse Government states that it will not enter into any agreement with other countries obligating Norway to grant bases on Norwegian territory unless Norway is attacked or threatened with attack.

February 6: The Soviet Union offers Norway a nonaggression pact and warns tacitly against joining a North Atlantic defense pact.

February 11: Secretary General of the United Nations Trygve Lie warns against regional pacts unless they recognize the supremacy of the United Nations.

February 17: The Turkish Foreign Minister proposes to the French Foreign Minister an extension of the North Atlantic Pact by a supplementary agreement for the defense of the Mediterranean area.

February 18: Secretary of State Acheson meets with the Senate Foreign Relations Committee to discuss the North Atlantic Pact.

February 20: Senator ROBERT A. TAFT endorses a strong North Atlantic security pact that would pledge United States aid to western Europe in case of attack.

February 21: A Foreign Office spokesman states that Norway has decided to join in organizing the Council of Europe.

February 21: Greek Foreign Minister Tsaldaris states that western European statesmen understand the desire of Greece

and Turkey for a Mediterranean defense alliance to supplement the Atlantic Pact.

February 22: Maurice Thorez, secretary general of the French Communist Party, states that French Communists would not fight the Soviet Union in the event of a war between that country and France.

February 23: The Minister for External Affairs of Eire informs the Dail that he had explained to the United States Eire's agreement with the general aim of the North Atlantic Pact but that Eire could not undertake any military alliance with the state (Great Britain) responsible for partition.

February 26: Italian Communist leader Togliatti states that in case of conflict between the Soviet Union and Italy it would be the duty of Italians to aid the Soviet Army.

February 28: Senators CONNALLY and VANDENBERG reassure Secretary of State Acheson that the draft of the North Atlantic Pact was satisfactory to them as it now stood.

March 3: Norway requests and receives an invitation to join conversations on the North Atlantic Security Pact.

March 3: Norway rejects the Soviet offer of a nonaggression pact.

March 4: The Norwegian Ambassador to the United States joins the Ambassadors' Committee in Washington negotiating the North Atlantic Pact.

March 7: A draft of the proposed North Atlantic treaty is completed by the Ambassadors Committee meeting in Washington and is sent to Canada and the western European countries for official approval.

March 8: The Italian Cabinet backs Italy's participation in the North Atlantic Pact.

March 8: Members of the Senate Foreign Relations Committe informally endorse the North Atlantic Pact.

March 10: The Danish Foreign Minister arrives in Washington to discuss the North Atlantic Pact.

March 10: The British Cabinet approves the final draft of the Atlantic Pact.

March 10: The Soviet Finance Minister discloses that the Soviet government plans to spend the equivalent of $15,000,000,000 on its armed forces during the coming year, an increase of 20 percent over last year.

March 11: Premier de Gasperi of Italy announces in a session of the Chamber of Deputies that his government has approved Italy's participation in the North Atlantic alliance.

March 12: The Danish Foreign Minister states that he had satisfactory talks with United States Department of State officials regarding Greenland's role in the Atlantic Pact.

March 13: Iceland's Foreign Minister arrives in Washington for talks on Atlantic Pact, stating that Iceland would refuse to grant peacetime bases to any foreign power.

March 14: The Foreign Ministers of the five Brussels Treaty powers begin a 2-day conference to coordinate western European defense organization with the North Atlantic Pact.

March 14: Australia's Defense Minister states that he hopes for a Pacific defense pact similar to the North Atlantic treaty.

March 14: The Danish Foreign Minister presents to the State Department his government's estimate of Danish defense needs.

March 15: The Foreign Ministers of the five Brussels Treaty powers approve the terms of entry into the North Atlantic Pact at a conference in London.

March 15: Iranian officials voice fears that the Soviet Union plans to invoke the 1921 treaty whereby its troops might enter Iran on the pretext that the security of the Soviet Union is threatened.

March 16: The Portuguese Embassy in Washington issues a statement giving support to the principles of the North Atlantic Pact.

March 16: The French Cabinet approves the Atlantic Pact, at the same time expressing desire for further clarification of details of the armament program and military organization.

March 17: Invitations are issued to Italy, Portugal, Denmark, and Iceland to join the Atlantic Alliance.

March 18: The total cost of the Marshall plan for the 4¼-year program is estimated as $17,000,000,000 by Paul C. Hoffman, Economic Cooperation Administrator.

March 18: The text of the North Atlantic Treaty is made public, with indications that the pact will be signed during the first week in April.

March 18: Foreign Secretary Bevin champions the Atlantic Pact before the House of Commons, and later, in a broadcast, declares the treaty to be a strong defense against Communist encroachment and a great step toward world peace and security.

March 19: The Italian Chamber of Deputies votes 342 to 170 in favor of Italy's adherence to the North Atlantic Pact.

March 19: A white paper on the North Atlantic Pact is issued by the Department of State.

March 20: The Moscow radio denounces the North Atlantic Treaty and charges that a Pacific pact is being prepared as another link in the plan for "Anglo-American world domination."

March 21: The Russian newspaper Pravda of Leningrad accuses Finland of violating its peace treaty with the Soviet Union and warns against Finnish alinement with the Western Powers.

March 23: Secretary of State Acheson supports the Iranian Government's denial to the Soviet Union that Iran is being converted into an American military base for operations against the U. S. S. R.

March 23: A plan to include France and western Germany in the Benelux customs arrangement is reported to be under consideration.

NORTH ATLANTIC TREATY

(Department of State—North Atlantic Treaty. Publication 3464, March 1949)

PREAMBLE

The parties to this treaty reaffirm their faith in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all governments.

They are determined to safeguard the freedom, common heritage, and civilization of their peoples, founded on the principles of democracy, individual liberty, and the rule of law.

They seek to promote stability and well-being in the North Atlantic area.

They are resolved to unite their efforts for collective defense and for the preservation of peace and security.

They, therefore, agree to this North Atlantic Treaty:

ARTICLE 1. The parties undertake, as set forth in the Charter of the United Nations, to settle any international disputes in which they may be involved by peaceful means in such a manner that international peace and security and justice are not endangered, and to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes of the United Nations.

ART. 2. The parties will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and well-being. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them.

ART. 3. In order more effectively to achieve the objectives of this treaty, the parties, separately and jointly, by means of continuous and effective self-help and mutual aid, will maintain and develop their individual and collective capacity to resist armed attack.

ART. 4. The parties will consult together whenever, in the opinion of any of them, the territorial integrity, political independence or security of any of the parties is threatened.

ART. 5. The parties agree that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all; and consequently they agree that, if such an armed attack occurs, each of them, in exercise of the right of individual or collective self-defense recognized by article 51 of the Charter of the United Nations, will assist the party or parties so attacked by taking forthwith, individually and in concert with the other parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area.

Any such armed attack and all measures taken as a result thereof shall immediately be reported to the Security Council. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

ART. 6. For the purpose of article 5 an armed attack on one or more of the parties is deemed to include an armed attack on the Territory of any of the parties in Europe or North America, on the Algerian departments of France, on the occupation forces of any party in Europe, on the islands under the jurisdiction of any party in the North Atlantic area north of the Tropic of Cancer or on the vessels or aircraft in this area of any of the parties.

ART. 7. This treaty does not affect, and shall not be interpreted as affecting, in any way the rights and obligations under the Charter of the parties which are members of the United Nations, or the primary responsibility of the Security Council for the maintenance of international peace and security.

ART. 8. Each party declares that none of the international engagements now in force between it and any other of the parties or any third state is in conflict with the provisions of this treaty, and undertakes not to enter into any international engagement in conflict with this treaty.

ART. 9. The parties hereby establish a council, on which each of them shall be represented, to consider matters concerning the implementation of this treaty. The council shall be so organized as to be able to meet promptly at any time. The council shall set up such subsidiary bodies as may be necessary; in particular it shall establish immediately a defense committee which shall recommend measures for the implementation of articles 3 and 5.

ART. 10. The parties may, by unanimous agreement, invite any other European state in a position to further the principles of this treaty and to contribute to the security of the North Atlantic area to accede to this treaty. Any state so invited may become a party to the treaty by depositing its instrument of accession with the Government of the United States of America. The Government of the United States of America will inform each of the parties of the deposit of each such instrument of accession.

ART. 11. This treaty shall be ratified and its provisions carried out by the parties in accordance with their respective constitutional processes. The instruments of ratification shall be deposited as soon as possible with the Government of the United States of America, which will notify all the other signatories of each deposit. The Treaty shall enter into force between the

states which have ratified it as soon as the ratification of the majority of the signatories, including the ratifications of Belgium, Canada, France, Luxemburg, The Netherlands, the United Kingdom, and the United States, have been deposited and shall come into effect with respect to other states on the date of the deposit of their ratification.

ART. 12. After the Treaty has been in force for 10 years, or at any time thereafter, the parties shall, if any of them so requests, consult together for the purpose of reviewing the Treaty, having regard for the factors then affecting peace and security in the North Atlantic area, including the development of universal as well as regional arrangements under the Charter of the United Nations for the maintenance of international peace and security.

ART. 13. After the Treaty has been in force for 20 years, any party may cease to be a party 1 year after its notice of denunciation has been given to the Government of the United States of America, which will inform the governments of the other parties of the deposit of each notice of denunciation.

ART. 14. This Treaty, of which the English and French texts are equally authentic, shall be deposited in the Archives of the Government of the United States of America. Duly certified copies thereof will be transmitted by that Government to the governments of the other signatories.

In witness whereof, the undersigned plenipotentiaries have signed this Treaty.

Done at Washington, the 4th day of April 1949.

Signers of the Atlantic Pact to date: Belgium, Canada, Denmark, France, United Kingdom, Iceland, Italy, Luxemburg, Netherlands, Norway, Portugal, United States of America.

Polish Constitution Day

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. HESELTON. Mr. Speaker, another year has passed since Members of this House expressed their hope that on the next anniversary of the adoption of the Polish Constitution the people of Poland might be able to join with those of Polish descent elsewhere in celebrating that memorable event. But their alien and terroristic rules still prevent it. More than that, those rulers apparently have undertaken more widespread religious persecutions and have increased the terrorism directed toward all opposition to the end that Poland's economy may become completely sovietized. Yet, even in the midst of the misery of millions of Poles, there can be no doubt that courage and hope remain alive. Americans can and do join in paying tribute to the greatness of the people of Poland and in pledging themselves to the ultimate restoration to Poland of its free government under its constitution which no tyrannical oppressor can take from them permanently.

I have read with interest an excellent, brief memorandum on the Polish Constitution, prepared by the Polish-American Congress, Inc. I am glad to make it available to all who read the RECORD by including it in my remarks.

MAY 3, POLAND'S NATIONAL HOLIDAY

POLAND—A PARLIAMENTARY COUNTRY

It is impossible to understand the history of Poland, or even the essential character of the Polish Nation unless it is realized that Poland is fundamentally a country in which the parliamentary system is a deep-rooted and age-old tradition. For this circumstance explains the fact that the most important moments of Polish history are concerned with the problem of parliamentarism, and that the Polish Nation as such raised to the forefront of its tradition and history not battles or revolutions, but the date of a fundamental reform of parliament and the system: that of the constitution of May 3, 1791. It is to this event that the following remarks are devoted.

For if we desire to sum up the very essence of a Pole and things Polish in a couple of sentences, then in relations with the outside world it consisted of a romantic struggle, against the heaviest of odds and conditions, for state independence, and internally it was dominated by a principle which at times suffered from exuberant overgrowth, namely, that a Pole regards as legal, justified, and obligatory only that which has been resolved by a decision of the people or their delegates, i. e., by way of plebiscite or parliament.

PARLIAMENTARISM AND THE SLAVS

We have to go a long way back into early history of Poland to understand how Poles came to be and remained devoted to the parliamentary system. For it is particularly characteristic of Poles, who are analogous in this case to the English, that among the Slavonic peoples they were the only nation which remained faithful to the parliamentary tradition throughout all their independent existence, and that irrespective of the processes to which other Slavonic nations were submitted only from the middle of the nineteenth and in certain cases only in the twentieth century. It is obviously difficult to speak of any common Slavonic psychology, despite the common root language, when for a thousand years of history each of the nations in the Slavonic lingual group was shaped in its own distinctive culture, system, and religion.

So we must not overlook for one moment all the various processes, in operation for a thousand years and more, which had the effect of producing only one nation in these central eastern areas of Europe which was primarily a nation of a parliamentary system. We write "primarily" and not "exclusively" because for the sake of objectivity we must recognize that other nations in central Europe were also for centuries, though not uninterruptedly, educated in the parliamentary system. This applies, longest of all, to the Hungarians and Czechs.

THE UNBROKEN PARLIAMENTARY TRADITION

So the Poles are a nation of parliaments, in other words, a nation whose conception of legality requires the absolutely freely expressed agreements of all those interested, and this simply because in distinction from other nations they have been molded in a thousand years of historical processes fundamentally different from those of all their neighbors. Nowhere else on the Continent of Europe, among all the nations and states which have survived to the twentieth century, is the unbroken continuity of existence of parliament a feature of national life. Perhaps the most characteristic and striking similarity, or rather internal accordance between Polish and English, or British history, is the fact that Poland maintained her parliamentary system without a break-down to the end of her independent existence as a state. And it must be added that the form of the Polish-Lithuanian Union has features similar to that of the system uniting Great Britain. Nor must we forget that, even during the years when Poles were divided and governed by inclusions in other states they immediately restored their parliamentary system whenever possible, first in the form of the Grand Duchy of Warsaw and the so-called Congress Kingdom of the nineteenth century, and later under the autonomy conceded by Austria.

THE POLITICAL AND SOCIAL PRINCIPLES OF THE MAY 3 CONSTITUTION

The numerous provisions of the May 3 constitution include certain basic elements which have retained a lasting value for the Polish Nation, as well as a number of valuable, just, and sound decisions which, however, arose out of the political requirements and the relationships existing in Poland at the end of the eighteenth century.

The greatness of the May 3, 1791, constitution consisted in the fact that it eliminated the most fundamental weaknesses of the Polish parliamentary and social system, and that is also the reason why this day marks both the crowning act of regeneration of the spirit of the Polish Nation in the second half of the eighteenth century and also a testament of the progressive and evolutionary methods with which the Poles entered political life after the temporary downfall of their own state.

The preamble of the May 3 constitution clearly and unmistakably expresses the motivating force that gave birth to this remarkable and immortal document. Here is its preamble:

"Persuaded that our common fate depends entirely upon the establishing and rendering perfect a national constitution; convinced by a long train of experience of many defects in our government, and willing to profit by the present circumstances of Europe, and by the favorable moment which has restored us to ourselves; free from the disgraceful shackles of foreign influence; prizing more than life, and every personal consideration, the political existence, external independence, and internal liberty of the nation, whose care is entrusted to us; desirous, moreover, to deserve the blessing and gratitude, not only of our contemporaries but also of future generations; for the sake of the public good, for securing our liberty, and maintaining our kingdom and our possessions; in order to exert our nautral rights with zeal and firmness, we do solemnly establish the present constitution, which we declare wholly inviolable in every part, till such period as shall be prescribed by law, when the nation, if it should think fit, and deem necessary, may alter by its express will such articles therein as shall be found inadequate. And this present constitution shall be the standard of all laws and statutes for the future diets."

SOVEREIGNTY OF THE PEOPLE

In the very forefront of these lasting contributions we must place the principle of the sovereignty of the people in the state, which sovereignty was also made the primary postulate of the first constitution of the restored Poland, passed on March 17, 1921. In the 1791 constitution this principle was formulated in the words:

"All power in civil society should be derived from the will of the people, its end and object being the preservation and integrity of the state, the civil liberty, and the good order of society, on an equal scale, and on a lasting foundation. Three distinct powers shall compose the government of the Polish nation, according to the present constitution, viz:

"1. Legislative power in the states assembled.

"2. Executive power in the king and council of inspection.

"3. Judicial power in jurisdiction existing, or to be established."

To any western European who had been reared in French ideas, or even more in the age-old parliamentarism of Britain or in the principles which have been natural to the United States from their very beginning, this principle is almost a truism, and something natural in itself. But in eastern and central Europe it cuts off the Poles and the Polish political tradition completely from both the Germans and the Russians, who have been reared throughout the centuries in the principles of state, and not national, sovereignty.

EXECUTIVE POWER

The philosophy of government discernible throughout this Polish Constitution would lead one to believe that the American people and the Polish people had each drawn inspiration for their respective constitutions from the same source. We find under article VIII relating to executive power these provisions:

"The most perfect government cannot exist or last without an effectual executive power. The happiness of the nation depends on just laws, but the good effects of laws flow only from their execution. Experience has taught us that the neglecting of this essential part of government has overwhelmed Poland with disasters."

Under this same heading the constitution provides:

"This executive power cannot assume the right of making laws, or of their interpretation. It is expressly forbidden to contact public debts; to alter the repartition of the national income, as fixed by the diet; to declare war; to conclude definitely any treaty, or any diplomatic act; it is only allowed to carry on negotiations with foreign courts, and facilitate temporary occurrences, always with reference to the diet."

HUMANITARIANISM AND TOLERANCE

Throughout the May 3 constitution runs a philosophy of humanitarianism and tolerance, such as—

"We publish and proclaim a perfect and entire liberty to all people, either who may be newly coming to settle, or those who, having emigrated, would return to their native country; and we declare most solemnly, that any person coming into Poland, from whatever part of the world or returning from abroad, as soon as he sets his foot on the territory of the republic, becomes free and at liberty to exercise his industry, wherever and in whatever manner he pleases, to settle either in towns or villages, to farm, and rent lands and houses, on tenures and contracts, for as long a term as may be agreed on; with liberty to remain, or to remove, after having fulfilled the obligations he may have voluntarily entered into."

RELIGIOUS FREEDOM

We find in this Polish Constitution, adopted almost contemporaneously with our own Federal Constitution, rule by majority, secret ballot at public elections, and the language relating to religion that—

"The same holy religion commands us to love our neighbors, we therefore owe to all people of whatever persuasion, peace in matters of faith, and the protection of government; consequently we assure, to all persuasions and religions, freedom and liberty, according to the laws of the country, and in all dominions of the Republic."

Thus it was on May 3 in 1791, barely 2 years after the adoption of its Constitution by the United States in 1789, that Poland, without a bloody revolution or even without a disorder, succeeded in reforming her public life and in eradicating all her internal causes of decline.

But this great rebirth and assertion of democracy came to the Poles 20 years too late and did not forestall the third partition of Poland in 1795, which left the Polish nation in the bondage of Russia, Germany, and Austria until 1918.

Our Government Is Approaching the Limit of Bigness

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. SMITH of Kansas. Mr. Speaker, the metropolitan press in our large cities such as New York, Chicago, Detroit, Philadelphia, and Cleveland, maintain a highly paid and well-trained editorial staff. If the New York Times or Chicago Tribune, Kansas City Star, and so forth, writes an editorial on some timely national problem, this editorial is widely copied by many other papers. A recent editorial appearing in a small daily newspaper of Goodland, Kans., is deserving of wide circulation because it sets forth self-evident truths so pointedly. This editorial demonstrates the fact that people living in the wide-open spaces, see very clearly the direction our country is drifting. I recommend it to you for reading.

[From the Goodland (Kans.) Daily News of April 10, 1949]

OUR GOVERNMENT IS APPROACHING THE LIMIT OF BIGNESS

Too many world leaders, including some in Washington, believe complicated political problems can be solved by economic means. The fallacious theory is that if people are well fed, fully employed, subsidized by the Government they will cease to be nationalistic and will be tractable to every Federal directive. Big government is a prerequisite of the theory. It was a prerequisite of Hitler's Germany in 1939–40.

We have extended our own big Government across the seas. Through economic means we are trying to form an economic union of western Europe. We learn we must wait upon political consideration. "We have lived for centuries without the Marshall plan," says Charles de Gaulle, of France. And Winston Churchill says: "While Socialist ministers are boasting of their achievements and of the benefits they have given the public—of which the public is not always conscious—they seem to forget that they are living on the charity of the greatest capitalist free-enterprise state in the world—the United States."

Some day in the not too distant future there will be a reckoning not only of our prodigality but of extension of government into private lives. We have been negligent of the course of our democracy in two World Wars and a severe economic upset in one generation. We have shouldered, almost without thinking, a heavy and steadily increasing local and national tax bill. We have drifted into expenditures and exhaustion of national assets that drive us toward individual and national sacrifices. We face a reduced standard of living, compulsory or voluntary.

If we are the greatest country in the world, we are not without limitations. Our most threatening limitation is that we are allowing our Government to become too big—too big for taxpayers to support.

Basing-Point System Operated in Missouri—Missouri Highways Taxed for Phantom Freight — Hannibal (Mo.) Plant Charged Freight From Eastern Pennsylvania in Early Days—Moratorium Presages Return of Basing-Point System—Small Business Taxed on Every Sale by Basing-Point Monopolists

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. PATMAN. Mr. Speaker, today I desire to demonstrate the basing-point system in action in the great State of Missouri. Bids received by the Missouri State Highway Department from January 6, 1947, through February 26, 1948, show the identity of prices inherent in pricing under the basing-point system prior to the Supreme Court decision on April 26, 1948. In Missouri, as well as elsewhere, it is now possible to get competitive bids on cement. Such bids are not confined to cement, however, but competition is reflected in the purchase of most basic commodities formerly using the basing-point system. Therefore, it is of the utmost importance that we be not swayed by fallacious arguments advanced for the purpose of passing legislation which will undo all of the gains made in outlawing the basing-point system.

One of the early Portland cement plants built in the United States was erected at Hannibal, Mo. It would be natural to assume that the building of this plant would have been a great boon to Missouri and the surrounding States, since at that time the nearest cement plant was in eastern Pennsylvania. This did not prove to be the case, for every pound of cement sold in the first few years by the Hannibal plant had in its price the element of phantom freight. A very heavy and unjustifiable phantom freight charge, for that phantom was the freight charge from a Lehigh Valley cement plant in eastern Pennsylvania to all destination points in Missouri to which the Hannibal plant shipped. The same charge applied when shipments were made to customers at destinations in neighboring States.

LEHIGH VALLEY "PLUS" ATTEMPTED FOR MISSOURI

As a matter of fact, the cement industry tried very hard to establish the "Lehigh Valley Plus" in the same manner the steel industry had successfully saddled the Pittsburgh Plus on the American economy. While the cement industry was not successful in this single basing-point effort, due to the nature of the industry, it did, as we all know, successfully work out a multiple basing-point system, much to the detriment of our country and its business structure.

LOCAL MATERIALS EVERYWHERE FOR CEMENT

The materials necessary for the manufacture of Portland cement lie in great abundance in the valleys and hills of every State in our country. It is our loss that this valuable basic construction material has not been made available at a low cost on an honest and fair basis for each and every needed improvement, whether it be for homes, highways, flood control, or for any other purpose. It will be even more disastrous if we allow the basing point system, with all of its monopolistic overtones, to creep back by way of a moratorium and once more control the distribution of cement, steel, lumber, food, and the other important commodities so necessary to the comfort, the safety, and the convenience of our people. The phantom is laid and only a Congressional seance in the name of moratorium can bring it back.

The Missouri table follows:

Abstract of cement bids received by the Missouri State Highway Department during the year 1947 and to Feb. 26, 1948

Destinations	Missouri Portland Cement Co.		Alpha Portland Cement Co.		Universal Atlas Cement Co.		Marquette Cement Manufacturing Co.		Lone Star Cement Corp.		Ash Grove Lime & Portland Cement Co.

[1] Denotes high early strength cement. Normal portland cement uniformly 50 cents per barrel less than high early strength. These are delivered prices in paper bags subject to a cash discount of 10 cents per barrel.

Location of cement mills: Missouri Portland Cement Co., St. Louis and Sugar Creek, Mo.; Alpha Portland Cement Co., St. Louis; Universal Atlas Cement Co., Hannibal, Mo., and Independence, Kans.; Marquette Cement Manufacturing Co., Cape Girardeau, Mo. (also warehouse at St. Louis, Mo.); Lone Star Cement Corp., Bonner Springs, Kans.; Ash Grove Lime & Portland Cement Co., Chanute, Kans.

SMALL BUSINESS SUFFERED

Because the basing-point system is a monopolistic device to control prices and stifle competition, small business has suffered greater direct hardships under the system than have public agencies. While the taxpayer has paid millions upon millions of unearned dollars through his governmental bodies for the construction of public works of all types, small business has paid not only through increased taxes, but through the stranglehold which the practices under the basing-point system have on his business operations. The myriad daily transactions of the independent grocer, the tire dealer, the hardware merchant, the electric-supply dealer, and of all the small business enterprises everywhere, are taxed by monopolies for phantom freight in one form or another.

CONSUMERS HARD HIT

Consumers, of course, are the losers in the end result. Every man, woman, and child pays for the upkeep of the basing-point and other systems of price control. For Congress to pass a moratorium bill, which in the smallest degree would delay or restrict our efforts to restrain the powerful and ruthless monopolies in our country, would be to render a disservice to our people beyond calculation.

Socialized Medicine Concerns Us All

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 2, 1949

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ernest F. Henry:

SOCIALIZED MEDICINE CONCERNS US ALL

(By Ernest F. Henry)

For decades socialized medicine has been practiced unsuccessfully in various parts of the world. For years it has been advocated by certain groups for this country and legislation repeatedly has been introduced into both Houses of Congress to accomplish this objective.

Congress had hardly convened this January when S. 5 was submitted to the Senate to socialize medicine in the United States under the inoffensive title of national health insurance. Companion bills were introduced in the House.

This is not just a problem for the doctors. This is a matter of concern to all of us. It would have a direct bearing on our national economy, the future progress of the medical profession and the health of every citizen.

As are most other "do-gooder" schemes, the arguments for socialized medicine are based largely on false representations and emotional appeal. The proponents say that the state of the health of the American people is indeed pitiful; that unnecessary disease is rampant everywhere; that the number of cases of medical neglect is appalling; that only the rich man can get any medical care; that the poor must ask for charity, and that those that lie between simply can't get charity of medical care.

They say that the distribution of doctors is extremely inequitable; that there are large areas of this country in which medical care is not available; that there are many counties in which there is no hospital.

Now, is our health bad? If it is, we ought to consider what to do about it. It doesn't necessarily follow that, if it were bad, the measure proposed would be a satisfactory solution. But, if it isn't bad, a good deal of force of the argument has been lost. Reports of the United States Public Health Service show that the incidence of tuberculosis, diphtheria, and other diseases is lower in the United States than any other country and substantially lower than in most of the countries where socialized medicine is now in effect.

The statement that there are large areas of the country without medical care is correct but this would not be changed by national health insurance.

One of the points which has been greatly stressed is that national health insurance will be administered locally. "There won't be anything centralized in Washington." A study of the bill reveals that there is no such intention. Whatever local committees are set up, either of the profession or of the public at large, must operate only under the rules and regulations from Washington and they must agree, if they come in under the State plan, as is approved in Washington, to accept the rules and regulations from Washington. We would, therefore, not have local administration but only talk about it.

The power for the administration of the program would be centralized solely in the hands of the Federal Security Administrator. A National Health Insurance Board is to be set up but the program is to be administered under the direction and supervision of the Federal Security Administrator. The final authority, therefore, for this entire program is vested in a political appointee without any knowledge in the field of health and medicine. Of the five members of the Board only one must be a physician.

The proposed bill has objectionable features from the beginning to the end but space permits mention of only a few. One provision is that a specialist may be consulted only with the permission of the Govment insurance doctor. If he does not grant permission the patient may appeal. Everyone knows how long it takes to appeal anything in the Government. This means that the patient would continue to suffer or perhaps die pending the appeal or else go to a non-Government doctor and pay a fee just as he does now. However, please bear in mind that in this way he would be paying two fees instead of one because he would still be required to pay for the Government service which he did not get.

National Health Insurance would be financed in 1951 by a deduction of 1 percent from all wages received during the fiscal year. In 1952 and thereafter, by a deduction of 3 percent from all wages. Thus as bait to get the measure enacted the tax would be only 1 percent but would automatically jump to 3 percent the next year. If this bill is enacted and the social-security tax is increased to 3 percent as is contemplated, the individual wage earner would have a total of 6 percent of his salary withheld for social security and medical care in addition to the already large amount for income tax.

If the experience with socialized medicine in England is repeated here, the 3-percent tax would not be sufficient to support the program. In that country the cost of this "free" medical service will probably exceed 250,000,000 pounds a year, instead of the 150,000,000 as originally anticipated. In the view of Health Minister Bevan, that results from the fact that "too many are demanding too much." In other words, people are acting on the theory that they may as well visit the doctor whether they are sick or not because "free" medical service is due them. This situation has reached such an extreme point that Mr. Bevan issued a public statement in which he said: "Don't let us become a nation of hypochondriacs. I ask the public to use their doctors wisely and only when they need them."

There are many who think it is not necessary to consult the medical profession on problems related to medical care, but that legislators, social workers, and other laymen can draw up a complete program, have it adopted, and then expect the doctors to make it work. It should be borne in mind that, no matter what system we employ to obtain medical care, the doctor is the one who is going to have to deliver it. It cannot possibly be delivered by a social uplifter. Yet approximately 90 percent of the doctors have no sympathy whatever for the proposal. Then how could it possibly work?

The American people should realize that they will be the real ones to suffer should socialized medicine become a reality. Not only will they still have to go to a private doctor to get the type of service they now receive, but they will also pay the Government medical tax. Furthermore and foremost, there is little doubt that the future advancement of medical knowledge, learning, and research would be seriously retarded.

This country doesn't need the proposed system of socialized medicine. We have more doctors and medical facilities per family than anywhere else in the world. If those facilities sometimes appear inadequate, it is by comparison only with our splendid new ones. Our skilled worker and family wage earners are covered by a national system of workmen's compensation for injuries on the job; most of our population is entitled to and gets Federal medical care under the existing Public Health Service, Veterans' Administration, and other forms of medical service, or enjoys protection under private programs of insurance companies and industry. Our indigent now get as good or better service than they would under any socialized plan which would simply reduce, through red-tape requirements, the number of hours each doctor could render service.

The building industry, as well as all those believing in the American private-enterprise system, should appreciate the fact that those who would socialize the medical profession would do the same to practically every form of private business. We should be united in opposition to all adventures in state socialism.

Will the World Starve?

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD and to include an article, I am pleased to present a thought-provoking theme from the mind and the pen of Mr. Bruce Bliven:

WILL THE WORLD STARVE?

(By Bruce Bliven)

The American people have lately been frightened by one of the grimmest of all specters: World-wide starvation.

The warning has come from a number of sources, but notably from two books by well-known scientists, Our Plundered Planet, by Fairfield Osborn, and Road to Survival, by William Vogt.

These authors say that the earth's population is increasing very rapidly, while the available food supplies are increasing slowly, actually decreasing in many areas.

Says Mr. Osborn:

"Blind to the need of cooperating with nature, man is destroying the sources of his life. Another century like the last, and civilization will be facing its final crisis. * * * The tide of earth's population is rising, the reservoir of the earth's living resources is falling. * * *"

ABANDON CIVILIZATION?

"As nearly as can be ascertained, it takes nature under the most favorable conditions * * * anywhere from 300 to 1,000 years or more to build a single inch of topsoil. Yet what may have taken a thousand years to build can be removed by erosion in a year or even in a single day. * * *"

Mr. Vogt is equally alarming:

"Unless man readjusts his way of living * * * to the imperatives imposed by the limited resources of his environment, we may as well give up all hope of continuing civilized life. Like Gadarene swine we shall rush down a war-torn slope to a barbarian existence in the blackened rubble. * * *

"In the hundred years prior to 1940 the world population more than doubled. * * * Agricultural land, now amounting to little more than an acre per person and shrinking fast * * * is every year producing less food. * * * A few more decades of such abuse as we have subjected [the land] to, will wrest the control out of our hands."

The specific statements of fact which are made by Messrs. Osborn and Vogt are true. But in my opinion the alarming conclusion which they reach, and which has frightened

so many people, is quite unjustified. The problem is far more complicated than most readers of these books realize; a number of factors are omitted which are on the optimistic side. In short, no readers of these words is in any danger of facing general starvation—nor is his son or his grandson. The western nations will not go hungry. Even the East is in little more danger in the future than in the past.

Here are six important facts of which the alarmists do not take proper account:

1. Population increase is not uniform and unlimited. In the western countries growth is leveling off and will turn downward sometime in the next quarter century. The rate of growth is at present largest in the oriental nations, but this will change as these countries shift over to more factories with fewer people on the land.

It is a universal rule that as the standard of living goes up with industrialization, the rate of increase in population (after a preliminary spurt) slows down until the population eventually stands still or gets smaller. There are various reasons. Marriages tend to be later. Families are smaller when children become an economic liability rather than an asset. With more education, various techniques for voluntary control of population begin to be employed.

NO MORE MIGRATIONS

It is also a fact that each continent is a law unto itself in the matter of population. In the modern world large numbers of people cannot move from one great land mass to another without the consent of the people already living on the second. Population pressure can be, and is, fairly severe in certain parts of the world without directly affecting the others.

2. Land can produce more. Modern scientific methods of farming, now applied to only a minute portion of the earth's farm land, increase production tremendously. Farmers in Denmark, for example, get five times as much food per acre on comparable land as do farmers in India. Dr. Robert M. Salter, Chief of the United States Bureau of Plant Industry, Soils, and Agricultural Engineering, calculates that if farmers everywhere practiced the best methods we could produce twice the present food needs of the world.

While soil erosion and exhaustion constitute a serious problem, they are being conquered—in the United States and other advanced regions—by the application of scientific methods. Ralph S. Trigg, head of the Production and Marketing Administration of the Department of Agriculture, recently told me of some of the soil-conservation techniques now being applied and other aspects of scientific farming. We have managed within the past 15 years to increase the productivity of our farms more than one-third on the same acreage. Food crops have been increased by 40 percent.

Chief factors in this amazing achievement have been the breeding of better farm animals, the use of hybrid seeds for increased yields, better use of soil, improved farm machinery, more and better fertilizers, new insecticides such as DDT, drought-resistant plants, and the successful war on pests.

REGULATING MOTHER NATURE

The great campaign of the agricultural-conservation program, initiated by the Department of Agriculture but carried out on a cooperative basis by the farmers themselves through nearly 100,000 elected farmer-representatives, is a basic factor responsible for this great record of success.

Still further scientific achievements are ahead. The wonderful new growth hormone, 2,4-D, is an amazingly effective killer of certain weeds, was used to rescue the sugarcane fields of Cuba. A stubborn weed, aroma marabu, with an enormous root mass, threatened to overrun them. Dr. Robert L. Weintraub of the United States Army Chemical Corps, pointed out that with the use of such hormones we can create new varieties of growing foodstuffs almost at will. We can develop slow-maturing crops that are safe from late spring frosts and early-maturing crops not damaged by the first bad freeze of autumn.

3. We can increase the supply of land. Millions of acres of potentially useful land are now lying fallow for reasons with which science is at last able to cope. Tropical jungle can now be cleared with the aid of growth hormones at a reasonable cost. Malaria, which has made vast areas unusable, is being wiped out by spraying DDT from airplanes. A new drug, antrycide, has been developed which protects cattle from diseases in Africa. This drug should open up an African region which will produce about as much meat as Argentina.

4. We can get food from the sea. At present, the world obtains only one-half of 1 percent of its food from the ocean. This supply could be increased 100 times if we wished. Commercial fishermen catch, in addition to the few fish which finicky humans are willing to eat, great quantities of "trash fish," nearly all of which could be prepared for human consumption without undue expense.

FISH FARMING

It is possible to raise fish, both salt and fresh-water varieties, in artificial ponds. Preliminary studies in Great Britain indicate that fish raised in ponds and fed on garbage produce a much larger return than does the land itself used in more orthodox ways.

5. There are new food sources: Production of yeast as a food is now past the experimental stage. Production at a pilot plant in Jamaica has proven successful, and a number of additional plants are being built. The end product is a brownish powder, bland in flavor, which can readily be mixed into fruit juices, soups, stews, milk, porridge, ice cream, and many other foods. In nutritive value it's the equivalent of buying beefsteak at 12 or 13 cents a pounds.

Fresh-water ponds contain enormous quantities of Chlorella, a microscopic type of algae. By manipulating its environment, Chlorella can be made to furnish half its dry weight as edible protein, or three-fourths of its weight as edible fats.

RAISING FAT

With the algae from an acre of pond, we can get 1,400 pounds of food in the form of fat. Compare this with 227 pounds of soybean oil or 360 pounds of peanut oil which can be obtained from an acre of dry land.

Dr. Richard L. Meier points out that Chlorella and yeast might be combined into one operation. We can use Chlorella as the food for the yeast, instead of molasses or sugarcane juice. Dr. Meier says that 7,000 acres of land used for an algae-yeast operation can produce as much food as 175,000 acres used for conventional farming. Moreover, it can be land which at present is considered so poor as to be useless.

A wonderful natural process is photosynthesis, by which in green, growing plants, nature turns carbondioxide and water into sugar and other organic materials in the presence of sunlight. If we could duplicate this process, most of the world's food troubles would be over. Great strides have been made, largely with the use of radio-active isotopes.

6. We can cut down waste. Just as important as new sources of food is maximum efficiency in the use of the food we have. Important progress is being made in this direction. We have found that precious vitamins and minerals are destroyed by certain types of cooking; that, for example, vegetables should be cooked in small amounts of water and this water served with them or saved for soups and stews.

QUICK FREEZING HELPS

We also know that many vegetables and fruits lose some of their nutritive elements if there is a long interval between picking and eating. Quick-freezing processes are a great help here, since they preserve most of these qualities.

Messrs. Osborn and Vogt are certainly right in warning us against being wasteful, especially when we remember that the overwhelming majority of all the world's people, including millions here at home, are on a diet which is far below the level required for good health. We need to know much more about food than we do. We need to solve the problem of poverty, which for so many people means inadequate diet even when food is in the market. We must apply intelligent control to the problem of population increase versus food supply.

And if we accept the principle that the problems of food and agriculture belong properly to science, if we will apply generally what the laboratory experts already know, if we will use a little common sense about our common problems, then our future is bright. And you'll be eating beefsteak and French fries for a long time to come.

Jersey City Celebrates Americanization Day

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. HART. Mr. Speaker, the annual celebration of Americanization Day, for long a yearly event in Jersey City, took place on Sunday, April 24. Again these exercises and the parade preceding them were conducted under the auspices of Captain Clinton E. Fisk Post, Veterans of Foreign Wars of the United States, and its auxiliary. The celebration this year was the eighteenth annual demonstration of patriotic devotion on the part of the citizens of Jersey City under the leadership of this enterprising veterans post.

The parade was viewed by 75,000 spectators along the line of march and by several thousand more at Pershing Field in Jersey City where it was reviewed by Lyall T. Beggs, commander in chief of the Veterans of Foreign Wars; Mrs. Helen Murphy, national president of the Veterans of Foreign Wars Auxiliary; Sheldon DeBaum, national inspector general of the Veterans of Foreign Wars; former Representative Elmer H. Wene, now State senator from Cumberland County, N. J.; Hon. Frank H. Eggers, mayor of Jersey City and his colleagues on the city commission; and other National, State, and county officials of veteran organizations. The grand marshal was Col. Frank B. Chapman and the aides to the grand marshal were Capt. Francis X. Burke, Lt. Stephen R. Gregg, Sgt. Nicholas Oresko, Sgt. John W. Meagher, all holders of the Congressional Medal of Honor, and Col. Harry A. Conroy, veteran of both World Wars. Mr. George A. Thornton, Sr., again occupied the post of general chairman and turned in his usual flawless performance. It is of course impracticable to mention all those who had a part in making the day the great patriotic success it was.

Addresses were delivered by National Commander in Chief Beggs, Mrs. Murphy, national president of Veterans of Foreign Wars Ladies Auxiliary, Hon. Frank H. Eggers, Hon. Elmer H. Wene, Capt. Marion J. Duncan, United States Navy, and myself. I append hereto the stirring address so eloquently delivered by Commander in Chief Beggs and follow it with an editorial comment on the celebration over the years by the Hudson Dispatch, a daily newspaper published in Union City, N. J.

ADDRESS BY COMMANDER IN CHIEF BEGGS

SELLING AMERICANISM

Several years ago there was a play on Broadway about George Washington at Valley Forge. In it, the general spoke one line that went something like this: "This liberty we have will seem easy by and by, when nobody has to die to get it."

Those are bitter words, but they have the solid ring of truth. They apply not only to liberty but to the entire democratic concept of life. In times of peace there is a tendency to take our American way of life for granted. We are likely to forget how dear a price we paid to keep our rights as freemen secure.

That is why, many years ago, the Veterans of Foreign Wars set aside the last Sunday in April as Americanization Day, an occasion for reviewing our Nation's history and heritage. It gives us the opportunity to recall to the entire country that the basic principles of Americanism—liberty and equality—were bought with the blood of patriots in '76, and have been preserved through the years only because there were men in every generation ready to fight and die to defend them. On this day, we who have borne arms in the defense of Americanism, repledge ourselves to guard our liberties against every attack, in peace as well as in war.

What is this Americanism to which we have dedicated ourselves? At its core is the great gift this country brought to all mankind—the concept of human liberty. The Declaration of Independence established this as the first Nation based on the rights of the common man. At the very heart of our Constitution are those provisions, known as the Bill of Rights, which safeguard the rights and dignity of the individual. Any time we fail to make good these essential guaranties, the entire structure of our way of life is weakened.

The average American accepts the rights and benefits of democracy without giving them a moment's thought—the right to move from one State to another without notifying anyone; the right to change jobs; the right to fair trial; the right to retain one's nationality; the right to own property—and not be arbitrarily deprived of it; the right of peaceful assembly, such as here today; and to belong to a business or social fraternity, or to a political party or trade union; in short, all of the fundamental rights we enjoy under our Constitution and our form of government. To us it seems strange that these simple things are denied in totalitarian countries.

Most of us have blithely assumed that the basic rights of all Americans are pretty thoroughly protected. But when the Civil Rights Committee published its report a couple of years ago, the entire Nation got a surprising eyeful. The report revealed wide gaps between our democratic principles and our daily practices. It brought to light some very disturbing facts—that many Americans are denied a fair chance for education; that others are denied equal opportunities for jobs, for decent housing, even for medical care.

Although our standards of equality and fair play are higher than in any other nation, imperfections such as these must be eliminated. And the only cure is to insist on more of the benefits of democracy for everyone. This includes better schools, more teachers, and adequate recreational facilities, so that our youngsters will grow up with healthy minds and bodies. It means teaching young and old the glorious lessons of American history—not only of the battles won, but the record of team work among our peoples that led to victory.

In order that we can be better Americans, we must change or revamp our approach and way of thinking. There is today a growing tendency to revert back to the rut that we were in after World War I. The democratic ideal is the noblest political vision that was ever given to mankind. Yet, in our surface way of thinking we measure our benefits from our democracy in terms of the luxuries that we enjoy, such as electric ice boxes, automobiles, and radios. We must realize that a democracy is religious as well as political in its concept and that as God-fearing men and women we know that we gain nothing from religion unless we are willing to labor long and hard in the vineyards of God. Thus it is in a democracy.

We have learned by bitter experience that the best weapon against communism and other subversive "isms" is better Americanism—live it ourselves and demonstrate it to the world.

We of the VFW have dedicated ourselves to this mission. At our 1948 national encampment we resolved to conduct a national educational campaign designed to strengthen each individual citizen's importance, freedom, and right of opportunities, regardless of his religious, racial, or social status.

Today, democracy and communism are pitted against each other in an all-out struggle. The test is not one of arms—and we hope it will never become that—but a conflict of social and economic ideologies. The peoples of the world want desperately to be on our side, although misinformation, ignorance, and Communist propaganda sometimes cause them to have some doubts about us.

It is important that we let the world know about America and what it stands for; and it is odd that we in the United States who have developed the technique of advertising to a fine science, have proven such poor advertisers of America in other lands. Advertising creates consumer demand; develops consumer acceptance. With advertising, manufacturers boast they can sell iceboxes to Eskimos; but we have failed miserably to sell democracy to the Germans, or to the Chinese, or to the Balkan countries.

It is a sad commentary upon American tourists—and upon the average GI who served in Europe and Asia—that they make poor ambassadors for democratic America. The average Yank, when in association with the people of other countries, gained a reputation of being a braggart and a "blowhard." The other night I was talking to an Australian war bride who confessed that she at first considered the Yanks, in general, as great ones to "skite"—which is their slang term meaning to brag. To the Aussies, who themselves are not overly modest in speaking of their accomplishments—it was galling.

The average American, in talking to the natives of other countries, compares the material things of the United States with what the other country has to offer—its trains and streetcars, its roads, hotels, and restaurants, and its plumbing and theaters.

A Jewish refugee from Europe told me that he had heard about the skyscrapers, the superhighway, the big and showy things of America—but it was not until he arrived in the States that he realized that the true worth of Americanism lay not in material things—but in the freedom from fear, the sense of belonging, and the satisfaction of feeling oneself a real person—an important individual. These are the things we must advertise to the world. These are the things that count.

We can overcome Communist propaganda and bring the rest of the world safely within the democratic orbit if we advertise Americanism in its true light, and if we show that we are true to our ideals; that our system of individual freedom, with the spirit of initiative that flows from it, is strong enough to help war-shattered countries rebuild their economies. If the civilization we know is to survive, democracy must be proved to be workable, not only for the United States, but for all the world.

Strength and liberty are indivisible. This applies both in a military and spiritual sense. If we permit the rights of any of our citizens to be disregarded, we weaken our ranks and jeopardize the freedom for all. We must stand guard over our liberties every day of our lives, lest we fritter them away or permit them to be stolen behind our backs. As President Truman says: "The greatest danger is that through apathy or weakness of intention, the citizen may fail to exercise with virility his heritage of democratic freedom and thus let go by default the constructive power history has placed in his hands."

These dangers from within, which are constant, cannot be brushed off by the mere poking of our heads into the sands. Those who adhere to the Communist ideologies are open and bold in their denunciation of our way of life.

Just a few weeks ago Foster and Dennis, the leaders of the American Communist Party, had the supreme gall to publicly proclaim that in the event our Nation became involved in a conflict with Soviet Russia they and their fellow travelers in America would be found fighting on the side of Soviet Russia. This man Dennis is the same individual who out of the other corner of his mouth insisted on his constitutional rights as one of the eleven defendents now being tried in New York. He insisted on a trial by jury with a large jury panel to draw from and also the right to appear as his own attorney. He was asking for constitutional rights given to him from a Government that he would turn against in the event of war with the Communists.

We have laws for the purpose of protecting society. Although this is a free nation—we are free people—we cannot without fear of punishment go out and kill our neighbor, or rob a bank or a drugstore. In my opinion laws should be put into effect to punish and curb these individuals who have openly avowed that they are working toward the destruction of ourselves and our children. I believe that we can go too far in according such individuals all of these constitutional protective rights.

I do not advocate the curbing of their right to speak out their beliefs. That is one of the four freedoms for which you men of World War II fought to preserve. I prefer that we handle these so-called fellow travelers in the manner that was pursued by the VFW comrades in New York last May 1, which is also known as Red Day on Times Square by the Communists here in America. These comrades did not attempt to heckle or prevent the Communist rally. On the contrary, the VFW sponsored a tremendous loyalty day celebration just across the river from Times Square—in Brooklyn.

I did not attend either meeting but read what went on in both places. At the loyalty day meeting, which drew five times as many spectators as the Communist rally in Times Square, the speakers all used as a theme for their subject the pointing out of the good things that we enjoy in America and the fact that we should be more appreciative of those God-given privileges to which I have

hereto alluded. In Times Square the Communist leader, who, by the way, was not sent here from Russia but was born and raised in the Midwest and educated in the colleges of the East, struck out in sarcastic terms against our capitalistic and democratic form of government and spoke only in laudatory terms of the good times to be enjoyed under a Communist-controlled regime under the 14 men in the Politburo of the Kremlin, and continued in a sneering tone to cast aspersions upon the United States.

I thought he sank to a new low level when he ridiculed our American flag. He is quoted as saying that the red in our flag stands for revolution, the blue for despair, and the white for surrender. As I read these remarks I instinctively said, "It isn't so." I laid the paper aside, and in the course of the next 10 days read the paper several times, wondering why I had not destroyed it. It then dawned upon me that perhaps I, as a spokesman for a militant veteran organization made up of men who fought to preserve this flag of ours, should speak out, not only to my comrades and sisters in this country but to all citizens alike, in an affirmative tone as to what this flag stands for.

We of the Veterans of Foreign Wars are plain everyday Americans, and as such believe that it is well on a day such as this that we recall and refresh our minds as to the true meaning of the Stars and the Stripes. I want to remind you that the red in our flag does not stand for revolution. It stands for sacrifice. A sacrifice that was first made by our founding forefathers who left their bloody footprints on the snow-clad field of Valley Forge. That same sacrifice was made by the boys of '61, clad both in the Blue and the Gray, brother against brother, who were locked in mortal combat at Shiloh, Vicksburg, and at Gettysburg.

Then, too, the red in our flag stands for the sacrifice that was made by the gallant lads of '98, a 100 percent volunteer army, and those who were the founders of the Veterans of Foreign Wars, who charged the heights of San Juan Hill in the face of a ruthless enemy bullet, or who served with valor and distinction with Admiral Dewey in Manila Bay.

And then, as we turn the glorious pages of history, we find that the red is for the sacrifice made by the khaki-clad doughboys of '17 and '18, who fought and beat down into utter humiliation and defeat what was then regarded as the world's invincible army under the leadership of Kaiser Wilhelm of Germany. And once again we turn the pages of history to find that the red stands for the sacrifice that was made by the some 14,000,000 of American men and women of World War II, who left thousands of their comrades on the far-flung battlefields of the world.

It is well to be reminded that the blue in our flag, instead of standing for despair, stands for loyalty—that same loyalty that was displayed by those young men of certain generations in our history to whom I have just alluded, who defended their country in time of peril. And it is that same type of loyalty that you and I as parents are trying to instill and to inculcate into the hearts and minds of our children.

As christian men and women we know that the white in our flag does not stand for surrender—it stands for purity.

As I read those disparaging remarks I was cognizant of a definite void—that there was something conspicuous in its absence. It was that which was absent that depicted to me the utter stupidity of those 14 men of the Politburo in the Kremlin. They had failed to grasp the significance of the stars in the field of blue, symbolic of the stars in the heavens above; failed to realize that each star stands for a great State, and the 48 States collectively stand for a great freedom-loving Nation—the one that is to be the salvation if we are to have world peace.

So, as we gather here on this Americanization day, I ask that we join together, all the people of this Nation, firm in the resolution that as God-fearing, freedom-loving men and women, not only today but for days and years to come, we shall always look to those same heavens above—wherein dwelleth Him—for inspiration, aid, and protection; may the people of the United States so live that we shall always continue to deserve and receive God's blessing.

AMERICANIZATION PARADE "TOPS" IN NATION

What is probably the greatest demonstration of its kind in the United States, sponsored annually by a single veterans' post, is the great Americanization Day parade and exercises held in Jersey City under the auspices of Capt. Clinton E. Fisk Post, Veterans of Foreign Wars, and its Auxiliary.

Tomorrow, in the eighteenth demonstration, it is expected that 25,000 to 30,000 persons will march. Countless thousands more will view this spectacle, which is unsurpassed in its patriotic contribution to the great spirit of Americanism and in its effects as an antidote to the poisonous treachery of communism.

So important is this annual Jersey City outpouring of patriotism that it has become the yearly custom of the national commander of the V. F. W. to drop whatever else he may be doing when the last Sunday in April rolls around in order to be present at Pershing Field both to review the paraders and to address the huge gathering.

This year will be no exception and Lyall T. Beggs, World War I veteran and commander-in-chief of the V. F. W., will come all the way from Madison, Wis., for the affair, again attesting the significance of this growing veterans' organization attaches to the Jersey City demonstration. Also in attendance and listed as one of the speakers will be Mrs. Helen Murphy, national V. F. W. Auxiliary president. State V. F. W. officers will likewise lend their presence.

Fisk Post's yearly patriotic spectacle had its genesis in a desire to maintain true allegiance to the Government of the United States and to preserve and defend the United States from all her enemies, whomsoever. It is a living portrayal of Americanism as defined at a joint conference of the commanders-in-chief of the five major veterans' organizations in Washington, February 18, 1927. At that time this definition was adopted:

"Americanism is an unfailing love of country; loyalty to its institutions and ideals; eagerness to defend it against all enemies; undivided allegiance to the flag, and a desire to secure the blessings of liberty to ourselves and posterity."

This annual display of American patriotism is not limited to the thousands who join in the parade. Everyone in Jersey City and surrounding municipalities is invited to join in the demonstration as a spectator along the line of march or at Pershing Field. The American flag should be flown from or draped on all homes and other buildings in Jersey City to show its citizens are proud to be Americans.

Mayor Frank H. Eggers, in his annual Americanization Day proclamation inviting Jersey City's citizens to participate, declared: "Freedom-loving peoples the world over look to this great Nation to lead them on the path toward peace and understanding among all nations. May the years ahead find our Nation serving in the forefront in the maintaining and establishment of a just and lasting peace in the world. As Americans, we must ever remain strong in our belief in our cause, firmly resolved to maintain a constant and vigilant guard against the penetration of any isms that have been expressly designed to divide us."

This year's parade, like the 17 which have preceded it, will maintain the high standards reached in recent years and may even surpass previous events in the number of units participating and in the number of marchers. To reach a new peak is difficult, for Americanization Day, starting in a small way back in 1932, has grown to such proportions as to approach the saturation point as far as records are concerned.

In tomorrow's line of march there will be 100 or more veterans', fraternal and civic organizations and about 35 bands. These will come not only from Hudson County but from many parts of the State and the metropolitan area. Flights from First Air Force headquarters at Fort Slocum, N. Y., will cover the parade route during the 3 or more hours of marching, and Army and Navy units will participate.

It is fitting that this year's grand marshal should be Col. Frank B. Chapman of Jersey City, who is slated to retire from the United States Army in June. Colonel Chapman did an illustrious job all during the war and in the years since as commanding officer of the New Jersey-Delaware recruiting and draft induction district. Colonel Chapman will have four Hudson County Congressional Medal of Honor winners as his aids, including Capt. Francis X. Burke, Sgt. John W. Meagher, Lt. Stephen R. Gregg and Sgt. Nicholas Oresko, Col. Harry A. Conroy also will serve in this capacity. George A. Thornton, Sr., is general chairman, and Daniel D. Kamp will be chief of staff and Franklin R. Perkins adjutant. Harold Nievelt is post commander.

Anniversary of the Signing of the Polish Constitution

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. KEARNEY. Mr. Speaker, today, May 3, again marks another milestone in the history of the Polish people. It is the one hundredth and fifty-eighth anniversary of the signing of the Polish Constitution in the year 1791. Many documents are of great historical moment but the Polish Constitution is truly one of the world's great documents of freedom.

For centuries it has fallen to the lot of the Polish people—while being foremost exponents of freedom—to undergo bitter persecution and privation. That is the history of Poland—a history replete with struggle and sacrifice. We in our country are grateful to Poland and to Americans of Polish extraction for their contribution to our liberty. Way back in our primary fight for freedom reign is the name of Kosciusko who fought to secure our own liberty against a great power.

What the Fourth of July means to Americans, the Third of May means to all true Poles—a day of days. Today in the hearts of millions of true Poles, those still behind the iron curtain, and to millions of our own Polish-Americans, burns the light of freedom that some day will bring to that heroic nation a new-born independence, an independence which will allow Poland to govern herself as a nation without outside interference, as in the police state which now exists.

Are We Outsmarted?

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of April 30, 1949:

ARE WE OUTSMARTED?

Are the American people and the Truman administration being played for suckers all around the world?

Has the first serious venture into internationalism on the part of Uncle Sam, in more than a century and a half, already been productive of disasters which will haunt us for generations?

Is the historic American concept that foreign diplomats, and especially those of Europe, are simply too greedy, too treacherous, too lacking in veracity and idealism—is this skepticism already demonstrated to have been correct?

Did the American people make one of the worst mistakes in our history when they chose to disregard the warning of Washington to stay out of entangling alliances?

Let's look at some facts—then you answer these questions for yourself:

Fact No. 1: For 2 or 3 years, the maneuvers of Russia have kept American attention focused on the problems of Europe. Our national leaders have been so excited about this front door issue, that they forgot all about the back door—China.

In seizing China, as Russia now is doing, Stalin is picking up the greatest military prize in the history of the world!

China has a population of 500,000,000. She is a vast food producer. She has immense unassayed natural resources. Under strong government, her people are hard-working, energetic, tractable. And China sits at the southeastern corner of Asia, dominating the whole South Pacific and the Indian Oceans, with their thousands of important big and little islands.

What other great conqueror—Alexander, Caesar, Genghis Khan, Bonaparte, or Hitler—ever seized so valuable a prize; and won it for so trivial a cost?

Query: Has the Truman administration been befuddled and mousetrapped by Stalin, with the European crisis just a phony to screen his real objective—China?

The fact that the moment Stalin feels sure of capturing all China, he suddenly started conceding everything in Europe, is a point of much significance in considering this query.

Fact No. 2: The entire 2-year strategy in Europe of the Truman administration was knocked galley-west the day when Russia offered to lift the Berlin blockade virtually on Mr. Truman's own terms.

The Berlin crisis has been the thread on which such divergent schemes were strung as the Truman plan (direct aid to Greece and Turkey; the Marshall plan (direct aid to Western Europe); the Atlantic Pact; the rearming of West Europe; and the creation of an independent West Germany.

This whole program is shaken and demoralized by the Russian offer to open up Berlin on whatever conditions we wish—on the understanding, of course, that under the terms of the Potsdam Agreement and many other commitments, Russia must be consulted in the organization of any new German government.

Russia has made this proffer in a way which President Truman cannot refuse to heed. All we have previously demanded now is to be conceded. But think over the impact of this development. If Russia is going to cooperate in the case of Berlin, who can dispute that she may be going to cooperate in the case of Greece and Turkey; and for that matter, throughout the whole of Europe?

What excuse does the offensive-defensive alliance of the Atlantic Pact have, in that event, for being put into effect? What excuse can Mr. Truman offer to Russia, or to the American people, or to the rest of the world, in that event, for persisting in pouring arms into Europe—if the Russian Bear is going to be on his good behavior?

Stalin has trapped Mr. Truman in an impossible position. By agreeing to all American conditions with respect to Berlin, he has forced the President's hand. Mr. Truman cannot refuse to consider the offer. But the moment he resumes negotiations with Russia, on a cross-the-table basis, then the argument that "you can't do business with Russia," on which our foreign policy has been based for the past 2 years, automatically goes out the window.

To those who face the realities of world geography, it is obvious that Stalin could afford to give up almost anything he holds in Europe, so long as he is able to retain China—and be far ahead of the game.

Fact No. 3: The new shuffle in Europe has swung the leaders of Germany into the most powerful bargaining position it is possible to imagine. And they are ruthlessly exploiting their advantage.

Let anyone who doubts this make a very simple test. Get a copy of the Occupation Statute enacted a couple of weeks ago by the American-British-French representatives in western Germany (discussed editorially in this column under the title "Plenty of Nothing") and compare it with the interpretation and agreement released a couple of days ago by the American State Department.

The Statute was tough. The German Government was to be a mere puppet, with the big three powers holding all basic control over the Government. But the agreement as announced commits the big three not to invoke any of its authorities, except under extreme emergencies, and to allow the new German Government virtually complete autonomy.

Trying frantically to win the Germans over to this scheme of an independent government for west Germany, the big three now have gone so far as to stipulate, in effect, that whenever they attempt to overrule or revoke actions of the proposed German Government, it will have to be by unanimous action.

This is accomplished by an elaborate veto arrangement similar in effect, though not in language, to the veto clause of the United Nations Charter. Any one government's representative can delay action of the occupation powers almost interminably. There's a joker provision which will haunt the supervisors of the German Government for many a day, if Russia succeeds in being counted in among them.

Meanwhile, the German leaders are considering the intimations from Russia that Stalin may be willing to arrange for eastern, or Russia-occupied, Germany to be included into the restored German nation. They are using these rumors to try to drive a still better bargain with Uncle Sam.

In other words, in this particular matter, our diplomats have been so thoroughly outmaneuvered that it is apparently the leaders of defeated and occupied Germany who are really writing the terms of their experiment in self-government.

Fact No. 4: As everyone knows, the way by which Russia hopes eventually to conquer the United States is by driving us into national bankruptcy.

In the past four peace years we have been maneuvered into spending some $50,000,000,000 or more in frantic efforts to keep in-between nations on our side instead of drifting over to the Communists. This new spending is on top of gigantic debts and vast internal expenses, and has meant the postponement of innumerable urgently desired domestic improvements.

This has resulted in a frightful drain upon our economy, at a time when we could ill afford it. There have been profound collateral disturbances—much labor unrest, social stresses, failure to return to normalcy and stability; these have grown largely out of the top-heavy peace spending.

Moreover, we have geared our military enlargements up to approximately the scale with which the First World War was fought. Billions each year go into rearmament. Our form of government has been warped out of shape by the increasing domination of the military branch.

Necessarily these spending programs have come to dominate our economy. We are doing business on a get-ready-for-war basis. Inflation has been the watchword.

As many national leaders have pointed out, our leaders have been maneuvered into a position where peace would be deflationary. As it has been expressed, "an outbreak of peace would be an economic disaster."

And now Mr. Truman finds himself threatened with peace; finds Stalin willing to make so many concessions in Europe that continued war preparations on our part may become rank absurdities.

This development, it is worth noting, comes at a moment when we already have had enough disinflation so that confidence in financial circles has been shaken.

Query: Is this all the result of a deliberate maneuver by Russia to force Mr. Truman to go overboard in rearmament spending—and then "pull the rug" on him by starting a peace offensive that cannot be resisted?

There are some of the facts—you figure the answers.

Horizon Still Limitless

EXTENSION OF REMARKS
OF
HON. ROBERT L. DOUGHTON
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. DOUGHTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Concord (N. C.) Tribune of April 13, 1949:

HORIZON STILL LIMITLESS

"Our horizon is not a whit less limitless and not a shade less promising than that which lay before our forefathers in the blackness which followed the revolution," James A. Farley said in an address before the Kiwanis Club of Syracuse, N. Y.

"We shall retain the power that is essential to the maintenance of America's responsibilities to the world only so far as we retain the spirit of the pioneer in each individual American," he said.

"The door to opportunity must be kept open.

"The American boy must be taught from experience that whatever he attains depends upon his own inner integrity.

"We have won the past by hard work and honesty and self-reliance.

"There is no better formula through which we can win the future.

"The greatness of the past, in its achievements, lights the way for progress that is assured if no man-made shadows blur the road."

Mr. Farley, former postmaster general and long-time Democratic Party leader, is an intelligent, patriotic American. He has lived through the changes of the twentieth century and has observed the influences brought to bear upon the American philosophy and the American way of life. And his statement in Syracuse, expressing sound American doctrine, is worthy of more than passing note.

America has become the mightiest and the wealthiest Nation of the world because of the principles of freedom on which it is founded. It has become the leader and the hope of the world for the same reason.

The United States of America will retain its position in world affairs so long as the door of opportunity is kept open—and as long as young Americans practice industry, thrift, honesty, and self-reliance, and reap the rewards for practicing such virtues.

Maryland Solves Health Problem

EXTENSION OF REMARKS
OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the second of a series of articles from the Washington Post, written by Agnes E. Meyer:

MARYLAND SOLVES HEALTH PROBLEM

(By Agnes E. Meyer)

What does the Maryland health plan for the care of the indigent and medically indigent mean to the people? It means profound security, especially for the aged receiving old-age assistance and for the dependent children. It frequently rehabilitates those on general assistance and enables them to become self-sustaining. It has not thus far reached the medically indigent in sufficient numbers to answer the health problems of the border-line income groups.

In Montgomery County recently a little girl of 8 appeared at the office of Dr. William Welsh, one of the leading Rockville physicians, waving the little white card denoting eligibility and dragging a little boy of 6 who had been severely burned. She explained to the amazed doctor that the little fellow's parents were drunk and, as he was her friend, her "best friend," she had looked up the family card of eligibility and gone at once to the nearest doctor's office.

What is significant about the incident is that an 8-year-old child was familiar with the medical plan, that the card of eligibility was so precious that she knew where to find it, and that she also knew it would be honored in any physician's office.

ELIGIBLES AWARE

Whereas the general public is still largely unaware of this important experiment in medical care, the people who are in the eligible class have gradually learned through the welfare department, or through referral from the doctor's office in case of medical indigency, that they are entitled to medical services.

Often the clients walk into the health department to present their problems. In all the smaller counties the health officer sees all the applicants. In the larger counties this responsibility is delegated to a clerk, who refers to the health officer only those cases she feels unable to decide.

The choice of a doctor is left to the client and recommendations are made only when the client asks for suggestions. The doctor is free to take new patients or not, but usually both patient and doctor already know each other.

The doctors throughout the State are paid on a fee-for-service basis, $2.50 for an office visit, $3 for a home visit, and $4 for a night visit plus an allowance of 50 cents for every mile of travel above 12 miles. Though the fees are somewhat lower than those charged in private practice, the physicians are compensated by the knowledge that their bills will be paid in full, whereas in private practice they collect about 70 percent of the total. As every county is running over the budget, the doctors have voluntarily renounced their fees for hospital visits where there is a resident staff, or reduced them where they take full charge of hospitalized patients. The hospital costs are paid out of a separate State fund.

EFFECTS VERY MOVING

The effect of the program on the fantastic number of old people who live alone in a single room is especially significant and very moving. "It's hard enough to be old and lonely," said one dignified old lady in Hagerstown, "but it's terrible to think that you might get sick, and nobody cares." The health funds of the welfare department, now abolished, had always been inadequate. All recipients of relief depended upon the charity of the local doctors, who could give services but not medicaments. Now they can go to a doctor's office and sit among the paying patients, with their heads high, knowing that the visit is paid for at the regular rate. And since the drugs they need are free, the cronic cases such as diabetics have been given a new lease of life.

"If it weren't for my daily dose of insulin, I wouldn't be sitting here talking to you," said one old woman. "And even when we're not sick, we cling to our cards and get them renewed promptly because it's a comfort to know we needn't worry."

It is interesting that very few of the indigent or the medically indigent think of the program as charity. This is due in part to the fact that the health department, which administers the program, is considered a public service to the whole community, rich and poor alike. It has never acquired the stigma of dependency associated with the welfare department.

NO LESS GRATEFUL

The poor mothers of large families receiving aid to dependent children and the women in charge of foster homes, are no less grateful. What is absurd about our social structure is that in Maryland as in most other States, the relief grants are not sufficient to provide rent, clothing, and adequate nourishment by even the most basic standards.

Thus we create illness on the one hand and are obliged to remedy it at far greater cost than the few extra dollars which would give our dependents an adequate diet. Now, when necessary, the doctor can order not only medicines but extra diets for these undernourished children on the relief rolls, as well as vitamins.

The children get complete dental care as well, partly through the schools. Dentures—a very general need even among young people—are no longer provided because they threatened to absorb a disproportionate amount of the budget. For adults, only emergency dental work can be done on the present budget allotted each county by the State, as the back-log of neglect is very heavy, especially among the Negro population. A shortage of Negro dentists as well as doctors exists in all counties.

Eye examinations are also given under the program. Private organizations supply the glasses for children but rarely for the aged. What is important in the medical program for dependent children is that they now receive regular comprehensive medical care, whereas formerly it had to be a life-and-death matter before they got attention. The program is too new to show marked signs of improvement among Maryland's dependent children, but the results are sure to be salutary.

MATERNITY CARE

Perhaps the best over-all program is that for maternity care because it meshes into the existing programs of the health department. The expectant mother is sent by her doctor to the prenatal clinic. For the delivery, whether in the home or in a hospital, the doctor receives $35. Thereupon the mother and baby are referred to the well-baby clinic. As hospital facilities are inadequate in most of the rural counties, by far the large majority of deliveries are in the home.

The program set out to provide bedside nursing. But even in such counties as Montgomery, where the nursing staff is larger in proportion to population, 1 to 5,000 people, nursing schedules in the schools, the venereal disease, tuberculosis, child hygiene clinics, and other services are so heavy that only limited demonstration services can be given, followed by check-ups. Many counties have taken on the program without adding to the nursing staff. Twenty-three additional nurses were distributed throughout the State by the department of public health nursing. Some of these nurses do experiments in time-studies on bedside nursing to ascertain the cost of a well-rounded State-wide program and the economies that would result from reduced hospitalization.

QUALITY UNEVEN

The quality of medical care given under the program is necessarily uneven, if only because the doctors vary in ability and hospital or clinical facilities are inadequate in many counties. But the significant thing is that the quality of medical care is rising, as the local practitioners take more and more advantage of the local diagnostic clinics that have been established in many counties. Here they can consult the leading specialists of Baltimore's medical schools and hear them lecture on recent discoveries.

Sometimes a whole team of specialists from Johns Hopkins or the Maryland University Medical School go to the counties to give an intensive survey of a single medical problem. The local doctors are also invited to come to Baltimore for special lectures at the two medical schools. Another service is rendered to the local practitioner, through the improvement of services and personnel in local diagnostic laboratories of the board of health. This is especially valuable in counties where no other clinical laboratory facilities are available. The two great medical schools in Baltimore have become the hub of a wheel whose spokes radiate into the remotest rural areas and hold the program together.

The expansion of the county advisory committees has also had an educational influence as the doctors become more and more interested in the analysis of local health and medical needs, and in developing new resources designed to meet these needs.

Instead of the usual opposition to insurance by medical societies, the Maryland doctors are already convinced of the need to superimpose upon the medical-care program for low-income groups a system of voluntary insurance to reach down to the present program.

About 610,000 individuals, or 29 percent of Maryland's 2,000,000 population, are now enrolled in the Blue Cross. "At our last meeting," said Dr. John H. Griffin, president of the Charles Medical Society, "the physicians in our county passed a resolution in favor of

voluntary health insurance and agreed to give information concerning health and medical insurance to the consumer. We younger men see our future in voluntary insurance and think all medical societies should do their utmost to expand it."

The fact that the local people themselves are becoming more health conscious is another educational byproduct.

Absence of Prayer at Signing of North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. ROGERS of Florida. Mr. Speaker, on April 5 I made some observations on the floor of the House deploring the omission of prayer at the ceremonies held in Washington at the signing of the North Atlantic Pact. My remarks are found on page 3950 of the CONGRESSIONAL RECORD of April 5, 1949, and were as follows:

MINISTER OF GOD ABSENT AT THE SIGNING OF THE NORTH ATLANTIC DEFENSE PACT

Mr. ROGERS of Florida. Mr. Speaker, on yesterday, April 4, 1949, I attended the ceremonies and the signing of the North Atlantic Defense Pact by the Foreign Ministers of the countries which, together with the United States, formed the North Atlantic community of nations. This pact was signed in the Departmental Auditorium on Constitution Avenue, in the city of Washington and District of Columbia, at approximately 5 p. m. Preceding the signing of the North Atlantic Defense Pact, which might appropriately be called a peace pact between the 12 nations, I listened to the addresses of the Foreign Ministers of Affairs of the respective governments represented. I listened to the concluding address by President Truman on this historic occasion. All Ministers, together with the President, lauded the high purpose of this gathering and denominated it an agreement to safeguard the peace and prosperity of not only this community of nations but as a means to maintain, preserve, and protect the peace of the world.

This was a momentous gathering, marking a historic milestone in the history of our Nation. The sovereignty of 12 nations had gathered together, pledging themselves each one to the other to abide by the peaceful principle of United Nations, maintain friendly relations and economic cooperation, to consult together whenever the territory or independence of any one of them is threatened and to come to the aid of any one of them which may be attacked. It was a solemn pledge to work for and guarantee a lasting and abiding peace insofar as human instrumentality might so do.

The ceremonies together with the signing of the mutual pact was most impressive and there was harmony and a note of peace that resounded throughout this gathering, but there was lacking one other minister, the minister of God, to invoke divine guidance and spiritual blessing of Almighty God, who in time and eternity is the Judge of all nations.

No prayer opened this historic ceremony as is the usual custom of our Nation. Only two ministers referred to Deity in their addresses. One was Foreign Minister Dirk Stikker of the Netherlands, and the other was Foreign Minister Carlo Sforza of Italy, both of whom recognized and expressed the moving hand of God in and among nations.

I was both disturbed and disappointed that whoever arranged this program blundered in that they forgot the minister of God. Was it the lack of spiritual courage or the lack of faith and devotion in neglecting to invoke divine guidance and the ultimate success of this peace pact?

This omission of a prayer is but a duplication of what happened at the United Nations Organization at San Francisco and there was no prayer at the opening of that great gathering, and it might possibly be that the history of this organization could have been different had divine guidance been invoked upon the proceedings there. Let us hope that it will not be a stumbling block to the ultimate success of this North Atlantic defense pact, otherwise known as the peace pact signed here. May the prayers and dedication of millions and millions of people in our own and sister nations provide the real consecration for a pact which at the signing seems to me at least to have missed its deepest significance.

That this world shall have a new birth of freedom, of peace, and of brotherhood, and that the governments shall not perish from the earth, there must be born in the hearts of men a universal belief and faith in God.

Let us exclaim with Kipling:

"Lord God of hosts, be with us yet
Lest we forget, lest we forget."

Mr. Speaker, I have received a number of commendatory letters and telegrams from both Protestants and Catholics as well as civic groups giving full endorsement to these remarks. I include herewith an editorial by Charles Francis Coe, editor and publisher of the Palm Beach Post-Times, West Palm Beach, Fla., appearing in the Easter edition of April 17, 1949, entitled "In God We Trust":

IN GOD WE TRUST

Representative DWIGHT ROGERS points out to us that the signing of the North Atlantic Pact was achieved without preface of prayer. The Congressman was shocked by this neglect. We agree that he is justly shocked.

Here was a gathering for the purpose of pledging mutual resistance to the advent of a godless world, entering into that agreement without even the formality of seeking divine guidance. Not, we reluctantly suggest, that such guidance would have been followed, even if available. What galls us is the implied self-sufficiency of a group using their own ego by way of supplanting public confidence in them.

Russia sees and knows but one god. That is the Russian state. We know a supreme being, unto whose plan we subscribe ourselves, into whose hands we commit ourselves and our posterity. This is so, even to the extent of stamping upon our money "In God we trust." Ours is a philosophy which places nation second to God. Ours is a theology which believes that man is the creature of God, and the safety of man's institutions is as permanent only as is their dedication to God.

That right here, in our National Capital, men should gather and affront that philosophy, carries a significance which cannot be set forth in mere words. To many, it is expressive of that growing tendency among the ungifted few, to relieve God of any responsibility for ourselves, and, for our posterity. These many, and we think quite rightly, will resent with abysmal conviction, any such self-complacency. This Republic, by the antics of its unelected statesmen, is embarking upon a new and unchartered course, just as did its founders.

Recall, please, that its founders knelt upon rock-bound coasts and with humility committed themselves to the mercies, and asked the blessings of Almighty God. In their humility lay their strength. Their devotion was the chrysalis of freedom in the earth. God richly blessed this land and this people. If it be His will that these blessings shall now be spread into the entire earth, with this people as the sower of the seeds, then surely this people has learned a magnificent lesson upon which to pattern the future world.

To lower ourselves through omission to the level of godless Russia, will blot the pages of history. But it will do more than that. If it leads to the suspicion that Washington doodlebugs have enriched their egos to the point where God is no longer important in their deliberations, then indeed, are we impoverished. Remove God from the daily life and deeds of this Republic, and this Republic becomes a mausoleum of liberty, a monument of desecration, a crypt, in which will be interred the tenets of liberty and the spiritual advancement of the human species.

In God we trust. Not in statesmen intent upon devices of their own. Let that ring forth for all to hear. Perhaps even God would be pleased to know that the phrase has become more than a trade-mark in the marts and machinations of men. Our obligation is to God. Our achievements will be no greater than our integrity with God. Fidelity is our creed. Politics is our greed.

"In God we trust?"

A Friendly Analysis of the Columbia River Bills—Part 2

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD I am pleased to include a radio address by myself, being delivered this evening in the State of Washington:

A FRIENDLY ANALYSIS OF THE COLUMBIA RIVER BILLS—PART 2

In the first part of this discussion of the four major proposals for development of the Columbia River region, I described the major differences between these various approaches to the general subject. Tonight, I want to touch more specifically on certain important aspects of these bills—particularly the provisions regarding labor relations and local control.

You will recall that I started last week with the original proposal for a Columbia Valley Authority, first introduced in Congress in 1945, and modeled very much after the Tenessee Valley Authority. Then, we had my own bill for a Columbia Interstate Commission, in which I have tried to incorporate constructive means of achieving a coordinated program of Northwest development without creating an all-powerful superstate controlled from Washington, D. C. I have advocated giving the balance of power into the hands of the people who live in the Northwest. The third proposal is the joint Army engineers-Bureau of Reclamation compromise, which would operate through the Columbia Inter-Agency Committee according to present laws and policies. Finally, there is the new Truman proposal for a Columbia Valley Administration—which is not to be confused with the earlier CVA bills. This new CVA would con-

solidate the policy-making functions and operation of some Federal agencies in the Northwest but would carry out most of its project construction through existing agencies, like the Reclamation Bureau and engineers.

Now, there are a few things we all should remember in discussing this whole Columbia River problem. The first is that the Columbia's tremendous resources for power, irrigation, navigation, fisheries, watershed protection, and other uses will be developed—inevitably—in the national interest. Even if no change is made in the present laws, that development will go on. The question, therefore, is not whether the Columbia will be developed, but by whom will it be developed and according to what policies will it be developed and who will control the whole business after it is developed.

The second major question is what kind of an organization will operate the Federal projects in the Pacific Northwest. Under what rules will it function—what will its relations be with Congress, with the people of the region, with its own employees? Any new organization designed to coordinate Federal resource activities in the Northwest must be examined very carefully to determine whether it is acceptable to the people—to farmers, to labor, to business, to the State governments, and local bodies, such as Rural Electrification Cooperatives and Public Utility Districts.

One of the most important parts of any proposal for a coordinating agency—regardless of what name is given to it—is the rules according to which it will hire and fire and deal with its own employees. In this respect, the bills now before Congress differ very greatly. The original Authority bill would have set up a powerful autocracy, which would be subject to no restriction whatever in its personnel policies. There was no protection guaranteed either to clerical or laboring employees, in spite of which many labor leaders supported the bill.

The Joint Bureau of Reclamation-Army Engineers proposal would continue the present employee-manager relationship. Practically all work would be done by contract, with the clerical and administrative employees of the different agencies all under full civil-service protection. Contractors have to follow the same provisions of national labor relations law that other private businesses do.

Under the Truman administration bill, the new agency would write its own rules for labor relations, with only a few minor protections guaranteed by law. Acting as a corporation, the Truman CVA would be required to give substantially the same privileges as are given employees under Federal civil service. But the employees of the CVA would not be under civil service. Furthermore, the CVA, although privileged in all other respects to act as a private corporation, does not have to abide by any of the provisions of national labor-management relations laws to which all other employers must adhere.

But here is the real booby trap for labor in the administration bill: On page 38, in section 15, of the CVA bill, there is this simple sentence:

"Any employee of the Administration may be removed in the discretion of the Board."

There is no qualification whatever attached to that sentence. In the Truman CVA bill, backed by a party which claims to be the friend of organized labor, in a bill which they have asked labor to support and which many labor leaders in the Pacific Northwest have already supported without question—in that bill is a provision more devastating to the rights of labor and the workingman than all the 29 pages of the much-maligned Taft-Hartley Act put together: "Any employee of the Administration may be removed in the discretion of the Board."

There is no provision for appeals, no requirements to show justification for firing an employee, no provision for turning disputes over to a third party for settlement, no system of mediation in case of disputes, no machinery for avoiding or settling costly strikes, no protection of the most important utility operation in the Pacific Northwest against sabotage except by denying the rights of innocent workers. In short, the CVA proposal presently before Congress is an antilabor bill.

Lest there be any doubt whatever about this matter, it should be stated right now that last March, before the CVA bill was sent to Congress, one of the Congressmen from the Pacific Northwest who is particularly friendly to labor wrote to one of the Cabinet officers who was helping to draw up the bill and spelled out to him eight basic provisions regarding labor relations which must be included in any CVA bill to be acceptable from labor's point of view.

Here are those provisions:

1. That all employees shall have security of tenure as provided by the civil-service laws; that is, a seniority system on the holding of jobs.

2. That all employees have transfer privileges with the same grade and seniority as provided by civil-service laws.

3. Provision for coverage of employees under the Federal injured-workmen's compensation laws.

4. That the CVA be authorized and directed to bargain collectively with its employees and that the contracts arrived at by collective bargaining be binding and enforceable in the courts.

5. That, so far as is legally possible, all pertinent Federal laws relating to labor-management relations shall apply to the Corporation, as an employer, and to its laborers, mechanics, and workmen, as employees.

6. That the States in which the Corporation operates be authorized to cover the Corporation's employees under the unemployment-compensation system.

7. That employees of the Corporation be covered under social security.

8. That the Corporation be required to comply with provisions of the withholding-tax laws in cooperation with the Bureau of Internal Revenue.

There is only one of the four major proposals for development of the Columbia River system which complies with all eight of those requirements—and that one is my own bill for a Columbia Interstate Commission.

Let's take those provisions, one by one.

The CVA bill says employees shall have rights with respect to security of tenure comparable to those given civil-service workers. My CIC bill guarantees those rights by placing all clerical and administrative employees under full civil-service status. In addition to guaranteeing the same rights to its workers, it gives them an effective collective-bargaining procedure to enforce those rights.

Both the CVA and CIC bills provide for transfer-in-grade of all employees to other jobs in the Federal civil service. However, the CIC bill, by bringing its administrative employees directly under civil service, eliminates the red tape and confusion which would be bound to arise under two separate systems.

Both the CIC and CVA bills provide for coverage under the injured-workmen's compensation laws.

It is the fourth provision that contains the "joker" for labor. The CVA bill authorizes—but does not require—the Corporation to bargain collectively with its laborers. My CIC bill authorizes and directs the Corporation to bargain collectively. The administration CVA bill makes no provision for enforcement of the contracts negotiated by collective bargaining. It gives no guaranty to labor that an agreement, once made, will not be broken by the Corporation the following day. My CIC bill specifically provides that such contracts will be binding upon the Corporation and enforceable in the courts. Without such a provision labor, under the CVA, would be absolutely at the mercy of the Directors of the Corporation.

The CVA bill makes no provision whatever regarding the rules for employment or discharge of employees to safeguard the rights of workers, other than a statement that no political test will be made of prospective employees. The most important part of the CVA bill is that sentence which reads: "Any employee of the Administration may be removed in the discretion of the Board." Politics may not be the test, but there is no doubt in anyone's mind that such a Board would be capable of exercising a tremendous amount of discretion in its handling of employees. By contrast, my CIC bill provides a double measure of protection to its employees. Under my bill, the administrative employees would be directly under civil service, with all the protection that civil service is meant to give. The workers—mechanics and laborers—would be protected fully under the same national labor-management relations laws which apply to workers in all other businesses.

There is absolutely no reason why workers under a CVA or CIC should not have this protection. The only excuse so far offered by any official of the Administration for not giving employees full protection of the Federal labor relations laws is that workers are doing all right in the TVA. There followed, in the reply given to the Congressman who asked for these eight protections to workers, a statement indicating the Administration had no real reason for not giving this protection other than its own desire to maintain absolute control over labor in any CVA that would be set up. The mere fact that labor in the Tennessee Valley has not yet had reason to complain is no guaranty whatever to labor that at some future time Directors might be appointed who were enemies of labor and would take away every privilege granted to labor by administrative fiat. If any such argument were used in this week's debate on the national labor bill in the House of Representatives, the man who spoke it would be laughed off the floor. Yet, in the CVA bill, some labor leaders have already been foolish enough to swallow it.

Finally, both the CVA and CIC bills contain provisions for social security and unemployment compensation coverage and for withholding of income taxes.

No workingman should support any bill for a Columbia Valley Administration which does not guarantee the rights for which labor has fought so long. Although voluntary agreements, such as now prevail in the TVA and such as would be given under the Truman CVA bill, may be all right at present, they are only political privileges extended by a political Administrator favorable to labor. Labor should know full well from past experience that what politicians give, politicians can take away and that labor has no security except what is written into law.

The amazing fact about this comparison of attitudes toward labor under a Columbia Valley Administration is that there already is working, in the Pacific Northwest, a perfectly acceptable pattern of labor-management relations for an organization of this type. It operates in the Bonneville Power Administration and it can easily be transferred over to the new Columbia River agency. That is exactly what I have done in my Columbia Interstate Commission bill. Through it, clerical workers are given all the rights and protections of civil service—and there is absolutely no reason why they should not have them, as Chairman Harry B.

Mitchell, of the Civil Service Commission, told me 4 years ago. The necessary flexibility of operation is obtained by making special provision for hiring of professional and engineering employees. Finally, the men who do the real work—the mechanics and laborers—are placed under the full protection of the same laws which apply to all other workers in private industry. That system—almost exactly as I have included it in my Columbia Interstate Commission bill—is working today in the Bonneville Power Administration. But the proponents of CVA want to junk this successful system and substitute for it a bill which gives nothing to organized labor.

Workers of the Pacific Northwest had better study this proposal carefully before they find they have unwittingly supported a CVA bill which honestly can be described as nothing other than antilabor.

Next week, I will discuss what to me is the heart and soul of any proposal for development of the Northwest—the subject of local control.

Address Before Red River Valley Improvement Association by Hon. Overton Brooks, of Louisiana

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me before the Red River Valley Improvement Association at Shreveport, La., on Tuesday, April 19, 1948:

Mr. President, members of the Red River Valley Improvement Association, and friends, Louisiana is the southern gateway in the extensive network of navigable waters composing the great Mississippi River system. This system joins the Gulf of Mexico with the Great Lakes, and extends—east and west—into the hearts of our greatest agricultural and industrial regions. Louisiana alone is traversed by the Gulf-Coastal Waterway which joins with the Atlantic-Coastal Waterway on the east, and with the Rio Grande Valley on the west. At New Orleans and at Baton Rouge, our State capital, which lies nearly 250 miles inland from the Gulf, are two of the Nation's finest seaports, and the port of Lake Charles is now rapidly moving to the front, so fine are the facilities of this region.

With these and many additional water resources, Louisiana has an active interest in the expressed aims and progressive endeavors of river and valley development. When I therefore urge in Washington continued efforts on behalf of a sound program of water resources development, I am able to promise to those people up there continued support from the people of Louisiana. I believe the Congress of the United States will also continue to work with you in the achievement of this objective. The Congress recognizes fully that the progressive development of our natural resources is a basic requirement in its duty to provide for the common defense and the general welfare of the American people, as set forth in the preamble of the Constitution.

No phase of our national life manifests more clearly the American democratic procedure of accomplishment than does the Federal development and control of our water resources. For more than a century and a quarter, the Congress—as respresentatives of the people—has assigned this work to the Army engineers, who, in turn, work closely with the people in making the required studies of proposed improvements, and in constructing the authorized projects. During this long period, succeeding Congresses have relied upon the Corps of Engineers for engineering counsel and for the execution of all Federal rivers and harbors projects. In later years, Federal flood-control work has been added to these responsibilities, together with allied water uses. And the people have played their vital role in this work, generally through associations such as your own.

This has been a happy and historic relationship. It has contributed in large measure to the economic progress of the Nation in times of peace. It has been a vital contribution to victory in times of war. It has encouraged technical advances that have pioneered the entire field of civil and military engineering. And most importantly, it has preserved procedures that are as democratic as the American town meeting.

In the execution of its responsibilities, the Corps of Engineers has built up a decentralized organization that blankets the entire Nation. I believe that when records of brilliant accomplishments and outstanding services to the people of this country are made again and again, those responsible should be awarded high praise, vigorously defended, and maintained in the scheme of Government. Such records have been repeatedly performed by our Army engineers. Congress has depended upon them over the course of many years, and I think this confidence has been wisely placed. For the Corps of Engineers has demonstrated that its personnel is not only highly skilled, but also impartial and nonpolitical in arriving at solutions to our waterway problems. These attributes have won for the Army engineers the unquestioned confidence and appreciation of the American people.

Another thing we like about the Army engineers—a fact that is a constant comfort to the Congress and to the Nation—is that here is an organization performing—and I think performing well—its regularly assigned civil functions, yet stands ready to meet at a moment's notice the challenge of tragic emergency. Whether it is a Texas City explosion, a Gulf coast hurricane, a river flood emergency. or a western snow disaster—wherever catastrophe strikes at the safety of our people—there you will find the Corps of Engineers, getting the job done.

Such an emergency occurred only 2 weeks ago in this State. On Thursday, March 24, a break occurred in the Mississippi River main-line levee near Port Allen. By Saturday night, March 26, the crevasse had been closed by Army engineer crews, and another new record in flood fighting had been made by this organization, to the immense relief of thousands of our people living in the threatened area. To achieve this result, operations were conducted around-the-clock by more than 400 men, many working in water knee deep or worse. The break was closed by the construction of a 1,600-foot rock and sand-bag temporary levee. A temporary loop levee was also constructed as a reserve protection against the closure works. Immediately, the engineers started construction of a permanent main-line set-back levee.

Performances like these are the most remarkable because there was no pre-break mobilization. There had been no main-line failure on the lower Mississippi since 1927. A falling river, 172 feet deep at that point, had made an under-water attack against the leveed bank. The flood fight—which began after the bank and levee had caved into the Mississippi—had to start from scratch. Huge earth-moving equipment had to be moved into the area, together with supplies of rock, timber, sand and bags. Labor had to be recruited.

It was a semimilitary operation involving mobilization, transportation, supplies and technical know-how—all for the purpose of flood combat. Only Army engineer leadership could have done it sucessfully in so short a time. I want to pay tribute to Brig. Gen. Peter Feringa, president of the Mississippi River Commission, who flew to the scene as soon as word came of the break, and to all his fellow officers and civilian workers for their outstanding performance.

Emergencies such as these cannot be met without money. It was fortunate then—and it is a fortunate condition, generally—that the Army engineers held a reserve amount of unobligated funds, available for use in just such an emergency as the Port Allen levee break. Army engineers have the authority to act in times of a flood fight. Time, however, does not permit appearances before Congress for emergency funds. Some funds have to be there for use when the unexpected happens. And I am thoroughly in accord with the policy of the engineers in keeping a certain amount of money always available for the unexpected.

Break such as the one that occurred near Port Allen can be prevented only by bank stabilization projects—one of the most costly items in the entire flood-control undertaking. Because the lower Mississippi Valley flood-control appropriations have not been sufficient for a period of years, bank stabilization there is still being done on a patchwork basis. The Army engineers are financially unable to undertake the general stabilization program that the Congress authorized some years ago. It is a shortsighted policy, and it could result in more failures like that at Port Allen.

I am in favor of adequate appropriations by Congress for a vigorous prosecution of our water resources development program. In my opinion, it is false economy to reduce appropriations necessary for such urgently needed work. In the lower Mississippi, the world's mightiest river flows between hundreds of miles of great earthen embankments. Held within them, the river is a beneficent friend. Once it breaks out, it becomes one of the most destructive forces known to men.

The Red River Basin in itself constitutes a major problem for the Army engineers. This river, 1,300 miles in length, is one of the world's great streams. It rises in far-east Texas and traverses along the boundary lines of both Texas and Oklahoma, through the State of Arkansas, and flows through Louisiana in a southeastern direction to a confluence with the Atchafalaya River a few miles from the Mississippi in Avoyelles Parish, La. It is badly in need of further work.

In 1945 the record flood on the Red River occurred. I visited many places in the valley which had been flooded and to watch the strenuous effort to maintain the levee line in Louisiana from the Arkansas boundary to Alexandria. I saw the terrifying effects resulting from an uncontrolled stream, thousands of acres inundated, homes destroyed, cattle and poultry killed, and human life placed in grave jeopardy. It was a test of what can really happen in the Red River Valley unless flood control is pushed to the limit. The damages from that flood totaled $16,000,000.

Immediately after my tour over the flood-waters I flew back to Washington to preside over a meeting of Congressmen interested in flood control. At this meeting the Army engineers came forward and made suggestions. I introduced a resolution calling for an interim flood-control plan, and within a few weeks this plan had been filed in the Congress as a result of my resolution. Subsequently I led the fight in the House of Rep-

resentatives to have this plan approved, and now it is a basic law of this land. It calls for a total expenditure of seventy-seven and one-half million dollars for flood control in the Red River Valley Basin.

Operating under this interim plan, called for by my resolution, from year to year we are obtaining funds for the purpose of controlling the floodwaters of the Red River. Such projects as the Shreveport-Bossier revetment project; the big stabilization project from Denison south through Louisiana; the Bayou Bodcau project; Texas Dam project, and many other such projects, are receiving money and being constructed at the present time. As an objective, I have set the beginning of work on the Caddo Dam and Reservoir enlargement project, and the Cypress Creek project, and next year, together with able and vitally interested Congressmen, we hope to have the flood-control program in the valley further stepped up. As you know, the House of Representatives provided about $8,000,000 for this purpose, and we hope this amount will be further increased in the Senate. At this rate, we hope to see the main stem of the Red River protected from floods within the course of the next 5 to 10 years.

Of course, we must then take up the work on the tributaries and this alone constitutes a huge program. It is called the comprehensive flood-control program for Red River and when this program is reported to the Congress by the engineers, I will also begin work on it. I am glad to report to you today that the House of Representatives has given us $50,000 additional money for planning work on the Overton Red River lateral canal. This amount is in addition to the sum of $75,000 previously granted. Before the House of Representatives this year I did not make a fight to obtain construction funds. This was due to the fact that last year the Red River lateral canal had sustained a real set-back when the House committee recommended even against planning for this canal. We therefore were happy to be able to obtain additional planning money, knowing that this action took the black mark from the project which the Appropriations Committee in the Eightieth Congress had placed, and made it ready for the green light for construction money.

I hope the Senate will now act even more favorably than has the House acted. I shall continue to work for the construction of this great project which means so much for this four-State area. I shall continue to work for and fight for the further development of the Red River Valley with all its limitless possibilities and its unscratched resources. I believe the canal is practical and feasible and along with the Army engineers, I firmly believe that it should be constructed.

To strengthen our position in reference to an early construction of the Red River lateral canal, along with the president of your association, I appeared before the National Rivers and Harbors Congress, asking that this great organization give a priority position to the construction of the canal. I am pleased to report that our project was one of the seven in the United States placed in this category.

I am interested in further development of Red River for navigation and have joined with my distinguished colleague from Texarkana, Tex., Mr. PATMAN, asking for approval of a resolution authorizing the study of Red River for navigation purposes to Texas, Arkansas, Jefferson, Tex., and other places. I hope that this study proceeds apace and that we will soon have a favorable report upon which we can work.

Mr. President, the possibilities of this program are so vast as to be almost limitless. We are opening up, with water transportation, a veritable empire in the Southwest. The present is seeing, and the years ahead will continue to see, development in this area beyond the dreams of our imaginations. It will see teeming millions of people brought into the Southwest; thousands of new farms opened up and placed in cultivation; hundreds of new industries brought in; and many villages growing into towns and towns growing into great cities. Naturally, I am enthused over this program, and I welcome the wholehearted support, cooperation, counsel, and advice of all our people, and especially of this great organization.

Congressional New York-West Point Tour May 6 to May 8, Inclusive

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. VAN ZANDT. Mr. Speaker, to date, nearly 200 Members of the Senate and House, together with members of their families, have accepted the invitation of Mayor William O'Dwyer, of New York City, and Maj. Gen. B. E. Moore, superintendent of the United States Military Academy, West Point, N. Y., to visit New York City and West Point this week end. The following program has been arranged:

SCHEDULE OF JOINT CONGRESSIONAL VISIT

FRIDAY, MAY 6

5 p. m.: Arrive New York at Pennsylvania Station, proceeding by foot to New Yorker Hotel, Thirty-fourth Street and Eighth Avenue, immediately adjoining terminal.

6:30 p. m.: Leave New Yorker Hotel by Board of Transportation busses for buffet dinner at the Rainbow Room, sixty-fifth floor, RCA Building, Radio City, and for panoramic view of Manhattan Island.

7:30 p. m.: Move to studio 8H, National Broadcasting Co., same building, for Cities Service radio show.

8:45 p. m.: Leave RCA Building by bus for American Telephone & Telegraph Co. at 32 Avenue of the Americas, near Canal Street, to observe handling of telephone calls to all parts of the world.

9 p. m.: Tour of telephone building starts.

10 p. m.: Leave A. T. & T. Building for New Yorker Hotel.

Arrangements have been finalized for police guard at Pennsylvania Station, on Thirty-fourth Street, west of Eighth Avenue and north of Thirty-fourth Street. Arrangements have been finalized for police escort to accompany busses to Radio City, the telephone building, and return to Hotel New Yorker.

SATURDAY, MAY 7

8:30 a. m.: Leave New Yorker Hotel for bus tour of New York City, following an itinerary which is to include United Nations headquarters site, examples of city, State, and Federal housing, parks, bridges, arterial highways, and airport facilities.

11 a. m.: Arrive New York Stock Exchange, Wall Street, to observe trading on floor of the world's financial nerve center.

11:45 a. m.: Leave New York Stock Exchange for City Hall.

12 noon: Arrive at City Hall for reception by Mayor O'Dwyer and board of estimate in board of estimate chambers. Concert by the police department band and glee club will feature these short ceremonies.

12:20 p. m.: Leave City Hall for pier A to board the S. S. *John A. Meseck* for joint congressional tour of harbor as guests of the Port of New York Authority.

12:30 p. m.: Arrive pier A to board excursion steamer for tour of harbor. The cruise will feature escort by police, Navy, and Coast Guard patrol vessels, a "fly over" by 30 Navy aircraft, a Coast Guard helicopter and a New York Police Department plane. Luncheon will be served aboard the *Meseck* in the main dining salon. Other refreshments such as soft drinks, etc., will also be served. The Fire Department Glee Club will be aboard to entertain the party, as well as lecturers representing the Port of New York Authority, the city of New York, and several Federal agencies. The welcoming address will be made by Mr. Howard S. Cullman, chairman of the Port Authority.

4:30 p. m.: Arrive at pier 84, Hudson River, to disembark for return to New Yorker Hotel.

4:50 p. m.: Arrive New Yorker Hotel.

All required arrangements for police escort during morning sightseeing tour have been finalized. The Department of Sanitation, city of New York, will assign uniformed lecturers to each bus.

While it is felt that the congressional party may wish to be free during Saturday evening to see midtown New York on their own, we are providing approximately 200 tickets to radio shows for members and their families. The New York Convention and Visitors Bureau is also providing copy of the official Visitors Guide for each member of the party.

SUNDAY, MAY 8

9 a. m.: Leave Hotel New Yorker by charter bus for tour of United States Military Academy at West Point.

2:30 p. m.: Leave West Point by bus for return to Pennsylvania Station for entraining to Washington.

5:30 p. m.: Leave New York from Pennsylvania Station by train for Washington.

Arrangements have been finalized through Police Commissioner William P. O'Brien for motorcyle escort by members of his force to the city line where the motorcade will be picked up by State troopers for the remainder of the trip to West Point. This procedure will be reversed on the return trip.

Tickets covering round-trip railroad fare, two nights at the Hotel New Yorker, all meals, baggage transfer and tips, may be purchased Wednesday and Thursday at the office of the Sergeant at Arms of the House.

The committee in charge of the trip has the assurance of Speaker RAYBURN and Majority Leader MCCORMACK that there will be no important business scheduled for Friday, and that the House will not be in session on Saturday.

If you have not yet made your reservations, please call Representative VAN ZANDT'S office, telephone extension 366.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. AUCHINCLOSS. Mr. Speaker, when a friend is in trouble we are all most sympathetic toward him; when a friend is attacked and beaten down we are moved to rush to his aid; but when a friend is attacked and beaten down, perhaps through our own negligence or by our act unbecoming a friend, we are bewildered and apt to be more than a little

ashamed. Today a friend of our country has been attacked, beaten down, and humiliated, and we are accused of having aided in his humiliation.

The people of Poland, like our own people, are lovers of liberty. It was on the 3d of May in 1791 that Poland adopted its constitution, modeled largely after our own Constitution, and it is today, 158 years later, that this gallant country, overrun by the godless, alien philosophy of communism, and ground under the tyrant's heel, is celebrating its anniversary of freedom. Lovers of freedom everywhere in the world are proud of Poland's determination to continue its fight for those precious things that freedom alone can bring. It is not only the duty and obligation of our country to aid in every way possible, but indeed it is our privilege.

There is no doubt that Poland will rise again, and it is my earnest hope that its resurrection will be hastened by the active assistance of the United States of America. Thereby we may redeem ourselves for any past negligence on our part that contributed to its slavery, and we may have the satisfaction of helping a gallant, unconquerable people, imbued with the spirit of truth, honor, and spiritual integrity.

Curtailment of Alcoholic Liquor Traffic

EXTENSION OF REMARKS

OF

HON. GEORGE H. CHRISTOPHER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. CHRISTOPHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

NEVADA, MO., *April 29, 1949.*

Hon. GEORGE H. CHRISTOPHER.

DEAR SIR: We, the undersigned, are very anxious for the following bills to be passed and hope you will see fit to vote for their passage.

The bills are:

1. H. R. 2428, the Bryson bill, to prohibit the advertising of alcoholic beverages in interstate commerce and stop its broadcasting over the air.

2. H. R. 3114, the Rees bill, to prohibit alcoholic beverages in and around military establishments.

3. House Joint Resolution 151, the Bryson amendment, to prohibit the manufacture, sale, transportation, or possession of beverages containing more than one-half of 1 percent of alcohol by volume.

4. H. R. 886, the Pace bill, to take beer out of the camps, and alcohol, prostitution, and gambling out of their vicinity.

Hoping you see as we do on these vital bills, we are:

Mrs. Mabel C. Flagor, Mrs. Blanche, Margaret Kamm, Mrs. Annis Thurston, Mrs. Emma Gould, Mrs. H. L. Windler, Mrs. M. L. Packer, Mrs. Teske Speece, Mrs. Roy Mabry, Mrs. Geo. Wilhelmson, Mrs. Herman Koehler Francis, Mrs. L. S. Ware.

MAY 2, 1949.

Mrs. MABEL C. FLEGOR,
Nevada, Mo.

DEAR MRS. FLEGOR: Your letter of April 29 came to my attention this morning and I note that it is signed by several Nevada ladies. I am glad to get your letter and to have your views on the subject. I would be glad to lend my influence at any time to prohibit the further inroads of intoxicating liquors on the morals and integrity of our citizens. The bills mentioned will receive my support when they come to the floor of the House. I realize that liquor is doing a tremendous lot of damage but it seems like the human race has never been content to do without the use of things of that description. Personally, it doesn't worry me and never did because I never became addicted to the use of it but I am glad to lend my influence at any time to help curtail the traffic.

Again thanking you and the other ladies for the nice letter, and with kindest regards, I am

Sincerely yours,

GEORGE H. CHRISTOPHER,
Member of Congress.

Air Force Secretary Symington Urges Enactment of Legislation To Encourage Construction of Housing in Areas Adjacent to Military and Naval Installations—Make Smyrna Air Base a Permanent Installation

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. EVINS. Mr. Speaker, there exist very pressing reasons why our National Military Establishment feels that the early passage of adequate housing legislation is greatly needed. First, there exists a moral problem that seriously bears upon the effectiveness of our defense efforts; secondly, our defense establishment is having much difficulty in acquiring the type and kind of personnel needed; and thirdly, our services are having equal difficulty in keeping those that they do induce into the services. Adequate and proper housing on or near military establishments will go a long way toward solving these problems.

Within the Fifth District of Tennessee, the district which I have the honor to represent, there is situated a large and modern and extensive Air Force installation—the Smyrna Air Base. This base should be made a permanent Air Force installation. Proper housing accommodations on the base or in the cities of Smyrna and Murfreesboro nearby is needed. Passage of legislation pending in the Senate will greatly improve the situation and serve to insure that Smyrna Air Base be made a permanent installation. In this connection, I have today introduced in the House a companion bill to the measure pending in the Senate to encourage the construction of rental housing in areas adjacent to naval and military installations.

I desire to include in the RECORD the statement which Hon. W. Stuart Symington, Secretary of the Air Force, recently made before the Senate Banking and Currency Committee concerning this pending and needed legislation. The statement of Secretary Symington is as follows:

Mr. Chairman, we appreciate the opportunity to appear before the committee on behalf of the National Military Establishment in support of this legislation to provide homes for our military personnel.

The National Military Establishment considers that the enactment of this legislation is essential to the continued efficiency of the armed services. Present housing facilities for military and civilian personnel of the National Military Establishment are so totally inadequate in numbers as to fail utterly in meeting the demands. This proposed legislation would greatly stimulate construction by private enterprise of housing units needed by the National Military Establishment.

In order to attract and hold the highly trained, experienced and technical personnel now required by the Departments of the Army, the Navy and the Air Force, it is essential that this personnel be afforded an opportunity to live comfortable and normal lives insofar as military duty permits on a reasonable parity with the average American citizen. Most of them do not now have this privilege.

For example, in my travels to various bases, some of the conditions we have found are almost unbelievable. At Mather Field, Calif., families are living in converted barracks-type buildings where it is necessary to use community bath and cooking facilities. The same applies to Mitchel Field, N. Y. At Chanute Field, Ill., there are several families living in a converted mid-Victorian house where only outside toilets are available. I could name many more specific examples of which the above are typical.

By the very nature of the service, military personnel must be always on order. They must proceed to designated places at designated times for varying durations. As a result, they are considered transient to whatever community in which they currently reside. Under the terms of the existing National Housing Act transients are not considered sound business risks for housing. Many of our people are unable to find quarters at all. Others are forced into slum areas or make-shift dwellings too inadequate to have been considered a part of the available and livable housing facilities of the community in the first place. Moreover, any adequate accommodations that may be available command a price far beyond their means. With the enactment of this legislation, we intend to give priority to caring for the need of quarters for junior officers and noncommissioned officers who are most affected by these conditions.

The result of this situation on the effectiveness of our armed forces is incalculable. Separated families and squalid living conditions combine to produce very poor morale. The resulting problems of replacement and excessive training costs seriously jeopardize the effectiveness of our efforts to provide adequately for the defense of the Nation. The same housing difficulty also greatly retards our efforts for personnel procurement.

In short, Mr. Chairman, there are three very pressing reasons why the National Military Establishment feels that this legislation is urgently needed. First, there exists a morale problem that seriously bears upon the effectiveness of our defense measures. Second, we are having grave difficulty in acquiring the personnel that we need; and third, we are having equal difficulty in keeping those that we do get. Modern warfare demands a much higher percentage of qualified specialists than at any time in the past. Such men, stable and serious as a class, are deeply interested in their homes and families. They are also amply qualified to succeed in civilian life. It is these men, the ones we need most, that we cannot attract or expect to keep if military careers prove a handicap in providing adequate homes for their families.

The housing erected as a result of this legislation would not alone solve our entire housing problem any more than adequate housing alone would suffice to attract into service the number of competent engineers and technicians that are urgently needed. The measure being considered today, however, is designed to provide immediate relief. The basic requirement is, of course, for the erection of a sufficient number of adequate public quarters to house all military personnel. This is also a long-range requirement, the fulfillment of which is of necessity a lengthy process. But the problem is immediate and pressing. This legislation would operate, in the shortest possible time, to provide an invaluable aid in easing this grave difficulty.

This plan has the approval of the entire National Military Establishment. The Federal Housing Administration will suggest certain technical amendments and the Bureau of the Budget has advised that the objectives of this legislation with the proposed amendments should be considered in accord with the program of the President.

United Jewish Appeal

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. MULTER. Mr. Speaker, on April 29, 1949, the gentleman from Wisconsin [Mr. SMITH] placed in the Appendix of the RECORD a letter which appeared in the Washington Star of April 27, written by Faiz El-Khouri, Minister of Syria. Despite the source of the letter I feel it my duty to assert as vigorously as possible that it contains serious misstatements of fact which at a time when efforts are being made to establish permanent peace in the Holy Land had better have been left unsaid. It is true that the Arabs and Jews were living as brothers in Palestine at one time. They are living as brothers today in the state of Israel and they would be living as brothers today all through Palestine if it were not for sinister and unholy pressures. I speak from personal knowledge, having viewed these things with my own eyes and having heard them with my own ears, not from Jews but from Arabs.

The following letter which appeared in the Washington Star of April 30, 1949, written by Harry Zinder, is a complete answer to that of the Minister of Syria:

DIFFERS WITH SYRIAN MINISTER ON USES OF UNITED JEWISH APPEAL MONEY

TO THE EDITOR OF THE STAR:

I think in the interest of accuracy and honesty it is necessary for me to point out one or two facts which have been misrepresented in the letter written to you by the Minister of Syria, Faiz El-Khouri.

Not a single penny of the money collected by the United Jewish Appeal goes to the government of Israel for the maintenance of its administrative services. The money collected through this appeal is used to bring immigrants to the state of Israel from the DP camps and other places in Europe and from north Africa and is disbursed through agencies especially set up for that purpose. The money is also used to see to it that these people are settled on the land or in business and become useful citizens of the state. It is the taxpayers of the state of Israel who contribute all the necessary funds for the administration of the government of Israel, including its armed forces. Thus, in addition to having fought in the front lines and having been on a wartime footing for over a year as a result of willful aggression by the Arab states, including the Syrian Minister's own country, they are also contributing of their material wealth to see to it that the state continues to function in a democratic and progressive way.

HARRY ZINDER,
Press Adviser, Embassy of Israel.

If the Syrian officials will devote themselves to improving the conditions of their own people they might stir up enough sympathy here so that Americans will contribute to that work as they are doing to similar work in the state of Israel.

Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. ROBERT L. RAMSAY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. RAMSAY. Mr. Speaker, the Taft-Hartley Act contains all the inhibitions and restrictions against labor that the Republican National Committee could purchase for $7,500.

Even though I didn't know anything about the Lesinski bill, I would be assured of its value to laboring men, after I heard the flaming, ardent liberal from Virginia describing it as reactionary.

And if this was not sufficient, I would be more than assured when I heard peons of praise heaped upon the gentleman from New York, by the great Republican from Michigan, when the New York gentleman offered an amendment to the Wood bill, that the Taft-Hartleyites thought would aid in the defeat of the Lesinski bill.

I am only sorry the gentleman spoiled his great laudation by closing his address with insinuations that the gentleman from New York is a Communist.

It certainly recalls the old political aphorism that politics makes strange bedfellows.

Another thing that has aroused my suspicion of the attacks on the Lesinski bill is the constant contention of opposition that the Taft-Hartley bill is a great measure, enacted entirely to benefit the workingman; that it has brought peace and contentment to the labor world.

That it is the greatest labor law ever conceived by the mind of man, and then end up on the sour note that the opposition are all for the Wood bill.

If the Taft-Hartley bill is all they say, how can they desert it and let it sink into oblivion and shout in unison, "We are all for the Wood bill"?

Not all employers of labor oppose the right of their workingmen to join a union, nor do they refuse to bargain about wage and working conditions with such unions.

We have been proceeding here as if all labor were on one side, and all employers lined up on the other, battling or ready to battle to death, for the privilege of writing and dictating all labor contracts.

This is not true, for many great industries recognize and welcome union labor with complete confidence, not only in contracting for wages and working conditions, but depend on the aid of their employees in every matter that affects their trade and industry.

Yes, Mr. Speaker; ever since the advent of union labor the pottery-industry organizations advise their employees to become good union members. In this atmosphere of good will there is no trade or industry that has enjoyed friendship and peace like the pottery industry of America. This industry never could understand the continued opposition of the steel and coal industries to the unions of their employees.

I hold in my hand a letter received concerning this legislation from Mr. J. M. Wells, chairman of the labor committee of the United States Potters Association, which reads as follows:

We have dealt collectively with the Pottery Workers Union on an industry-wide basis for more than 50 years, and have had only one strike of a few weeks' duration more than 25 years ago.

Neither the Wagner Act nor the Taft-Hartley Act had the least particle of influence on our labor relations. We continued to conduct our collective bargaining exactly as we had in the past, and no provisions of our wage agreement were changed under either act.

This amendment not only repudiates the Democratic Party and its solemn pledges made in convention, but it will take Taft off the hook. At least its adoption will be a fine recommendation by the Democrats for the Republican policies of the last session of Congress, and an admission by the Democrats that they were faking and insincere in their promises during the last campaign.

Today we are about to try the case of this unwanted child of Taft-Hartley. Are we going to send it back to its parents, only to adopt its twin, that is even worse and more despised by labor, who will be compelled to live and work under its banal and hateful restrictions?

Those who hope to change the name of this despised labor control bill must believe that if such change is made, that the people will forget its conception and birth.

They hope the people will forget that the real father of the Taft-Hartley law was paid $7,500 as a doctor fee for his attendance at this event. They also hope by the mere change of name that the people will also forget the great celebration that attended its birth when the NAM and its golden lobby sang its praises and took credit for its origin and passage.

Those who love little "TAFTIE" are now shouting to us "Please—Mr. Congress, pass the Wood amendment and get Mr. TAFT off the spot. This will only be a change of name and will preserve the Taft-Hartley Act with its full intent and purpose."

They also tell us "they hate any and all Government controls, but we must keep the Taft-Hartley controls over labor."

The Taft-Hartley Act and the Wood proposal remove all Federal statutes that have been passed by Congress to protect labor from restrictive court orders.

The Taft-Hartley Act is and was intended to extend governmental dictation over all contracts between unions and employers.

The first reactionary Congress since 1932 reverted to true type and repealed the Wagner Act, because this act refused to regard labor as a chattel to be used in barter and control. It was the first victim of reaction. Labor's rights were doomed from the first day of control of Congress by the NAM.

Fairness and justice for labor; the vision of future yellow-dog contracts; the right of labor to strike; the right even to join a union—all were forgotten and placed at the mercy of a court injunction, for the sole purpose of destroying the right of labor to secure fair labor contracts, and to participate in the election of their choice of representation in the Halls of Congress.

If we are to have either the Taft-Hartley or the Wood amendment written into our statutes, let every opponent of bureaucracy who votes today to support them, forever hold his peace, because he will have fully shown by his vote that he hates the rights of labor to battle for a fair wage and honest working conditions, far more than he hates Government dictation.

Under either of these proposed statutes, no laboring-man's rights are safe, nor can his liberty be secure, when their arbitrary powers are invested in Denham as general counsel for the Board, with authority to defy the Labor Board and ignore the rights of the laboring man.

The Taft-Hartley Act and its reincarnation—the Wood amendment—both deny to labor and their employers the right for a complete union shop.

The cardinal sin of both these proposals is that it restores complete and absolute judicial control over labor disputes.

It compels all union leaders to deny they are Communists, without any reason or cause to suspect their loyalty to their Government.

To those who desire to control labor by the use of court injunctions, let me call to their attention the sufferings that attended the warding of injunctions in labor disputes, in the good old days, when labor was under the absolute control of the courts. Perhaps some like Senator TAFT and his followers desire to return to slave labor of these golden days of labor injunctions, but I can assure you this is not the desire of those who must labor for their living.

During the days of labor control by injunctions, men were killed or wounded, because they dare admit they were members of a labor union.

During the injunction reign, Fanny Sellins, a labor leader, was shot in the back and killed in the great manufacturing State of Pennsylvania, by coal and iron police, because she was walking in the streets of a mining town, claimed by the mining company to be privately owned property.

Under this defense of sovereignty, no law violator was ever brought to justice for the perpetration of this crime, yet this was only one of hundreds of such instances that occurred in West Virginia and Pennsylvania, and the records are barren of any successful prosecution for murder committed under the defense of violation of injunctive order, even to this day.

I think we can at least see stormy times in the future, if the Taft-Hartley law is not repealed. If we wish to take precautions against these stormy times, you know it is best to push legislation in quiet times, and reform the abuses of the Taft-Hartley Act now.

I do not believe Congress realizes the great danger that threatens labor in the injunction proviso of the Taft-Hartley Act.

It certainly can be used to prevent their right to negotiate contracts on behalf of their members, and their right to strike in order to enforce reasonable contracts on behalf of workers.

Injunctions and injunctive powers alone, kept the membership of all national labor unions to less than four million, until the passage of the Norris-LaGuardia and Wagner Acts. Since then, in less than 10 years, the membership of labor unions has increased to fourteen millions.

This alone should be a notice to beware of the Taft-Hartley Act for all those who believe in the rights of labor to organize for the protection of their working interests.

Under the Taft-Hartley Act, injunctions will again be a weapon to be used by those who hate all efforts that give labor a voice in their own interests, to organize and bargain under contract for wages and hours of work.

As early as 1914, it was admitted by Congress that there should and must be restraints on the power of courts to grant injunctions in labor disputes between employer and employee.

To limit this power, Congress passed the Shield-Clayton Act, now found in United States Code, title 29, section 52, and our courts have construed this act to mean that orderly and peaceful strikes, involving, or as growing out of a dispute concerning terms or conditions of employment, are protected from prosecution under section 1 of the Sherman Antitrust Act.

I assume all Members of Congress are familiar with the provisions of the Sherman antitrust law, but I wonder if they are aware that the author was John W. Davis, an outstanding, able, and eloquent lawyer, and Member of Congress. This law was enacted to protect union labor against court orders in injunction cases, and from outlawing them under the terms of the conspiracy provision of the Antitrust Act.

In 1912, Mr. Davis on the floor of the House, in support of the Shield-Clayton Act said:

> Injunction has been carelessly used. It has been turned to purposes beyond its proper scope.
>
> I denounce as a libel upon American citizenship the assertion that the laboring men of the country are ready at the word to break into lawlessness, or that they sympathize with those who do.
>
> Let us see to it here and now that no pretext hereafter shall remain to him.

In the enactment of the Norris-LaGuardia Act and the Wagner Act, Congress saw to it that labor had no just right of complaint, until the sad day when labor, secure in the belief that no person elected to Congress would ever dare vote away their legal rights, went to sleep; refused to go to the polls and vote for their friends. This by default permitted the election of men to Congress, who for a generation had fought to destroy all legislation that recognized the right of labor to engage in concerted activities for the purpose of collective bargaining, mutual aid, and protection, without being regarded as conspirators against their government.

Then came the blow. The first reactionary Congress since 1932 reverted to true type and repealed the Wagner law, because it refused to regard labor as a chattel to be used in barter and control. And in order to restore the "yellow dog" contract, they gave us the Taft-Hartley bill, which restores government by injunction and reduces the dignity of labor to that of a chattel to be bought in the markets of exchange like cattle being led to the slaughter.

Fairness and justice for labor "yellow dog" contracts—the right to strike, even to join a union—all were forgotten in an effort to destroy the power of labor to force fair labor contracts and to study political conditions and records of their Representatives in Congress.

The crimes committed against labor by the abuse of injunctions will never be forgotten, so long as the sordid story of persecutions continues to appear in the volumes of case reports and the histories of labor disputes, reported from 1900 to 1930.

It is the opinion of the average laboring man that the Taft-Hartley law has proven to be a bonanza for lawyers; a fear of loss of job; or a cut in wages and longer hours of employment for the workingmen, who fear and hate injunctions.

Those who remember the jail sentences, starvation, and loss of employment that followed its wake in the "good old days," fear it means the end and destruction of organized labor.

Ever since the Taft-Hartley Act became effective the 90,000 members of the typographical union have been continuously bedeviled by litigation. Every union man knows the same can happen to his craft and his union until it is no more.

Of course, the obvious object of these injunction cases is to break the union, so that men may be employed by dictation, without contract bearing on wages and working conditions. The workingmen of America have not been fooled by the support of this measure by the Eightieth Congress. The vote of 1948, if it proves anything at all, proves that American labor hates and fears the Taft-Hartley Act.

INJUNCTIONS IN NATIONAL EMERGENCIES

To grant to every employer of labor the right to secure injunctions in strikes that may be declared national emergencies, is of course empowering every injunctive-minded judge of the Federal courts to issue injunctions for the purpose of breaking every strike. In granting the

injunctions the court can hold also that such strike is interfering with, or affects, interstate commerce.

With such powers must go the correlative power that whenever any employer of labor refuses to recognize the right of his employees to join any national labor union, or refuses to meet with representatives of labor to bargain about any point of dispute between employer and employee, or refuses to agree and comply with any order of a Federal labor board, then the Government may take over the operation of such business, until the orders of said labor board may be agreed to and complied with.

I am sure no business or laboring man—be he manager or employee—is willing to submit that the business of this country be placed under Government controls and restrictions. But if we insist on such holdings over labor, then Government controls must in fairness be set up—or business will again hold sway and labor again will become a mere commodity to be used and cast aside at will.

National Health Insurance

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. DINGELL. Mr. Speaker, the New York Times on Sunday, April 10, carried a most interesting story on the development of the International Ladies Garment Workers' famous health center in New York, where members of the union and their families get the best medical care under a voluntary insurance plan worked out by the union and employers.

Some of the best voluntary health-insurance plans in this country are such programs resulting from collective bargaining between employers and employees. They are far better, on the average, than the voluntary insurance plans available to others. Nevertheless, good as they are, they fall short of what the unions and their members want.

It is significant that the International Ladies Garment Workers, and other unions mentioned in this article, support President Truman's national health-insurance legislation. Although they have better protection than most Americans can obtain today through voluntary insurance, they realize the only real answer to the problem is compulsory, Nation-wide health insurance.

The workers, however, should forcefully tell their doctors, druggists, insurance agents—yes, even their pastors—about their preference and desire for a genuine health-insurance plan else there is danger that the combined opposition welded together by the $3,500,000 slush fund of the American Medical Association plus the wealth and power of unfriendly industrialists and insurance companies will stifle the efforts of the friends of the legislation in Congress, and the plan will be killed.

[From the New York Times of April 10, 1949]

UNION'S HEALTH CENTER HERE MODEL OF AID TO WORKERS—ILGWU PROJECT ESTABLISHED 36 YEARS AGO TO FIGHT SWEATSHOP ILLS

(By Howard A. Rusk, M. D.)

In 1910 the women's garment district in New York was centered in the narrow streets of the East Side. The majority of the factories were in dirty, wooden walkups, with splintered and sagging floors. A wood-burning stove in the middle of the room provided the only heat in the winter, and the constantly burning gas jets made the already humid atmosphere intolerable in the summer. In this environment of disease and ill health, the sound of the tubercular cough was almost as familiar as the whir of the sewing machines, for 3 percent of the workers were tuberculous.

As a result of the historic strikes of 1909–1910 and 1910–11 against these sweat-shop conditions, a Joint Board of Sanitary Control was made up of members of the International Ladies Garment Workers Union, the manufacturers and such eminent public citizens as Hamilton Holt, Lillian Wald, Louis Marshall, and Meyer London.

After their activities for the improvement of working conditions in the trade, the ILGWU in 1913 established a small health center with Dr. George M. Price, a member of this board, as its director. The quarters consisted of an office of 300 square feet of floor space. The staff included, in addition to Dr. Price, a part-time physician, a nurse, and a clerk. The equipment consisted almost entirely of the traditional physician's "black bag."

FOUR HUNDRED AND TEN THOUSAND VISITS IN YEAR

A few weeks ago, ceremonies were held, attended by leaders in Government, medicine, management and labor, marking the expansion of the Union Health Center. Now occupying six floors of a modern union-owned skyscraper at 215 Seventh Avenue, the health center has a staff of 148 physicians, 35 nurses, 5 pharmacists, 27 technicians, and 150 clerical workers. It is an example of the frequently-repeated philosophy of David Dubinsky, its president, that the ILGWU is concerned not only with wages and hours but with the better things of life, such as health and recreation.

Last year, 410,000 visits were made by 68,000 individuals to the center's 51 examining rooms, 22 physical therapy units, 8 X-ray units, and other clinical, diagnostic, and therapeutic services. Largely in the off-work hours after 4 p. m., its resident medical staff, with the aid of a visiting staff of 66 general medical examiners and 68 medical specialists, gave services to an average of 1,300 patients a day in the allergy, arthritis, ear, nose and throat, eye, social hygiene, chest X-ray, general medical, laboratory, X-ray, electrocardiography, and physical therapy clinics.

The excellent nutrition department gave down-to-earth advice on diets, in terms of both need and budget, to 2,000 patients, the social service department assisted 1,300 patients with family, personal, and medical problems, and the drug department filled 100,000 prescriptions.

Aside from the sheer numbers to whom it brings medical services, one of the most impressive factors of the center is the administrative organization devised by Dr. Leo Price, son of the center's founder and the present medical director. For example, each patient carries a metal identification plate similar to those used for department store charge accounts, so that the physician can stamp it on the various records, thus saving time. Each patient also carries a book of stamps issued by his local union entitling him to an average of $30 in medical services during a year.

HEALTH CENTER PATTERN

When a patient comes to the center, a stamp is removed from the booklet and affixed to a detachable section of his clinical record, so that it can be forwarded later to the local union for reimbursement to the center.

Throughout the organization, the mechanical aspects of administration are streamlined, but great care is taken to avoid the loss of the patient-doctor relationship.

Although its services today are a far cry from those of 1913, the center's original charge of $1 a visit has not varied greatly. Today, 85 percent of the services are rendered at $1 or less. Of its nearly $1,000,000 budget in 1948, 82 percent came from fees paid in behalf of the membership by ILGWU local health funds built from employer payments in accordance with union contracts. The remainder came from cash fees paid by patients.

The Union Health Center is not only a singular success from the standpoint of the 200,000 members who benefit from its services, but it has served as an example for similar plans for ILGWU affiliates ranging from Shamokin, Pa., to San Antonio, Tex.

The United Automobile Workers in Detroit also has a plan for limited diagnostic services, and a Labor Health Institute recently was started in St. Louis under the auspices of the United Retail, Wholesale and Department Store Employees. Financed entirely by management, the St. Louis plan envisages complete medical care to union members and their dependents. Most recent of the newly started programs is that of the health and welfare retirement fund of the United Mine Workers of America, which thus far has purchased medical care for its beneficiaries from existing hospitals and medical services.

Rather than operate their own medical services, however, most unions providing medical benefits for their members utilize an insurance plan. Illustrative of such groups is the Amalgamated Life Insurance Co., an affiliate of the Amalgamated Clothing Workers Union, which, in its first 5 years of operation, paid out accident and health benefits amounting to $7,165,594 to 107,105 members. Following the pattern of the ILGWU, Amalgamated now is planning a $1,000,000 health center to be situated at 14 East Sixteenth Street, and to be named in honor of the late Sidney Hillman. A similar center is being planned also by the New York Trade Council and the New York Hotel Association.

In most instances unions participate in voluntary health-insurance plans either through commercial indemnity plans or through groups like the health-insurance plan of New York. Under industry-wide welfare funds, the health-insurance plan of New York is providing medical services to 6,000 members of the Painters Union District Council 9; to 4,500 members of the Chefs and Cooks Union Local 89; to 1,600 members of the Luggage Workers Local 60; and to 1,800 members of the Sheet Metal Workers Local 28. A fifth group, the Ornamental Iron Workers Local 580, has arranged to provide health-insurance benefits to its 700 members, beginning in May. Under this plan members of the unions covered receive medical services from any one of the 26 health insurance plan's medical groups in New York.

The great advances made during the last few years in labor's interest and contribution to the health of their workers must be given serious consideration in any long-range planning for the Nation's health.

FHA to Insure Mortgages on "Mixed" Cooperatives

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. MULTER. Mr. Speaker, I am pleased to call to the attention of my colleagues the following article which appeared in the New York Post on May 2, 1949:

FHA TO INSURE MORTGAGES ON MIXED COOPERATIVES

(By Charles Abrams)

Franklin D. Richards, Commissioner of the Federal Housing Administration, said today FHA is ready to insure mortgages on cooperative housing projects of mixed racial occupancy.

This Federal agency, which has long encouraged racial segregation in housing and even provides sample restrictive covenants for builders, has been steadily modifying its policies under pressure from racial and civil-rights groups.

Its willingness to insure mortgages on mixed cooperatives is the most recent development.

On December 6, 1948, I published a letter from Assistant FHA Commissioner W. T. Lockwood to James Cassels, secretary of the National Cooperative Mutual Housing Association. Lockwood said that "FHA has never insured a housing project of mixed occupancy" and then ventured "the unofficial and informal statement that we believe that such projects would probably in a short period become all Negro or all white."

My article citing the FHA policy was published in the CONGRESSIONAL RECORD and Negro and cooperative organizations attacked the accuracy of FHA's policy.

Today Richards said Lockwood's letter had been misinterpreted. "If the sponsors of any cooperative want to have a mixed project," he said, "no regulations, rules, procedures, or internal thinking or policy by anybody within the FHA prevents our giving Federal insurance for such projects. We have in fact already undertaken to insure Bell Park Gardens and another project in New Jersey."

Bell Park Gardens in Queens is subject to a city ordinance barring discrimination in tax-exempt projects, but its sponsors have said no eligible Negroes have yet applied for apartments.

In New York, $30,000,000 of investments have recently been made by insurance companies, savings banks and cooperators in nondiscriminatory projects. These investors have found that in large projects that create their own environment, the presence of some Negroes or other minorities does not hazard the investment. On the contrary, the racial character of the occupancy is stabilized. It is not the same as ordinary neighborhoods of small, separately held parcels where racial infiltrations have caused mass shifts in the composition of the neighborhoods.

Here and in Philadelphia, Pittsburgh and Los Angeles, public housing projects have successfully mixed their occupancy for more than a decade. Many war projects for higher income groups followed the policy and now private companies have invested millions on the basis of the experience.

The initial impetus for private investment in mixed projects came from the Mutual Life Insurance Co. and the Bowery Savings Bank, who were willing to invest up to 80 percent of project cost without Federal insurance.

Abraham Kazan, director of Amalgamated Houses, has said that so far he has received only three applications from Negro families, and the experience in other projects is that too few Negro families apply. Many members of minority races prefer to live with their own people.

"One Negro family has moved into the downtown project and has been living there for about a month," said Kazan, "and if more eligible Negro families apply we would definitely accept them. Every one of the cooperators knows that the property is subject to the nondiscrimination ordinance," he said, and "the Mutual Life Insurance Co. and Bowery Savings Bank also know that. It has not deterred either financing or investment by either the lending institutions or the cooperators."

Interest rates on the mortgage loans are 3 percent, indicating that the lending institutions consider the investment a prime mortgage security. Kazan said "Not one of the 2,500 tenants has ever objected to the nondiscrimination policy and all of them have been willing to pay $600 per room in purchasing their interest in the project."

Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. MILLER of Nebraska. Mr. Speaker, I have listened carefully to the many hours of debate on the revision of the National Labor Relations Act. Some of it has been constructive, but all too much of it has been punctuated with appeals to prejudice, name calling, warnings of political extinction, and threats to the use of the patronage club. As a physician, I have at times been frankly worried because of the agitation of some of my colleagues whose blood pressure, under their emotional strain, must rise to a dangerous point. All this has obscured the real purpose of passing legislation to cure the evils that have arisen in the conduct of labor-management relations. We must not lose sight of the fact that our purpose is to set up rules for the conduct of collective-bargaining negotiations so they will result to the benefit of the laboring man and at the same time not be harmful to the whole people. This legislation is one of the most important problems from a domestic standpoint that is to come before the Congress. I know it is difficult to strike a happy balance between labor and management and to act in the best interests of the people. I deeply respect the differences of opinion. I question no one's motives. Only by free and open discussion can we explore the many sides of this question and then write legislation which will be fair.

Now as to my attitude on a labor-management law. I am not wedded to the present legislation. I do not think it was as good as its proponents claimed it was, and certainly not as bad as its opponents pictured it. The labor organizations have made the Taft-Hartley law a fetish and are determined to wipe out all reference to its name. I have no objections to that, but I am certain that many of the provisions of the Taft-Hartley law must be incorporated into any new legislation. I did say, 2 years ago, when the bill was under consideration, that if after several years' experience, I found it needed amendments, I would support those changes. I am convinced that certain amendments are needed to keep the bill more in balance, not only to meet the public demands but for better relations between labor and management. I believe this Congress can write a fair labor bill, with a common-sense approach which will bring long industrial peace.

Mr. Speaker, I am supporting those amendments to the Wood bill, some of them which labor leaders wanted, and some requested by management. I believe these amendments are in the interest of the public and the workingman.

Mr. Speaker, I am amazed at the President and his leaders coming before this intelligent body of Representatives and demanding that all provisions of the Taft-Hartley bill be wiped out and that the old one-sided Wagner Act be reinstated. That was their first demand.

All the letters coming to my desk from the labor leaders and inspired from that source demands not one single amendment be permitted to the administration's Lesinski bill. I am sure the administration and the labor leaders must know this is impossible.

Two years ago, after extended hearings, both Houses of Congress passed the National Labor Relations Act of 1947. It was passed over the veto of the President. More than 300 Members of Congress—both Republicans and Democrats, voted for the law. The Congress set up a watchdog committee to study the workings of the law and to make recommendations. These recommendations are now being adopted in the so-called Woods amendment to the Lesinski bill. I expect to support those amendments. If the Woods amendment fails, I expect to support amendments to the administration's bill which will be in the interest of the public and the workingman. I understand now that the administration is asking for five or six amendments to the Lesinski bill. If the amendments are good, I will support them, and when the final bill is completed, if, in my opinion, it is better than the old Taft-Hartley law, then I am willing to support the measure. If it is not, I shall vote against the Lesinski bill, with the hopes that we can retain the present labor-management legislation.

This present law is not bad legislation despite all the hue and the cries from the labor bosses that it was a slave-labor bill, and labor was being given a death blow. All checks on public opinion show that the individual workmen, union and nonunion alike are not opposed to provisions of the act and none of them feel in the bonds of slavery. I have taken several polls of my district, and they indicate overwhelmingly their approval of the provisions of the Taft-Hartley law.

I have always maintained an attitude of willingness to vote for changes that would benefit the laboring man and the public. In contrast, the President, until today, has demanded outright repeal of the law and a return to the old, one-sided Wagner Labor Relations Act.

When they reported the bill, they asked for a closed rule, so there would be no chance for the Members of Congress to consider amendments. Such a procedure seems unfair to an intelligent group of men trying to work their will and write good legislation.

Mr. Speaker, the President himself, when the railroad strike threatened to paralyze the Nation, appeared personally before Congress and asked for most drastic legislation—that of drafting the railroad workers into the armed forces. I supported the President at that time because a war was on and the President said it was necessary. I think my vote at that time was a mistake, and fortunately the other body did not act upon such drastic legislation.

Mr. Speaker, there have been only two men who have been able to turn the lights out on the Capitol dome. One was the German paperhanger, who we hope died an inglorious death in the ruins of the Reich Chancellery. The other was John L. Lewis. Not only did he turn the lights out on the Capitol dome, but he caused many a brown-out all over this country. Now certainly any labor-management law must carry some provision which will prevent any one individual or single group from paralyzing the economy of our great Nation.

In my opinion we should adopt the amended Woods bill, or place similar amendments in the Lesinski bill. These changes are in the interest of the public and the laboring man. It will continue to give the laboring man more privileges than he ever had before.

Several Democratic Congresses have adopted amendments to the original Wagner Act because they were needed. I cannot believe that we supported the original Taft-Hartley Act, and you Democrats who supported amendments to the Wagner Act, will not want to throw it all into the ashcan and go back to a measure which experience has shown was not in the best interest of the public or the workingman.

I presume the bill which will finally pass the Congress will not satisfy all of us in several details, but it should be the considered, honest judgment of every Member. Certainly the mistakes I make will be of the head and not of the heart.

My entire approach to the whole subject of labor-management legislation has been on the grounds of what is best, first for the public and then for the man in the ranks of union organization who must work and make a living for his wife and family. What is good for these two groups is good for big business and big labor.

I am not interested in the partisan and gigantic selfish struggle between labor and management who seek to gain advantages for themselves. Both are selfish and want unfair advantages over the other. I hope that Members of Congress can lay aside their extreme partisan views and some explosive statements, and settle down to a calm, reasonable consideration in order to write constructive and progressive labor legislation.

Lone Star Steel Co. Loan

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. BECKWORTH. Mr. Speaker, I desire to include in the CONGRESSIONAL RECORD an editorial which appeared in the Tyler Courier-Times Telegraph, May 1, 1949.

Incidentally, I wish to point out that very recently a Tyler citizen, Mr. C. E. Owen, was selected as the chairman of the board of the Lone Star Steel Co. Mr. Owen is a very competent, successful and outstanding businessman. His broad business experience from the time of his humble initial efforts to his more recent impressive attainments fits him ideally to lead the destinies of the Lone Star Steel Co. at this very important time.

Indeed, the editorial clearly and succinctly emphasizes the significance and importance to the great Southwest, as well as to the Nation itself, of the expansion of the Lone Star Steel Co. In the interest of national defense alone, the development of our iron-ore resources in east Texas is justifiable.

I quote for emphasis a part of the editorial at this point:

> East Texas asks for no gift of any kind. It merely asks the RFC to make a safe business loan at a profitable rate of interest.

I believe, from information I have received about the prospective loan, this to be true. It is my hope the authorities of the RFC will give immediate consideration to the approval of this loan.

The editorial follows:

RFC SHOULD APPROVE LONE STAR STEEL LOAN

There is before the Reconstruction Finance Corporation at this time an application of the Lone Star Steel Co. for a loan of $75,000,000, with which to build at its Daingerfield plant a steel mill which will produce plate steel and pipe. The original plant has been turning out high-grade pig iron for some time.

Pushing this loan through as early as possible is a matter of urgent concern for the stockholders and directors of this independent Texas-owned industrial concern. It likewise is a matter of much importance to every citizen of east Texas and of the Southwest. With the loan, the Lone Star Steel Co. will be able to produce the steel with which to feed Texas and southwestern factories, which in turn will turn it into manufactured goods needed in this area. Without this mill, such steel must continue to be shipped here from the Pittsburgh, Pa., area at great cost.

A long-term loan of $75,000,000 cannot usually be gotten at the ordinary bank—the Reconstruction Finance Corporation is practically the only institution which makes such loans—and this is a very much safer loan than many it makes. In fact this is the type of enterprise for which RFC loans were created.

The building of this steel mill is called the greatest step forward in Texas in a lifetime, ranking along with, perhaps ahead of, the discovery of oil. Such a mill would provide steel for the factories which Texas already has and would provide other factories with material on which to work.

Of even more immediate importance is the pipe mill which would be a part of the improvements provided. This would provide pipe for oil-field operations in the very heart of the oil country. These supplies now are coming from Pittsburgh. The new Daingerfield plant would have $11 per ton on the freight of it shipped in the usual way. But most of large major and independent oil companies would have their own trucks ready to haul the pipe away from the plant as quickly as the newly made pipe becomes cool enough for handling. Drilling operations in many fields in this area are slowed down because of the difficulty of getting necessary pipe. This nearby source of pipe would stimulate drilling over a wide area. Seventy-five percent of the output could be sold in the area within a radius of 400 miles. A survey shows that this urgent demand for oil-field pipe will last for 10 years and that the Lone Star plant can supply only one-eighth of the demand. This insures a steady long-time sale for one of the products contemplated.

Of course, big steel is fighting the building of a steel mill right in the middle of a highly profitable territory, whose trade it has enjoyed alone for so many years. The turning of east Texas iron ore into steel has been a Texas-born idea and enterprise.

East Texas asks for no gift of any kind. It merely asks the RFC to make a safe business loan at a profitable rate of interest. The interest will bring the Government $3,000,000 per year and the taxes on the property will bring the Government another $7,000,000 annually.

To east Texas, the Southwest and the Nation, the development of this great natural resource at a time when the iron-ore beds of the Great Lakes area which supply Pittsburgh are beginning to fail, is of vital importance. It will stabilize prices on steel throughout the Nation and especially in east Texas.

This will bring to east Texas a great new industrial development era. Fabrication of steel products in all of its enterprising cities may overshadow the rich returns now coming from oil.

For the Nation it will mean a great steel-producing area far inland and away from dangers of naval or air attack, which is important in this atomic age. This is important in building up a real defense for the country.

We believe that the $75,000,000 loan sought by the Lone Star Steel Co. is the type for which this Government agency was created. We hope that no time is lost in approving the loan.

On Catholic Education

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by

Hon. James A. Farley, at the dinner opening the drive for St. Brigid's Parochial School fund, Garden City Hotel, Garden City, N. Y., April 20, 1949:

Perhaps it is somewhat venturesome for a man of my background to speak on education before such eminent educators as Bishop Molloy and Father Gannon. All of you probably know that I was actively engaged in politics for over 35 years. Fewer know that I have been engaged in business through those years, except during the 7½ years I served in the Cabinet. Most people associate me with business only for the past 9 years. No one associates me with education. As a matter of fact, I didn't associate myself with it too long. All in all I had 13 years of school, including high school and 9 months in a business college. Most of my education came in the school of life. Because my rating in that school has not been without honors, I feel qualified to speak about education in the world of change.

It may be trite to say we are living in a world of change, yet the ebb and flow of events is such that the truths, concepts and theories of the law of God and the law of man are under calculated attack from men of sinister minds, who grasp power by spread-the disaster-laden doctrine of secularism. A confused and uninformed public opinion makes a nation the ready prey of desperate demagogues. A confused and misinformed mind endangers the soul.

Education, based on our heritage of freedom and justice, is the foundation of any permanent peace for the world. Education, rooted in the laws of God, makes for happiness and salvation. It was not my good fortune to have a Catholic education, but I was happy to provide it for my three children. There was no Catholic school in my Rockland County home. My training in the three R's was in the Grassy Point Grammar School and the Stony Point High School, which were in a small part, in the excellent school system of New York State, and my training in the all-important fourth R—religion—came at my mother's knee and at the hands of gentle young women who drilled classes in catechism.

There are those who profess to see danger in education in the hands of the church. Actually these persons, except for the misguided fellow wanderers, fear the truth, which makes men free. There can be no despotism and no men of vast power where there is freedom—freedom of worship, freedom of speech and of the press, freedom of criticism, freedom of assembly, freedom against unreasonable search and seizure, freedom of work, freedom to own property and freedom to act as freemen.

Our heritage is one of freedom under law. This freedom can be and is taught well in many public schools. I believe most sincerely that there are few scoundrels in the teaching profession. There is, however, not a little confusion within our academic halls. Some would have freedom under the law; license under the law. They forget the laws of God.

Teachers of the world are the stonemasons of world peace. They are patiently building the foundations of lasting peace. They cannot build without the mortar of love and understanding which comes from knowledge of the laws of God. The social and economic problems which must be solved in this country and abroad before a just and lasting peace is assured are staggering in their scope and complexities. Yet progress is coming every day if only in thinking and planning in our classrooms.

Everyone in the teaching profession must take pride in knowing that he is a link in the chain of progress. The work of the teacher in combating ignorance and prejudice never dies, for he trains the minds of those who battle these ancient foes of mankind, and he trains the minds of those who will train future champions down through the ages. Man owes everything to his ancestors and his teachers. It is fitting that both should train him in the way of the Lord.

Freedom under the law is at its noblest when it is freedom under God. We cannot have freedom without religion. There is no freedom without religion. There is no freedom among animals, but only the brute law of survival of the fittest. Without religion man is no more than a brute. Our first President recognized that religion is the soul of the Nation. In his Farewell Address George Washington said, and I quote: "Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports * * * and let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education or minds of peculiar structure, reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle. It is substantially true that virtue or morality is a necessary spring of popular government."

Unfortunately we have a cancerous doctrine on our body politic. Secularism is its name. There are those who would have us believe that the only school where democracy is safe is the school from which God and the things of God are excluded. They would make the law of man supreme.

I am happy that your presence here tonight, the campaign you have planned to raise $450,000 for the erection of Saint Brigid's Parochial School shows that you have not been beguiled by the unholy apostles of secularism. You are taking the words of the father of your country seriously, as you should. You are building a school that will bring the indispensable supports of religion and morality to our State. Your school will be a nursery of religion and morality, as well as the fertile ground of knowledge.

In this connection I would like to return to my experience as a politician. I do not apologize for that profession. It is one in which an honest man may render more service to his fellow man by gaining him security and safeguarding his freedoms than in any other worldly profession. I make exception, of course, to the sacred profession of His Excellency and the reverend fathers, who light the way to everlasting happiness. I must note, however, that politics is the most dangerous of all professions, for in it man is beset by a multitude of temptations for power that may cost him his immortal soul.

Today there is a most urgent need for honest politicians throughout the world. Governments are reaching further into every phase of individual life. Peoples of the world are being beguiled by benevolent governments. Much of this is good and some of it is bad. Benevolence can and has led to despotism. I am not here to discuss this trend, but merely to note it and emphasize that it calls for utmost vigilance on the part of all citizens.

Benevolence in the hands of Communists becomes brutal dictatorship. We should see that benevolence rests in the hands of leaders of religion and morality. This need for Christian political influences in the political life of nations was recognized by Pope Pius XI when he declared: "It is incumbent on all Catholics to prepare themselves prudently and seriously for political life in case they should be called to it." Pope Pius XII deplored the man, "Who either in contempt or because he is discouraged, does not participate in the activities of his country."

In calling for Catholics to engage in political life, the Popes rightfully emphasized that the church is not allied with any party. The church is interested in the morality of all parties. I would like to see more Catholics in politics and more Catholics interested in politics.

As a politician, I would like to see them in the Democratic Party, which is my party. As an American, I do not care what party they are in just so they are active in the party. I know we would have a better country if the morality of the church were exerted on the Government. If Washington were here before you, I think he would sound a warning that sufficient heed is not being given to his plea for religion and morality in Government.

We need and the world needs men of honesty, integrity, intellect, energy and vision in politics. Most of all we need men of religion. For that reason I hope that the campaign you are inaugurating will be a success. The school you will erect will be one in which religion and morality will have a place of supreme importance. And because they will, the children who are to be educated in that school will be given a foundation that will make them better Catholics and better Americans. I hope that a goodly number of the men and women of religion will take an active interest in politics so that they, as better Americans, will make other Americans better Americans and thus help to mold a better world.

The Free Irish

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Manila Bulletin of April 21, 1949:

THE FREE IRISH

The freedom of Ireland has been attained without very much notice in these parts. It is a very significant thing. For more years than perhaps any nation on earth the Irish have been seeking their independence from mother England. Wars have been fought over it, and a fighting rebelliousness has been bred into the Irish. The wonder of it is that the rebel spirit didn't make them bad citizens.

They are not bad citizens, they are good ones. Their traditional rebelliousness against England has endowed them with a rough-and-tumble arrogance tempered with high humor and generousness and sometimes a lush sentimentality hidden by a gruff exterior. They have great capacity for hard work and hard play.

Back in the days of the potato famine a large number of Irish emigrated to the United States. Hunger drove them from their beloved land. The Irish found their place in America. They were troublemakers sometimes, but their people were quick to get into trouble and quick to extricate themselves. They were not the brooding kind. It is a peculiarity of Americans that when any of them can claim Irish ancestry they are proud of it, and others a trifle envious.

The Irish have found their way into almost every part of the world, civilized and uncivilized. As with all nationals abroad, many have done well and some have gone back home the worse for wear. But almost always they are well liked. They get along with themselves and with others. Among them all, at home or abroad, there was that everlasting yearning to be a free and independent nation.

That feeling can be well understood in this country. Last Monday independence

was acquired. It was a great day for the Irish. No longer do they have to be distinguished as citizens of the Irish Free State, which in reality was a dominion status, like Canada's, existing since 1921. With India freed, Britain in all good conscience had to cut the tie. The Irish are now fully free of British rule.

They start their independence with a sound economy. Ireland has always been an agricultural country and there is great demand in England for her beef and other produce of the land. It has an army, a small but strong one, with an air force. Its people are poor individually but they face the future with courage and a strong notion that they will not remain that way for long.

The only regret the Irish have is that the six northern counties of Ulster have not joined the free Irish and still belong to England. That pattern follows tradition, North Ireland has traditionally been distinguished from the Free State. Their politics are not the same and they don't think alike. They are not necessarily quarrelsome, but they wish to go their different ways. It is a commentary on the times and disposition of nations that they have this free choice and privilege.

Price Day's Career

EXTENSION OF REMARKS
OF
HON. LANSDALE G. SASSCER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. SASSCER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the Baltimore Morning Sun of May 3, 1949, on the career of Mr. Price Day, globe-trotting correspondent of the Baltimore Sun, who was awarded the Pulitzer prize for distinguished reporting in the field of international affairs. The State of Maryland is proud of this outstanding journalist who has so graphically given to his readers colorful accounts of vital, renowned events.

PRICE DAY'S CAREER

In gathering the material which won for him the Pulitzer Prize for international reporting, Price Day made one trip around the world, and an additional journey to England.

The longer trip took him to London, East Africa, South Africa, India, Burma, Siam, Malaya, Australia, and New Zealand, and thence across the Pacific to the States.

He was in South Africa at the time Gen. Jan Christiaan Smuts began his unsuccessful campaign to retain the leadership of that country, in India at the time of independence and in Burma when U Saw, a former Prime Minister, went on trial as the engineer of the assassination of most of the Cabinet of that country.

A WAR CORRESPONDENT

In the course of his assignment he interviewed, among many others, Smuts, Mahatma Gandhi, and Jawaharlal Nehru, Prime Minister of India.

He was in the Punjab and in Delhi during the Hindu-Sikh-Moslem riots of the summer of 1947, and reported on those events in dispatches to the Sun.

Before beginning his part in the Sun's study of the British system of nations and dependencies, Mr. Day had served as a Sun correspondent in many areas of the globe.

As a war correspondent, he covered the Eighth Air Force during the winter of 1943–44, and was assigned to the Italian campaign late in March of the latter year.

In Italy, he reported on the offensive that broke the Garigliano-Cassino line in May 1944, the breakout from the Anzio Beachhead, the liberation of Rome, and the campaign up the peninsula as far as Livorno.

From Livorno, he returned south to sail for southern France, and reported the invasion of the Riviera by the American Seventh Army on August 15.

Mr. Day stayed with the Seventh Army until its troops broke the German winter line in the Vosges and reached the Rhine, and then was assigned to write the SHAEF story from Paris, which he did for the rest of the war.

He was the only representative of an individual newspaper present at the signing of the German surrender at Rheims.

COVERED NUREMBERG TRIALS

After the war, he went to southern Germany, made a brief trip to Italy and returned to Germany to enter Berlin with the first American troops.

He remained in Berlin through the Potsdam Conference, and then returned to the States.

In the spring of 1946, he was assigned to the Caribbean, reporting from Haiti, the Dominican Republic, Puerto Rico, the Virgin Islands, and Cuba.

A further assignment that year took him again to Germany, where he covered the Nuremberg trials and developments in the Ruhr and in Berlin. He also visited and wrote from Czechoslovakia and Italy.

There followed the British Commonwealth and Empire assignments on which he has worked most of the time since.

GRADUATE OF PRINCETON

Mr. Day was born in Plainview, Tex., on November 4, 1907, a son of John Walter and Zillah Price Day. He went to grade school in Texas and Chicago, and to public high school in Chicago.

In 1929 he graduated from Princeton University, where he was chairman of the Tiger and a member of the Triangle Club.

After graduation he worked variously as caricaturist, decorator of speak-easies, and minor poet, living in New York and Florida.

In the mid-1930's he began writing magazine fiction, and continued in that field until the beginning of 1942, when he became city editor of the Fort Lauderdale (Fla.) Time, of which his father was editor.

He came to the Evening Sun in August 1942.

He was married to Alice Alexander, of Coconut Grove, Fla., on December 28, 1931, and has three sons, Anthony, 15, who is a student at City College, and Joseph, 12, and Thomas, 10, both pupils at Roland Park public school.

Southwest-American Approves Constitutional Amendment for Abolishing Poll Tax

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. HAYS of Arkansas. Mr. Speaker, Mr. Clarence F. Byrns of Fort Smith, Ark., is one of America's ablest newspapermen. I am glad to have his approval of my plan for compromising the poll-tax issue by constitutional amendment. Under leave to extend my remarks, I include his statement which appeared recently in the Southwest-American:

At last the right-of-way to abolish the poll tax as a qualification for voting has been proposed in Congress—an amendment to the Federal Constitution.

Arkansas' Representative BROOKS HAYS is the author. His resolution would submit to the legislatures of the States an amendment to abolish the poll tax as a qualification for voting in all States. It includes a provision that the amendment shall be withdrawn if all the States which have poll taxes repeal them before the amendment gets the approval of three-fourths of the State legislatures, which is necessary for adoption.

This amendment is the second of a series of "compromise" civil-rights measures which Representative HAYS has been urging. An antilynching bill has already been offered.

In all the controversy about Federal outlawing of the poll tax, people in the South and some in other sections have contended that Congress has no constitutional power to abolish the poll tax. I agree with that view. The Federal Constitution as it now stands fixes the qualification for voting at whatever qualification a State fixes for voters who choose the most numerous branch of its State legislature. The only restrictions in the Federal Constitution prohibit discrimination because of race, color, religion and previous servitude. When Congress attempts to put a new restriction on voting qualifications, it goes beyond its power. That has always been my chief objection to anti-poll-tax legislation. Many of us who oppose anti-poll-tax bills have insisted that the Federal Government can prohibit poll taxes, legally or morally, only when the Federal Constitution is amended to give Congress that power.

Representative HAYS' proposal makes sense. If the necessary majority of the State legislatures approve the Hays amendment then, and only then, Congress will have a right under the Constitution and under a decent regard for the rights of the States to legislate on poll tax.

Only seven States now have poll taxes as voting qualifications. Some of them have the requirement for a poll tax in their constitution. Arkansas had until the election last November. At that time an amendment to the constitution was adopted which gives the legislature power to substitute a registration system as a qualification for voting. The recent legislature did not approve a registration bill. So Arkansas still has the poll tax. There is some difference of opinion as to whether a separate amendment is needed to abolish the poll tax as a voting qualification in this State. I do not think it necessary. The legislature can do that. Others, including Governor McMath, believe a separate amendment is needed to abolish the poll tax as a voting qualification, and such an amendment may be initiated for action at the next general election.

The Hays' compromise measures on civil rights are intelligent and merit serious consideration everywhere. The civil-rights argument is apparently over for this session of Congress. The filibuster victory of southern Democrats and a few Republicans made clear that the civil-rights bill will not pass this session. But the argument will arise again unless some way is found to avoid it. The amendment opposed by Representative HAYS would provide a way to deal fairly with the poll-tax question, and it may be his other compromise proposals will provide a similar solution for the other aspects of this disturbing problem.

Health Insurance

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. CELLER. Mr. Speaker, Albert Deutsch, in the March 19 issue of the New York Post, had a column telling of two opinion polls from the trade magazine American Druggist indicating popular support for President Truman's national health-insurance legislation. Under leave to extend my remarks, I include this column in the RECORD:

RX: HEALTH INSURANCE

(By Albert Deutsch)

Conservative American Druggist publishes the results of two opinion polls offering impressive proof of the growing public sentiment for national health insurance.

One poll reveals that two out of three "opinion leaders" in the United States favor such a system. This poll was conducted by Maurice Mermey, a public-relations expert whose clients include several big drug manufacturers strongly opposed to national health insurance and who is personally opposed to the plan.

Mermey polled 1,500 presidents and program chairmen of citizens' organizations with a combined membership of 40,000,000.

Of those executives who took a position, 67 percent were in favor of national health insurance.

Commenting on the poll, Mermey says:

"This is, indeed, a significant figure, for it foreshadows the possibility of broad grass-roots support for the Truman program. Advocates will also be heartened by the fact that leaders with knowledge of the President's health insurance program favor it more than do other leaders."

Indeed, 79 percent of those who knew details of the plan favored it.

"Advocates of the Truman program can be satisfied with their score among citizen organizations," Mermey concludes, "while opponents have much work and soul-searching ahead."

Another article in the current American Druggist reveals the result of a postal-card poll taken by the magazine's managing editor, Bernard Serbe, among 2,500 druggists. Since the American Druggist is dead set against national health insurance, its article is appropriately entitled: "A Danger Signal. Vote for Truman Health Plan Increases."

The poll shows that, as of February, 16.8 percent of the Nation's druggists favored the Truman health insurance plan, as compared with only 8.2 percent in 1946 and 9.4 percent last December.

The results are especially significant, for the poll was conducted immediately after American Druggist published a debate on the subject between Dr. Morris Fishbein of the American Medical Association and Federal Security Administrator Oscar R. Ewing.

Also significant is the fact that the Truman plan is favored by almost 40 percent of the pharmacists in areas of more than 500,000 population. In Eastern large cities, 50 percent favored the plan.

These percentages are particularly impressive in the light of the constant bombardment of antihealth insurance propaganda to which the average druggist is subject by the big pharmaceutical houses, organized medicine and his own organizations.

Finally, the poll of druggists reveals the same significant fact revealed in the poll of opinion leaders, Managing Editor Zerbe writes:

"The more the retail druggist knows about the Truman proposal for national health insurance, the more likely he is to favor it."

The results of these two polls should vastly encourage the advocates of a positive health program for America. What is called a "danger signal" by the American Druggist and the AMA propagandists should be further intensified when President Truman sends his special message on national health to Congress, now expected within the next 2 or 3 weeks.

A Timely Editorial

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the April 15 issue of the Evangelist, published in Albany, N. Y., which was prompted by a recent speech of James A. Farley, at whose request, I am inserting the editorial, as follows:

Spending billions in the European recovery plan and binding ourselves to the commitments of the North Atlantic Pact, with all its foreboding implications, in an effort to bulwark America's security against the growth of Communist aggression are half measures as long as short-sighted political considerations continue to outlaw Franco Spain. Western Europe and the British Isles can never be restored to economic stability if the whole Iberian Peninsula lacks prosperity. Nor can western Europe attain the stature of an impregnable fortress against the assaults of Soviet inroads unless vitally strategic Spain can be counted on as an ally. The wall of defense against communism can only be as strong as its weakest segment, and Spain alined with the signatories of the North Atlantic Pact would contribute much to both Atlantic and Mediterranean security. All military authorities and straight-thinking statesmen are in agreement in this matter.

The wisdom of former Postmaster General James A. Farley's demand in his address, last Sunday, to the Glens Falls Knights of Columbus, that the United States renew full diplomatic relations with Franco's government and draw Spain into the circle of nations that are avowedly united in opposing the extension of Soviet domination, deserves the attention of those concerned with safeguarding America.

Much of the opposition to Catholic Spain comes from those who foment religious bigotry or from groups and individuals who are known as fellow travelers and have sympathetic feelings toward Russia.

Accounts of religious persecution of non-Catholic minorities have proved to be false. Charges that Franco's regime opposes political liberty and retards the betterment of the mass of the Spanish people is contradicted by facts. Despite terrific pressure and hindrances from foreign sources, Spain, under the generalissimo, has made amazing strides toward recovery.

Devotion to democracy cannot be acceptable as a true basis for the opposition to Franco's regime, while we continue to tolerate diplomatic and trade relations with Russia and its satellite nations.

Mr. Farley, in his Glens Falls address, gave a realistic means of measuring the fitness of our political allies. He said: "It is not a matter of whether we agree with the politics inside Spain. It is simply a matter of whether Spain is essential to the securities of the democracies."

Mr. Farley continued: "The Spanish war is 12 years behind us but I shudder to think what the situation would be today had the Communists gotten control of that nation. The Pyrenees mountains would today be a Communist fortress looking down the throat of Europe; Gibraltar would be a Communist machine gun looking down the throat of the Mediterranean.

"We botched the job of handling Germany and now we are trying to straighten out the wreckage. We cannot afford another error like it in Spain."

Rudimentary hindsight should compel everyone to acknowledge that the freedom-loving nations of the world owe a debt of gratitude to Franco and the heroic Spanish people who, in defending their country against communism during the so-called civil war, saved Europe from Red engulfment and preserved a frontier for democracy.

Franco's intimation that he would welcome a military agreement with the United States should not be flippantly dismissed. Vociferous opponents of Spain's inclusion into any combine of power that would strengthen our national defense are guilty of a grave disservice to America.

Saving Our Public Schools

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. CASE of South Dakota. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Rapid City (S. Dak.) Daily Journal of April 28, 1949:

SAVING OUR PUBLIC SCHOOLS

The Greater South Dakota Association points out that Washington planners back up their proposals for Federal aid for education as necessary by the argument that the States are not financially able to bear the burden.

In answer to this claim the GSDA points out that since the planners began this campaign, the States themselves have increased their financial aid for the public-school system from $1,656,798,000 to $3,124,550,000, or an increase of $1,467,751,000, or five times the $300,000,000 proposed by the Federal planners to save the schools.

There are few, if any, States that are not able to support their public schools. Some of them may not be alert enough in the matter. Among these we might mention South Dakota. Recently the South Dakota Legislature has been appropriating $3,000,000 in addition to the distribution of State aid from the interest derived from the State school fund. Unquestionably that amount is insufficient. Undoubtedly, South Dakota should institute a study of State aid to public schools. What other progressive States are doing might be a revelation to the people of this State.

Congressman CASE, we believe, has a far better plan for Federal aid to the public schools than any other that has yet been proposed. His plan will avoid whatever evil there is in the socialist trend of Federal aid in this particular matter. Moreover it is a natural. It will not tax the citizens of the country to further support their immensely valuable system of public schools, but will actually make use of resources that already belong to the people.

CASE'S plan is to transfer to the public schools of the Nation the proceeds from the development of tideland oil. In Minnesota a wise provision of this kind, put into the State constitution in the early days, now brings to education in that State large sums from iron ore found on State school lands.

The Supreme Court of the Nation says that tideland oil belongs to the Nation. As this oil is developed, Congressman CASE proposes that the proceeds be distributed to the schools of the country on the basis of the number of pupils in school in each district. He limits the distribution to $500,000,000 per year, but this figure can be changed if the need for it develops.

The proposal should have the most careful consideration. It appears to have extreme merit along several lines.

It may have a strange combination of opposition. Private industry may object to losing the rich plum of tideland's oil, and the statesmen who hope to make political hay with a new bureau to levy more taxes on the people in the name of education will also object.

If Congressman CASE's bill proves feasible, it will be vastly more substantial help to education than is now proposed, and will relieve the people of the Nation, already overburdened with taxes, from what will otherwise in the end be another billion or more addition.

Is the President Above the Law?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, yesterday's piece by David Lawrence raises the question of Mr. Truman's recent threat to purge those who do not do his will; to reward those who obey his wishes.

TRUMAN'S PATRONAGE THREAT HELD POSSIBLE VIOLATION OF LAW—CRIMINAL CODE IS CITED ON REWARDING CONGRESS MEMBERS FOR VOTE

(By David Lawrence)

Has President Truman committed an offense for which, under the Constitution, he could be impeached?

The laws of the United States forbid any person to offer any Member of Congress any bribe or thing of value to influence the vote of such Member. The crime is punishable by fine and imprisonment.

President Truman told his press conference last Thursday that the way that Democratic Members of Congress voted on repeal of the Taft-Hartley Act would be a test which he would apply in filling jobs sought by Members of Congress for their constituents.

Since Mr. Truman controls the so-called patronage of the Government, this is a threat to Members of Congress if they do not vote as the President dictates, and it is a promise of reward to those Members who obey the dictation. Here is what the United States Criminal Code says:

"Whoever promises, offers, or gives any money or thing of value, or makes or tenders any check, order, contract, undertaking, obligation, gratuity, or security for the payment of money or for the delivery or conveyance of anthing of value, to any Member of either House of Congress, or Delegate to Congress, or Resident Commissioner, either before or after he has qualified, or to any person with his consent, connivance, or concurrence, with intent to influence his action, vote, or decision on any question, matter, cause, or proceeding which may at any time be pending in either House of Congress, or before any committee thereof, or which by law may be brought before him in his capacity as such Member, Delegate, or Resident Commissioner, shall be fined not more than three times the amount of such money or value of such thing or imprisoned not more than 3 years, or both."

PATRONAGE USED AS CLUB

All Presidents in the past are suspected of having used patronage as a club over members of their party but it is doubtful whether any Chief Executive said so in so many words or offered any Federal jobs specifically in return for a vote by Representatives or Senators on a pending measure. If anything like that has ever happened, it certainly has never been publicly admitted as it was by Mr. Truman last week.

The impeachment article of the Federal Constitution says that any President who is tried and convicted for "crimes and misdemeanors" may be removed from office.

These references to the laws of the land and the Constitution are cited, not because either House will bring impeachment proceedings but to indicate what a hollow mockery has been made of the laws of the United States by politicians.

Today the materialistic background of Federal politics takes it for granted that almost anything goes. A few days ago there were rumors on Capitol Hill that the administration was offering favors in order to line up votes for the repeal of the Taft-Hartley Act. There were reports about public-works projects that were being brought forth from old lists and dangled before Members whose districts and constituents would benefit by such Federal expenditure.

AIM TO PUNISH SOUTHERNERS

Also, a group of proadministration Democrats openly declared that the time had come to punish southern Democrats by ganging up on appropriations needed by the southerners. There seems to be no hesitancy in emphasizing these sordid aspects of present-day politics.

Now, when the President of the United States himself enters the auction of votes and indicates that Federal jobs will be allotted to Congressmen and Senators for their loyalty and in reality in exchange for their votes, it is natural for the administration henchmen to grow bolder on Capitol Hill in their offers of things of value.

One wonders where conviction and principle have gone. One wonders whether the much-boasted democracy and representative government, in its defects, differs very much under the skin from the totalitarian systems where the executive controls the legislature and purges or punishes those who do not go along with his will.

It is a sad commentary on the lack of ethics in government. But, fortunately, only a minority will be affected by the White House threats. The vast majority of Members of Congress will not be bribed or coerced into altering their convictions.

Our Educators' Responsibilities

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following from the Framingham News, Framingham, Mass., Friday, April 22, 1949:

DR. BRIN CALLS SCHOOLS THE KEY TO AMERICA'S DEMOCRACY

The Massachusetts Principals of Junior and Senior High Schools and the Association of Deans last night at a joint dinner meeting at the State Teachers College here were called upon by Dr. Alexander Brin, vice chairman of the Massachusetts Board of Education, to wage a militant public-opinion campaign with "energy, determination, and resourcefulness" to awaken apathetic and indifferent citizens to the realization that no institution in the State and the Nation, vital to the maintenance of the American ideal, can compare with the American system of schools as the key to America's survival as a democracy.

He said that the schools represent the greatest single influence and resource for the preservation and advancement of the character and quality of the American brand of liberty and democracy, which nourished America's progress and created our unique surpassing civilization as the last best hope on earth.

Taking as his theme, "America's Destiny in a Changing World," Dr. Brin, who is also the senior member of the State board of collegiate authority, and editor and publisher of the Jewish Advocate, delivered the principal address, and asserted that "we cannot neglect and starve the school systems of the State and Nation, without imperiling the inner defenses of the structure of democracy itself."

Pointing out that the greatness of the Nation lies not in material wealth alone but in the valor of mind and the character of citizenship, the speaker deplored the loss of many able and intelligent teachers to education who are daily joining the procession from the profession as the greatest potential danger of the threat that American democracy faces disintegration from within.

COUNTERACT FOREIGN IDEOLOGIES

Against the barrage of propaganda for the minds of our young people, Dr. Brin advocated the establishment of courses and chairs in democracy in public and private schools and colleges to counteract the infiltration of foreign ideologies which are threatening to mislead unsuspecting Americans in their conception of true Americanism.

As a further step to make our Nation propaganda-proof and propaganda-wise the speaker urged a large network of neighborhood forums and study groups in every school district as a prime requisite to develop the clarity and power of thought processes and a balanced emotional outlook so that students may protect, with argument and reason, the democratic institutions in the light of current developments in world affairs.

He said that current events should have a place as an important subject in every school curriculum, so to instill in the pupils an interest and appreciation of the times we live in and what is happening currently all over the world, for the laws of today are the history of tomorrow and the pupils of today must be trained to take their places in the world of tomorrow.

He asserted that it was the duty of the schools to teach the great liberties which Americans enjoy, how we got these liberties and what duties and responsibilities these liberties impose, and that we must point out the importance of making it clear to students the ways in which these liberties are threatened and all too often violated. The teachers, he said, should be specific to show where and when human rights are trespassed.

Dr. Brin said the schools should teach the history of tyranny and the facts about governmental systems which compete with democracy, and we should teach no abstractions and generalities but the actual practice

of democracy in daily living. He advanced the deliberate indoctrination for American democracy of children and youth from the kindergarten to the last year of the university, which would include understandings, beliefs, and loyalties with respect to the basic and abiding principles of the American way of life.

LAST GREAT FORTRESS

With a warning that if the pattern of American democracy is to be saved and the causes and circumstances of the decline and disintegration of the old world are not reproduced in this last great fortress of liberty and freedom, Dr. Brin said that it must be done now by the mobilization of all forces that believe that free government to be the best way of life, by rallying to the support of the schools.

He said in the present swift race between education and catastrophe it is our supreme duty to safeguard the deep and abiding faith of the American people in education which began 19 years after the Pilgrims landed here, when they founded Harvard College. Whether democracy lives or dies will depend on the human personality and the character of today's students.

He said that America, may be the last battlefield on which will be fought out the issue whether democracy shall survive or perish. "America is the center and the hope of the world, and we must not only extend the frontiers of democracy in many parts of the world, but to improve democracy at home, which is to serve as a model and inspiration for other countries," he declared.

Dr. Brin warned against the paralyzing pessimism which is hampering the progressive creativeness of the American people to constantly widen and expand democracy and build a better and finer Nation. He said that this is the time to lay the foundation for a richer, broader, more useful national life for ourselves and our children and future generations. "It is up to the educators to stand up against the forces of defeatism, despondency, and despair, and to proclaim that civilization is not ringing down the curtain, and that it is a privilege to be a part of the tremendous times and continue to build a better world on the foundation of justice and peace, and to bear in mind that the very life-spirit of American democracy is progress and it must not be abandoned. We must keep the beacon light of democracy burning brighter than ever, for its very rays are potent to destroy all subversive forces that come within its range.

SERVICE TO COUNTRY

Referring to the recent international mid-century convocation of the Massachusetts Institute of Technology, Dr. Brin said, "The convocation has rendered a service to the Nation and to mankind of far-reaching spiritual import by keeping the beacon light of creative thought, with freedom of teaching, freedom of learning, and freedom of utterance as an inalienable right to search for truth. It was a demonstration that our Nation is still a center of light and learning, an intellectual powerhouse in which knowledge as a mighty influence, under the tradition of American freedom, all men are free to build a statelier, finer civilization to be."

Dr. Brin prefaced his address by painting a first-hand world picture of the privilege of living in the United States with a résumé of conditions in European nations as he found them through personal observations and experiences of a recent 2-month tour, which covered 25,000 miles of the European Continent. He said he saw no immediate war on the horizon and that he was convinced that the American spirit and the classic essentials of American democracy are gradually conquering many parts of the world.

Dr. Walter P. Downey, headmaster of the Boston English High School and chairman of the Massachusetts Board of Education, acted as toastmaster.

DISCOVERY OF ATOMIC FISSION

Emphasis was focused on the scientific discovery of atomic fission and its importance in the modern world, in a panel discussion held yesterday afternoon at the Framingham State Teachers College as the annual conference of high school principals and deans went into the second day.

Participating in the discussion under title "Nuclear Fission in Secondary School" were chairman Edgar J. Morgan, principal of Plymouth High School, Dr. Fletcher G. Watson of Harvard Graduate School of Education, Principal Charles M. Frolio of Abington High School, John H. Packard, head of the science department of Plymouth High School, and John G. Read of the B. U. School of Education.

One important point gleaned from the consideration of this topic was the feeling that there was a necessity for providing opportunity for high school students to learn the general background and to gain some understanding of the nuclear fission discovery and its meaning.

Earlier yesterday afternoon a panel discussion was held over the radio on general school problems. Participants in this program were Principal John S. Collins, of Quincy High; Principal Mayo M. Magoon, of Framingham High School; and State Supervisor of Education A. Russell Mack.

Another outstanding speaker during the afternoon was Martha H. Biehle, operations officer of the International Refugee Organization, who described the problems which the IRO tackles and the number of people it must and has handled.

The rest of the day was taken up with special group meetings, with a large number of reports on a variety of subjects having to do with education being given.

OFFICERS ELECTED

Two local educators were elected by their colleagues at association meetings held yesterday afternoon. Dean Dorothy Larned, of the State Teachers College, was chosen president of the Massachusetts Association of Deans and Francis J. Cavanagh, principal of Saxonville Junior High school, was selected as president of the Massachusetts Junior High School Principals Association.

Other officers chosen among the deans were as follows: Vice president, Helen Mulcahy, dean of girls at Lowell High School; secretary, Ruth Rothenberger, dean of Lasell Junior College in Auburndale; treasurer, Virginia Nye, counselor at Weymouth High School; one new director, Prudie Moore, associate dean of admissions at Northeastern University. The deans also adopted a revised constitution at their meeting.

Also elected to serve among the junior high-school heads were the following: Robert Perry, of Reading Junior High School, first vice president; Prescott Sawyer, principal of Normandin Junior High School in New Bedford, second vice president; H. Edgar Pray, of Bigelow Junior High School in Newton, third vice president; and Belding Jackson, of Classical Junior High School in Springfield, secretary-treasurer.

Reports were heard this morning on various subjects. Discussions on television and the use of wire recorders, carried on by Principal George A. Wilson, of Quincy High School, and Principal Donald Dike, of Athol High School, respectively, indicated that immediate employment of such facilities was unlikely.

With regard to television, it was revealed that while many programs which would be useful for educational purposes are being planned, up to the present, programs have not been scheduled at times when they could be utilized for such instructional purpose.

Legislation To Curb Unions Needed

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, just as other individuals and other organizations need legislation to regulate their activities, so labor leaders and unions are not above the law. Nor should they be permitted to ignore it.

A news article and an editorial from a Washington paper of last evening illustrate my point.

The news article reads:

BENDIX STRIKERS FOIL ATTEMPTS TO REMOVE FOUR CARS OF DIES

SOUTH BEND, IND., April 23.—An attempt by sheriff's deputies to move four freight cars out of the struck Bendix Aviation Corp. plant was abandoned temporarily tonight because of union resistance.

Two major automobile manufacturers, Ford and General Motors, had obtained an order from Circuit Judge Dan Pyle for removal of the cars. They are loaded with dies used in making automobile parts.

Sheriff Stephen C. Hipsak attempted late today to carry out the order. But massed members of local 9, CIO United Automobile Workers, had blocked the Bendix railroad spur with debris and refused to allow a Diesel locomotive to pass.

Millard E. Stone, Bendix industrial relations director, said no further effort to move the cars would be made until attorneys for Ford and General Motors carried out their expressed intention of getting an injunction. This appeared unlikely before Monday, with Judge Pyle's court closed for the week end.

UNIONISTS MASS AT PLANT

The sheriff said that if an injunction were issued he would arrest anyone who interfered with removal of the cars.

The union members had massed at the plant in response to an appeal broadcast by local 9 officials over a South Bend radio station this morning after Judge Pyle issued the order for removal of the cars.

Police and sheriff's deputies patrolled the streets around the plant after the radio summons was broadcast, but reported no violence.

Sheriff Hipsak said he examined the contents of the four freight cars after getting the order for their removal, and found their contents were dies as specified by Ford and General Motors in their petition.

The sheriff said that after examining the cars he notified union leaders of his intentions to remove them. The union officials refused to permit their removal but the sheriff ordered the locomotive sent to the plant gates anyway, he added.

WOULD NOT FORCE ENTRANCE

Sheriff Hipsak said he would do nothing to cause violence and did not attempt to force an entrance to the plant when strikers stood firm against allowing the locomotive to enter and pick up the cars.

The editorial is as follows:

THE STRIKE AT BENDIX

The current strike by the CIO United Auto Workers at the Bendix Aviation Corp. plant in Indiana is not going to throw the national economy into a tailspin. But the strike is important nevertheless for the light that it sheds on the philosophy which underlies the administration's fight for a toothless labor law.

In its drive to get rid of the Taft-Hartley Act, the administration is proceeding on the assumption that, in the main, legislative restraints on union activities are undesirable. The theory is that unions and union leaders can be depended upon to do the right thing, and that it is not necessary to regulate them by statute.

One of the innocent victims of the Bendix strike is the Hudson Motor Car Co. Hudson, along with General Motors and Ford, relies on Bendix as a principal supplier of brakes. The latter two have not been hurt because they were able to remove from the Bendix plant the dies used in making the brakes for their cars. But Hudson was less fortunate.

When other efforts failed, Hudson obtained an order from a State court requiring that its dies be surrendered. But UAW pickets forcibly prevented the local sheriff from carrying out the court's order. Walter Reuther, UAW president, accuses Hudson of trying to make political capital out of the situation, but he discreetly ignores his own union's defiance of a judicial order.

This is not an isolated instance of lawless union activity. The same thing, or similar things, have happened time and time again. And if the facts were faced candidly, the advocates of the doctrine that unions would not abuse their power if permitted to do as they pleased would find themselves without a leg to stand on.

The necessity for a little thinking on the part of the union rank and file employees in the Bendix Co. is apparent when we note another news story from the Chicago Tribune of May 2, 1949:

BENDIX STRIKERS FEAR JOBS HAVE GONE WITH DIES—COMPANY REPORTS LOSS OF AUTO BUSINESS

(By William Clark)

SOUTH BEND, IND., May 1.—The strike of 7,500 workers in the huge Bendix Aviation Corp. plant went into its twelfth day today with some of the strikers fearful that removal of brake dies from the plant may mean permanent loss of their jobs.

Thirteen truckloads of the dies were taken through sullen but unprotesting picket lines yesterday by Hudson Motor Car Co. and Kaiser-Frazer Corp., who planned to operate them elsewhere to restore the flow of brakes to their assembly lines. Observers doubted whether any of the dies, or more than a part of them, ever would be returned to the Bendix plant.

The corporation's division in South Bend, the Bendix Products division, manufactures aircraft parts in addition to automobile brakes. It is said that if the strike should cause Bendix automobile manufacturing customers to take their brake business elsewhere for good the plant's normal force of 7,500 may be reduced by as much as 2,000 workers.

BUSINESS ALREADY LOST

"We have already lost substantial business" said Millard Stone, Bendix industrial relations director. "Every day the strike goes on we lose more."

The current strike, which began April 20, is the second phase of a work stoppage that began earlier in the month when Bendix discharged 47 workers in a brake department for an alleged slow-down. That followed lengthy bickering between the company and the union, Local 9 of the CIO United Auto Workers, over the manner in which the 47 men were submitting time reports. When the 47 were discharged, the rest of the plant workers walked out in protest but walked back in again a few days later after the company filed a damage suit against them for contract violation. That was phase 1.

The present phase began when the union expanded its complaint about the discharge of the 47 workers into an accusation that the company was demanding a speedup in their department. The union handed the company an ultimatum demanding an adjustment of pay rates in the department, reinstatement with full pay of the men fired, and withdrawal of its damage suit. The company refused and the current strike began. Efforts at mediation to date have failed to modify the stand of either side.

THIRTY-FOUR THOUSAND LAID OFF

The halt in production of brakes has caused some 34,000 workers in the automotive industry to be laid off. April 23 General Motors Corp. and Ford Motor Co. tried to remove dies used for brakes on Cadillac and Lincoln cars, but 500 pickets blocked the railroad spur line into the plant with grease, coal, ties, and themselves. Two days later, after the companies obtained a writ of replevin in circuit court, the dies were removed by truck without violence.

Hudson's first attempt to remove its dies last Thursday also were blocked by pickets who refused to break their double line in front of the truck entrance gate. Hudson obtained a Federal court injunction restraining the union from interfering with the removal operation, and a circuit court order to Sheriff Stephen C. Hipsak to show cause why he did not enforce a writ of replevin to get the dies out. The union's international headquarters warned the local not to risk a contempt of court charge on the Federal injunction. Yesterday's successful removal of dies by both Hudson and Kaiser-Frazer followed. Hudson attorneys indicated they would withdraw their request for a permanent injunction and their suit against Hipsak.

The strike has cost the Bendix employees more than $1,000,000 in wages. Downtown merchants say it already has been reflected in their business.

Radio Broadcasters

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. KEOGH. Mr. Speaker, it is gratifying to know that the House on yesterday unanimously adopted the House Resolution 106 expressing its gratitude to amateur radio operators. Along the same general line, I have been requested to ask permission to insert the enclosed statement of W. L. Gleeson, president of the Broadcasing Corp. of America, Riverside, Calif., and at the request of the House Committee on Interstate and Foreign Commerce, I am pleased to comply with that request. Mr. Gleeson's statement is as follows:

Here's a news item that deserves your investigation and careful reporting as a case of real justice to a fine group of unselfish heroes.

The radio broadcasters are the most abused and worst treated of all American businesses. Especially is this true of about 1,500 independent stations.

Thousands of business firms and commercial-trade associations spend millions each year in printing, labor, and postage on material to be sent to radio stations, and especially to announcers and program people of the stations, in hopes their material will be used, and thus they can gain radio publicity without paying for it. Many of these, when called on for a part of their advertising budget for radio, say the firm in question does not believe in radio.

This condition goes clear on down to the local communities where thousands of advertisers who never question paying other advertising media expend every possible effort to get radio for nothing.

The Government is the biggest abuser of the radio broadcasters. The Government thinks nothing of paying transcription companies for making transcriptions of programs they expect the stations to run free of charge. While it subsidizes the air lines, it pays telegraph, telephone, and railroad companies for their services, and spends eight to ten millions in magazines and newspapers each year in recruiting, with little of the recruiting going to radio. It is expected to work free.

The telephone companies and radio-set manufacturers are real bad ones in that the broadcasters pay the telephone companies about $25,000,000 each year for broadcasting circuits. Also, the telephone directory advertising section of the phone book is one of radio's biggest competitors. Yet the telephone companies, like the railroads, while spending millions in every conceivable paper down to the throw-away sheets, seldom recognize radio, even though it is a top advertising medium. The same holds true for radio-set manufacturers, even though their very livelihood depends on the radio broadcasters.

Utilities usually say, having no editorial potential they don't need to use radio, that their money is spent more for editorial protection than for advertising value.

Radio broadcasters outperformed all public-information media during the war, and it appears now the businessmen are quick to forget this fact, and that Congress has forgotten it, too.

Radio is the most criticized of all businesses and least deserves this treatment, for if a survey were made, it would be found that the radio-broadcasting industry is made up of the most unselfish and self-sacrificing men found in any industry of the United States—a group of businessmen who work harder than any other, trying to please and serve the American people and their Government.

Yes, the broadcasters of this Nation, especially the small independent local and regional station operators deserve a better break, better support, and appreciation from American business, the American people, and their Government.

The sacrificing broadcaster stands in the front line of your national defense. You'll need him badly some day when he is needed to warn you and your family that the enemy is coming, so be smart and give him your support now while you can. Other means cannot do this for you—only your local radio broadcaster. Treat him equally with other advertising media now, and thank God for him when emergency comes.

British Film Quota

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. KING. Mr. Speaker, under unanimous consent to extend my remarks, I include a resolution adopted by the Motion Picture Industry Council on April 6, 1949, concerning the British film quota, which discriminates against the United States:

Faced with the greatest unemployment in the history of Hollywood, in large part due to discriminatory trade barriers set up by

the British Government, the Motion Picture Industry Council, representing every major labor and management group, urges the Government of the United States, through the State Department, to enter immediate negotiations with the government of the United Kingdom, to eliminate these practices which have injured the motion-picture industries of both countries.

We are sympathetic to the postwar difficulties of Great Britain and the great sacrifices of the British people, as is evidenced by the dollar remittance agreement negotiated by Eric Johnston and James A. Mulvey representing the American motion-picture industry. This agreement was entered into at a considerable sacrifice to the American industry.

Notwithstanding, the British Government, shortly after the conclusion of this agreement, broke faith with the American industry by doubling the required playing time of British pictures on the screens of Great Britain. It had been clearly understood at the time the agreement was negotiated that the then existing quota of screen time would not be disturbed.

The raising of this quota did not in any manner help to solve the British-dollar problem. Its only result has been to injure the American industry, deepen the plight of British exhibitors, and add to the unemployment among British film workers. Unless these restrictions are part of a program aimed at the destruction of the American film industry in the world market, we are unable to understand their purpose.

We ask the State Department to take this action under the authority of the General Agreement on Tariffs and Trade and of the International Trade Organization Charter.

Article IV of G. A. T. T., which deals with motion-picture quotas specifically provides:

"(d) Screen quotas shal be subject to negotiation for their limitation, liberalization, or elimination."

A similar provision is contained in article 19 of the ITO Charter.

There is thus complete authority and justification for the Department of State to act. It should promptly negotiate with the British Government to bring about substantial reduction of the present iniquitous quota which artificially restricts playing time of foreign pictures in British theaters.

We express our gratitude for the efforts of California's Senators and Congressmen and other outstanding legislators and members of the administration pressing for action.

CECIL B. DEMILLE,
Chairman, Motion Picture Industry Council.

(Including the following member groups: Hollywood AFL Film Council, Independent Office Workers, Motion Picture Producers Association, Screen Actors' Guild, Screen Directors' Guild, Screen Writers' Guild, Society of Motion Picture Art Directors.)

Assault and Flattery

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from the broadcast entitled "Assault and Flattery," by B. S. Bercovici, over radio station WOOK, Washington, D. C., April 28, 1949:

The Washington Star yesterday printed a letter to the editor from a reader. It is a strange letter and needs to be reviewed not necessarily for its contents, but for a kind of presumption on the part of the writer. All kinds of people write to the editor about matters which interest and often trouble them, and many of those communications are very interesting and enlightening. As a matter of fact, some letters are more enlightening than some editorials. Let me quote the first paragraph from this particular letter so you may get an idea as to why I say it is an out-and-out presumption: I quote: "As a representative of Syria to this great country, it is obviously my duty to advise my government about everything which serves the interest of both our people." So far so good. But it goes on to say, and I quote again: "It is equally my duty to enlighten the American public—when the opportunity arises—about matters that influence the policy of their Government toward my country and its people. Signed, Faiz El-Khouri, Minister of Syria." The rest of the letter may or may not interest you. What is of interest is that the representative in this country of another government assumes or presumes it to be his duty to talk to the American public about matters that influence the policy of their Government toward his country.

In other words, if by any chance Mr. Faiz El-Khouri should disapprove of any segment of our Government policy, he assumes a right to go directly to the people and complain. Obviously, he thinks it is his duty to inform his Government about matters of concern to both peoples, but I say it is neither his duty nor his privilege to deal directly with the American public on matters which should by right and according to protocol, be brought to the attention of our Government. An ambassador is not an agent of public propaganda. His mission is not one of direct contact with the people. He is expected to deal in the name of his Government with the government of the country to which he is assigned. It is not his business to talk directly to the people. If he has any complaint, it is his duty to take it to the Secretary of State, or if he wishes to go higher, to the President. It is neither ethical nor good diplomatic manners to take up matters with the people through the medium of the press. Obviously, he has a grievance. His grievance is one against an editorial printed in the Star of April 25 on the subject of the Jewish Appeal. He does not like that appeal. Apparently he thinks the United States Government should do something about it. In writing the letter to the editor about matters which influence the policy of our Government, Mr. El-Khouri appears to think that if nothing can be gained from protesting to the State Department, he has the right to go directly to the American people. Sometime ago one of our representatives to a foreign government committed the faux pas of trying to influence elections in that country. The result of the elections was the very opposite of what our representative wished it to be. Soon after that the man was recalled. He had committed a breach of diplomacy. Many years ago a foreign representative to this country allowed himself to express his opinion on our elections. His recall was immediately demanded, and he went home with tail between his legs. The President shapes our foreign policy. The State Department's duty is to make it work. It appears that this gentleman does not subscribe to our foreign policy nor to the way this policy is implemented; therefore, he takes it upon himself—as he puts it—to enlighten the American public about matters that influence the policy of their Government toward his country and its people. The Jewish Appeal has nothing to do with the foreign policy of this country. It is a benevolent and private expression on the part of those who wish to donate money to those in Israel who need a helping hand. Those in the United States who wish to give, do so; those who do not, refrain from helping. The Government has nothing to do with it. It seems, however, that Mr. Faiz El-Khouri thinks the Government is being influenced by this appeal and by the Star editorial, and that the State Department has been asleep at the switch. In which case, the Syrian representative thinks it is his duty to administer a spanking to the Government through the medium of the press and by direct appeal and protest to the American people. His attitude is unique. I don't recall a similar incident except the one I told you about and that was a long time ago, and something was done about it.

The State Department should make a note of this. For, if such a precedent is established, representatives of other nations will assume the right and consider it their duty to go direct to the public and complain about our Government's inability or unwillingness to deal with problems which affect our country and theirs. Now, what is it that bothers this gentleman? He claims that dollars collected here through the United Jewish Appeal are not going to be used in a worthy cause, but that they will go to buy arms from Soviet Russia and its satellite countries with which to fight the Arabs. Thus, he adds, the Jews now have a powerful army and are applying in Palestine against the Arabs the horrible lessons they learned from Nazi Germany. Let us look at this charge. The Jews buy arms wherever they can get them, and I hope the confused Syrian representative will not claim that his Government has not gone out into the open market to buy guns and ammunition—how else could they have undertaken an invasion of Israel? They were lucky enough to be able to get them from the British, and some of those arms looked suspiciously like American equipment formerly shipped to England under lend-lease. Also, the Syrians and the other Arab states invited the war. At no time since the state of Israel was established did the Israeli Army find itself invading neighboring soil. The Syrians and the Lebanese and the Iraquis and the Transjordanians and the Egyptians sent their armies into Palestine—and not, as one Israeli official said, in response to an engraved invitation. The Arab armies were sent back reeling, and I suspect the Syrian representative feels the defeat very keenly. The only Arabs the Israelis have killed were in military uniforms and on Israel's soil without having been invited. To say that the Israeli are applying in their country methods they learned from the Nazis is a callous and unfounded charge. No one has been able to produce factual proof, and if Mr. El-Khouri had the proof he would have incorporated it in his letter. American press representatives have at no time even hinted that the Israel Government has been guilty of oppression. Mr. El-Khouri speaks lightly of the lessons the Jews have learned in Nazi Germany, forgetting that the Jews paid with 6,000,000 lives. People who have suffered such horrors will not use similar methods in their own country. Originally I did not set out to discuss the gentleman's charges, because they are unfounded and also because they have been exploded on numerous occasions in the past. What I thought necessary was to bring to the attention of the American public the fact that a foreign representative had gone way beyond his prescribed duties and presumed to bring a matter of policy to the attention of the people over the head of the State Department. I thought the State Department might be interested.

Aid to China

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mrs. DOUGLAS. Mr. Speaker, during the recent consideration by the House of legislation to continue the availability of funds for assistance to China, the valuable work being carried on under the Joint Commission on Rural Reconstruction, an enterprise in which the United States and China cooperate, was mentioned.

Unfortunately, the press of time made it impossible to discuss this topic fully. I believe, however, that many Members of this body will be interested, as I was interested, in becoming more fully acquainted with the activities of this agency. I am therefore taking this opportunity to bring to the attention of the House some documents which tell the story more fully than we had the opportunity to tell it during debate.

The first document is a letter to the President of the United States, dated March 25, 1949, from one of the American members of the Joint Commission, discussing broadly the significance of the rural reconstruction program.

The second is a report on the progress of the rural reconstruction program covering approximately the first year since the enactment of the China Aid Act of 1948. It is preceded by a summary and is followed by four annexes.

I am also including three press releases issued by the Economic Cooperation Administration giving information on particular aspects of the joint program of rural reconstruction.

These documents give an encouraging view of the oportunity for help to China wherever it remains free of Communist domination.

CHINA PROGRAM DIVISION,
ECONOMIC COOPERATION ADMINISTRATION
Washington, D. C., March 25, 1949.

The PRESIDENT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: In view of the attention currently being paid to United States policy with respect to China, it appears appropriate, as members of the Joint Commission on Rural Reconstruction appointed by you under authority of Public Law 472, that we present to you directly our views concerning a continuation of United States aid to the program of rural reconstruction being developed by this Commission.

Our opinion is that interests of the United States would be served by a continuation of aid to this program in territory outside of Communist control as long as conditions permit an effective operation. Present indications are that such conditions will continue in substantial parts of south and west China for a period of between 6 months and 2 years or more.

In spite of serious difficulties thus far experienced, the Joint Commission has succeeded in establishing the initial phases of a substantial program aimed at improving the living conditions of China's rural people. One important part of this program aids efforts to increase the production of basic foodstuffs, helping China itself to meet existing shortages now being met in part through United States aid. With assistance from the Joint Commission, important irrigation and dike repair projects will be completed by May 30, 1949; a wide-scale program of seed distribution is being started; and a program for the control of important diseases of work cattle and swine is being carried out in several provinces.

Another important part of the Joint Commission's program consists of aid to significant centers developing a broad fundamental program of rural reconstruction, related to the improvement of agriculture, farm tenancy, education, health, and local government administration.

One such center is the project of the Mass Education Movement in Szechwan Province sponsored by Dr. Y. C. James (Jimmy) Yen. The commission also is assisting an important center building a similar program around a land reform project established under the National Government, and a third center patterned after the program of agricultural extension and home demonstration developed by the United States Department of Agriculture. It is expected that experience gained in these centers will provide sound suggestions for a program to be developed on a much wider scale in accessible parts of China.

An indication of the interests and possibilities in this program in China may be seen in the fact that, as of February 25, 1949, a total of 397 applications for assistance to specific projects had been received. At that date the commission had acted favorably on 37 of them. Among those not yet acted upon favorably are a large number of sound projects worthy of consideration. Other requests continue to come in.

A continuation of United States assistance to this program would present concrete evidence of our country's continued interest in the people of China, especially in the welfare of the large mass of China's population living in its rural areas. Aid to this program has thus far been well received in China and its continuation should help retain the good will of the large number of Chinese who remain friendly to this country. By helping to solve important problems of the Chinese people, such aid, furthermore, would strengthen the position of elements in China that still are resisting Communist domination. Its objectives, of course, are closely in line with those of your excellent statement bringing out Point IV of your inaugural address.

For the future, effective participation in these efforts by the United States will require not only technical assistance but also funds to help meet internal costs of certain operations in the program. Such assistance is being provided at the present time from counterpart funds made available in connection with the ECA program in China. Largely as a result of the rapidly growing inflation and the general deterioration in conditions it has become increasingly difficult to obtain such funds for the purposes of this program. The situation now is such that arrangements must be made to provide United States dollar support to finance a large part of what help is given by the United States.

Due to the circumstance that the other United States member of this commission, Dr. John Earl Baker, is in China, I am presuming to write this letter as though coming from both of us, which I am sure would have his full approval.

Respectfully,

RAYMOND T. MOYER,
Member, Joint Commission on Rural Reconstruction in China.

SUMMARY OF REPORT ON THE PROGRAM OF RURAL RECONSTRUCTION IN CHINA PROVIDED FOR IN SECTION 407, CHINA AID ACT OF 1948

In accordance with authority given in section 407 of the China Aid Act of 1948, an agreement was entered into between the Governments of China and the United States, signed on August 4, 1948, which provided for the establishment of a Joint Commission on Rural Reconstruction, having authority to formulate and carry out a program of rural reconstruction in China.

It was hoped that an energetic development of such a program would contribute to basic improvements in the living conditions of China's rural people, which gradually would be reflected in a greater measure of internal stability.

By the time preliminary arrangements were complete and the Joint Commission assembled, just 6 months remained of the year for which authority was granted by the above act of Congress. Furthermore, in carrying out its responsibilities, the joint commission encountered unusual difficulties arising from rapid deterioration in the political, economic, and military situation in China, which delayed progress in developing the program.

Nevertheless, steps have been taken to initiate a substantial program. The plan adopted placed special emphasis on efforts to increase agricultural production and to develop, in selected areas, a broad integrated program of rural reconstruction aimed at the improvement of agriculture, adult education, rural health, local government administration and farm tenancy. To date, active support has been given by the commission to projects in irrigation and dike repair, seed multiplication, animal disease control, the integrated program sponsored by the mass education movement, other broad rural reconstruction programs, and a wide variety of small projects established by Government and private agencies.

By February 25, 1949, a total of 379 applications for assistance to specific projects had been received, coming from 22 of China's 26 provinces excluding Manchuria. Of these, at that date, 37 projects had been acted upon favorably by the Commission.

By agreement with the Government of China, expenditures in Chinese currency were to be financed from counterpart funds deposited to a special account in the Central Bank of China, for which purposes up to the equivalent of United States $25,000,000 was to be set aside. The remaining $2,500,000 was to be available in United States currency. As of March 1, 1949, the United States dollar account had been drawn upon to an amount not exceeding $150,000, largely for salaries and travel of United States personnel engaged in this program. The program in China was financed from local currency funds, of which the equivalent of about United States $7,000,000 had been obligated by the above date. Of this amount the equivalent of only about United States $2,600,000 had been turned over to the Joint Commission, due to difficulties experienced by the Commission in obtaining needed funds through the special account. Continued deterioration in over-all conditions, which have underlain these difficulties, has made it apparent that, if the rural reconstruction program is to be continued, its financing must be based principally on the use of United States dollar funds to meet expenditures within China.

TEXT OF REPORT ON THE PROGRAM OF RURAL RECONSTRUCTION IN CHINA PROVIDED FOR IN SECTION 407, CHINA AID ACT OF 1948

In accordance with authority provided in section 407 of Public Law 472, Eightieth Congress, an agreement was entered into by the Government of the United States with the Government of China, through an exchange of notes signed on August 4, 1948,[1] which established a Joint Commission on Rural Reconstruction and dealt with other related matters. This agreement provides that the Commission shall be composed of two members appointed by the President of the United

[1] The texts of these notes appear in Appendix A of this report.

States and three members appointed by the President of China.[2] The three Chinese members were appointed immediately after this exchange of notes and the two American members on September 16. The Commission formally assembled in Nanking on October 1 and, in accordance with a provision in the agreement, elected one of the Chinese members as its chairman.

Authority was given the Joint Commission to formulate and carry out a program of rural reconstruction in China. Poor living conditions among China's rural people, who constitute about 80 percent of its total population, have been a fundamental factor contributing to instability and the spread of communism in China. It was hoped that an energetic development of a rural reconstruction program would lead to basic improvements, which gradually would be reflected in greater internal stability.

I. THE PRESENT PROGRAM [3]

Problems which the Commission agreed should receive attention, in its rural-reconstruction program, can be included under five general categories: Agricultural production, marketing, and processing; farm tenancy; local government administration; rural health; and social education.

To formulate and carry out a specific program aimed toward a solution of these problems, the Commission set up four divisions, each of which was given one of the following general responsibilities:

1. To stimulate the production of agricultural commodities, especially foodstuffs, in areas where the increased production can be utilized to meet existing shortages in coastal provinces now receiving food shipments supplied by the United States.

2. To stimulate the development of a fundamental program of rural improvement in all of the above five categories, carried out in an integrated manner, beginning first in selected areas of limited size but on a practical basis capable of duplication and gradual extension.

3. To establish an extended program of adult social education, with particular attention to literacy education and citizenship education, to create a better understanding of present problems and of the part which citizens can take in their solution.

4. To encourage numerous projects established throughout China by local agencies or individuals, in one phase or another of rural reconstruction, which in total can have a significant influence in bringing about improvements in rural living conditions.

The Commission further agreed upon the principle that in carrying out the program under these four divisions it would work through appropriate existing agencies, which it would strengthen and which later might continue activity initiated with the Commission's help. Assistance to such agencies is based upon applications submitted by them for aid to specific projects. By a discriminating selection from among these applications the Commission is able to encourage developments in line with its objectives and general plans.

By February 25, 1949, a total of 379 applications for assistance to specific projects had been received, coming from 22 of China's 26 provinces, excluding Manchuria. By that date, 37 of the applications had been acted upon favorably by the Commission. Among those not yet acted upon favorably are a considerable number of well-planned projects worthy of assistance. Additional requests continue to come in.

A list of projects to which the Commission had committed itself at the above date, together with sums allocated toward their support, appears as appendix C of this report.

Of the projects which the Commission thus far has emphasized the following are the most prominent types.

Irrigation and dike repair: One of the quickest and most certain means of increasing production in China is through the use and control of water. Applications received from the different provinces almost without exception include a substantial number of requests for assistance to irrigation or dike works, often for the completion of projects already under construction. The Commission has committed itself to assist several projects of this type, of which the two most significant ones are: The repair of dikes in the Tung Ting Lake area, Hunan Province, sometimes called the "rice bowl" of China; and the completion of 11 small irrigation projects in Szechwan Province which, when completed, will irrigate about 30,000 acres of land. Funds for these projects are given as loans, to be returned to a local foundation made up of Chinese and American members, which will administer the money as a revolving fund for other rural reconstruction purposes. A fuller description of the Tung Ting Dike project appears in appendix D of this report.

Broad programs of rural reconstruction: It is quite clear that the improvement of living conditions in China's rural areas cannot be achieved satisfactorily by attention to only one of the existing problems. In many areas all five of the problems to which the Commission is giving attention are serious. Emphasis, therefore, is being placed on the development, in selected districts, of a broad integrated program, aimed at improvement in all these fundamental ways. It is hoped, subsequently, to develop a gradually expanding program applying, on an increasingly wide scale, the successful techniques worked out in the initial centers.

Three such centers are now receiving assistance from the Commission, each one developing toward the same goal from a different initial approach. The first and best developed of these centers is one sponsored by the mass education movement in the third prefecture of Szechwan Province, where a broad integrated program is being developed on a basis of adult literacy education and the organization of producers' cooperatives. The second center, being established in districts near Hangchow, Chekiang Province, is building upon an initial program of agricultural extension and home demonstration patterned after the program of this kind developed by the United States Department of Agriculture. The third center's program, in districts around Lungyen, southern Fukien Province, is building upon an initial land reform project, established under the national government in 1943.

Out of experience gained in these centers, building a broad program upon three important basic approaches, sound suggestions for application under different conditions in the various parts of China should be developed.

A fuller statement of these three projects appears in Appendix D of this report.

Seed multiplication and animal disease control: In its efforts to improve agriculture, the principal source of livelihood for China's rural people, the Commission has paid particular attention to projects which will bring tangible benefits to farmers generally, throughout the parts of China where the Commission is operating. As a result of research carried out during the past several decades, two such projects are now available for the Commission's consideration. One provides for the multiplication and distribution of improved seed varieties, now available at many experiment stations, which are capable of yielding from 10 to 50 percent more than varieties presently used. The second provides for the manufacture of serums and vaccines required in the control of rinderpest among cattle and cholera and erysipelas among hogs—all serious diseases in China—and for a field program to make the serums and vaccines available to farmers in substantial quantities. Initial steps are now under way to develop these projects systematically, over a considerable area of China if circumstances permit. Details are presented in Appendix D of this report.

Local initiative projects: A large number of projects, related in one way or another to rural reconstruction, have been set up in all parts of China through the initiative and largely with the resources of local government or private groups. Under many different conditions in China, they serve as laboratories and demonstration centers which the Commission believes should be encouraged. The following examples, to which funds have been committed, illustrate the range and types of projects of this nature receiving the Commission's assistance:

(a) Citrus rehabilitation project of Lingnan University, Canton	$6,500
(b) Village handicraft projects making table linens, at Swatow, Kwangtung Province	2,000
(c) Land reclamation project on a farm in Hunan Province established with private means, to provide a living for crippled veterans	20,000
(d) Tea improvement extension project, Hsin Yeh Agricultural Middle School, Hunan Province	5,000
(e) A survey of rural health problems in Hunan Province, by Hsiang Ya Medical College, Changsha	5,000
(f) Rural service center in Hsun Hua Chen, near Nanking, sponsored by Ginling College	5,000
(g) Reforestation of White Cloud Mountain sponsored by the Sun Yat Sen University, Canton	6,000
(h) Farm projects in a rural reconstruction center in Kiangsu Province sponsored by the Catholic Cultural Association under Archbishop Paul Yu Pin	12,000
(i) Rural reconstruction projects under the Kiangsu-Anhwei Christian Rural Service Union, in Kiangsu and Anhwei	10,000

II. ORGANIZATION AND SUPERVISION

The program of the Commission is carried out through its four divisions. Division heads and their staff screen projects, make recommendations to the Commission and supervise field operations. Capable Chinese heads of these four divisions have been appointed.

In the field regional offices have been set up in four of the important areas where projects are being carried out, namely, Szechwan, Hunan, Kiangsu-Chekiang, and Kwangtung. In each of these offices the commission has a representative with an appropriate staff. The representative serves as liaison between the Commission and local agencies and assumes direct responsibility for

---

[2] The two American members appointed to this Commission were: John Earl Baker, formerly adviser to the Chinese Government Ministry of Railroads and for many years a relief executive in China; and Raymond T. Moyer, for 15 years engaged in agricultural work in China, and, more recently, in programs of agricultural collaboration carried out by the United States Department of Agriculture in China and Latin America. The Chinese members were: Chiang Mon Lin, prominent educator, several times Minister of Education, and a liberal thinker; Y. C. James Yen, internationally known founder of the Mass Education Movement; and T. H. Shen, a recognized leader in the field of agriculture in China. Chiang Mon Lin was elected chairman.

[3] A formal statement of the objectives and principles on which this program of the Joint Commission on Rural Reconstruction is based appears as appendix B of this report.

the supervision of projects. Other regional offices will be established as necessary.

A group of Chinese and American specialists is employed by the Commisison to give technical assistance in the various fields represented in the program. These specialists advise regarding choice of projects, make field studies of programs for which assistance is requested, help work out agreements with cooperating agencies, inspect and help organize supervision. A small group of well-qualified persons in agriculture, irrigation, land tenure, and health has been assembled. Shifting plans and uncertainties as to future have kept the number lower than is desirable.

Assistance to projects is provided on the basis of a written agreement between the Commission and the cooperating agency. For most major projects to which funds have been allocated, agreements have been worked out and signed. Steps are now being taken to establish agreements governing the Joint Commission's participation in all projects. The necessity of acting quickly appeared to make it advisable, in some cases, to initiate assistance before formalities were completed.

The Joint Commission assumes responsibility for general supervision of all projects to which assistance is provided. This includes: technical supervision, to assure that the quality of work done is satisfactory; and fiscal supervision, to assure that funds are used honestly and for the intended purposes. Provision for this supervision is gradually being built up. A field force of 30 inspectors, under a trained engineer, is now getting into the field to supervise use of the Commission's funds in the Tung Ting dike repair project. Auditors for each regional office are being appointed, responsible to the Commission's controller. Division heads, Commission members and technical specialists are all making field trips for observation. The Commissioner's experience thus far has been too limited to know the degree of success it will have in guaranteeing a completely satisfactory use of funds. By continued effort along lines already established it is believed that reasonable satisfactory supervision and performance will be secured.

III. FACTORS AFFECTING DEVELOPMENT OF THE PROGRAM

The Joint Commission was aware that its task was one of enormous proportions. China is a large country, with a population more than three times that of the United States. The problems of its rural people are of many types. Although certain government and private agencies have done excellent work, devising ways to attack these problems and establishing successful programs on a small scale, the proper procedures to follow in developing a national program are often not clearly defined, nor are they always agreed upon by those working in this field. Effective work on a large scale, moreover, requires a well-developed government organization prepared to carry out essential parts of a program; and such an organization does not exist. Well-conceived programs of several types have been undertaken in the past by well-qualified workers at national and provincial bureau levels, but they have not been well supported at the higher levels of the Chinese Government. Funds made available for the support of these programs have always been very limited. War, inflation, and attendant ills have further reduced the Government's support, with consequent discouragement among personnel doing the work. A gradual breakdown of these services of the national government has taken place. Despite these developments, an active interest in this type of work has been maintained among the trained workers in the national government bureaus and in most of the provincial governments outside of Communist control.

Obviously, in a rural reconstruction effort under these conditions, results on a scale calculated to affect the national situation are to be expected only if a well-supported program of significant proportions can be carried out continuously over a period of years. By the time the Commission assembled, 6 months remained of the year for which Congress had granted authority for American participation in this program.

Furthermore, rapid deterioration in the political, economic, and military situation accelerated inflation, introduced disturbances, and created uncertainties concerning the future. The collapse of nationalist resistance in Manchuria and north China made inaccessible a part of the area for which preliminary plans had been developed, and new planning was required. The new plans, developed in general outline by November 20, provided for a program largely in provinces south of the Yangtze River and the large western province of Szechwan. On December 4, the headquarters of the Joint Commission were moved to Canyon, in South China, a base of operations less subject to disturbance than Nanking. Continuing flexibility and adjustment were required, however, in face of constantly changing conditions. Stability and the assurance of continuity in operations, important for the proper development of a program and the assembling of a staff, have generally been lacking.

The Commission constantly found in China evidence of a great amount of public interest in its effort to establish a rural reconstruction program. Its actions were closely followed by the press. Editorials pointed out the potential significance of this program. Commission members were repeatedly invited to present information about the program to well-attended public gatherings. The need for what the Commission was asked to do is widely recognized. There has been general approval of United States aid to such a program.

IV. FINANCING ARRANGEMENTS AND PROBLEMS

Section 407 of Public Law 472 provides that up to 10 percent of the amount appropriated for economic assistance to China, under that act, shall be available for the purposes of this program, in United States currency, or in local currency, or both. This amounted to a total of up to $27,500,000. By agreement with the Government of China, expenditures in China were to be financed from a special account in Chinese currency, the amount obligated for deposit by the Government in that account to be commensurate with the landed cost of ECA commodities and services provided on a grant basis. To avoid rapid depreciation of idle funds, deposits in the special account have been requested on the basis of immediately foreseeable needs. The account was established in the Central Bank, from which it was agreed to earmark up to the equivalent of United States $25,000,000 for the program in rural reconstruction, the remaining $2,500,000 to be available in United States currency.

No detailed report of expenditures has yet been prepared. As of March 1, 1949, the approximate position was as follows:

	Approximate United States dollar equivalent
1. Local (Chinese) currency account:	
(a) Committed for approved projects[1]	$7,000,000
(b) Payments:	
For approved projects	$2,470,000
For administrative expenses	160,000
2. United States dollar account:	
(a) For administrative expenses	33,000
(b) For program expenses	7,000

[1] Commitments are usually made in terms of piculs of rice. This figure represents the revised estimated cost in terms of United States dollars, taking into account rises in the price of rice. The total cost of this rice, as estimated when the commitments were first made, was approximately $4,700,000.

It is obvious from these figures: (1) that a good deal less than the maximum amount of money authorized in section 407 of the act will be drawn upon for the purposes of this program before April 3, 1949; and (2) that actual payments to projects have lagged behind commitments.

Due to the late date at which the Joint Commission assembled and the financial and other uncertainties in the situation, it is doubtful whether the Commission would have been wise in committing itself to a much larger program, before the end of February, than is represented by these commitments. Had money been available, however, payments to the approved projects would by now be much further advanced, and preparation would have been made for aid to a new series of projects to which the Commission desires to give assistance. Of the difficulties experienced during the life of the Joint Commission, the most frustrating one has been the difficulty experienced in obtaining the amounts of local currency due it by agreement with the Government of China and required for the purposes of its program. These difficulties made it necessary for the Commission to postpone approval of important projects, consumed an undue proportion of the staff's time, caused embarrassment in the Commission's relations with cooperating agencies, and led to public criticism of the Commission for its slowness in developing a program.

This delay in making local currency available may be attributed, to a considerable extent, to the rapidly mounting inflation, which increased the Government's need for funds for all purposes and made it difficult for the bank to keep on hand a sufficient quantity of actual notes to meet required payments. At the same time, there was an understandable reluctance on the part of the Central Bank and some members of the Government's Council for United States Aid (CUSA) to resist any tendency to increase the currency in circulation, on the ground that such an increase would accelerate price inflation, at least in the short run. ECA also experienced great difficulty in negotiating with CUSA a satisfactory understanding as to the rate of conversion of United States dollar costs into Chinese currency, and as to provisions for maintaining the value of such currency in accordance with the terms of the Bilateral Agreement between the Chinese Government and ECA.

For a period subsequent to February 2, substantial payments were received at fairly regular intervals, though still falling behind schedule. At the time of writing this report it is again becoming almost impossible to secure the required amount of local currency funds for program purposes, because deterioration in the value of the Chinese gold yuan make it physically almost impossible for the banks to pay out the volume of notes required to represent the equivalent of any substantial amount of United States currency. Furthermore, the use of the gold yuan as a medium of exchange is now greatly limited as a result of waning public confidence in the national currency. It is, furthermore, necessary to consider the danger of inflationary effects following the use of large quantities of notes for local purchases of commodities.

Even assuming the utmost cooperation of all parties concerned, therefore, it is becoming clear that dependence upon counterpart funds for major support of the program of rural reconstruction, already extremely unsatisfactory, will become increasingly impossible. In the case of Taiwan, direct ECA assistance in supplying commodities should facilitate the obtaining of necessary local currency support for the rural reconstruction program. The ECA program, however, does not call for delivery of substantial amounts of aid commodities to many of the provinces in which the Commission now operates. If the rural reconstruction program is to be continued, therefore, some other basis for financing it must be found.

APPENDIX A

Texts of notes exchanged between the American Ambassador and the Minister of Foreign Affairs providing for the establishment of the Rural Reconstruction Commission in China

I. Note from Ambassador Stuart to the Foreign Affairs Minister

EXCELLENCY: I have the honor to refer to section 407 of the China Aid Act of 1948, enacted by the Government of the United States of America (hereinafter referred to as the act), which provides, among other things, for the conclusion of an agreement between China and the United States of America establishing a Joint Commission on Rural Reconstruction in China. In pursuance of the general principles laid down in the act, and in particular section 407 thereof, I have the honor to bring forward the following proposals regarding the organization of the Joint Commission and related matters:

1. There shall be established a Joint Commission on Rural Reconstruction in China (hereinafter referred to as the Commission), to be composed of two citizens of the United States of America appointed by the President of the United States of America and three citizens of the Republic of China to be appointed by the President of China. The Commission shall elect one of the Chinese members as chairman.

2. The functions and authority of the Commission shall, subject to the provisions of the above-mentioned section of the act, be as follows:

(a) To formulate and carry out through appropriate Chinese Government agencies and international or private agencies in China a coordinated program for reconstruction in rural areas of China (hereinafter referred to as the program).

(b) To conclude arrangements with the agencies referred to in the preceding paragraph establishing a basis for their cooperation.

(c) To recommend to the Governments of the United States of America and of China, within the limits prescribed by the act, the allocation of funds and other assistance to the program, and to recommend to the Government of China the allocation of such other funds and assistance as are deemed essential to the success of the program.

(d) To establish standards of performance for implementation of the program, including the qualifications, type and number of personnel to be used by cooperating agencies in the program, and to maintain a constant supervision of all phases of the program, with authority to recommend changes in or stoppage of any phase of the program.

(e) To appoint such executive officers and administrative staff as the Commission deems necessary to carry out the program, it being understood that the chief executive officer shall be a citizen of China. Salaries, expenses of travel and other expenses incident to the administrative functions of the Commission itself shall be paid from funds made available under section 407 (b) of the act.

3. In its program the Commission may include the following types of activity to be carried out in agreement with the agencies referred to in paragraph (2) (a):

(a) A coordinated extension-type program in agriculture, home demonstration, health and education, for initiation in a selected group of hsien in several provinces to include a limited number of subsidiary projects suited to conditions in the areas where the program is developed, in such fields as agricultural production, marketing, credit, irrigation, home and community industries, nutrition, sanitation, and education of a nature which will facilitate the promotion of all projects being undertaken.

(b) Consultation with the Chinese Government concerning ways and means of progressively carrying out land-reform measures.

(c) Subsidiary projects in research, training, and manufacturing, to be carried out in suitable locations to provide information, personnel, and materials required by the program.

(d) Projects to put into effect over a wider area than provided for in the coordinated extension-type program specified in (a), any of the above lines of activity which can be developed soundly on a larger scale, of which examples might be the multiplication and distribution of improved seeds, the control of rinderpest of cattle, the construction of irrigation and drainage facilities, and the introduction of health and sanitation measures.

(e) Related measures, in line with the general objectives of this program.

(f) The distribution of the assistance in this program, on the principle of giving due attention to strengthening rural improvement in areas where selected projects can be progressively developed and where their development will contribute most effectively to the achievement of purposes for which this program is undertaken, but that the principle of distributing aid will not be controlled by proportionate or geographical consideration per se.

4. In respect of any decision of the Commission, the approval of the Government of China shall be obtained prior to its execution if the Commission or its Chairman, with the concurrence of the Chinese members, deems it necessary.

5. The Commission shall publish in China and transmit to the Government of the United States of America and the Government of China, in such form and at such times as may be requested by either of the two Governments, full statements of operations, including a statement on the use of funds, supplies, and services received, and will transmit to the two Governments any other matter pertinent to operations as requested by either of the two Governments. The Government of China will keep the people of China fully informed of the intended purpose and scope of the program and of the progress achieved by the Commission in implementing the program, including the nature and extent of the assistance furnished by the Government of the United States of America.

6. The Government of China will upon appropriate notification of the Ambassador of the United States of America in China consider the United States members and personnel of the Commission as part of the Embassy of the United States of America in China for the purpose of enjoying the privileges and immunities accorded to that Embassy and its personnel of comparable rank. It is understood that the Ambassador of the United States of America in China in making the notification will bear in mind the desirability of restricting, so far as practicable, the number of officials for whom full diplomatic privileges and immunities would be requested. It is also understood that the detailed application of this paragraph would, when necessary, be a subject of intergovernmental discussion.

7. All supplies imported into China for use in the program shall be free of customs duties, conservancy dues, and other charges imposed by the Government of China on similar supplies which are imported through regular commercial channels.

8. The Government of the United States of America and the Government of China will consult with respect to problems incident to the interpretation, implementation and possible amendment of the terms of the agreement embodied in this exchange of notes whenever either of the two governments considers such action appropriate.

9. The Government of the United States of America reserves the right at any time to terminate or suspend its assistance, or any part thereof, provided under this exchange of notes. Assistance furnished by the Government of the United States of America under section 407 of the act and pursuant to this exchange of notes shall not be construed as an express or implied assumption by the Government of the United States of America or any responsibility for making any further contributions to carry out the purposes of section 407 of the act or of this exchange or notes.

10. This note and Your Excellency's reply accepting the above proposals on behalf of the Government of China will constitute an agreement between the two governments in the sense of section 407 of the act. Subject to the provisions of paragraphs 8 and 9, this exchange of notes will remain in force until June 30, 1949, or, upon the request of either government transmitted to the other government at least 2 months before June 30, 1949, until the date of termination of the Economic Aid Agreement between the two governments concluded on July 3, 1948.

I avail myself of this opportunity to renew to Your Excellency the assurances of my highest consideration.

II. Note from Dr. Wang Shih-chieh to the Ambassador

EXCELLENCY: I have the honor to acknowledge receipt of your note of today's date which reads as follows:

(Full text of Ambassador's note.)

On behalf of the Government of China, I have the honor to accept the proposals contained in the note quoted above.

In recognition of the importance of the program as one of the essential means of achieving the objectives in which the Governments of China and of the United States of America unite in seeking under the Economic Aid Agreement between the two governments concluded on July 3, 1948, the Government of China undertakes to afford to the execution of the program the full weight of its support and to direct cooperating agencies of the Government of China, including the local officials concerned, to give such assistance and facilities as are essential to the success of their undertakings under the program.

I avail myself of this opportunity to renew to Your Excellency the assurances of my highest consideration.

APPENDIX B

Objectives and principles of the program of the Joint Commission on Rural Reconstruction (as adopted by the Joint Commission on October 15, 1949)

I. Objectives

A. To improve the living conditions of the rural people.

B. To increase the production of food and other important crops.

C. To develop the potential power of the people to reconstruct their own communities and the nation, thus to lay the foundation of a strong and democratic China.

D. To help build up and strengthen appropriate services of government agencies—national, provincial, and hsien—that are established to carry out measures pertaining to rural reconstruction.

E. To help stimulate and revitalize enterprises of the rural reconstruction movement and other private agencies doing rural-reconstruction work.

F. To offer liberals, educated youths, and other constructive elements, opportunities to participate in a program of service.

II. Principles

1. Relating to program:

A. The emergency nature of the present situation shall be given paramount consideration in deciding on the nature and location of program and projects.

B. First consideration shall be given to projects which will contribute most directly and immediately to the welfare of the rural people, with special emphasis to be given to the improvement of their economic conditions.

C. A literacy program, supplemented by audio-visual aids, shall be an essential part of this program, as a means of furthering education, organizing the people, and developing and selecting rural leadership.

D. New projects in rural reconstruction deserve encouragement, but unless they can show evidence of self-help and self-support for a reasonable length of time, financial aid shall not be considered.

E. Projects which already have been proved successful, under rural conditions, and which are reasonably simple and inexpensive shall be broadcast on a large scale.

F. In general, preference shall be given to those agencies engaged in rural reconstruction having a sound foundation and experienced staff and organization.

2. Relating to procedure:

A. The program formulated by the Commission shall be carried out in cooperation with existing agencies.

B. A correlated approach shall be adopted wherever possible, since the various aspects of rural reconstruction are interrelated, the success of one depending upon the success of the other.

C. A direct extension type of adult education shall be emphasized as the most effective and quickest means of promoting the understanding, acceptance, and correct use of recommended practices.

D. Local initiative shall be fostered and local resources, both human and material, shall be mobilized for the purposes of the program.

E. Assistance to a project in any province shall be contingent upon the willingness of the provincial and local officials concerned to cooperate fully in efforts to carry it out, and to take other steps, themselves, that are essential to the attainment of results expected of the project.

APPENDIX C

Projects to which the Joint Commission on Rural Reconstruction is committed for assistance, as of Mar. 1, 1949

Project	Province	Sponsoring agency	Amount committed (United States dollars) [1]
1. Irrigation: the completion of 11 partially completed projects	Szechwan	Szechwan Provincial government	$400,000
2. Integrated rural reconstruction program of third prefecture	do	Mass education movement in cooperation with local government.	1,000,000
As loans to—			
Program assisting tenants to become owners. $72,000			
Weaving cooperatives 266,000			
Dyeing and processing plant 30,000			
Pond irrigation 120,000			
Water buffalo purchase 12,000			
Total 500,000			
As grants to—			
Adult education program (4,000 teachers) 250,000			
Supervisory personnel 60,000			
Texts and teaching material 90,000			
Training program 30,000			
Health program 50,000			
Seed multiplication and distribution 20,000			
Total 500,000			
3. Tung Ting Lake dike repair	Hunan	Hunan Provincial government	1,600,000
4. Land reclamation on farm established by private means, to provide a living for crippled veterans.	do	Hunan Crippled Veterans' Rehabilitation Bureau	20,000
5. Distribution cottonseed in Tung Ting Lake flooded area	do	National Government Ministry of Agriculture and Forestry.	10,000
6. Reclamation of land held by Keh Chiang College	do	Keh Chiang College, Hunan	30,000
7. Lan Shan rural reconstruction center	do		3,000
8. Tea-improvement extension program	do	Hsiu Yeh Agricultural Middle School	5,000
9. Lin Lake land reform demonstration center	do	Hunan Provincial government, Provincial Bureau of Land Policy.	20,000
10. Survey of rural health problems in Hunan Province, preparing for a rural-health program.	do	Hsiang Ya Medical College	5,000
11. Lung Yen land reform project	Fukien	Fukien Provincial government	30,000
12. Projects to be agreed upon following visit of Commission members to Kwangsi.	Kwangsi	Kwangsi Provincial government	200,000
13. Sheep and wool rehabilitation program or Mongols	Ninghsia	ECA China Mission in cooperation with local authorities.	100,000
14. Rural community industries (for specific projects now being selected).	Hunan, Kiangsi, Fukien, and Kwangtung.	Chinese industrial cooperatives	20,000

33. Rice borer research program	do	National Government Ministry of Agriculture and Forestry.	5,000
34. Improved seed multiplication and distribution	Chekiang, Szechwan, Kwangsi, Hunan, and Kwangtung.	National Government Ministry of Agriculture and Forestry in cooperation with Provincial governments.	100,000
35. Animal-disease control	Chekiang, Szechwan, Kwangsi, Hunan, and Taiwan.	do	100,000
36. Improved sweetpotato extension	Kwangsi, Kwangtung, Hunan, and Szechwan.	do	12,500
37. Program of public information and education	Szechwan, Chekiang, Kwangsi, Kwangtung, and Fukien.	(For local currency support of a program carried out under contract by Counsel Services, Inc., Baltimore, Md.)	50,000
Grand total			[1] 4,708,900

[1] Commitments are usually made in terms of piculs or rice. The figures given here represent the United States dollar cost of that rice as estimated when commitments were first made. Rises in the price of rice have since occurred, which were not known for all cases when this table was prepared. As a result, the best information available indicated that the total amount to which the Joint Commission has committed itself for these projects would finally be around $7,000,000, shown on p. 8 of this report, as compared with the total of $4,708,900 as shown here.

APPENDIX D

Description of selected projects illustrating work carried on in the joint commission's program

The following examples will illustrate the type of work represented in projects thus far selected for assistance:

Repair of dikes in the Tung Ting Lake area, Hunan Province: This is the largest project receiving assistance under the rural reconstruction program. Because of torrential rains in 1948 which flooded simultaneously five rivers that flow into the Tung Ting Lake region, widely known as the Rice Bowl of China, water broke through numerous places in the network of dikes protecting agricultural land which normally produces around 400,000 tons of rice. This area was one of the important sources of rice for Shanghai, and Canton also shared its surplus. Approximately 1,000,000 people were affected by the flood.

Upon the urgent request of the governor of Hunan Province, the Joint Commission agreed to provide half the cost of the repair, on a loan basis. A foundation, made up of Chinese and American members, is to receive repayments on the loan and administer the funds in a program promoting other projects of rural reconstruction in that province. It is stipulated that one of the important uses of this fund shall be to help worthy tenant farmers become owners. Funds initially allotted to this project total an equivalent of approximately US$1,600,000.

Seed multiplication and distribution: Before the war, as part of a program sponsored by the Nanking University, college of agriculture and forestry, in cooperation with Cornell University, experiment stations in many parts of China undertook work to develop improved varieties of important farm crops. This effort subsequently was expanded by the National Government. As a result, a large number of rice, wheat, cotton, sweetpotato, and corn varieties have been developed, capable of producing from 10 to 50 percent more than varieties now in most common use. Although previously distributed to farmers on a small scale, no systematic effort has yet been undertaken to multiply these seeds and make them available to farmers generally. The Commission's assistance has been requested to do this.

A system for accomplishing this is being developed, and initial steps are now being taken to put it into effect in five provinces this spring. The advice of American specialists is to be obtained to help insure that the plan is established on the soundest possible basis, for gradual application throughout China. Funds thus far allotted to this program total the equivalent of US$100,000.

Animal disease control: While farm animals in China suffer from the ravages of a large number of diseases, three of them appear susceptible of effective control in a practical program. These diseases are rinderpest among cattle and cholera and erysipelas among hogs. Measures for their control are already in existence as the result of preliminary work done in the Animal Industry Research Bureau of the Ministry of Agriculture and Forestry, aided by specialists and equipment supplied initially by UNRRA and continued by the United Nations Food and Agriculture Organization. Plans have been presented to the Joint Commission for a program to undertake the control of these diseases on a large scale, including the establishment or expansion of facilities to manufacture the necessary sera and vaccines and the organization of a field program to make them available on farms. The manufacture of vaccines, and field programs in four provinces, are now under way. Funds thus far allotted to this program total the equivalent of US$100,000.

The third prefecture (Szechwan) rural reconstruction program—sponsored by the mass education movement: Over a period of nearly two decades the National Mass Education Movement, of which Dr. Y. C. James (Jimmy) Yen is director, has promoted the development of a broad program of rural reconstruction, in China, for the purpose of stimulating effort to solve problems of livelihood, education, health, and local government in China's rural areas. One such project began in Szechwan about 2 years ago and has gradually taken root in parts of 3 hsien (counties) in the third prefecture of Szechwan Province, near Chungking. The assistance of the Commission has been requested to complete development of the program in these hsien and to extend suitable parts to 8 other hsien, into an area populated by about 5,000,000 people of whom roughly 80 percent live in rural communities. Its object is, while continuing to experiment in ways of improving rural conditions, to demonstrate on a larger scale what can be achieved by using technique already well worked out. About half of the total cost of this program is being borne by the local people in the prefecture, the remaining half being provided by the Joint Commission.

This assistance will help establish in 4,000 communities of this area mass education classes for adults, which are expected largely to eliminate illiteracy in the area within 1 year. In each of these communities a producers' cooperative will be established, membership in which is limited to farmers actually engaged in farming. A grant also is being given to develop a health program, with emphasis on the control of smallpox, malaria, and gastro-intestinal infections, together with a program related to hygiene, maternity, and child care.

Loans will be given to help develop home weaving on a cooperative basis, from the purchase of cotton yarn through weaving and dyeing. Loans also will be extended for the building of irrigation reservoirs, the acquiring of land ownership by tenants, and the purchase of water buffalo to be owned and used cooperatively. As loans are repaid they will revert to a foundation, to be used as a revolving fund for other rural reconstruction work.

The amount in grants and loans initially allocated to this program totals the equivalent of US$1,000,000.

The Hangchow agricultural extension and home demonstration program: There is available in China a great deal more information which could improve the living conditions of its rural people than has yet been put into use. One of the important reasons for this gap between what is known and what is applied is the lack of a suitable system for getting the existing information to farmers and into farm homes. There is badly needed in China a government service to do for its rural people what has been done for the rural people of the United States through the Extension Service of the United States Department of Agriculture.

A sound beginning in establishing such a service, following recommendations of the Joint China-United States Agricultural Mission in 1946, has been started in four districts of Chekiang Province, around Hangchow. Results already obtained have stimulated local support, which now provides about half of the needed funds. Four surrounding hsien also wish to initiate a similar program. Because of uncertainties in the situation the Commission will limit its support to the original districts, to which funds are being allocated to improve agricultural services, add projects in home demonstration, and establish health services. If conditions permit this work to continue, the experience gained will help substantially in efforts to establish an agricultural extension and home demonstration program on a national scale. The amount allocated for this purpose to date is the equivalent of US$120,000.

The Lungyen (Fukien) land-reform project: In 1929 the Chinese Communists, under Mao Tze Tung, occupied a portion of southern Fukien Province, where they instituted drastic land-reform measures, putting land into the hands of tenants and killing or frightening away the landlords. Six years later, when this area was recovered by the National Government, the land was restored as far as possible to its former owners. A period of confusion followed, the tenants being unhappy about giving up their newly acquired ownership and the original owners wishing to keep the land. The fact that 64 percent of the land was tilled by tenants, largely held by absentee landlords, and only 36 percent by owner farmers indicates that a real farm-tenancy problem did exist.

To stabilize conditions in the area, the provincial government appointed in 1943 a young county (hsien) magistrate with authority to institute reforms as he felt necessary. He established a system for retransferring ownership to the tenants based on government compensation to landlords for their property and distribution of land according to the number of persons in a family. Results have been very beneficial to the tenants and to the region; and landlords, who also are usually merchants, are now fully reconciled to the arrangement.

Partly stimulated by fear of the Communists, remembering the experience in 1929, six hsien in the surrounding territory now wish to institute a similar program to put ownership of land into the hands of the tenants, the landlords being quite willing to cooperate. At the same time, the local government of the original hsien is asking for assistance in developing irrigation and agricultural improvements to increase production and income. The Commission's assistance has been requested in this program, which may provide many lessons leading to a peaceful solution of the farm-tenancy problem now receiving attention throughout China. The Commission has set aside the equivalent of $30,000 (United States) for this project, but expects to allocate for this program in the near future up to the equivalent of $110,000 (United States).

[U. S. Economic Cooperation Administration press release]

SHANGHAI, January 25.—Dikes to protect highly productive farmland along the south and west shores of Tungting Lake are now being reconstructed with the aid of the Sino-American Joint Commission on Rural Reconstruction. (JCRR).

The JCRR was established as part of the ECA American-aid program to China.

Through its support for the Tungting Lake dike project, the JCRR will not only help safeguard one of the most fertile rice-producing areas in China against spring floods; it will also bring about the establishment of a Hunan Rural Reconstruction Foundation to perpetuate benefits from the American-aid program for the rural population of the province.

The flood-threatened land in Hunan is scattered through 11 hsien and populated by 1,000,000 people. Normally this land produces 400,000 tons of rice a year. Before the war, the area was one of the principal sources of food supply for Shanghai, and it also shipped some of its surplus crop to Canton.

When rainfall is normal, Tungting Lake is an adequate reservoir for the five rivers which traverse the region, including the Yangtze. However, last May, torrential rains affected all five rivers simultaneously. Water overflowed the banks, destroying dikes and inundating the land.

The flooding of land bordering Tungting Lake became the primary economic problem of Hunan Province, and Governor Cheng Chien approached the JCRR for assistance to prevent the recurrence of a similar disaster this spring.

Reconstruction of the dikes began early this month under the supervision of 336 dike offices. Work will be intensive during the winter season when the water is low, and the rebuilding is scheduled to be completed by the end of April to enable spring planting. The dikes are being built 2 feet higher to match an equivalent amount of silting which has occurred in Tungting Lake.

Half the cost of this project is being financed with a loan from the JCRR. The loan is in terms of rice, part of which is being purchased in the immediate region of the project, and the rest at Changsha. (Buying in two places helps keep the price of rice down.) Chinese currency funds used by the JCRR come out of the ECA–CUSA special account.

The JCRR office at Changsha will maintain engineering and auditing inspection of the project.

The JCRR loan will be repaid in from 1 to 3 years, depending on crop conditions, with interest at 6 percent per annum on unpaid portions.

The repaid loan will be put to work for future agrarian benefits for Hunan Province, under the direction of the Hunan Rural Reconstruction Foundation.

The foundation will be established by April 30, 1949. It will comprise 5 or 10 members, with the ratio of 3 Chinese to 2 Americans. The same ratio applies in the JCRR. The chairman of the foundation will be Chinese. Members of the foundation will serve without pay, and they will meet from two to four times a year to consider the application of foundation funds. These funds will be repaid JCRR loans or repaid foundation loans.

The foundation will use its resources to back projects which will increase food production in Hunan and improve the lot of the rural population there.

The foundation can either make loans or grants. Projects in areas from which the foundation derives its funds will be given preference.

One of the main purposes of the foundation will be to aid tenant farmers purchase land. It will be abetted in this work by the formation of producers' cooperatives in connection with the JCRR program. The Hunan provincial government has pledged its aid in the establishment of these cooperatives. Only land tillers are eligible to join the cooperatives. The cooperatives will:

1. Collect rents and pay landowners. This will eliminate the middleman in the collection of rents and help protect tenant farmers.

2. Insure that landowners do not evict tenants unjustly.

3. Prevent raising of rents.

4. Loan funds to tenants for land purchase and buy land for the cooperative. These credit functions will obtain after the cooperatives reach an advanced stage of development.

[United States Economic Cooperation Administration press release]

SHANGHAI, February 3.—An over-all program to improve rural life for 5,000,000 Chinese in the Third Prefecture of Szechuen Province has begun with the support of the Sino-American Joint Commission on Rural Reconstruction.

The program exemplifies the comprehensive rather than piecemeal approach to rural improvement.

The program will concentrate on five main targets of the JCRR: agriculture, farm tenancy, local government, administration, health and adult social education.

A foundation for the project has already been laid by the work of the mass education movement, which started a program in the Third Prefecture after the war. The Third Prefecture is adjacent to Chungking and comprises 10 hsien and one special district.

It is upon this tested ground that the new program will build, extending methods which have already worked successfully and using trained and proven personnel in an area where local initiative has already been aroused.

About half the cost of the program will be borne by the JCRR, which has three Chinese members and two American members, as grants and loans in rice, and the other half by the Third Prefecture, also in rice. Loans will be repaid in rice. The combined JCRR and local effort will make possible the following projects:

1. An attack on the problem of farm tenancy through the formation of 100 new producer cooperatives. Only land tillers are eligible to join these cooperatives. Ninety-two cooperatives already exist in the Third Prefecture, and they have proven effective representatives of the tenants in guarding against illegal cancellation of contracts, increase in rents or sale of land without first offering the tenant a chance to buy.

It is estimated that if the average family of 5 has 10 mou of rice land and 10 mou of dry land, plus small supplementary home industries, it is possible for them to maintain a decent livelihood in a province like Szechwan where the soil is generally fertile.

The program in the Third Prefecture will aid 5 members of each of the 100 new producer cooperatives to purchase 10 mou of land. Sixty percent of the cost will be a loan from the JCRR, and the rest a loan from the producer cooperatives. The JCRR loan will be repaid in installments over a 10-year period, with 6 percent interest per annum on the unpaid portions. The accumulated interest will be paid off in a lump sum at the end of the eleventh year.

2. Spread education among the 1,904,306 illiterate adults and unschooled youth of the Third Prefecture.

The education project will be carried out through the Tao Sheng (pupil-monitor) system. The mass education movement has already used this system to teach one-third of all illiterates in Pishan, one of the hsien in the Third Prefecture. One-half of those in this hsien who should have been in school and were not are now in school.

The success of the Tao Sheng system rests upon voluntary workers in the rural areas who go out and teach their own neighbors. To do this, they need reading material, including basic character primers and texts on the training of other voluntary workers. Publication costs will be defrayed by the JCRR.

In addition, the JCRR will pay for the cost of maintaining one adult education worker in each of 4,000 schools in the prefecture. Twelve thousand regular teachers in these schools will be supported by the local population.

3. Protect and improve the health of the population in the prefecture.

Control of specially prevalant endemic diseases—smallpox, malaria and gastro-intestinal infections—will be pushed. Water supply and sanitation will be improved. As part of a health education program, classes will be held in hygiene, maternity and child care, planned parenthood and nurses' training. The JCRR will back this part of the program with a grant.

4. Help the weaving cooperative movement grow in Pishan hsien. This project will affect directly an estimated 23,000 families in Pishan. These families have 11,000 improved looms and 30,000 wooden looms. But only 12 percent of the owners so far have been organized into a cooperative union which handles transportation and marketing.

The JCRR will provide credit for the establishment of more weaving cooperatives and the building of a dyeing and standardization plant that will enable cooperative cloth to compete more successfully with machine-made cloth.

5. Construction of small-scale irrigation ponds. Streams in the mountainous Third Prefecture can easily be used for irrigation if ponds are built to conserve water. The JCRR will furnish a loan to construct 2,000 such ponds; producer cooperatives will finance the rest with a loan.

6. Increase livestock in the region. The chief source of power for planting and cultivation in the prefecture is the water buffalo. A thousand of these animals will be purchased, and the JCRR will defray three-fifths of the cost with a loan.

[United States Economic Cooperation Administration press release]

SHANGHAI, February 3.—Discussing the new rural improvement program, to be supported by the Joint Sino-American Rural Reconstruction Commission in Szechuen's Third Prefecture, Dr. James Y. C. Yen, Commission member, said:

"The people's interest has been stimulated; the program is not superimposed from the outside, and the people want it. The basic fundamental techniques for rural improvement have been evolved. And local leadership has been developed."

Dr. Raymond T. Moyer, one of the American members of the JCRR, said:

"Experience has shown that an integrated program is necessary in order to really improve the living conditions of the people."

Dr. Moyer said a fundamental task of the JCRR was to "work with existing agencies to build up the concept of what ought to be done in the field of rural improvement and establish the kind of organization necessary to do it."

Like the other JCRR projects, the program in the Third Prefecture will not burn itself out with the accomplishment of its immediate tasks. Through the program, a foundation will be established to continue rural projects in Szechuen Province. The foundation will support such projects with grants and loans, using funds from repaid JCRR or foundation loans.

Panama Canal Security Against Atomic Attack

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. MARTIN of Iowa. Mr. Speaker, earlier during this session of Congress in extensions of my remarks there were included authoritative articles dealing with the subject of the atomic bomb as regards the Panama Canal and other proposed Isthmian waterways. The first of these was by Lt. Gen. Leslie R. Groves, January 13, 1949, A–169 of the RECORD; the second, by Maj. Gen. C. F. Robinson, February 14, 1949, A–755 of the RECORD; and the third, by Lt. Col. A. W. Betts, March 24, 1949, A–1713 of the RECORD.

Recently another comparable contribution was made by Lt. Cmdr. H. B. Seim, United States Navy, the "prize essay" of 1949, awarded by the United States Naval Institute, and published in

the April, 1949, issue of the Institute's Proceedings. Under leave accorded, I include the essay as a part of these remarks, with accompanying notes of the editor, as follows:

The opinions or assertions in this article are the private ones of the author and are not to be construed as official or reflecting the views of the Navy Department or the naval service at large.

A graduate of the Naval Academy in 1940, Lieutenant Commander Seim served in South American, West Indian, and Pacific waters before World War II. He was assistant gunnery officer of the U. S. S. *Independence* when she was torpedoed in the Tarawa campaign, and subsequently was gunnery officer on the staff of commander, Carrier Divisions 4 and 5, in Task Force 38. After Japan's surrender, he served in the western Pacific, Philippines, China, and Japan, and is now on duty in the office of the Chief of Naval Operations, Navy Department, Washington, D. C.

The author emphasizes the fact that so long as the atomic-warfare threat exists, the national security depends upon the maintenance of the military superiority of the United States in the form of our present atomic advantages, together with other features and elements of military strength in accepted use. That view necessarily implies that the expenditure of our national wealth on projects—such as the proposed sea-level canal at Panama—that do not actually contribute to our general security are to be avoided.

These four articles—I repectfully submit—definitely show that in this age of modern weapons it is not possible to attain even a reasonable protection against atomic explosives by any particular types of construction. The carefully considered statements of these authors are most timely, and they serve to correct the erroneous impression—so industriously presented and widely accepted—that we can construct an impregnable canal at Panama, or elsewhere.

In this general connection there should be kept in mind the most vital consideration—which, I believe, has escaped, thus far, any sufficient discussion—that the atomic bomb is yet in its infancy; and that in a few years it may be actually obsolescent in comparison with what science may evolve. Hence, any plan of canal which, for the sake of argument, might be regarded as proof against serious atomic attack at the present time, would, in undoubted probability, be wholly insecure all too soon; perhaps on or before the completion of any new project.

As heretofore I have sought to indicate, the security of the Panama Canal must depend on the military, political, and industrial might of the United States, augmented by the protective devices and methods which an efficient and tireless scientific effort and ingenuity may produce.

Here follows the very able and informative article under discussion:

ATOMIC BOMB—THE X-FACTOR OF MILITARY POLICY

(By Lt. Comdr. H. B. Seim, U. S. Navy)

A belief that is fast becoming the central core of our national defense thinking appears consistently in many of our national forums; namely, that the atom bomb is a miraculous panacea for all of our military ills. For example, a recent article, based on an interview with Gen. George C. Kenney, then head of the Strategic Air Command states that "today, strategic bombing authorities are concerned with only one bomb load—the atom bomb." However great and awe-inspiring the power of the A-bomb, it is but simple common sense to attempt an evaluation before we accept it as the main shot in our weapons locker. This is particularly important in view of the above-expressed tendency to rely completely and solely on this weapon to preserve our national security. Are we jeopardizing the safety of our Nation by such complete reliance?

No one can dispute the fact that the five publicized explosions of atomic bombs have demonstrated almost unbelievable power. Observations and reports from the first experimental blast in New Mexico, the wartime bombing of Hiroshima and Nagasaki, and the two test explosions at Bikini indicate decisively that mankind has found the key to unleash tremendous force for destructive purposes. The United States Strategic Bombing Survey has estimated that to produce results similar to the Nagasaki attack approximately 2,200 tons of conventional high explosives and incendiaries for physical damage plus 500 tons of fragmentation bombs for casualties, a total of 270 B–29 loads of 10 tons each, would be required. The subsurface explosion at Bikini on July 25, 1946, was reported to have been at least as destructive as 20,000 tons of TNT. When a force of such potentialities has been revealed as a part of our arsenal, it is certainly not amiss to investigate its effects on both the enemy and ourselves, and the military and political considerations which may govern its employment.

EFFECT ON ENEMY

There are but two examples of the use of the atomic bomb in actual warfare—the destruction of Hiroshima and Nagasaki. A review of the results of these two attacks can provide us with an understanding of the effect of the atomic bomb when used against urban targets. In addition, certain lessons may be inferred from the meager reports which have been published concerning the effectiveness of the A-bomb during the Crossroads operation. From these experiences we may make a general assessment of the capabilities and limitations of the bomb insofar as it affects the target.

The Hiroshima attack on the morning of August 6, 1945, caught the Japanese almost completely by surprise; in fact, the explosion came 45 minutes after the "all clear" had been sounded from a previous alarm. The complacency of the Japanese population can be easily understood. Hiroshima had never been attacked in force, but the people were accustomed to seeing stray American planes flying around the city. The United States Army Air Force had been using Lake Biwa to the northeast of Hiroshima as a rendezvous point for bombers which had assaulted the larger Japanese cities. Therefore, little notice was paid by the Japanese to the small group of three planes which approached Hiroshima on that fateful morning. Only one bomber, the Enola Gay, carried a bomb; the other two contained observers and their instruments. Because of this indifference and the lack of adequate warning, most people had not taken shelter.

The bomb burst slightly northwest of the center of the city. The nature of the terrain at Hiroshima was such that the blast and ensuing fire leveled nearly five square miles of the city. The exact number of casualties will probably never be determined. Seventy to eighty thousand people were killed, or missing and presumed dead, and an equal number were injured. The casualties at Nagasaki were somewhat smaller about 35,000 killed and a similar number injured.

Nagasaki was scarcely more prepared for an atomic bomb attack than Hiroshima, although 3 days had elapsed since the first drop. Once again the appearance of the small raiding group of only two planes caused little concern. The newspapers had made only vague references to the Hiroshima disaster. The devastation caused by the explosion was as horrible and complete as at Hiroshima. However, due to the uneven terrain and the absence of a "fire storm," less than two square miles of the city were destroyed.[1] Nevertheless the destruction far exceeded that which any conventional bomb would have achieved. What are the miraculous qualities of the atomic bomb to enable it to inflict such tremendous damage?

The bomb is nothing supernatural or incomprehensible. As do ordinary high explosives, atomic bombs release energy, though on an unprecedented scale. The energy takes three forms—heat, blast or pressure, and radiation. Heat and blast effects are evident in ordinary TNT explosions; the radiation effect is unique to the atomic bomb. The energy released in atomic explosion is of such magnitude and from such a concentrated source that its physical properties are of much greater intensity than in the case of an ordinary bomb. This is because the energy produced in an atomic explosion results from the splitting of an atom of uranium or plutonium into two major fragments, a process called fission, whereas an ordinary explosion is accompanied only by the rearrangement of the atoms of the explosive material. An illustration of this rearrangement may be found in the simple chemical process of burning. For example, the carbon in coal is combined with the oxygen of the air to form carbon monoxide or carbon dioxide, liberating heat and light in the form of fire. The end products—carbon monoxide or carbon dioxide—still contain the original carbon and oxygen atoms. In an atomic explosion, however, there is a transmutation of the fissionable material. In the fission of uranium (U–235), typical end products are barium and krypton, two entirely different elements. These residual particles have masses whose sum is less than the mass of the original material. This reduction in mass results in an enormous release of energy. In theory, the matter is converted into energy at the rate of 11,000,000,000 kilowatt-hours per pound change of mass.

The magnitude of this potential energy supply can best be appreciated if we consider that the entire production of electrical power in the United States in 1946 amounted to 223,000,000,000 kilowatt-hours, the equivalent of the energy contained in about 20 pounds of matter. However, in practice there are severe limitations on the amount of energy which can be released in an atomic explosion. Actually only a very small percentage of the matter is capable of being converted into energy. The reduction in mass accompanying the fission of uranium or plutonium varies somewhat according to what are the final products, but has an average of about one-tenth of 1 percent. This represents the optimum energy release. Apparently the energy of the bombs used against Japan was actually less than this because the reaction was not complete. Fission in the Japanese bombs was only a small percentage of the theoretical potential. In spite of its fractional efficiency in terms of the theoretical potential, the atomic bomb far overshadows all previous explosives, as demonstrated by the physical results.

As previously mentioned, energy release in an atomic explosion is manifested by heat,

[1] The Japanese city of Kokura was designated the target for the second atom bomb. However, the raiding force found the primary target weathered in, and thus Nagasaki, the alternate objective, became the hapless victim.

blast or pressure, and radiation. The heat energy alone was estimated by Japanese physicists at the astronomical figure of 10-to-the-thirteenth power calories. A fire ball several hundred feet in diameter is formed and the temperature at its core runs into millions of degrees centigrade. At its edge the temperature has been estimated to be from 3,000 to 9,000 degrees centigrade. The fire ball is in effect a small sun, and the heat and light which radiate from it can cause charring, start fires, and kill people. At Hiroshima and Nagasaki charred telephone poles were found as far as 13,000 feet from "ground zero," the point directly beneath the center of the explosion. Mica, with a melting point of 900 degrees, fused on gravestones a thousand feet from the center of the blast. Victims were charred beyond recognition in the immediate vicinity of ground zero. These effects are vastly more intense than any which could be experienced from an ordinary bomb. The blast or pressure results are also magnified.

Pressure at the center rises to tens of millions of atmospheres. At ground zero its force was estimated by the Japanese at from 5.3 to 8 tons per square yard. The blast effects, with their resemblance to the aftermath of a hurricane, were most striking at Nagasaki. Concrete buildings had their sides facing the blast stove in like boxes. Long lines of steel-framed factory sheds, over a mile from ground zero, leaned their skeletons away from the explosion. That the blast effect is tremendous can be readily comprehended from the many pictures of the devastated cities that have been published, and from the damaged wrecks of the Bikini tests. It is much more destructive than the blast from an ordinary bomb. In regard to the third form of energy release, radiation, the atomic bomb is vastly more effective than the usual explosive.

In addition to the emission of heat and light radiation which is common to the ordinary bomb, the atomic explosion also produces dangerous radiations in the form of high-speed neutrons and gamma rays. Gamma rays, like X-rays, can be deadly. Neutrons also have a degenerative effect on the body cells that can be lethal. The high concentration of radioactive emissions at both Hiroshima and Nagasaki caused heavy personnel casualties, even though their duration was very short. The rays proved deadly for an average radius of 3,000 feet from ground zero, and mild effects were observed on people who had been almost 2 miles away from the blast. An odd characteristic of radiation disease is its delayed effect. People who had survived the explosion itself succumbed to the effect of the radiation overdose several days after the attack, in some cases 2 or 3 weeks later. Japaneses casualties from the air bursts were limited to those who had been exposed to the direct radiation from the bomb. People in the underground shelters were largely protected, but the thin walls of buildings proved no barrier to the invisible rays. At Hiroshima and Nagasaki the radioactive by-products of the explosion and the induced radioactivity in other substances (water, earth, machinery, building debris, etc.) were of little consequence. This was not true in the second Bikini test, however. The explosion of the atomic bomb under the surface of the lagoon produced intense radioactivity in the water. It is estimated to have been the equivalent of many hundreds of tons of radium. A column of this radioactive water a mile high and nearly a half mile in diameter rose into the air and then engulfed about half of the target array. These contaminated ships became radioactive stoves, and would have burned all living things aboard them with an invisible and painless but deadly radiation. The implications of possible wartime applications of such methods of radioactive contamination are awe-inspiring.

EFFECT ON US

A tremendous economic and industrial effort is involved in the development and manufacture of atomic bombs and related atomic weapons. Great quantities of raw materials in the form of pitchblende and carnotite ores are required from which the fissionable U–235 or plutonium may be derived. Huge industrial plants containing hundreds of thousands of delicate and precision-made instruments and other equipment are necessary. Great numbers of men, from laborers to highly skilled and trained scientists and top-flight engineers and technicians, must be available. In certain of the processes huge amounts of power are required, and in others an abundant supply of cooling water is a necessity. All of these factors have potential limitations, especially when they may conflict with other possible wartime demands.

The quantity of fissionable material which can be made available is subject to limitation. So far, only U–235 and plutonium have been used in the manufacture of atomic bombs. Both of them are derived from uranium present in raw uranium ores. Uranium is a fairly plentiful material—about four parts in a million in the earth's crust, more plentiful than gold, for example. But only two ores, pitchblende and carnotite, are of value as a source of the uranium metal with the present methods of extraction. Usable deposits of these ores are rather limited. Uranium metal, a combination of U–235 and U–238, represents only a small fraction of the ore. U–235, the part of the uranium metal which can be used as the fissionable material in the manufacture of atomic explosive, is in turn present in very minute proportion. Seven-tenths of 1 percent of the uranium metal is U–235. The remaining U–238 can be processed in an atomic pile to form plutonium, another source of fissionable material.

The separation of U–235 from the uranium metal extracted from pitchblende or carnotite could not be accomplished by chemical methods. Instead, other processes had to be developed to capitalize on the infinitesimal weight difference between the lighter U–235 and the heavier U–238. Four methods were finally devised—gaseous diffusion, thermal diffusion, centrifugal, and electromagnetic.

All of these methods called for the mass production of precision instruments and equipment, some more delicate than any that had ever been manufactured for laboratory work. In the gaseous diffusion process, for example, thousands of containers about the size of a depth charge case were needed. Yet the gas, uranium hexafluoride, was so fiercely corrosive that ordinary metals were unsatisfactory. Only nickel was found to be acceptable, but the first increment of these tanks would have required all of the nickel mined in America for 2 years. The problem was finally solved by electroplating nickel on steel to standards of perfection that were undreamed of in the commercial world. New techniques in cutting and welding glass piping were developed; huge numbers of high-speed pumps of new design were made. Unbelievable standards of operation were achieved. For example, although a vacuum of 1 inch is very good in power-plant practice, the gaseous diffusion plant maintained a vacuum 25,000,000 times greater.

Tremendous amounts of power are required to operate the plants at Oak Ridge, Tenn. Though they were located in the Clinch River Valley in order to tap the TVA supply, one of the world's largest steam power plants was also erected there. In the manufacture of plutonium a plentiful supply of cooling water was necessary. For this reason the Hanford Engineer Works was built near the Columbia River in the State of Washington. With three atomic piles in operation in 1945 the liberated atomic heat had raised the temperature of the river fractionally, even though the water underwent a long decontamination period before flowing back into the river.

As can be readily seen, the development and manufacture of atomic weapons impose a huge burden on our economy. The capital outlay for the construction of the plants alone is staggering. The original cost of the Hanford Works was $350,000,000. The gas diffusion plant at Oak Ridge, only a part of the establishment at that location, consisted of 63 buildings costing half a billion dollars. It was the world's greatest continuous chemico-physical process factory. The principal building was a windowless U-shaped structure four stories high, 2,500 feet long, and 400 feet wide.

MILITARY CONSIDERATIONS

The adoption of a policy which places sole reliance upon the atom bomb would have severe effects on the pace of military progress, in that it would bring about a stagnation in the development of other weapons and techniques. Having committed ourselves to the use of one weapon and one method of delivery, we would find no incentive to invent new and different means of employing military force. In a world in which scientific achievement can tip the balance in time of war, we would be channeling all of our effort toward one limited objective—progress in atomic explosives to be used solely with long-range bombers.

Our own history provides an example of the damaging effect of sole reliance on an imperfect weapons system. After the Barbary wars, Congress adopted a "gunboat policy" which called for the construction of large numbers of small nonseagoing coastal gunboats, to the exclusion of seagoing vessels. It was reasoned that such a force would deter an attack from overseas and yet would not permit our involvement in conflicts in foreign waters. In the later War of 1812, however, larger enemy frigates and sloops had no difficulty in deeply penetrating our territorial waters. Washington itself was burned by the British. Our internal commerce, dependent upon coastwise seaborne trade, was paralyzed; foreign trade virtually ceased to exist. The resultant depression was one of the worst in our history. Our fleet of 176 gunboats was useless. Our few naval victories were the result of individual frigate and sloop actions in distant waters. A few American ships-of-the-line, in place of the numerous small gunboats, and at no greater cost, could have stopped much of this, besides affording a reasonable measure of protection to our ocean-going coastwise commerce, and even some support to our foreign trade. The gunboat policy was a blunder both from the naval viewpoint and that of national economics. From a purely military point of view, the stagnation brought about by exclusive reliance in a faulty weapons system can lead to fatal weaknesses in other lines which would cause our downfall. This is particularly true when we consider that the effectiveness of an atomic assault is dependent upon our means of delivery.

We face the danger of complete impotency if an enemy is able to develop countermeasures against our delivery agent. In other words, if we confirm as our policy the sole reliance upon one weapon—the atom bomb delivered by aircraft—an aggressor must merely devise a way to counteract either the bomb or the plane in order to render us powerless. At present, the development of a counter-agent to the bomb itself seems unlikely. Likewise, under present conditions, aircraft appear to have the upper hand over the means of defense. Such superiority is not guaranteed, however, for the indefinite future.

There are also several other military considerations which limit the use of atom bombs. Undoubtedly it restricts the variety and flexibility of offense, both from a strategical and tactical viewpoint. Strategically, sole reliance on an air-atomic policy would

not only eliminate the possibility of employing the many other forms of military power but also would exclude the varied use of economic, psychological, intellectual, political, and moral forces. Tactically, it is the same as issuing an arbitrary ruling to field commanders that nothing but flame-throwers shall be used in any and all tactical situations and against any and all targets.

We must also note that the use of atomic bombs can, under some conditions of employment, so pollute and contaminate the objective area that the devastated region is denied to us as well as the enemy.

Finally, it should be remembered that the atom bomb is not economical for use against pinpoint targets. Would we employ the atom bomb, capable of demolishing an entire city, to destroy an isolated railroad bridge? Certainly not, when we recall that the bombs may be limited in number and that each one represents a large investment in dollars alone.

Thus, in deliberating whether to adopt an exclusive policy of absolute dependence on the atom bomb, we must realize that from a purely military standpoint such a course can lead to stagnation of progress in other weapons systems, will create the danger of impotency due to countermeasures against the delivery agent, will seriously limit the diversity of offensive means, can contaminate an objective to our disadvantage, and will demand uneconomical usage against certain targets. Employment of the atom bomb is also subject to political considerations.

POLITICAL CONSIDERATIONS

In discussing some of the political factors which influence the employment of atomic bombs we must bear in mind that military policy is a means to an end. Military policy is an adjunct and corollary to national policy and is governed directly by our broader national aims. Therefore, a policy of sole dependence on atomic weapons must be compatible with the larger policy.

It is a matter of public record that the United States has encouraged and continues to support the world-wide adoption of measures which will bring about effective international control of atomic energy. An integral part of any system of international control would be an international authority to prevent the manufacture and use of atomic bombs for war purposes. A treaty covering this subject would guarantee the right of free and full international inspection and would provide for deterrents against offenses and punishment of offenders, without the privilege of a veto to protect willful violators or to hamper the operations of the international authority. Even though the first attempts to establish such an authority have met with failure, we have not officially abandoned or reversed our policy. If, in the face of this, we adopt a military policy of absolute reliance on the atom bomb, we are either incredibly stupid or blatantly hypocritical. Presuming that we are sincere in our desire to establish international control of atomic energy, a clever potential enemy could cause our complete disarmament by the simple expedient of agreeing to outlaw atomic weapons and institute a system of international inspection. On the other hand, if we are not prepared to accept complete disarmament under these circumstances, we cannot honestly continue to support our previously announced national policy. The choice of a military policy of sole dependence on atomic bombs would be interpreted by most people as a de facto repudiation of our position on international control.

Politically speaking, it would not be necessary to outlaw the use of atomic bombs by treaty to reduce us to impotency. There are many instances in which the employment of atomic weapons would be entirely practicable from a military point of view but would be impossible from a political standpoint. For example, could we justify the use of atomic weapons in a "luke-warm" war?

If in the ideological struggle between communism and democracy, internal communistic elements should overthrow the established constitutional government of a friendly nation, could we use atomic bombs in support of the democratic forces? Could we drop a bomb in Italy, or France, or Latin America, if the local Communists usurped control of the government? Obviously, no. Nor could we retaliate against the tide of communism by dropping an atom bomb on the original source of communistic strength.

Even if a "hot" war should break out, we would find occasions when we couldn't employ atomic bombs. It would not be politically or morally feasible to use the A-weapons in overrun countries. Could we have blasted Brest or Manila into atomic dust in the last war, merely because enemy forces were using those ports as bases for operations against us? Are we to murder hundreds of thousands of former allies or friends just because a few of the enemy are in their midst?

Aside from the moral implications of the adoption of a military strategy which places exclusive reliance on the atom bomb, there are several other practical considerations. Most observers agree that a psychological campaign to wean the enemy population from their leaders would be of marked consequence in a future conflict. Some go so far as to say that the split already exists, and that the exploitation of this fissure would play an important part in achieving victory. Yet, by relying solely on the atomic weapons, we sacrifice this psychological advantage. An announced policy of mass population extermination would insure the unity and last-ditch struggle of an aggressor nation, would weld together the people and their leaders under the barbaric threat of wholesale genocide.

From a purely material point of view, an exclusive air-atomic military policy would have severe repercussions. Atom bombs cannot be made in the small, handy pocket size. Due to the inherent characteristics of atomic fission, the bomb cannot be reduced below a certain critical magnitude. Hence there is also a definite irreducible minimum to its explosive power. It is quite probable that the bomb cannot be made much smaller or less powerful than the Hiroshima or Nagasaki type. Therefore each time an A-bomb is dropped, a large area will be laid waste, including without doubt a considerable number of nonmilitary targets. At Hiroshima, out of a total of 90,000 buildings in the urban area, 62,000 were totally destroyed and another 6,000 severely damaged. Most of these were residential structures, or other nonmilitary targets such as hospitals, schools, stores, etc. This poses the tremendous problem of postwar rehabilitation and reconstruction.

Thus, when considered in connection with our broad national aims, such a policy of absolute dependence is in marked dissonance. It would call for abandonment of our announced position on international control of atomic energy, would deprive us of the conventional instruments of military force for use in a lukewarm war, would leave us powerless to wage war against an aggressor in occupied areas or overrun countries, would make untenable our present strong moral position as the champion of freedom and democracy, would condemn to failure a psychological campaign to exploit a rift between an enemy population and their leaders, and would cancel out the anticipated fruits of victory through the overburdening weight of wide-scale postwar relief and reconstruction.

CONCLUSION

In this discussion we have reviewed briefly the broad capabilities and limitations of the atomic bomb. We have examined the effects of its employment, both on the recipient and on the deliverer, and have analyzed the major military and political considerations which govern its use. From this scrutiny we must conclude that the adoption of a military policy of exclusive reliance on the atom bomb would jeopardize the security of our Nation. The strategy of victory through the sole agent of mass atomic destruction is not only morally untenable, but has dubious chances of success politically and militarily.

However, since the threat of atomic warfare still hangs over us, we cannot cease to maintain our atomic advantage, if only for insurance. Under these circumstances, a sound program for national security would include atomic weapons as well as the conventional forms of military strength. On the other hand, it must be remembered that military force is only a segment of our national power. Military policy must be the servant and not the master of national policy; military might must be used in harmony with the economic, intellectual, psychological, political, and moral factors which also form a part of our national strength. We must keep the atom bomb in our arsenal of weapons, but we must also be prepared to fight a war without it. We must realize fully what an atom bomb cannot do as well as what it can do.

New National Health Program—A Sugar-Coated Pink Pill

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. MILLER of Maryland. Mr. Speaker, anything that touches upon the fundamental operations of our great medical profession and its related institutions is of truly prime importance to us all. It touches upon the duration of life itself.

On April 25, the revised administration national health insurance and public health program was introduced in two identical House bills, H. R. 4312 and H. R. 4313, and in the Thomas bill in the Senate.

The measure contains 163 printed pages and is designed to provide complete medical, dental, and hospital service for about 85 percent of the population, according to estimates. In addition, the plan calls for greatly increased Federal appropriations for medical education, research, and hospital construction.

Special medical aid for rural areas and grants to States for local health work and crippled children are included in this vast scheme, the cost of which can only be guessed.

The program would be financed partly through a 3 or 4 percent pay-roll tax, jointly shared by workers and employers, and by an initial appropriation of $1,500,000,000 a year out of general funds. The pay-roll tax would be based on earnings up to $4,800. Those self-employed would have to put up as both employer and employee.

As one who looks with disfavor upon any scheme—no matter how well intended—that leads us farther down the road toward planned economy and a so-

cialized state, it is natural that all this fills me with forebodings. America has always been the land of opportunity. But opportunity involves willingness to take a risk. If Government is to care for us from the cradle to the grave, we must of necessity surrender many liberties. We would be forced to limit our horizons to what Government could provide for each one of the 150,000,000 population. The effort of individuals ceases to be a controlling factor in their scale of living. We must be prepared to conform to the general pattern laid out for us all by the bureaucrats. Otherwise, one could not expect to receive even the type of security offered by their paternalism. Personally, I prefer not to surrender liberties even in exchange for a very good mess of pottage—and this is not good at all.

Compulsory health insurance, according to the New York Times, is "the most radical reform yet to be broached by the Truman administration." Of course, it is primarily another big spending scheme and would be one more move in redistributing wealth. The States and individuals with the larger incomes would carry the burden for those with less; not on a basis of necessity, but whether they need help or not.

Additional bureaucrats and file clerks would go on the Federal rolls by the thousands. One can imagine how many public meddlers and clock watchers would be employed with the public footing the bill. We have added 58,000 civilians workers to our already overloaded pay rolls in the last 12 months. Think what would happen if this scheme, which would reach into every hamlet and cross roads, were put into operation.

Another inequity is that, whether or not you or your family is a healthy group, you would have to pay just as much as your neighbor, who might have a great deal of illness or lead a very dissipated life and require constant attention because of his own indiscretions.
